## Course Archives

This document is a BETA archive of titles and course descriptions for undergraduate courses that have been taught at Sarah Lawrence College between Fall 2000 until Spring 2012. Older listings are very likely not complete. If the course you are looking for cannot be found here, please contact the Office of the Registrar at regoff@sarahlawrence.edu or (914) 395-2301

## Africana Studies

### 2003-2004

Full descriptions of the courses may be found under the appropriate disciplines.

**African Americans in the City** (p. 287), Komozi Woodard *History*

**Architectures of Exclusion: Prisons, Homelessness, Refugee Camps, Squatters' Movements** (p. 34), Dominique Malaquais *Art History*

**Divine Doctors and African Ideas: A History of Science, Technology, and Health in Africa** (p. 290), Mary Dillard *History*

**First-Year Studies: Telling Tales of Slavery and Colonialism** (p. 412), Chikwenye Okonjo Ogunyemi *Literature*

**Gender, Education, and Identity in Modern Africa** (p. 291), Mary Dillard *History*

**History and Memory: Race in American Life** (p. 292), Priscilla Murolo *History*

**International Relations: Beyond War** (p. 601), Elke Zuern *Politics*

**Introduction to Global Studies: Ideas of Freedom** (p. 292), Mary Dillard *History*, Kasturi Ray *Global Studies*

**Poetry, Performance, and Identity Part One: African American Poetry** (p. 902), Tracie Morris *Writing*

**Race and Democracy: South Africa in Comparative Perspective** (p. 602), Elke Zuern *Politics*

**The Family in a Black Literary Context** (p. 418), Chikwenye Okonjo Ogunyemi *Literature*

**The Museum in African America** (p. 294), La Shonda Barnett *History*

**U.S. Labor History: Class, Race, Gender, Work** (p. 294), Priscilla Murolo *History*

**Violence and Political Change** (p. 603), Elke Zuern *Politics*

**Voices of Dissent: Politics, Dissidence, and Visual Culture in Twentieth-Century Africa** (p. 36), Dominique Malaquais *Art History*

### 2004-2005

Full descriptions of the courses may be found under the appropriate disciplines.

**African American Women's History and U.S. Social Movements: Demarginalizing Race and Gender** (p. 296), La Shonda Barnett *History*

**Black Liberation: A History of Black Radicalism in the United States** (p. 297), Komozi Woodard *History*

**First-Year Studies: Africa in the International System** (p. 604), Elke Zuern *Politics*

**Global Africa: Theories and Cultures of Diaspora** (p. 299), Mary Dillard *History*

**Morrison, Naylor, and Walker: Charting the Nation** (p. 422), Chikwenye Okonjo Ogunyemi *Literature*

**Peoples, Places, and Papers: Anthropology and History in East Africa** (p. 13), Mary A. Porter *Anthropology*

**Recent Novels by Award-Winning Black Writers** (p. 424), Chikwenye Okonjo Ogunyemi *Literature*

**Royal African Art: Kings and the Representation of Power** (p. 38), Michelle Gilbert *Art History*

**Sickness and Health in Africa** (p. 303), Mary Dillard *History*

**The Art and Architecture of Africa** (p. 38), Michelle Gilbert *Art History*

**The Politics of Race in Music and Culture in the United States** (p. 531), Eric Martin Usner *Music*

**The Psychology of Race and Ethnicity** (p. 641), Linwood J. Lewis *Psychology*

**U.S. Labor History: Class, Race, Gender, Work** (p. 304), Priscilla Murolo *History*

**Urban Poverty and Public Policy in the United States** (p. 304), Komozi Woodard *History*

### 2005-2006

Full descriptions of the courses may be found under the appropriate disciplines.

**African Art: Visualizing Power** (p. 39), Michelle Gilbert *Art History*

**African Dance** (p. 145),

**African Diasporas: Negotiating Dispersion in the Americas and Europe** (p. 305), La Shonda Barnett *History*

**Art, Myth, and Ritual: Mostly in Africa** (p. 40), Michelle Gilbert *Art History*

**Autobiografiction in Black** (p. 428), Chikwenye Okonjo Ogunyemi *Literature*

**Divine Doctors and African Ideas: A History of Science, Technology, and Health in Africa** (p. 306), Mary Dillard *History*

**First-Year Studies: Introduction to African American History** (p. 307), Komozi Woodard *History*

**Gender, Education, and Opportunity in Africa** (p. 308), Mary Dillard *History*

**Liberty, Equality, and the Jurisprudence of Work** (p. 695), K. Dean Hubbard, Jr. *Public Policy*

**Literary Nation-Building: An Introduction to African Literatures** (p. 432), William Shullenberger *Literature*

**Performing Identities: Class, Ethnicity, Gender, and Race in Contemporary Performance** (p. 433), Shanti Pillai *Asian Studies*

**Private Lives: Methods of Life History and Oral History** (p. 309), Mary Dillard *History*

**Senior Seminar: Alterity: The African Griotte** (p. 434), Chikwenye Okonjo Ogunyemi *Literature*

**Slavery: A Literary History** (p. 435), William Shullenberger *Literature*

**Still Calling, Still Responding: Discourses of Violence in Black Literature** (p. 435), Chikwenye Okonjo Ogunyemi *Literature*

**The Origins of the Urban Crisis: Race, Ethnicity, and Class in America** (p. 311), Komozi Woodard *History*

**The Politics of Anthropology** (p. 15), Mary A. Porter *Anthropology*

**The Sixties** (p. 311), Priscilla Murolo *History*

**The World Turned Upside Down: Women, Race, and Struggle in the Civil War Era** (p. 312), Lyde Cullen Sizer *History*

**Traveling Cultures: Postcolonial Diasporas and the Politics of Cultural Translation** (p. 437), Shanti Pillai *Asian Studies*

**“A Complex Fate”: A History of Culture and Ideas in the U.S., 1800 to the Present** (p. 312), Lyde Cullen Sizer *History*

## 2006-2007

Full descriptions of the courses may be found under the appropriate disciplines.

**African Americans in the City: Dynamics of History, Politics, and Public Policy** (p. 313), Komozi Woodard *History*

**African and Middle Eastern Cinema** (p. 224), Rahul Hamid *Film History*

**African Art and Architecture** (p. 42), Michelle Gilbert *Art History*

**African Dance** (p. 149), Michelle Gilbert *Art History*

**Art, Myth, and Ritual: Mostly in Africa** (p. 43), Michelle Gilbert *Art History*

**Black Liberation: A History of Black Freedom Movements in the United States** (p. 314), Komozi Woodard *History*

**Finance, Debt, and Instability** (p. 184), Jamee K. Moudud *Economics*

**First-Year Studies: Science in Africa, African Science** (p. 317), Mary Dillard *History*

**Food for Thought** (p. 15), Mary A. Porter *Anthropology*

**Gender, Education, and Opportunity in Africa** (p. 318), Mary Dillard *History*

**Global Africa: Theories and Cultures of Diaspora** (p. 318), Mary Dillard *History*

**Global Inequalities, Underdevelopment, and the Role of the State** (p. 185), Jamee K. Moudud *Economics*

**Royal African Art: Kings and the Representation of Power** (p. 45), Michelle Gilbert *Art History*

**Sex, Race, Kin: Navigating Boundaries in the Postcolonial World** (p. 16), Mary A. Porter *Anthropology*

**Telling Lives: Life History Through Anthropology** (p. 16), Mary A. Porter *Anthropology*

**The Political Economy of the State: The Welfare State and Prisons** (p. 186), Jamee K. Moudud *Economics*

## 2007-2008

Full descriptions of the courses may be found under the appropriate disciplines.

**African Art: Images of Transformation** (p. 45), Michelle Gilbert *Art History*

**Borders, Boundaries, and Belonging** (p. 739), Patrisia Macías *Sociology*

**Collective Violence and Political Change** (p. 611), Elke Zuern *Politics*

**Concepts of International Law and Human Rights: Their History and Contemporary Practice** (p. 323), Tai-Heng Cheng *History*

**Diagramming Ethnicity: Theories, Methods, and Texts of Ethnic Studies** (p. 449), Una Chung *Literature*

**Divided Nation? The Political and Social Geography of U.S. Cities, Suburbs, and Metroplexes** (p. 612), Raymond Seidelman *Politics*

**First-Year Studies: Africa in the International System** (p. 612), Elke Zuern *Politics*

**First-Year Studies: Islam** (p. 710), Kristin Zahra Sands *Religion*

**From Mammies to Matriarchs: The Image of the African American Woman in Film, from Birth of a Nation to Current Cinema** (p. 854), Demetria Royals *Visual Arts*

**Gender and Development: Politics, Violence, and Livelihoods in South Asian and African Societies** (p. 257), Kathryn Tanner *Geography*

**Gender and Power in the “Muslim” World** (p. 740), Shahnaz Rouse *Sociology*

**Global Africa: Theories and Cultures of Diaspora** (p. 327), Mary Dillard *History*

**Global Geographies: From Colonization to the World Bank** (p. 257), Kathryn Tanner *Geography*

Global Value Chains: The Geographies of Our Daily Needs (p. 258), Kathryn Tanner *Geography*

Harvest! Land, Labor, and Natural Resources in Latin American History (p. 327), Matilde Zimmermann *History*

Image-Affect-Ethnic: How to Make Bodies Move (p. 452), Una Chung *Literature*

Muslim Literature, Film, and Art (p. 711), Kristin Zahra Sands *Religion*

Poetry Workshop: The New Black Aesthetic (p. 933), Thomas Sayers Ellis *Writing*

Poverty and Public Policy: An Ecological and Psychobiological Approach (p. 661), Kim Ferguson *Psychology*

Public Stories, Private Lives: Methods of Oral History (p. 327), Mary Dillard *History*

Race in a Global Context (p. 741), Patricia Macías *Sociology*

Rainbow Nation: Growing Up South African in the Apartheid and Post-Apartheid Eras (p. 661), Kim Ferguson *Psychology*

Sisters in Struggle: Women and U.S. Social Movements in the Twentieth Century (p. 328), Mary Reynolds *History*

The Caribbean and the Atlantic World (p. 328), Matilde Zimmermann *History*

The Political Economy of Development and Underdevelopment (p. 188), Jamee K. Moudud *Economics*

The Psychology of Race and Ethnicity (p. 663), Linwood J. Lewis *Psychology*

Urban Poverty and Public Policy in United States (p. 329), Komozi Woodard *History*

Visions/Revisions: Issues in U.S. Women's History (p. 330), Lyde Cullen Sizer *History*

Women in the Black Revolt: The Lecture (p. 330), Komozi Woodard *History*

Women in the Black Revolt: The Seminar (p. 330), Komozi Woodard *History*

Workers, Law, and Global Justice (p. 696), K. Dean Hubbard, Jr. *Public Policy*

## 2008-2009

Full descriptions of the courses may be found under the appropriate disciplines.

Across the Atlantic: Arts of the African Diaspora (p. 48), Susan Kart *Art History*

African American Letters: Race Writing and Black Subjectivities (p. 457), Alwin A. D. Jones *Literature*

African Modernities (p. 20),

Art of the Americas: The Continents Before Columbus and Cortés (p. 49), Susan Kart *Art History*

Arts of the African Continent (p. 49), Susan Kart *Art History*

Conscience of the Nations: Classics of African Literature (p. 459), William Shullenberger *Literature*

Contemporary World Literatures: Fictions of the Yard (p. 460), Alwin A. D. Jones *Literature*

Democratization and Inequality (p. 615), Elke Zuern *Politics*

First-Year Studies: "In the Tradition": An Introduction to African American History and Black Cultural Renaissance (p. 333), Komozi Woodard *History*

Gender and Development: Politics, Violence, and Livelihoods in South Asian and African Societies (p. 259), Kathryn Tanner *Geography*

Global Africa: Theories and Cultures of Diaspora (p. 334), Mary Dillard *History*

Globalization and Migration (p. 743), Patricia Macías *Sociology*

Intermediate French II: "Being Maghrebi: Morocco Through French and Moroccan Eyes" (p. 242), Habiba Boumlik *French*

International Relations: Beyond War (p. 615), Elke Zuern *Politics*

Introduction to Development Studies: The Political Ecology of Development (p. 259), Joshua Muldavin *Geography*

Introduction to Muslim Thought and Cultures (p. 712), Kristin Zahra Sands *Religion*

Public Stories, Private Lives: Methods of Oral History (p. 335), Mary Dillard *History*

Racial Politics and Political Thought in Twentieth-Century United States (p. 616), Jessica Blatt *Politics*

Rethinking the Racial Politics of the New Deal and Cold War Citizenship, Public Policy, and Social Welfare (p. 335), Komozi Woodard *History*

Spirit Possession and Theatre (p. 21),

The Contemporary Practice of International Law (p. 335), Viviane Meunier *History*

The Geography of Water: Global Rivers and "Saving the Homeland" (p. 260), Kathryn Tanner *Geography*

## 2009-2010

Full descriptions of the courses may be found under the appropriate disciplines.

A History of African American Renaissance in the City: Hidden Transcripts of Kinship, Communities, and Culture (p. 338), Komozi Woodard *History*

Europe and Africa: Colonialism and Modernity in 19th-Century Art (p. 52), Susan Kart *Art History*

First-Year Studies: (W)rapping the Black Arts (p. 469), Alwin A. D. Jones *Literature*

First-Year Studies: Global Africa: Theories and Cultures of Diaspora (p. 341), Mary Dillard *History*

First-Year Studies: Making History of Non-Western Art History: Africa, Oceania, and the Americas (p. 53), Susan Kart *Art History*

Gender, Education and Opportunity in Africa (p. 342), Mary Dillard *History*

Imagining Race and Nation: The Unfinished Democratic Revolution (p. 343), Komozi Woodard *History*

International Inequalities, Economic Development, and the Role of the State (p. 192), Jamee K. Moudud *Economics*

Mother/in Black Lit. Traditions (p. 473), Alwin A. D. Jones *Literature*

Occult Economies in Sub-Saharan Africa (p. 23), Policy in Theory and Practice: Environment and Development (p. 261), Joshua Muldavin *Geography*

Representing Africa (p. 24),

## 2010-2011

Full descriptions of the courses may be found under the appropriate disciplines.

Across the Atlantic: Arts of the African Diaspora (p. 55), Susan Kart *Art History*

Arts of Africa from 1950 to the Present (p. 55), Susan Kart *Art History*

Arts of Africa to 1950 (p. 56), Susan Kart *Art History*

Borderlands: Histories of Race and Gender in the U.S. Southwest (p. 348), Priscilla Murolo *History*

Collective Violence and Political Change (p. 619), Elke Zuern *Politics*

Contemporary African Literatures: Bodies & Questions of Power (p. 478), Alwin A. D. Jones *Literature*

Contemporary African Politics (p. 620), Elke Zuern *Politics*

Food, Agriculture, Environment, and Development (p. 261), Joshua Muldavin *Geography*

Gender, Education and Opportunity in Africa (p. 350), Mary Dillard *History*

Global Feminisms (p. 480), Una Chung *Literature*

Hunger and Excess: Histories, Politics, and Cultures of Food (p. 350), Persis Charles *History*, Charles Zerner *Environmental Studies*

Intermediate French III Francophone Voices: "Un-French" Narratives (p. 247), Angela Moger *Literature, French*

Introduction to Development Studies: The Political Ecology of Development (p. 262), Joshua Muldavin *Geography*

Investigating Culture (p. 25),

New World Studies: Maroons, Rebels & Pirates of the C'bbean (p. 483), Alwin A. D. Jones *Literature*

Public Stories, Private Lives: Methods of Oral History (p. 351), Mary Dillard *History*

Rethinking Malcolm X: Imagination and Power (p. 351), Komozi Woodard *History*

Sickness and Health in Africa (p. 352), Mary Dillard *History*

Standing On My Sisters' Shoulders: Women in the Black Freedom Struggle (p. 352), Komozi Woodard *History*

The Contemporary Practice of International Law (p. 352),

The Literatures of Russian and African-American Soul: Pushkin and Blackness, Serfs and Slaves, Black Americans and Red Russia (p. 486), Melissa Frazier *Russian, Literature*

Western Discourses: African Conflicts and Crises (p. 621), Elke Zuern *Politics*

"New" World Literatures: Fictions of the Yard (p. 487), Alwin A. D. Jones *Literature*

## 2011-2012

Full descriptions of the courses may be found under the appropriate disciplines.

African American Literature Survey (1789-2011) (p. 487), Alwin A. D. Jones *Literature*

Arts of the African Continent (p. 58), Susan Kart *Art History*

Beyond the Matrix of Race: Psychologies of Race and Ethnicity (p. 685), Linwood J. Lewis *Psychology*

Cinema and Society in the Middle East and North Africa (p. 354), Hamid Rezai *Politics*

Collective Violence and Post-Conflict Reconciliation (p. 622), Elke Zuern *Politics*

Conscience of the Nations: Classics of African Literature (p. 489), William Shullenberger *Literature*

Creating New Blackness: The Expressions of the Harlem Renaissance (p. 489), Alwin A. D. Jones *Literature*

Field Methods in the Study of Language and Culture (p. 27), Aurora Donzelli *Anthropology*

First-Year Studies: "In the Tradition": An Introduction to African American History and Black Cultural Renaissance (p. 355), Komozi Woodard *History*

Food, Agriculture, Environment, and Development (p. 262), Joshua Muldavin *Geography*

Gender, Education, and Opportunity in Africa (p. 356), Mary Dillard *History*

**Hunger and Excess: Histories, Politics, and Cultures of Food** (p. 212), Charles Zerner *Environmental Studies*, Persis Charles *History*

**Ideas of Africa: Africa Writes Back** (p. 357), Mary Dillard *History*

**Introduction to Anthropology: Debates, Controversies, and Re/visions** (p. 27),

**Introduction to Development Studies: The Political Ecology of Development** (p. 263), Joshua Muldavin *Geography*

**Islam and the Muslim World** (p. 718), Kristin Zahra Sands *Religion*

**Language, Culture, and Performance** (p. 28), Aurora Donzelli *Anthropology*

**Language and Race: Constructing the Self and Imagining the Other in the United States and Beyond** (p. 28), Aurora Donzelli *Anthropology*

**Leisure and Danger** (p. 357), Persis Charles *History*

**Making History of Non-Western Art History: Africa, Oceania, and the Americas** (p. 59), Susan Kart *Art History*

**Muslim Literature, Film, and Art** (p. 719), Kristin Zahra Sands *Religion*

**Political Language and Performance** (p. 29), Aurora Donzelli *Anthropology*

**Poverty in America: Integrating Theory, Research, Policy & Practice** (p. 689), Kim Ferguson *Psychology*

**Rainbow Nation: Growing Up South African in the Apartheid and Post-Apartheid Eras** (p. 689), Kim Ferguson *Psychology*

**Reform and Revolution in the Contemporary Middle East and North Africa** (p. 358), Hamid Rezai *Politics*

**Sickness and Health in Africa** (p. 359), Mary Dillard *History*

**Slavery: A Literary History** (p. 495), William Shullenberger *Literature*

**Spoken Wor(l)ds: African American Poetry From Black Arts to Hip Hop (1960-2012)** (p. 495), Alwin A. D. Jones *Literature*

**The Anthropology of Life Itself** (p. 29), Robert R. Desjarlais *Anthropology*

**The Black Arts Renaissance and American Culture: Rethinking Urban and Ethnic History in America** (p. 359), Komozi Woodard *History*

# Anthropology

## 2002-2003

### Challenging Terror: The Cultural Politics of Human Rights and Violence in Latin America

**Maria Elena Garcia**

*Open—Year*

In Latin America, "September 11" has long invoked images of terror, political violence, and the restriction of civil liberties. On September 11, 1973, the United States government supported a bloody coup in Chile against a democratically elected president. The coup led to the kidnapping, torture, and execution of thousands of Chilean "subversives" and "terrorists." This anthropology course examines how notions of "otherness" and the power to label are central to the cultural politics of violence. Examining the forces and discourses of state authoritarianism, the gendered strategies of torture and resistance, and the role of race and ethnicity in political violence, this course engages debates over the construction of political order, human rights, and social struggle. In addition to ethnography and anthropological analysis, we will rely on films, documentaries, historical fiction, plays, and testimonials to interrogate the complexities of human rights and violence in Latin America. Specific topics will include the political deployment of motherhood in Argentina and El Salvador, ethnic and racial conflict in Guatemala and Nicaragua, sexual politics in Cuba, the role of paramilitary and militia forces in Colombia and Peru, and the role of United States foreign policy in the region.

### Desire Across Boundaries: Race and Sexuality in the Postcolonial World

**Mary A. Porter**

*Open—Year*

A common feature of colonial encounters is the enforcement of rules, both cultural and legal, determining with whom one may be sexual and whom one may marry. Intimate interactions among people of different races have been the most heavily regulated. This course uses an anthropological framework to explore race and sexuality in the postcolonial world (i.e., from the European scramble for colonies to the present post-independence era). For this exploration we will mine the works of nineteenth-century sexologists; Freud and Foucault and their feminist critics; the writings of colonizers and anticolonial activists; and ethnographic and historical accounts of race and sex in particular colonial and postindependence settings. We

will examine the concepts of desire and boundary, and we will ask, for example, why subaltern white men were encouraged to form households with colonized women in the nineteenth century and strongly prohibited from doing so in the twentieth. We will consider, too, why public discourse among Indians in colonial Fiji turned from anticolonial politics to debates about the sexuality and marriage of gods; and why the emerging lesbian and gay liberation movements in newly independent states are depicted by their governments as reproducing colonial ideologies. We will study the writings and images of anthropologists, historians, novelists, and activists from many parts of the globe. The class Web site is at [www.slc.edu/~mporter/desire02](http://www.slc.edu/~mporter/desire02).

### Ethnographic Research and Writing

**Robert R. Desjarlais**

*Advanced—Year*

Javanese shadow theatre, Bedouin love poems, and American street-corner societies are but a few of the cultural realities that anthropologists have effectively studied and written about. This is no easy task, given the substantial difficulties involved in understanding, and portraying through writing, the concerns, activities, and logic of lives other than one's own. Students in this course will similarly try their hands at ethnographic research and writing. In the fall semester, each student will be asked to undertake an ethnographic research project in order to investigate the features of a specific social world — such as a homeless shelter, a religious festival, or dorm life at a liberal arts college. In the spring, she or he will craft a fully realized piece of ethnographic writing that conveys something of the features and dynamics of that world in lively, accurate, and comprehensive terms. Along the way, and with the help of anthropological writings that are exceptional or experimental in nature, we will collectively think through some of the most important questions inherent in ethnographic projects, such as the use of fieldnotes, the interlacing of theory and data, the role of dialogue and the author's voice in ethnographic prose, and the ethnical and political responsibilities that come with any attempt to understand and portray the lives of others.

### First-Year Studies: Culture, Mind, Experience

**Robert R. Desjarlais**

*FYS*

How do the cultures in which we live shape how we feel, think, know, or act? How do social relations between people or pervasive economic or political forces contribute to our sense of selfhood or bodiliness? How might we best understand the relation between cultural dynamics and such psychological processes as dreaming, getting angry, or feeling anxious or depressed? In this

yearlong course, we will try to develop answers to these questions by considering a range of anthropological writings on the links between cultural processes and personal experience in such places as Nepal, Brazil, and Northern Ireland. In the first semester, we will read into several life histories and ethnographies of persons living in non-Western settings, as well as think through the history and conceptual underpinnings of the field of psychological anthropology. In the second semester, we will focus on how emotions, cognition, dreaming, bodies, and constructions of selfhood take distinct forms in different societies. By reading, talking, and writing about how, say, women and men suffer grief in Indonesia, grow old in Tibet, or live through political violence in South Africa, we will learn to think critically about how bodies, selves, and minds tie into complex webs of cultural, historical, social, and political forces.

## **Indigenous Politics in Postcolonial Latin America: Global Identities, Alternative Development, and Grassroots Struggles**

**Maria Elena Garcia**

*Intermediate—Year*

Today, an indigenous leader usually speaks Spanish and English in addition to his/her indigenous language, navigates the Web, uses cell phones, and travels frequently to international conferences. What does this say about indigenous identity? How do indigenous leaders' actions challenge our ideas about culture, representation, and authenticity? When, why, and how have the recent changes in indigenous mobilization come about? This anthropology course explores these and other questions about indigenous activism. After a general introduction to the political and social history of the region, students will be asked to think critically about concepts like race, ethnicity, culture, and gender. Primarily, we will focus on the contemporary cultural and political transformations advanced by indigenous groups and their advocates. We will examine the impact that ethnic-based politics have had on development and democracy through such examples as indigenous-military alliances in Ecuador, indigenous struggles against World Bank policies in Brazil, language politics and education policy in Peru, neoliberal multiculturalism in Bolivia, anti-globalization protests in Mexico, and cultural politics in Guatemala. More generally, we will discuss the effects of international aid and alternative development policies on indigenous communities. By focusing on the links between local community activism and transnational networks, this course invites students to critically engage the challenges, opportunities, and risks of globalization.

## **Medicine, Bodies, and Power**

**David Valentine**

*Intermediate—Year*

When Haitian villagers claim that HIV is "sent" through sorcery or by the U.S. government, are they wrong? If a Fijian woman experiences the illness symptoms of a kinswoman miles away, is she faking it? Is it merely standard medical practice when Western doctors discount patients' illness narratives? *Medicine, Bodies, and Power* seeks to explore the complex relationships among politics, culture, globalization, illness, health, healing systems, and the human body; and the implications for human health and well-being given these complexities. The basic premise of the course is that an understanding of disease, health, and embodied experience requires an understanding of the political, economic, and cultural contexts within which they are experienced. The course aims to build from an understanding of how cultural ideas about health and the body shape people's experience, to an understanding that even physical experiences such as pain and suffering are also culturally mediated and located in specific contexts of political and economic power. Though Western biomedical practices focus on the biological processes of illness and disease (both physical and mental), this course aims to show how all systems of healing and embodied experiences are culturally located and politically situated. At the same time, the globalization of Western ideas (both medical and nonmedical) also requires us to think about the ways that different cultural systems come up against one another in terms of approaches to disease, reproduction, sexuality, and bodily processes, issues that engage contemporary anthropological questions about power and meaning. In particular, we will look at how reproduction, sexuality, and the body become sites for medical intervention and the ways that the internationalization of biomedicine produces complex results at the local level.

## **Urban Anthropology**

**David Valentine**

*Open—Year*

We all think we know what a city is — but what, exactly, are the defining features of a city? Many criteria have been proposed — from the presence of a cathedral or governmental institutions, to the anonymous nature of urban life, and the lack of a community ethos. But is urban life always anonymous? How does "village" life differ significantly from "city" life? While anthropologists are traditionally thought of as working in remote and rural places, many anthropologists both past and present have been concerned with urban life, and trying to understand human experience in urban settings, from the Yoruba towns of Nigeria, to the self-proclaimed "capital of the world," New York City. Urban Anthropology looks at a range of questions that have

animated anthropological investigations of urban life in the past hundred years. Through looking at ethnographic studies of cities globally, we will explore questions about the nature of urban experience, the differences and similarities between different urban settings, and the vexing question of what is a city, anyway? And, in an increasingly globalizing world, does it even make sense to talk about cities anymore? In the spring semester, we will switch our attention specifically to New York City. Classes will be supplemented by field trips to the city.

## 2003-2004

### First-Year Studies: Power and Difference: Colonialism, Imperialism, and Development in Anthropological Perspective

**Maria Elena Garcia**

FYS

Anthropology, it has been said, is the offspring of colonialism and imperialism. This first-year studies course explores the troubled histories of anthropology and contemporary efforts to question and challenge imperial imaginings. It explores current controversies about the aims and practices of “development” and of the role of anthropology and anthropologists in the making and unmaking of the “first” and “third” worlds. This course also introduces students to the debates over representation, advocacy, and ethnographic responsibility. Readings will include classic and contemporary studies set in Africa, Asia, and the Americas.

### Himalayan Cultures

**Robert R. Desjarlais**

*Open—Year*

In this course we will develop an understanding of some of the key features of life among a number of societies in the Himalayan region, as found primarily in the nations of Nepal, Tibet, and India. Particular attention will be paid to Tibetan Buddhist societies and to societies that draw their heritage from Tibetan culture. By reading and discussing a range of important scholarly and ethnographic writings, we will consider such issues as the origins and cultural force of Tibetan Buddhism; the politics of ethnic identity; gender dynamics; folk and shamanic healing practices; constructs of time, selfhood, bodiliness, embodiment, suffering, and personal agency; local linkages between language, meaning, form, and experience; and cultural perspectives on life and death. This intensive yearlong course should prove especially valuable to students who are thinking of undertaking studies in the Himalayan region or have already done so.

### Latinos: Politics and Culture in the U.S.

**Maria Elena Garcia**

*Intermediate—Fall*

As the most recent U.S. census declares, Latinos are the largest “minority” group in the country. Rather than considering these growing numbers as a set of objective facts, this course encourages students to explore the cultural and political dynamics that lie behind census categories and the constructions of multicultural visions of the United States. Specifically, students will explore questions of immigration, the construction of citizenship, racial and cultural identities, language politics, and social movements. Latino border crossings and hybridity will also be explored in seminar discussions about liminality, transnational communities, and long-distance nationalisms. The course also invites students to view these cultural politics within the broader frame of the Americas and historical patterns of inequality and marginalization throughout the continent.

### Linguistic Anthropology

**David Valentine**

*Open—Fall*

The “English Only” movement in the United States has been attempting for years to have English recognized as the nation’s official language . . . On a daily basis, people with nonstandard accents are asked where they come from . . . In New Guinea, languages that have thrived for centuries are dying out . . . People claim that they can “tell” if someone is gay or straight by the way they speak. While language is a universal feature of human culture, and a vital resource for humans’ ability to describe and relate to the world around them, language is also deeply political in nature. This course aims to consider, from an anthropological perspective, how language as a social phenomenon is enmeshed in relations of social power. The complex relationship between language and culture raises important questions: How does language shape our view of the world? What relations of power are encoded in language use and beliefs about language? How is language used creatively to produce social worlds? What are the politics of using one variety of language over another? This course seeks to explore these and other questions from a variety of perspectives, including language and worldview, the use of metaphors in everyday speech, language socialization, language shift, and language and identity. Above all, we will be concerned with the relationships of power that are deeply enmeshed in everyday language use, and consequently, the major themes of this class revolve around the politics of language and language ideologies.

## Subject to Culture: The Anthropology of Human Subjectivities

**Robert R. Desjarlais**

*Advanced—Year*

In the past few years subjectivity has emerged as an increasingly important concept among anthropologists, informing a wide range of anthropological projects, from accounts of selfhood and emotional processes to writings on the subjective force of political economies. Most often the word is used when speaking of the forms and features of subjective experience: thoughts and perceptions, modes of consciousness, ways of knowing, and ways of acting in the world. There is, in fact, a multiplicity of analytic perspectives—psychodynamic, phenomenological, practice-oriented, political-economic, linguistic, and interpretive—presently at work in anthropological approaches to human subjectivities. Each of these perspectives attempts to further our understanding of human subjectivities through comprehensive anthropological methods. The purpose of this yearlong course is to explore and think through many of these perspectives and methods by attending to key theoretical statements and exemplary ethnographic writings. In examining some of the most pressing issues related to this field of inquiry, from accounts of human agency and bodiliness to considerations of narrative and intersubjectivity, we will further our abilities to reflect on what it means to be human.

## Telling Lives: Life History Through Anthropology

**Mary A. Porter**

*Open—Fall*

Through studying life history narratives (one person's life as narrated to another), autobiographical memoir, and more experimental forms in print and on screen, we will explore the diverse ways that life courses are experienced and represented. Throughout our readings, we will carefully examine the narratives themselves, paying attention to the techniques of life history construction and familiarizing ourselves with ethical, methodological, and theoretical challenges. We will consider a number of questions about telling lives: What is the relationship between the narrator and his or her interlocutor(s)? How does a life history approach inform debates about representation? What can the account of one person's life tell us about the wider culture of which he or she is a part? How can individual life narratives shed light on such issues as poverty, sexuality, colonialism, disability, racism, and aging? The books and films selected attend to lives in various parts of the world, including Australia, Great Britain, the Caribbean, Kenya, and the United States. Students will analyze primary sources and construct a life history as

part of their work for the course. Further details about this course can be found at <http://pages.slc.edu/~mporter>.

## The Anthropology of Animal Rights: Politics, Advocacy, and Cultural Representation

**Maria Elena Garcia**

*Open—Spring*

This course explores some ethical and cultural questions regarding animals, or as philosopher Peter Singer calls them, nonhuman species. Specifically, it looks at the cultural production of difference between humans and nonhumans, as well as the tactics, strategies, and ideologies behind animal rights movements. Drawing on debates in philosophy, anthropology, and politics, this course invites students to problematize the discourses and practices that reduce animals to "inferior beings." The class also asks students to critically examine their own relationships with animals.

## The Anthropology of the Future

**David Valentine**

*Advanced—Year*

What is the future? Or, perhaps, we should rather ask, when is the future? The twenty-first century has been imagined throughout the twentieth in popular culture and in academic discourses as the time of both dystopic and utopic futures, of both possibility and apocalypse. Now we are here, and the question remains: When is the future? Many of the things that twentieth-century commentators have been concerned over or hoped for—artificial life, radical gender and sexual difference, the spread of liberal democracies, radical individualism, technological incursions into the body, the formation of superstates in the form of the European Union, space travel, environment disasters—have come to pass. Some of them—socialism in Eastern Europe and Asia, holocausts, the "satanic mills" of Europe and America's industrial revolutions—have come and gone or have been transformed. Yet at the same time, we live in a present that seems to be characterized by what we are told belongs to the past—religious fundamentalism; racism; massive worldwide poverty; sectarian, colonial, and separatist wars; and the reassertion of "tradition." The Anthropology of the Future is a course that deals with a range of different futures (both past and present), the ways that anthropologists and others have thought about the future, and the intellectual currents that have enabled us to think about futures in different ways. Anthropology, with its roots in a socially conscious anti-racism, directed at a better world, is a rich location from which to consider how Western intellectuals have thought about the future. While we will be spending much time considering anthropological texts, we will also be focusing on popular media and texts generated in

other disciplines, bringing an anthropological perspective to bear on such diverse objects as cyborgs, the World Trade Center, fundamentalism, *Star Trek*, primate studies, prosthetic limbs, democracy, the colonization of Egypt, abortion, urbanization in Samoa, the World Wide Web, and torture. Our concern is to look at how people have imagined the future, what those futures look like, and how we are still imagining futures.

## Transgender Histories, Identities, and Politics

*David Valentine*

*Open—Spring*

In the past decade, the term “transgender” has rapidly come to be used to describe a range of social identities, a political movement, and a community that had no name until the early 1990’s. Although transsexual, transvestite, drag queen, and many other identities (now grouped under transgender) have a long history in the West, and while non-normative genders have been recorded in many societies, “transgender” is a term with a very short history. Despite this, it has come to be ubiquitous in the early twenty-first century in a wide range of contexts: from grassroots activism and social service provision, to academic settings (such as courses like this one), the U.S. Congress, and even in psychiatry and the medical community more broadly. This course will critically investigate the category transgender—not to cast doubt on the identities, movements, and communities that have arisen around this term, but rather, to investigate the historical, political, social, and cultural conditions and contexts that have enabled it. At the heart of this course is a series of critical questions: Where did “transgender” come from? What does it enable as a category? What does it obscure? How can it be seen as a term located in the terms of U.S. American understandings of personhood? What are the problems and possibilities of using “transgender” to describe non-normative genders cross-culturally? What are the contexts within which “transgender” can be used to make claims of the state in a representative democracy? What possibilities and problems are presented by using the term to describe people who refuse it as descriptive of their experiences? What issues arise when nontransgender-identified people investigate, and ask questions about, those who take this category to be meaningful about their lives? And what does “transgender” tell us about the organization of gender and sexuality in the contemporary United States? We will take a wide view of “transgender,” starting with medical and sexological texts of the early- to mid-twentieth century, early feminist critiques of transsexual identities and technologies, anthropological, historical, and sociological studies, as well as other literature—academic, activist, and autobiographical—which is increasingly grouped into

the category of “transgender studies.” Consequently, a further and important question that will animate this class will be how is it that all these texts have been grouped together in a class about “transgender”? What does this syllabus itself tell us about the category and about emerging notions of gender and sexuality in the United States in the early twenty-first century?

## 2004-2005

### Anthropology of Latin America

*Maria Elena Garcia*

*Open—Year*

Anthropological work in Latin America, by both Latin Americans and foreign scholars, has, in the past decade, challenged the field of anthropology. It has questioned the colonialist legacies of the discipline and explored the links between advocacy and social science in such areas as indigenous struggles, gender dynamics, violence and human rights, development, and migration. Through a close examination of ethnographic texts (including books, articles, and films) and primary documents (like music and testimonials), this course introduces students to central issues and debates in anthropology and in Latin America. Specific cases we will explore in depth include the construction of childhood and violence in Brazilian favelas, the meanings of “macho” in Mexico, peasant struggles against globalization in Costa Rica, and the various ways that “Indianness” and “Blackness” have been defined in the Andes. Additionally, we will explore ethnographically the politics of economic development, borders, democracy, revolution, and multiculturalism. This course will also consider the politics of anthropology itself and the ways that Latin America has been imagined and interpreted by both “insiders” and “outsiders.” In short, in this course we will wrestle with Gabriel García Márquez’s lamentation: “The interpretation of our reality through patterns not our own serves only to make us ever more un-known, ever less free, ever more solitary.”

### Culture, Mind, Experience

*Robert R. Desjarlais*

*Open—Year*

How do the cultures in which we live shape how we feel, think, know, or act? How do social relations between people or pervasive economic or political forces contribute to our sense of selfhood or bodiliness? How might we best understand the relation between cultural dynamics and such psychological processes as dreaming, getting angry, or feeling anxious or depressed? In this yearlong course, we will try to develop answers to these questions by considering a range of anthropological writings on the links between cultural dynamics and personal experience in such places as Nepal, Egypt, and

Brazil. In the first semester, we will read several ethnographies of persons living in non-Western settings, as well as think through the history and conceptual underpinnings of the field of psychological anthropology. In the second semester, we will focus on how emotions, cognition, dreaming, bodies, and constructions of selfhood take distinct forms in different societies. By reading, talking, and writing about how, say, women and men suffer grief in Indonesia, grow old in Tibet, or live through political violence in South Africa, we will learn to think critically about how bodies, selves, and minds tie into complex webs of cultural, historical, social, and political forces.

## **Ethnographic Research and Writing**

**Robert R. Desjarlais**

*Advanced—Year*

Javanese shadow theatre, Bedouin love poems, and American street-corner societies are but a few of the cultural realities that anthropologists have effectively studied and written about. This is no easy task, given the substantial difficulties involved in understanding, and portraying through writing, the concerns, activities, and logic of lives other than one's own. Students in this course will similarly try their hands at ethnographic research and writing. In the fall semester, each student will be asked to undertake an ethnographic research project in order to investigate the features of a specific social world—such as a homeless shelter, a religious festival, or dorm life at a liberal arts college. In the spring, she or he will craft a fully realized piece of ethnographic writing that conveys something of the features and dynamics of that world in lively, accurate, and comprehensive terms. Along the way, and with the help of anthropological writings that are either exceptional or experimental in nature, we will collectively think through some of the most important questions inherent in ethnographic projects, such as the use of fieldnotes, the interlacing of theory and data, the role of dialogue and the author's voice in ethnographic prose, and the ethnical and political responsibilities that come with any attempt to understand and portray the lives of others.

*Previous course work in anthropology required.*

## **First-Year Studies: Making Connections: Gender, Sexuality, and Kinship from an Anthropological Perspective**

**Marya A. Porter**

*FYS*

Like Goldilocks in her selections of porridge and resting places, human beings are supposed to choose marriage partners who are "just right." To marry a close relative, or someone of the same gender, may be deemed unnaturally close, but marriages across great difference

such as age, race, culture, or class can also be perceived as problematic due to social distance. This question of closeness and distance in marriage prescriptions is particularly timely in light of the current debates about gay marriage; it will be one topic of exploration in this yearlong seminar on gender, sexuality, and kinship from an anthropological perspective. Anthropology is a discipline that explores the ways people make sense of the world, and the social relations in which we engage. In this class we will explore two parallel themes: the extraordinary diversity in the ways that people understand and enact kinship, sexuality, and gender cross-culturally and changes in the ways that anthropologists have understood and documented (or failed to document) these themes. We will read ethnography, oral history, and anthropological theory, as well as literature beyond the discipline; we will also view some films. Topics under our consideration will include female husbands in southern Africa, hermaphroditism in nineteenth-century France, institutionalized homosexuality in New Guinea, transnational and interracial adoption, childhood, and sexual rights. Along the way we will learn to be better writers, readers, speakers, and listeners. The class Web site is at <http://pages.slc.edu/~mporter/FYS04>.

## **Indigenous Representations: Ethnography, Politics, Culture**

**Maria Elena Garcia**

*Intermediate—Fall*

The images of, ideologies about, and insecurities over "Indians" have had a powerful impact on the Americas. Since the first encounters between European and native peoples in the territory now known as "America" (North, Central, and South), the "imagined" Indian has played a critical role in shaping ideas of civilization, nationhood, and progress. This course interrogates these early discourses as well as more recent ones regarding the "return" of indigenous people to public life from Alaska to Argentina. We will consider the politics and poetics of ethnographic explorations of such indigenous "cultures" as the Maya, Pequot, Cherokee, Quechua, and Aymara. Additionally, we will explore indigenous resistance that has included the "postmodern" rebellion of the Zapatistas in Chiapas, the emergence of transnational indigenous intellectuals in universities and cyberspace, and the controversial tactics of gaming among Native Americans in the U.S. In these cases and others, we will also critically examine central concepts like "culture" and "race" that are part of the discourses of authenticity and survival that shape the ways in which scholars, state officials, and indigenous leaders engage each other.

## Peoples, Places, and Papers: Anthropology and History in East Africa

**Mary A. Porter**  
*Spring*

In this course we will explore the ways in which the disciplines of anthropology and history have been inextricably connected for a very long time, particularly in colonial and postcolonial settings. We will draw on East Africa, primarily Kenya, as the site of our empirical explorations; and we will read more globally for further conceptual insights in India, Latin America, and Southeast Asia. We will examine the conventional work sites of anthropologists and historians (the field and the archive) and their classical methods (interpretations of observed behavior and interpretations of texts). We shall then examine the work of a fairly new set of scholars, calling themselves "historical anthropologists," who approach anthropology historically and history anthropologically. Some of the empirical questions that we will examine include: Why has history thrived as a subject in African universities while anthropology has not? Why did Jomo Kenyatta, an anticolonial African nationalist leader, study with one of the founders of modern anthropology? Why did women members of the British parliament unsuccessfully attempt to prevent female circumcision in East Africa in 1929? How did dock workers in Mombasa organize their labor so successfully in the first few decades of the twentieth century? The work in this course will allow us to learn about East African history and ethnography, concepts of culture, time and place, colonial processes, nation formation, and the nature of interdisciplinarity. For conference work, students may focus on whatever relevant topics and geographical regions they chose. The class Web site can be found at <http://pages.slc.edu/~mporter/anthhist05>.  
*Open to sophomores and above.*

## 2005-2006

### Animals: Articulating Human and Nonhuman Struggles

**Maria Elena Garcia**  
*Open—Year*

How are animal rights and feminist movements connected? Does eating meat perpetuate notions of patriarchy? Can we successfully challenge the exploitation of human beings without also fighting for the rights of nonhuman animals? Can we morally distinguish between human and nonhuman exhibitionism? How do notions of class structure our choices about eating habits? This course explores some ethical, political, and cultural questions regarding animals, or as philosopher Peter Singer calls them, nonhuman species. Specifically, it looks at the cultural

production of difference between humans and nonhumans, as well as the tactics, strategies, and ideologies behind animal rights movements. Drawing on debates in anthropology, philosophy, and politics, this course invites students to interrogate the discourses and practices that reduce animals to "inferior beings." The class also asks students to critically examine their own relationships with animals, the privilege of choosing to not eat animals, and to think about the discourse of "rights" more concretely. Finally, this seminar will emphasize the significance of the animal rights movement and its connections to other global movements for cultural, social, and environmental justice.

### Desire Across Boundaries: Race and Sexuality in the Postcolonial World

**Mary A. Porter**  
*Open—Year*

A common feature of colonial encounters is the enforcement of rules, both cultural and legal, determining with whom one may be sexual and whom one may marry. Intimate interactions among people of different races have been the most heavily regulated. This course uses an anthropological framework to explore race and sexuality in the postcolonial world (i.e., from the European scramble for colonies to the present post-independence era). For this exploration, we will mine the works of nineteenth-century sexologists; Freud and Foucault and their feminist critics; the writings of colonizers and anticolonial activists; and ethnographic and historical accounts of race and sex in particular colonial and post-independence settings. We will examine the concepts of desire and boundary, and we will ask, for example, why subaltern white men were encouraged to form households with colonized women in the nineteenth century and strongly prohibited from doing so in the twentieth. We will consider, too, why the emerging lesbian and gay liberation movements in newly independent states are depicted by their governments as reproducing colonial ideologies. We will study the writings and images of anthropologists, historians, novelists, and activists in many parts of the globe.

### First-Year Studies in Anthropology: Culture, Mind, Body

**Robert R. Desjarlais**  
*FYS*

How do the cultures in which we live shape how we feel, think, know, or act? How do social relations between people or pervasive economic or political forces contribute to our sense of selfhood or bodiliness? How might we best understand the relation between cultural

dynamics and such psychological processes as dreaming, getting angry, or feeling anxious or depressed? In this seminar in

cultural anthropology, we will try to develop answers to these questions by considering a range of anthropological writings on the links between cultural dynamics and personal experience in such places as Nepal, Greece, and Brazil. In the first semester, we will read several ethnographies of persons living in non-Western settings, as well as think through the history and conceptual underpinnings of the field of psychological anthropology. In the second semester, we will focus on how emotions, cognition, dreaming, bodies, and constructions of selfhood take distinct forms in different societies. By reading, talking, and writing about how, say, women and men suffer grief in Indonesia, grow old in Tibet, or live through political violence in South Africa, we will learn to think critically about how bodies, selves, and minds tie into complex webs of cultural, historical, social, and political forces.

## **Indigenous Anthropologies: Indigenous Struggles and Social Science in the Americas**

**Maria Elena Garcia**

*Intermediate—Year*

The images of, ideologies about, and insecurities over “Indians” have had a powerful impact all over the globe. In particular, since the first encounters between European and native peoples in the territory now known as “America” (North, Central, and South), the “imagined” Indian has played a critical role in shaping ideas of civilization, nationhood, and progress. This course explores these early discourses as well as more recent ones regarding the “return” of indigenous people to public life. Moreover, this seminar interrogates important debates over representation, advocacy, and ethnographic responsibility, by focusing on the relationship between social science (anthropology in particular) and indigenous struggles. How have anthropologists shaped debates about the place of American Indians? Have anthropologists perpetuated the colonization of indigenous peoples? What are the challenges posed to anthropology by indigenous scholars? What are some of the ethical and political questions raised by fieldwork in indigenous communities? This course will ask students to think critically about questions such as these. Through readings, guest lectures, films, and field trips, we will also delve into ethnographic explorations of indigenous struggles and interrogate the implications of indigenous resistance that has included the “postmodern” rebellion of the Zapatistas in Chiapas, the emergence of transnational indigenous intellectuals in universities and cyberspace, and the controversial tactics of gaming

among Native Americans in the United States. While our focus will be on the Americas, we will also consider the politics and poetics of indigenous representations in other parts of the world. Finally in this course we will critically examine central concepts like “culture” and “race” that are part of the discourses of authenticity and survival that shape the ways in which scholars, state officials, and indigenous leaders engage each other.

*Intermediate. Open to sophomores, juniors, and seniors.*

## **Lifeworlds: Phenomenological Approaches in Anthropology**

**Robert R. Desjarlais**

*Advanced—Fall*

How does a chronic illness affect a person’s orientation to the everyday? What are the social and political forces that underpin life in a homeless shelter? What is the experiential world of a deaf person, a musician, a refugee, or a child at play? In an effort to answer these and like-minded questions, anthropologists in recent years have become increasingly interested in developing phenomenological accounts of particular lived realities in order to understand, and convey to others, the nuances and underpinnings of such realities in terms that more orthodox social or symbolic analyses cannot achieve. In this context, phenomenology entails an analytic method that works to understand and describe in words phenomena as they appear to the consciousnesses of certain peoples. The phenomena most often in question for anthropologists include the workings of time, perception, selfhood, language, bodies, suffering, and morality as they take form in particular lives within the context of any number of social, linguistic, and political forces. In this course we will explore phenomenological approaches in anthropology by reading and discussing some of the most significant efforts along these lines. Each student will also try her or his hand at developing a phenomenological account of her or his own of a specific social or subjective reality through a combination of interviewing, participant-observation, and ethnographic writing.

*Advanced. Previous course work in anthropology required.*

## **Senior Seminar in Cultural Studies: Mourning, Text, Memory**

**Bella Brodzki, Robert R. Desjarlais**

Every society has developed responses to death and the grief that ensues. Many of these responses involve acts of mourning, remembrance, and memorialization of some kind. In this advanced seminar we will examine such acts through the double lens of literature and anthropology. What role, for instance, does a dead body play in moments of mourning and remembrance? How do acts of textual representation and other forms of inscription play into processes of grief and the

remembrance of the dead? How do cultural forms and psychological dynamics intersect in the wake of a loss? Other matters to be discussed include psychoanalytic considerations of mourning and memory; cross-cultural comparisons of funeral rites; the symbolic and forensic value of corpses; and ghosts and other hauntings. In conference students will be asked to work with either Ms. Brodzki or Mr. Desjarlais.

*Advanced. Open to seniors and graduate students only. Previous course work in either anthropology or literature is required.*

## **The Politics of Anthropology**

**Mary A. Porter**

**Intermediate—Year**

When Jomo Kenyatta's ethnography of Kikuyu (Kenya) society was published in the 1930's, the foreword to this nationalist, anticolonial text was provided by Bronislaw Malinowski, a "founding father" of British social anthropology. This apparently unlikely alliance is just one example of the many paradoxes and contradictions to be found in the political history of anthropology. Over the past two centuries, anthropology has been both the site of liberation and antiracist activism and of studies that justified colonialism and slavery. This course will be an exploration of the ways in which this intellectual discipline has arisen in various social and political contexts both within and beyond the academy. Our questions will include the following: Why have particular theoretical approaches arisen in specific geographical locations? How have the subject positions of anthropologists in terms of their nationality, class, race, gender, and sexual orientation informed their anthropological research and writings? What have anthropologists done in wartime? What have been the relations between anthropologists and their funders (both large foundations and individual patrons)? We will study the writings and images of anthropologists, historians, novelists, and activists in many parts of the globe.

*Intermediate. Open to sophomores, juniors, seniors, and graduate students.*

## **2006-2007**

### **Drugs, Society, Culture**

**Luther Elliott**

**Open—Fall**

This seminar offers an anthropological introduction to substance use as social and cultural practice and process. We will investigate licit and illicit substances in a number of distinct cultural contexts, putting ethnographic case studies into conversation with historical, legal, archaeological, psychological,

sociological, and neuroscientific contributions to our contemporary Western discourse on "drugs." Ethnography will serve as a means of foregrounding the cultural and historical construction of drugs and addiction. Gender, race, and the international politics of drug prevention and control will be important seminar foci, as will indigenous and religious contexts for substance use and the global pharmaceutical industry. Moving across a number social issues and cultural locales (ranging from Yemen, to Spanish Harlem, to college dorm rooms), students will be encouraged to formulate their own cultural analyses, asking how regimes of drug use and prohibition serve both to challenge and to reproduce dominant structures in culture and society.

*Open to any interested student.*

### **Engagements with Death and Dying**

**Robert R. Desjarlais**

**Open—Spring**

"My mind turns to thoughts of death," drones the Seventh Dalai Lama in an eighteenth-century poem of his. In this course, our minds will similarly turn to thoughts of death: to understandings of death and the afterlife, and to experiences of aging, dying, and grief, among diverse peoples in the world today. By looking closely at burial practices in rural Greece, bereavement in Indonesia, funeral rites in Hindu India, orientations to the afterlife among Tibetan Buddhists, mortuary cannibalism in the Amazonian rainforest, and new technologies of death in Japan and North America, we will develop a critical awareness of the interrelated social, cultural, psychological, and political underpinnings of human engagements with death. Through this inquiry into one of the most fundamental and important aspects of the human condition, students will also give serious thought to how one might best go about understanding and portraying the makings of life in societies other than their own.

*Open to any interested student.*

### **Food for Thought**

**Mary A. Porter**

**Fall**

In *Sweetness and Power*, Sidney Mintz's classic study of sugar, he describes how this sweet substance became essential to the diet of the English working class during the Industrial Revolution. Cups of hot, sweet tea substituted for more substantial hot meals and sustained workers through long and grueling factory shifts. The tea break and the "cup of tea" have subsequently become integral to English culture and social relations. This open seminar uses an anthropological lens to examine some aspects of people's relationships to food and eating, focusing primarily on the cultural meanings of food

consumption and the social relations in which they are entailed. We will consider the symbolism of food and its taboos and prescriptions; we will be aided in this endeavor by anthropological classics such as Mary Douglas's *Purity and Danger* and Claude Lévi-Strauss's *Raw and the Cooked*. We will look ethnographically and historically at feasts and famines, and we will mine the vast food memoir and criticism literature that has burgeoned in the past few years. We will consider connections among gender, food, and eating in a variety of contexts and the ways in which identities form around particular foods. Our examples will come from literature, history, ethnography, and film, including *Like Water for Chocolate*; *Eat, Drink, Man, Woman*; and *Ongka's Big Moka*. Our materials will include work from the United States, Europe, Mexico, China, Melanesia, and Africa.

*Open to any interested student.*

## **Sacrifice Now: The Ethics of Death, Immortality, and Contemporary Politics**

**Christopher Garces**

*Intermediate—Spring*

The decision to sacrifice is an omnipresent theme in contemporary societies. This survey course will review the configurations and problems of sacrifice in the United States, Middle Eastern, and Latin American contexts. In class readings and discussions, we analyze the logic of sacrifice from its classical expression(s) in collective religious beliefs and ritual procedures, to its up-to-date governmental practice(s) of marshalling civil society toward the goals of the state, to its many spectral and/or unwanted social by-products, such as the Holocaust, collateral damage, suicide bombings, seldom-considered types of social abandonment, and the persecution of pariah populations. In the course as a whole, we reflect not only on the decision to sacrifice, in ordinary and exceptional circumstances, but we also pause to consider the rhetoric and symbolic operations of the imperative to sacrifice: its portrayal as the only course of fruitful action, its claims to singular beneficence, and its marriage of temporal context and transcendental form. Topics to be addressed will include the ethics of death and immortality, the intimate relationship between the victim and perpetrator of sacred violence, and the new types of subjectivities produced in the aftermath of a sacrificial event. Course readings will include philosophical tracts, ethnographic, and historical works; student's own life-history narratives; and up-close textual analyses of newspaper reports and public media.

*Intermediate. Open to sophomores, juniors, and seniors.*

## **Sex, Race, Kin: Navigating Boundaries in the Postcolonial World**

**Mary A. Porter**

*Year*

A common feature of human societies is the enforcement of rules that determine social relations, particularly regarding kinship: With whom may one be sexual? Who can a person marry? Which children are "legitimate"? To marry a close relative, or someone of the same gender, may be deemed unnaturally close in some societies, but marriages across great difference such as age, race, culture or class can also be problematic due to social distance or unequal power relations. Social rules also govern the acceptance of children into particular social groups depending on factors such as the marital status of their parents or the enactment of appropriate rituals. At the height of nineteenth-century colonial expansion, "civilized" discourses, popular and anthropological, were obsessed with the social relations of subordinated peoples—both the poor at home and the colonized overseas. Many observers imagined that "primitive" societies had sparse social regulation as they reported cases of "marriage by capture," "primitive promiscuity," and "paternity uncertainty." The urban poor were similarly imagined as much less rule bound and, therefore, less moral. These hegemonic discourses about kinship, sex, and race continue into the twenty-first century with debates about queer families, gay marriage, unmarried mothers, transcultural adoption, and new reproductive technologies. We will read a broad variety of texts in this intermediate seminar, including nineteenth-century accounts of the display of Saartje Bartman (vulgarly referred to as "The Hottentot Venus") and the diaries of Hannah Cullwick and Arthur Munby who engaged in a complex, decades-long, mistress/servant marriage across class lines. We will read memoir and ethnography about adoption and the ways in which it has changed in the context of postcolonial world politics and domestic family formations. We will read about global gay rights movements and their uneasy relationships with their governments. Our interpretations will be aided by reading Freud, Foucault, and Rubin, among others. Students will develop yearlong conference projects on any aspect of this topic that interests them.

*Intermediate. Sophomores and above.*

## **Telling Lives: Life History Through Anthropology**

**Mary A. Porter**

*Open—Spring*

Through studying life history narratives (one person's life as narrated to another), autobiographical memoir, and more experimental forms in print and on screen, we

will explore the diverse ways that life courses are experienced and represented. Throughout our readings, we will carefully examine the narratives themselves, paying attention to the techniques of life history construction and familiarizing ourselves with ethical, methodological, and theoretical challenges. We will consider a number of questions about telling lives: What is the relationship between the narrator and his or her interlocutor(s)? How does a life history approach inform debates about representation? What can the account of one person's life tell us about the wider culture of which he or she is a part? How can individual life narratives shed light on such issues as poverty, sexuality, colonialism, disability, racism, and aging? The selected texts attend to lives in various parts of the world, including Australia, Great Britain, the Caribbean, East Africa, and the United States. We will take a field trip to one of the Story Corps booth in New York City. Students will also analyze primary sources and construct a life history as part of their work for the course.

*Open to any interested student.*

## **The Anthropology of Contemporary Religion**

**Christopher Garces**

*Intermediate—Fall*

From the unflagging rise of global evangelism (Islamic and Christian) to the worldwide resurgence of so-called "superstitious beliefs" (e.g. magic, witchcraft, and sorcery), contemporary religion is transforming day-to-day work and life nearly everywhere. In the university, too, where predictions of the "death of God" have been commonplace, scholars also recognize a marked "religious turn:" a renewal of interest in the worldly importance of messianic beliefs, political theologies, and the ethics of life & death. In this seminar we investigate these and other worldly provocations of "religious belief," and evaluate three critical anthropological approaches to the study of religion: specifically, (a) how the "religious body" may be viewed as a complex spiritual instrument of self-recognition and self-control, (b) how "religious experience" may be understood as a cultural response to states of perpetual insecurity, and (c) how the very definition of "the religious" turns into a key point of governmental debate between secular-liberal, fundamentalist, and popular religious supporters. Topics to be analyzed include US evangelical Christianity, global fundamentalisms, post-colonial religiosity, spiritual exercise & dietetic health programs, extra-terrestrial and alien encounters, the phantasmagorias of urban and suburban life, the pieties and spiritual effects of secular ethics, and the complex interplay of religion & media technologies.

*Intermediate. Open to sophomores, juniors, and seniors.*

## **The Anthropology of Latin America: Sub-Versions of Politics, Culture, & History**

**Christopher Garces**

*Year*

In this course, we will survey a number of influential ethnographic projects, and contextualize their findings, by comparing the anthropologist's methods, assumptions, and narrative strategies with other scholarly, governmental, and media representations of parallel or related phenomena. Investigating ethnographic approaches to major geopolitical issues (e.g., militarization, border control, crime, terror, security, HIV/AIDS, and civil war) as well as less privileged subjects (e.g., authoritarianism, populism, indigenous rights movements, social abandonment, everyday violence, prostitution, and local identity politics), this seminar course will offer a panoramic overview of current anthropological research interests and how they provide meaningful sub-versions of Latin American politics, culture, & history. Specific topics to be analyzed include: the trans-national drug market, dual polity systems, marginalized forms of citizenship, the informal labor economy, religious struggles, gendered violence, poverty and systematic forms of social exclusion, urban regeneration, economic enclaves, eco-tourism, and the cross-cutting relevance of health, class, race, and gender.

*Open to any interested student.*

## **The Anthropology of Sound**

**Luther Elliott**

*Intermediate—Spring*

Drawing on literature in anthropology, ethnomusicology, philosophy, popular music and material culture studies, this course will challenge students to step back from the cultural assumptions attendant in "music" as a cultural category and to consider more broadly the social life of sound. Weekly readings survey a number of ethnographic sites (ranging from the highlands of Papua New Guinea to the rock and roll studio to the urban soundscape) at which the aesthetic organization of sound as musical commodity—or disorganization as "noise"—bears significant sociopolitical consequence. With reference to particular technologies and practices of sound recording, reproduction, and distribution, the course will ask how contemporary, sonic forms of cultural property and expressive culture have come to constitute such powerful forms of sociality and contention.

*Intermediate.*

## Understanding Experience: Phenomenological Approaches in Anthropology

**Robert R. Desjarlais**

*Advanced—Spring*

How does a chronic illness affect a person's orientation to the everyday? What are the social and political forces that underpin life in a homeless shelter? What is the experiential world of a deaf person, a musician, a refugee, or a child at play? In an effort to answer these and like-minded questions, anthropologists in recent years have become increasingly interested in developing phenomenological accounts of particular lived realities in order to understand, and convey to others, the nuances and underpinnings of such realities in terms that more orthodox social or symbolic analyses cannot achieve. In this context, phenomenology entails an analytic method that works to understand and describe in words phenomena as they appear to the consciousnesses of certain peoples. The phenomena most often in question for anthropologists include the workings of time, perception, selfhood, language, bodies, suffering, and morality as they take form in particular lives within the context of any number of social, linguistic, and political forces. In this course, we will explore phenomenological approaches in anthropology by reading and discussing some of the most significant efforts along these lines. Each student will also try her or his hand at developing a phenomenological account of her or his own of a specific social or subjective reality through a combination of interviewing, participant-observation, and ethnographic writing.

*Advanced. Previous course work in anthropology required or permission of the instructor.*

## 2007-2008

### Ethnographic Research and Writing

**Robert R. Desjarlais**

*Advanced—Year*

Javanese shadow theatre, Bedouin love poems, and American street-corner societies are but a few of the cultural realities that anthropologists have effectively studied and written about. This is no easy task, given the substantial difficulties involved in understanding and portraying the concerns, activities, and logic of lives other than one's own. Despite these challenges, ethnographic research is generally considered one of the best ways to form a nuanced and contextually rich understanding of a particular social reality. To gain an informed sense of the methods, challenges, and benefits of just such an approach, students in this course will try their hands at ethnographic research and writing. In the fall semester, each student will be asked to undertake an ethnographic research project in order to investigate the

features of a specific social world—such as a homeless shelter, a religious festival, or a neighborhood in Brooklyn. In the spring, each student will craft a fully realized piece of ethnographic writing that conveys something of the features and dynamics of that world in lively, accurate, and comprehensive terms. Along the way, and with the help of anthropological writings that are either exceptional or experimental in nature, we will collectively think through some of the most important features of ethnographic projects, such as interviewing others, the use of field notes, the interlacing of theory and data, the role of dialogue and the author's voice in ethnographic prose, and the ethical and political responsibilities that come with any attempt to understand and portray the lives of others.

*Previous course work in anthropology required or permission of the instructor.*

### Explosive Latin America: Guns, Terror, and Everyday Violence

**Christopher Garces**

*Intermediate—Fall*

This course will examine how three “explosive” phenomena—the culture of firearms, the culture of terror, and the culture of everyday violence—encapsulate and outwardly express Latin America's diverse economic and political instabilities for Latin Americans themselves. Course materials in ethnography, history, journalism, and film will help us to analyze why, from one state to another, firearms, terror, and everyday violence coalesce to form a volatile public sphere, but also help people to organize their existence and make sense of a hostile politico-economic environment. This exploration will raise a number of questions. If the state has a monopoly on legitimate violence, then how does the massive armament of nonstate actors change the nature of statecraft? Do legal classifications of armed and dangerous people within the state produce the very things they classify (gangs, guerillas, drug lords, paramilitaries, private security forces, militias, vigilantes, outlaws, human rights violators, and would-be assassins), or vice versa? Instead of concentrating on the capacities of everyday violence and terror to destroy or foreclose one's life, might we also problematize and critique how, when already present, violence and terror may shape or facilitate possible futures? Does possessing firearms involve being possessed by them? Against a backdrop of these and other difficult questions, our seminar will interrogate the interrelationship between guns, violence, and terror in the broadest possible sense.

### Representing Africa

*Open—Fall*

This course will introduce students to major themes in African history and culture, as well as help us build a

critical framework for understanding some of the challenges that face the continent today. It will also lead us to question the Western production of knowledge about Africa and rethink what we know about such categories as history, culture, and gender. Throughout the semester we will read modern fiction, ethnography, historical narratives, human rights documents, primary sources, and theoretical texts touching upon on a broad range of topics, including griots and oral history, slavery, colonialism and resistance, independence struggles, health and healing, diamonds, imperialism, witchcraft, and democracy. Central to our class discussions will be the question of how Africa is framed and represented, not only in our readings but in Western discourses past and present.

## **Spectral Engagements: The Anthropology of Time, Memory, and History**

### *Advanced—Year*

This course will consider time, memory, and history as spectral endeavors, and ask what it might mean for anthropology (and anthropologists) to engage seriously with the concept of haunting. We will begin the course with an exploration of time. Insisting that the way we perceive and understand time is both culturally constructed and historically specific, we will consider the importance of time concepts in western ideas of modernity, the central role of clocks and regularized time practices in European imperialism and the industrial revolution, diverse time systems in pre-industrial Europe and nonwestern societies, the contradictions that arise between linear progressive time and cyclical or ritual time, theories of the social construction and relative experience of time, and representations of time in narrative and rhetoric. We will also explore such topics as repetition, *durée*, Nietzsche's eternal return, and Mbembe's "time of entanglement." Turning then to the question of memory, we will consider individual, collective, and national remembering and forgetting, and explore such topics as nostalgia, memorialization, false memory syndrome, and the relationship between memory and history. Throughout the course of the semester, we will think about the implications these spectral endeavors might have on the discipline of anthropology. As a mode of storytelling that has come from a particular way of apprehending the world, anthropology might give credence to specters as social figures and assign ethnography the task of chasing after ghosts and other traces of the past, not simply for the poetic spaces they may open up but out of a concern for justice and responsibility in the past, present, and future. Advanced. Previous coursework in anthropology required or permission of the instructor.

## **Stateless Peoples in Latin America**

### **Christopher Garces**

#### *Advanced—Spring*

Do stateless people exist? Can we imagine society without the state? How might "statelessness" be represented as such? If states legitimize violence, should anthropologists join forces with those (such as the advocates of political anarchism) who work to challenge state authority and disrupt its mechanisms of control and surveillance? These questions, and others like them, are neither idealistic nor essentially utopian in character; they are basic points of inquiry that cultural anthropologists, time and again, have returned to in the process of ethnographic research at the limits and/or margins of state power. In this course, we review anthropologists' disciplinary legacy of close engagement with stateless peoples, and we systematically analyze the most predominant theories and experiences of "statelessness" from the nineteenth century to the present. The course will focus primarily on Latin American peoples and practices, but also compare Latin American experiences with other world regions, as we survey the "statelessness" of political refugees, socially abandoned individuals, informal labor markets, the Church, NGOs, secret societies, paramilitaries, anti-state activists, and indigenous peoples.

## **The Anthropology of Bodies**

### **Robert R. Desjarlais**

#### *Open—Year*

How do the cultures in which we live shape how we use and think of our bodies? How do social relations between people or pervasive economic or political forces contribute to ideas of bodily normality or deviance? How might we best understand the relation between cultural dynamics and such diverse phenomena as tattooing, anorexia, the genome project, and panoptic forms of visual observation? In this seminar in cultural anthropology, we will try to develop answers to these questions by considering a range of anthropological writings on the links between sociocultural forces and bodily experience in such places as Nepal, Bali, and the United States. In the first semester, we will explore research on cultural representations of bodies, body modifications, and ideas of sexual and bodily deviance. In the second semester, we will focus on the politics of embodied action, medical engagements with bodies, and the cultural patterning of sensory perception. By reading, talking, and writing about, say, the politics of hunger in Brazil, bodily adornment in Nigeria, the sale of body organs in India, political prisoners in Northern Ireland, or an apprentice boxer in Chicago, we will learn to think critically about how the bodies and lives of humans tie into complex webs of cultural, social, and political forces.

## What Is Religion? Anthropological Perspectives

**Christopher Garces**

*Open—Year*

The concept of “religion” is a source of endless debate in most societies. But religion as lived is indisputably vital to the politics of survival in a complex and rapidly changing world. Interrogating both faith and skepticism toward religious practices, our course will survey the history of anthropological research on religious peoples, processes, and provocations. We analyze and critique the stigmatization of cultural practices labeled “religious” and contextualize the socio- historical development of so-called “nonreligious” activities. The course as a whole will survey classic topics in this field of research, such as shamanism, ritual, magic, witchcraft, and sorcery. We also analyze a variety of contemporary ethnographic projects to develop a more complex and elaborate understanding of public debates about religious practices (pious observance, mysticism, asceticism, charisma, sacrifice); religious movements (evangelism, cultic experience, new age spiritualities); world religions (Islam, Judaism, Christianity, Hinduism, Buddhism, Confucianism, animism); belief systems that define themselves in opposition to religiosity (secularism, science, empiricism, existentialism); and historically complex and deep-seated religious concepts (sinfulness, nirvana, wakefulness, goodness, evil, charity, immortality, and the soul).

## 2008-2009

### African Modernities

*Advanced, Intermediate—Fall*

“Is an asphalt road modern? If a traditional peddler is walking on a modern road, does the road become more traditional or the peddler more modern? Both, either, neither?”

– Renato Rosaldo

Popular representations of modern Africa in the West often depict a continent that clings to—and is weighed down by—tradition. Such representations generally portray “tradition” not just as the opposite of modernity, but as that which is opposed to and defiant of modernity. But what exactly is modernity, anyway? Does the concept of “modernity” necessarily go hand in hand with Western cultural hubris, imperialistic endeavors, and globalization? Does it imply a state or status that is singular and universal, or conversely, is it possible to speak of competing and contested modernities? Drawing on contemporary ethnographies from various regions of sub-Saharan Africa, this course will introduce you to the complexity of ideas, practices, and struggles that exist throughout the large and diverse continent today. Insisting on (and also problematizing) the existence on

African modernities, we will complicate and deconstruct the often taken-for-granted dichotomy between modernity and tradition. We will also consider the production of nostalgia and authenticity in discourses of belonging and “otherness” in postcolonial Africa.

## Engagements with Death and Mourning

**Robert R. Desjarlais**

*Open—Spring*

“My mind turns to thoughts of death,” drones the Seventh Dalai Lama in an eighteenth-century poem of his. In this course, our minds will similarly turn to thoughts of death: to understandings of death and the afterlife and to experiences of aging, dying, and grief among diverse peoples in the world today. By looking closely at burial practices in rural Greece, bereavement in Indonesia, funeral rites in Hindu India, orientations to the afterlife among Tibetan Buddhists, mortuary cannibalism in the Amazonian rain forest, and new technologies of death in Japan and North America, we will develop a critical awareness of the interrelated social, cultural, psychological, and political underpinnings of human engagements with death. Through this inquiry into one of the most fundamental and important aspects of the human condition, students will also give serious thought to how they might best go about understanding and portraying the makings of life in societies other than their own.

## First-Year Studies: The Question of Culture: Anthropology

*FYS*

What is culture, anyway? Is it something we have, or something we do? Can it be located in the way we think or the way we behave? This first-year studies seminar will introduce students to the field of cultural anthropology. It will also teach students to think like anthropologists. It has often been said that the aim of anthropology is to make the apparently strange and exotic seem comprehensible, while at the same time compelling us to ask questions about behaviors we might consider to be “natural” or “commonsensical.” By approaching this course as an anthropological experience, students will come to understand their own ideas about subjects like time, space, family, food, and personhood to be culturally constructed and historically contingent. We will consider patterns of behavior, systems of meaning, and structures of value in different societies and cultures throughout the world, including our own. Looking to ethnographic studies as well as theoretical writing, we will visit a range of perspectives on such topics as race and ethnicity, globalization and capitalism, gender, nationalism, power, representation, subjectivity and reflexivity, structure and agency, history, memory, and identity. By way of this ongoing

engagement with cultural analysis and reflection, students will improve their ability to read closely, write effectively, and think critically.

## **Latin America Otherwise: The Ethnographer's Craft**

**Christopher Garces**

*Intermediate—Year*

How do anthropologists write ethnographies and produce ethnographic films about Latin America? What is the ethnographer's craft? How might the practice of ethnography help aspiring journalists, cinematographers, activists, politicians, NGO workers, and businesspeople to better understand contemporary Latin American issues? This intermediate-level course reviews major trends and prospects for regional anthropological research—past, present, and future. Focusing on ethnographic methods, theories, and ethics, from the early twentieth century forward, we will examine how anthropologists have provided unique contributions to the study of Latin American politics, culture, history, and religion. We will analyze how anthropologists have lodged powerful and/or contrarian arguments about the politics of indigenous identity; colonialism and neocolonialism; nationalism; urban development; NGOs; neoliberalism; paramilitaries; guerrilla movements; the long- and short-term effects of civil war; race; populism; machismo; motherhood; transgender sexuality and identity; social abandonment; urban survival strategies; violence; terror; shamanism; and religious movements.

## **Love™, Ltd.: Charity, Philanthropy, and Humanitarianism**

**Christopher Garces**

*Open—Fall*

Are we entering a new age of philanthropy? Oprah's Big Give, the Clinton Global Initiative, the Open Society Institute, and other philanthropic institutions provide new models for the redistribution of wealth, political access, and desperately needed social services. The international nongovernmental organization (INGO) has become the most recognizable face of effective humanitarianism across the globe. And church-based charities grow ever more indispensable to poor people of all backgrounds and material conditions. What do these trends have in common? Have democratic processes accentuated the demand for charity, philanthropy, and humanitarianism? Moreover, is the commercialization of kindness impervious to critique? This course will examine what goes without saying when a price is placed on care and vital support for strangers: we will problematize how an ethics of volunteering and contingent mutual aid has come to define questions of international cultural politics. Key problems to be analyzed include attempts to bridge resource limitations;

the pragmatic limits of mutualism or cooperation; the local obstacles to providing international aid; the racialization of goodwill; philanthropy as a public relations mechanism; charity as a form of governance; the sacrificial logic of humanitarianism; and the tacit obligation to return gifts. In particular, the seminar will focus on Christian and Islamic charities, the NGO "third sector," ad hoc mutual aid societies, multinational relief agencies, and church-based welfare programs.

## **Militarization/Demilitarization**

**Christopher Garces**

*Open—Spring*

This seminar will focus on processes by which states, cities, and neighborhoods militarize themselves and attempt to defuse problems that arise from community mobilization. In addition to reviewing diverse literatures on military/civilian relations, we will trace the rapid worldwide growth in paramilitaries and problematize what the privatization of military force implies for local and international political orders. At the same time, we will pause to consider how societies effectively demilitarize themselves. Militaries are a fact of modern life, but people relate to military service, military protection, and military force quite differently from one culture, place, and time, to another. Key anthropological, political, and journalistic studies in this seminar will focus on international military training centers; "low-intensity warfare"; the gendered aspects of militarism; the "blowback" or "boomer-ang" effects of armed aggression; the archipelago of U.S. military bases at home and overseas; the current conflicts in Iraq and Afghanistan; Colombia's internal war; local arms races in Africa and the Near East; the checkpoint as a paradigm for ground-level security; and the processes by which firepower defines police tactics and national sovereignty.

## **Spirit Possession and Theatre**

*Advanced—Spring*

From Greek philosophy to surrealism and contemporary performance studies, from ethnographic descriptions of possession to techniques and theories of acting, the relationship between spirit possession and theatre has been figured in countless different ways. It has been posited, for example, that the figure of "the possessed" stands as a mythical model for the actor and possession itself could be approached as ur-theatre—an archaic image of the theatre. Conversely, it has also been suggested that spirit possession may be read as theatre; the performances given by "the possessed" are congruous with—and nothing more than—performances offered by actors. In this seminar, we will critically engage with ethnographic texts that emphasize the performative and theatrical aspects of spirit possession. We will then turn to look at things from the other side—specifically, we will explore how different performance theories and

acting techniques support or contest the idea that the actor should be possessed by (and actually become) his or her character. Looking to such influential figures as Stanislavsky, Vakhtangov, Brecht, Boal, and Artaud, we will also consider how the theatre itself has been described as—or in contrast to—possession itself.

## **The Anthropology of Sound**

### ***Open—Fall***

From birdsongs in the spring to Beethoven's Fifth Symphony, from the buzzing of a mosquito to a high-frequency ringtone, from the silence of a museum to the silence of a desert, sounds affect how we make sense of everyday experience. Hearing—an extremely powerful mode of perception—is commonly taken for granted, both in everyday life and in academic studies. This course is an explicit interrogation of sound and the many ways that it is implicated in human culture. In order to examine the “invisible sense” of hearing, we will take many of the fundamental premises of linguistic and cultural anthropology as launching points for a diverse set of cross-disciplinary modes of inquiry. These will include (but not be limited to) aesthetics, ethnomusicology, philosophy, media analysis, physics, and psychology. We will examine how classes of sounds come to be used in (and as) meaning-making systems. Grammars of music are a particularly salient form of this kind of sound-symbolism, and different types of musical “languages” will be considered (including Hindustani classical music and Indonesian gamelan traditions). Further, exploration of soundscapes from cultures across the globe (including equatorial forest sound-worlds) will demonstrate the variety of ways that people can generate “acoustemologies” both in ritual contexts and in everyday life. The crucial role of the body in this process will be examined through a biological and psychological examination of the hearing apparatus, as well as through studies of musical improvisation and embodied performance of folk, blues, and jazz music. Further, we will see that cultural patterns of sound are put into play in exciting and anxiety-inducing ways, as technology allows us to record and deploy (or even cancel) sounds at will, thereby giving them new social lives of their own, separated from their locus of origin. Moral and legal quandaries abound, as we ask who owns—or belongs to—a particular set of sounds.

## **Understanding Experience: Phenomenological Approaches in Anthropology**

### ***Robert R. Desjarlais***

#### ***Advanced—Year***

How does a chronic illness affect a person's orientation to the everyday? What are the social and political forces that underpin life in a homeless shelter? What is the experiential world of a deaf person, a musician, a

refugee, or a child at play? In an effort to answer these and like-minded questions, anthropologists in recent years have become increasingly interested in developing phenomenological accounts of particular lived realities in order to understand, and convey to others, the nuances and underpinnings of such realities in terms that more orthodox social or symbolic analyses cannot achieve. In this context, phenomenology entails an analytic method that works to understand and describe in words phenomena as they appear to the consciousnesses of certain peoples. The phenomena most often in question for anthropologists include the workings of time, perception, selfhood, language, bodies, suffering, and morality as they take form in particular lives within the context of any number of social, linguistic, and political forces. In this course, we will explore phenomenological approaches in anthropology by reading and discussing some of the most significant efforts along these lines. Each student will also try her or his hand at developing a phenomenological account of her or his own of a specific social or subjective reality through a combination of interviewing, participant-observation, and ethnographic writing.

*Previous course work in anthropology required.*

## **2009-2010**

## **Ethnographic Research and Writing**

### ***Robert R. Desjarlais***

#### ***Advanced—Year***

Javanese shadow theatre, Bedouin love poems, and American street-corner societies are but a few of the cultural realities that anthropologists have effectively studied and written about. This is no easy task, given the substantial difficulties involved in understanding, and portraying through writing, the concerns, activities, and logic of lives other than one's own. Students in this course will similarly try their hands at ethnographic research and writing. In the fall semester, each student will be asked to undertake an ethnographic research project in order to investigate the features of a specific social world—such as a homeless shelter, a religious festival, or dorm life at a liberal arts college. In the spring, she or he will craft a fully realized piece of ethnographic writing that conveys something of the features and dynamics of that world in lively, accurate, and comprehensive terms. Along the way, and with the help of anthropological writings that are either exceptional or experimental in nature, we will collectively think through some of the most important questions inherent in ethnographic projects, such as the use of fieldnotes, the interlacing of theory and data, the role of dialogue and the author's voice in ethnographic prose, and the ethical and political responsibilities that come with any attempt to understand and portray the lives of others.

*Previous course work in anthropology required.*

## **First-Year Studies in Anthropology: Culture, Bodies, Experience**

**Robert R. Desjarlais**  
*FYS*

How do the cultures in which we live shape how we use and think of our bodies? How do social relations between people or pervasive economic or political forces contribute to ideas of bodily normality or deviance? How might we best understand the relation between cultural dynamics and such diverse phenomena as tattooing, anorexia, the genome project, and panoptic forms of visual observation? In this seminar in cultural anthropology, we will try to develop answers to these questions by considering a range of anthropological writings on the links between sociocultural forces and bodily experience in such places as Nepal, Bali, and the United States. In the first semester, we will explore research on cultural representations of bodies, body modifications, and ideas of sexual and bodily deviance. In the second semester, we will focus on the politics of embodied action, medical engagements with bodies, and the cultural patterning of sensory perception. By reading, talking, and writing about, say, the politics of hunger in Brazil, bodily adornment in Nigeria, the sale of body organs in India, political prisoners in Northern Ireland, or an apprentice boxer in Chicago, we will learn to think critically about how the bodies and lives of humans tie into complex webs of cultural, social, and political forces.

## **Language, Culture, and Interaction**

**Aurora Donzelli**  
*Open—Year*

One of the defying properties of humans is their special capacity for social interaction and for the creation of complex systems of meaning and elaborate social relations. In this course, we will explore how language (intended both as the linguistic variety/ies of a group of people and as the human faculty of communication through a set of conventional signs—be they spoken or written words, gestures, signs, or inarticulate sounds) partakes in the making of our socio-cultural worlds. By looking closely at the unfolding of communicative interactions across a number of communities in the world, we will develop an understanding of the multiple intersections between language and culture and discuss the different theoretical and methodological approaches available for the analysis of the language-culture interface. One of the main goals of this enquiry into the universal and culture-specific properties of human communication will be to show how—far from being a mere device for the transmission of information—language plays an important role in mediating emotions, transmitting socio-cultural values,

organizing cognition, structuring experience, reproducing social structures, and enabling intersubjective recognition, as well as reproducing and challenging power relations.

## **Linguistic Anthropology**

**Aurora Donzelli**  
*Intermediate—Year*

Linguistic anthropology represents one of the most original contributions of the North American anthropological tradition to the discipline of anthropology as a whole. Although its practitioners consider it a field of research in its own right, they rarely make explicit the theoretical assumptions and the methodological principles that orient their work. This course aims at overcoming this setback by providing an account of the intellectual genealogy of linguistic anthropology. Through a series of theoretical readings and ethnographic descriptions, we will chart out intersections and disjunctures between linguistic anthropology and other disciplines within both the humanities and the social sciences. We will review some key notions within linguistic anthropological scholarship (such as agency, meaning, intention, culture, context, participation, language, competence, speech community, identity, performance, and ideology) and discuss how their meaning and usage has changed over the years. A special emphasis will be given to practicing and understanding the methodological specificities of linguistic anthropological work, which combines traditional ethnographic methods (such as interviewing and participant observation), with the use of audio-visual recording and transcription of spontaneous interaction. This methodological training will provide students with a deeper appreciation of the potential of these different techniques for grasping the nuances of communicative interaction and will enhance their awareness of the importance of linguistic details for the understanding of broader socio-cultural processes.

*With permission of instructor.*

## **Occult Economies in Sub-Saharan Africa**

**Intermediate—Spring**

Witchcraft, sorcery, and spirit possession have long been subjects of fascination to anthropologists, especially those working in sub-Saharan Africa. Drawing on both classic and contemporary ethnographic texts, this seminar will explore various anthropological approaches to these topics and ask why (and in what sense) this part of the world has seen such a dramatic rise in occult economies during the past several decades. Throughout the semester, we will look closely at how witchcraft, sorcery, and spirit possession relate to local cultures, politics, and social conditions, as well as to the history of colonization and recent trends in globalization.

Insisting that witches, spirits, and their mediums are part of global cultures and economies, we will ask questions about power and political agency that pertain to—but also expand beyond—the local. Paying special attention to the social and historical contexts in which witchcraft, sorcery, and spirit possession take place, we will also examine the ways in which gender, ethnicity, age, and class play into and define both belief and practice in a number of contexts.

## Representing Africa

### *Intermediate—Fall*

This seminar will address a number of important topics in sub-Saharan African history and culture, as well as help students build a critical framework for understanding some of the challenges that face the continent today. The seminar will also lead us to question the Western production of knowledge about Africa and rethink what we know about such categories as tradition, modernity, history, politics, power, and gender. Though the bulk of our reading will consist of ethnographic texts, we will also consult historical narratives, human-rights documents, primary sources, and fictional accounts touching on a broad range of topics, including sex work, mineral extraction, witchcraft and spirit possession, democracy, HIV/AIDS, and migration. Central to our class discussions will be the question of how Africa is framed and represented, not only in our readings but in Western discourses past and present.

## The Anthropology of Time and Memory

### *Open—Year*

The ways we perceive, reckon, and experience both time and memory are far from universal or static. Drawing on philosophical texts, critical social theory, literature, and ethnography, we will begin this yearlong seminar by exploring diverse time systems in pre-industrial Europe and nonwestern societies. We will look at calendars—Mayan, Dogon, Gregorian, French and Soviet Revolutionary, Hindu, and many others—as sociopolitical institutions and consider the gradual regularization and standardization of time that took place during the Industrial Revolution and up to the establishment of GMT. We will explore the contradictions that arise between linear progressive time and cyclical or ritual time, think about representations of time in narrative and rhetoric, and ask questions about the relative experience of time. Finally, we will consider the importance of time concepts in modernity and post-modernity as we engage with topics such as repetition, *durée*, Nietzsche's eternal return, and Mbembe's "time of entanglement." Turning, during the spring semester, to the question of memory, we will consider individual, collective, and national

remembering and forgetting and explore such themes as trauma, nostalgia, memorialization, false memory syndrome, ghosts and haunting, and the relationship between memory and history.

## 2010-2011

## Culture, Power, and Violence in Latin America

### *Deanna Barenboim*

#### *Open—Fall*

How does violence take shape in particular cultural worlds? What is the relationship between political repression and lived experience? How can the study of violence illuminate our understanding of what it means to be human? This course takes up questions of violence through the anthropological study of Latin America, a world region with a long history of civil wars, *coups d'états*, military interventions, guerrilla movements, and political repression. Considering violence as it relates to social and political power, the course explores overt and discreet violence in a variety of forms, including both the corporeal violence of genocide and torture, for instance, and the symbolic violence of ethnic conflict and state neglect. Through a close reading of selected ethnographic texts, we will gain insight into the permutations of violence and its particular formations and meanings in contemporary Central and South America. Our readings will address topics such as the aftermath of ethnic genocide in Guatemala; the legacy of torture and disappearances in Argentina; the politics of vigilance and surveillance in the militarized zone of the U.S.-Mexican border; and the everyday resonances of hunger, poverty, and infant death in Brazilian *favelas*. In addition to these anthropological writings, we will look to films, documentaries, historical accounts, and testimonials to enrich our discussion. Considering the confluences and consequences of violence portrayed in these accounts, we will attend, as well, to how violence is lived and experienced through engaging anthropological conceptualizations of suffering, trauma, subjectivity, and personhood. At the same time, we will explore a range of personal and collective responses to violence—such as social practices of commemoration, political engagements with human-rights struggles, and state-sponsored processes of truth and reconciliation—in order to understand the linkages between violence, suffering, and social justice.

## Engagements with Death and Mourning

### *Robert R. Desjarlais*

#### *Open—Spring*

"My mind turns to thoughts of death," drones the Seventh Dalai Lama in his 18th-century poem. In this course, our minds will similarly turn to thoughts of

death: to understandings of death and the afterlife and to experiences of aging, dying, and grief among diverse peoples in the world today. By looking closely at burial practices in rural Greece, bereavement in Indonesia, funeral rites in Hindu India, orientations to the afterlife among Tibetan Buddhists, mortuary cannibalism in the Amazonian rainforest, and new technologies of death in Japan and North America, we will develop a critical awareness of the interrelated social, cultural, psychological, and political underpinnings of human engagements with death. Through this inquiry into one of the most fundamental and important aspects of the human condition, students will also give serious thought to how they might best go about understanding and portraying the makings of life in societies other than their own. *Open to any interested student.*

## **First-Year Studies: Language, Culture, Performance and Interaction**

**Aurora Donzelli**  
**FYS**

The primary goal of this course is to understand the role of language in our lives. Far from being a mere device for the transmission of information, language plays an important role in mediating emotions, transmitting aesthetic and cultural values, organizing cognition, structuring experience, reproducing social structures, and enabling intersubjective recognition, as well as reproducing and challenging power relations. By looking closely at the unfolding of verbal and nonverbal interactions across a number of communities in the world, we will develop an understanding of the poetic and performative aspects of communication and gain critical insights into multiple intersections between language and culture. In addition to providing a discussion of the different theoretical and methodological approaches available for the analysis of the language-culture interface, the selected readings will cover topics such as bilingualism and code switching, the creativity of verbal art and verbal duels, the performance of identity, the structure of narrative and storytelling, language hegemony, language ideologies, political communication, and the aesthetics of persuasion.

## **Investigating Culture**

**Lecture, Open—Year**

What is culture, anyway? Is it something we have or something that we do? Can it be located in the way we think or the way we behave? This lecture will introduce students to the field of cultural anthropology. It will also teach students to think as anthropologists. It has been said that the aim of anthropology is to make the apparently strange and exotic seem comprehensible while, at the same time, raising questions about

behaviors that we might consider to be “natural” or “commonsensical.” By approaching this course as an anthropological experience, students will come to understand their own ideas about subjects such as time, space, family, food, and personhood to be culturally constructed and historically contingent. Together, we will consider patterns of behavior, systems of meaning, and structures of value in different societies and cultures throughout the world, including our own. Looking to ethnographic studies, as well as theoretical writing, we will visit a range of perspectives on topics such as race and ethnicity, globalization and capitalism, gender, religion, nationalism, power, representation, subjectivity and reflexivity, structure and agency, history, memory, and identity. *Open to any interested student.*

## **Language and Race**

**Aurora Donzelli**  
**Open—Spring**

This course explores the varied and sometimes surprising interconnections between language and race in multiple contexts and from different theoretical perspectives. The aim will be to show how language is a primary locus for the production of stereotypes, the performance of identity, the presentation of the self, and the reproduction (or the challenge) of social inequalities. We will scrutinize the role of linguistic ideologies in the colonial encounter, explore the interplay between language and the construction of hegemonic power, and examine the connection between communicative practices and the reproduction of racial discourse and racial stereotypes. We will also learn how languages operate as an index of distance, solidarity, and power among social groups and how social actors use language to craft representation of individual and collective “selves” in the course of communicative interactions. *Open to any interested student.*

## **Language and the Politics of Everyday Life**

**Aurora Donzelli**  
**Advanced—Fall**

Humans are characterized by their special capacity for social interaction through the use of language, the unique human ability that defines our species. Although the term “politics” often evokes in our minds large-scale processes involving local institutions, national governments, or international agencies, recent developments in the analysis of face-to-face interaction suggest that during our everyday lives we are often involved (although not always completely consciously) in subtle and complex interactional dynamics concerning our own and/or our interlocutors’ “identity” and footing. As many of us have experienced in our daily interactions, the way that we say something is often just as (or even more) important than what we

actually say. Students will be involved in conducting original research about the ethnography of everyday speech in settings of their choice, either individually or in small groups. A major goal will be the acquisition of skills in linguistic anthropology and ethnography, ranging from interviewing to participant observation, from the use of audio-visual recording to transcription of spontaneous interaction. By the end of the course, students will achieve a deeper appreciation of how speakers use language, as well as other semiotic resources (e.g., space, nonverbal behavior, cosmetics, and clothing), to construct meaning. Selected readings on the presentation of the self, face, politeness, stance, misunderstanding, vulnerability and risk, language ideology, indexicality, reported speech, and heteroglossia will enhance our awareness of the importance of linguistic details for the understanding of broader socio-cultural processes. *Advanced. Previous course work in anthropology or permission of the instructor required.*

## On Representing Indigenous Cultures: Latin America and Beyond

**Deanna Barenboim**

*Intermediate—Spring*

How do ideas about indigenous peoples shape cultural and national sensibilities in contemporary Latin America? What role do native identities play in global social movements? How do notions of cultural authenticity and autonomy figure in the discourse of indigenous rights? This course addresses postcolonial representations, performances, and politics of indigeneity—by indigenous people themselves, as well as by others—in such places as Guatemala, Mexico, Ecuador, Bolivia, Brazil, and the United States. Through a close look at ethnographic texts on this topic, we will investigate how perceptions about and participation by indigenous peoples have figured in nationalist campaigns, transnational trade agreements, educational reform, environmental advocacy, and efforts towards pluralism/multiculturalism in Latin America. Employing an anthropological lens, we will attend to notions of personhood, collectivity, community, autonomy, and heritage as these take shape in particular ideologies and discourses—such as pan-Mayanism, secular pluralism, cultural revitalization—and play out in specific sociopolitical and cultural contexts. Our course readings will explore how indigeneity is engaged in struggles such as the Zapatista resistance movement in Chiapas, Mexico; the pan-indigenous mobilization against environmental pollution in Ecuador; and efforts toward social justice in the aftermath of ethnic genocide against Maya peoples during Guatemala's civil war. We will attend to the role of globalization and transnational migration in emergent social movements, as well as new imaginings of indigenous identity. Finally, we will

contemplate the implications of the increasing presence of indigenous intellectuals as key actors in both academic and public debate.

*Intermediate.*

## Understanding Experience: Phenomenological Approaches in Anthropology

**Robert R. Desjarlais**

*Advanced—Spring*

How does a chronic illness affect a person's orientation to the everyday? What are the social and political forces that underpin life in a homeless shelter? What is the experiential world of a deaf person, a musician, a refugee, or a child at play? In an effort to answer these and like-minded questions, anthropologists in recent years have become increasingly interested in developing phenomenological accounts of particular lived realities in order to understand, and convey to others, the nuances and underpinnings of such realities in terms that more orthodox social or symbolic analyses cannot achieve. In this context, phenomenology entails an analytic method that works to understand and describe in words phenomena as they appear to the consciousnesses of certain peoples. The phenomena most often in question for anthropologists include the workings of time, perception, selfhood, language, bodies, suffering, and morality as they take form in particular lives within the context of any number of social, linguistic, and political forces. In this course, we will explore phenomenological approaches in anthropology by reading and discussing some of the most significant efforts along these lines. Each student will also try her or his hand at developing a phenomenological account of a specific social or subjective reality through a combination of interviewing, participant observation, and ethnographic writing. *Advanced. Open to sophomores and above.*

## 2011-2012

### Culture and Mental Illness

*Lecture, Open—Spring*

Does schizophrenia exist all over the world? Does depression look different in India than it does in the United States? Why was hysteria so widely diagnosed in England during the latter part of the 19th century, and why did this diagnosis seem to fade out of fashion? This semester-long lecture will explore the role played by culture in the experience, expression, definition, and treatment of mental illness. Together, we will explore mental illness as both a subjective (and yet culturally informed) experience and a social process. We will also examine the ways in which mental illness in the West has become both an object of knowledge and a site of

intervention. We will consider the strengths and weaknesses of the DSM classification system and critically assess what it refers to as “culture-bound syndromes,” such as koro, zar spirit possession, latah, nervios, and susto. What makes these more “culture-bound” than, say, Borderline Personality Disorder or PTSD? Finally, we will learn about a number of culturally informed modes of therapy and look closely at the doctor/patient (or healer/patient) encounter in a variety of settings.

## **Ethnographic Research and Writing**

**Robert R. Desjarlais**

*Advanced—Year*

Javanese shadow theatre, Bedouin love poems, and American street-corner societies are but a few of the cultural realities about which anthropologists have effectively studied and written. This is no easy task, given the substantial difficulties involved in understanding—and portraying through writing—the concerns, activities, and logic of lives other than one’s own. Students in this course will similarly try their hands at ethnographic research and writing. In the fall semester, each student will be asked to undertake an ethnographic research project in order to investigate the features of a specific social world, such as a homeless shelter, a religious festival, or dorm life at a liberal arts college. In the spring, she or he will craft a fully realized piece of ethnographic writing that conveys something of the features and dynamics of that world in lively, accurate, and comprehensive terms. Along the way, and with the help of anthropological writings that are either exceptional or experimental in nature, we will collectively think through some of the most important questions inherent in ethnographic projects, such as the use of field notes, the interlacing of theory and data, the role of dialogue and the author’s voice in ethnographic prose, and the ethical and political responsibilities that come with any attempt to understand and portray the lives of others.

## **Field Methods in the Study of Language and Culture**

**Aurora Donzelli**

*Intermediate—Fall*

The idea that language and culture are deeply interconnected seems almost commonsensical. But what are the actual mechanics of the interplay between these two key notions in the study of human experience? Linguistic anthropology offers an important contribution to the understanding of language as cultural practice, at the same time enhancing our awareness that language is a culturally loaded semiotic medium. This course will offer an overview of the rich scholarly tradition that examines the language/culture interface. We will discuss how social meanings and

cultural values are constructed and reproduced through prosaic and unsensational conversational practices. We will learn how people’s ideas and beliefs about language(s) can be mapped onto people and have profound implications in the life of a social group. We will scrutinize key issues in the study of endangered languages and learn how field linguists compile grammars of unknown languages spoken by only a few surviving speakers. We will see how the grammar of the specific languages that we speak shapes how we view the world and discover how language mediates perceptions of time, space, form, and matter. We will explore forms of lived experience such as music concerts, story telling, and dance and discover the culturally specific ways through which people engage with the images and sounds of a performance. In so doing, we will explore different practical approaches to ethnographic and linguistic fieldwork. Special emphasis will be given to practicing and understanding the methodological specificities of linguistic anthropological work, which combines traditional ethnographic methods (such as interviewing and participant-observation) with the use of audio-visual recording and transcription of spontaneous interaction. This methodological training will provide students with a deeper appreciation of the potential of these different techniques for grasping the nuances of communicative interaction and will enhance their awareness of the importance of linguistic details for the understanding of broader sociocultural processes.

## **Introduction to Anthropology: Debates, Controversies, and Re/visions**

*Lecture, Open—Fall*

The discipline of anthropology has housed a number of dramatic confrontations over the past several decades. Each of these debates, controversies, and re/visiory moments has made claims about—and has attempted to redefine—the appropriate theoretical and methodological parameters of the discipline. In this semester-long lecture, we will examine several of these more heated confrontations (including the Mead/Freeman debate, the Yanomami controversy, the Captain Cook debate, the Kalahari “San” debate, and responses to Turnbull’s contentious portrayal of the Mountain Ik) and use them as springboards for talking about anthropological practice and theory in more general terms. Through all of this, we will ask questions about the politics of representation, the ethics of fieldwork, and the authority of the anthropologist to speak “for a people.” Further, we will explore the relationship between theory, data, and explanation—and also consider how a single event can be interpreted in radically different ways. We will look to the publication of Malinowski’s diaries and Edward Said’s *Orientalism* as critical junctures in the discipline

and will discuss the profound impact that feminist theory and scholarship has had on both ethnographic research and writing.

## Language, Culture, and Performance

**Aurora Donzelli**

*Lecture, Open—Spring*

Language is such a ubiquitous and unavoidable component of our quotidian experience of the world that we are often inclined to take it for granted and to assume that it is just an external objective system of signs apt at enabling the transmission of information. The aim of this course is to encourage students to suspend what Edmund Husserl would call our “natural attitude” toward the way we engage with language in our everyday lives. By “bracketing” this naively taken for granted “natural standpoint,” we will be able to develop a deeper understanding of the multifaceted nature of human interaction and, hence, discover how humans constitute and, at the same time, are constituted by language. Through a series of readings, we will investigate language as a form of social action and discover the key role it plays in mediating emotions, transmitting aesthetic and cultural values, organizing cognition, structuring experience, reproducing social structures, enabling intersubjective recognition, as well as reproducing and challenging power relations. By looking closely at the unfolding of verbal and nonverbal interactions across a number of communities in the world, we will develop an understanding of the poetic and performative aspects of communication and gain critical insights into multiple intersections between language and culture. In addition to providing a discussion of the different theoretical and methodological approaches available for the analysis of the language-culture interface, the selected readings will cover topics such as bilingualism and codeswitching; the relation between language, sound, and images in performance; the creativity of verbal art and verbal duels; the performance of identity; the structure of narrative and storytelling, language hegemony, language ideologies, political communication; and the aesthetics of persuasion.

## Language and Race: Constructing the Self and Imagining the Other in the United States and Beyond

**Aurora Donzelli**

*Open—Fall*

“No, no, no, no. You gotta listen to the way people talk! You don’t say “affirmative” or some crap like that. You say “no problema.” [...] And if you want to shine them on, it’s “hasta la vista, baby.”

In this famous exchange from the 1991 blockbuster, *Terminator 2*, the young hero of the film was teaching his cyborg friend (Arnold Schwarzenegger) how to speak like a “real person.” These famous lines epitomize what has become the rather common conversational practice of interspersing English with Spanish (or Spanish-sounding words). In a similar fashion, the rising celebrity of hip-hop culture among US urban youth contributed to popularize linguistic practices that were once considered to be a prerogative of the African American speech community. Standard American English has gradually incorporated lexical items and expressions traditionally belonging to linguistic minorities. But what is the semiotic and cultural logic underlying these habits? What are the implications of these conversational practices for the reproduction of certain cultural representations of historically Spanish-speaking populations in the United States? How does the appropriation of African American English into vernacular English by white, upper-middle-class American teenagers partake in the production of certain forms of youth identities? How can we interpret these forms of cultural mimicry and appropriation? How does language operate as an index of distance, solidarity, and power among social groups? How do social actors use language to craft a racialized representation of individual and collective “selves” in colonial and postcolonial contexts? This course explores the varied and sometimes surprising interconnections between language and race. The aim will be to show how language is a primary locus for the production of stereotypes, the performance of identity, the presentation of the self, and the reproduction (or the challenge) of social inequalities. We will scrutinize the role of linguistic ideologies in the colonial encounter, explore the interplay between language and the construction of hegemonic power, and examine the connection between communicative practices and the reproduction of racial discourse and racial stereotypes. Moving away from the idea that racism is a phenomenon of the past or a prerogative of conservatives and uneducated others, this course constitutes a reading (and, hopefully, an experiential) journey through the interplay between language and race.

## Performing Culture

**Deanna Barenboim**

*Open—Spring*

This course takes up questions of cultural performance and how it intersects with the poetics and politics of ritual, heritage, and identity in Latin American, Latino/a, and indigenous contexts. Drawing upon a rich set of ethnographic examples, we will examine expressive culture in a variety of forms, including media, theatre, dance, music, storytelling, and art. In cultivating an anthropological sensibility of how culture is acted, enacted, and embodied, we will delve into topics such as

authenticity, representation, ethnicity, globalization, migration, and social change. Course readings will thus challenge us to grapple with a range of issues central to contemporary anthropological understandings of aesthetic practice and experience. We will look at topics such as the negotiation of Bolivian national and indigenous identities through musical performance, the innovative use of video technology by Kayapó to stake territorial claims in Brazil, and the new ways in which “folkloric” dance is employed by transborder Maya migrant communities as a form of resistance and empowerment. For their conference work, students will have the opportunity to conduct original ethnographic fieldwork on the topic of cultural performance.

## **Play: Psychological and Anthropological Perspectives**

**Robert R. Desjarlais, Barbara Schecter**  
*Intermediate—Spring*

“For many years, the conviction has grown upon me that civilization arises and unfolds in and as play”—Huizinga, *Homo Ludens*

Play is central to human experience—but what does it mean to play, and to what extent is play intrinsic to the human condition? In this course, we will consider play to be a central aspect of all imaginative life. We will look closely at the amazing complexity of human playworlds, both adult and child, and at the many aspects of our experiences through play. We will consider various domains of cultural life, such as ritual, theatre, improvisation, and storytelling—including the developmental origins in children of these modes of expression. Other topics will include therapeutic uses of play, the role of play in learning, play in virtual worlds, and the lifeworlds of competitive chess players. Throughout these inquiries, we will adopt an interdisciplinary perspective—charting the psychological, cultural, and social underpinnings of this imaginative realm. Students will be asked to choose a context in which to observe and/or participate in play with adults or children (such as at our Early Childhood Center or in another setting).

## **Political Language and Performance**

**Aurora Donzelli**  
*Advanced—Spring*

The involvement of humans with the world is essentially manifested in our being constantly engaged in performing actions, evaluating the potential results or regretting the actual outcomes of our own or other people’s deeds, assuming or disclaiming responsibility for the acts that we actually perform or imagine to perform, debating whether to act or refrain from action or act in a certain way or another. Language plays a key role in structuring and mediating humans’ political agency and moral reasoning. However, while language is often

understood as a mere device for the transmission of information, the term “politics” often evokes in our minds large-scale processes involving local institutions, national governments, or international agencies. This course would like to challenge these traditional representations of both language and politics and provide an understanding of how the micropolitical usages of language lie at the heart of human sociality. Through a series of readings and practical exercises, we will see how the way that we say something is often just as (or even more) important than what we actually say. We will discover how language is inherently political and how politics entails an important performative and aesthetic component. Throughout the semester, we will explore how, in our everyday lives, we are often (although not always completely consciously) involved in subtle and complex political dynamics concerning our own and/or our interlocutors’ “identity” and footing. We will seek to understand how speakers construct credibility and assertiveness while communicating among themselves and how they manage issues of agreement, affiliation, and disalignment in the moral domain of everyday conversation and political speechmaking. At the same time, we will examine how political discourse—both in the United States and in more “exotic” contexts—constitutes a form of verbal art that entails different aesthetics of persuasion and reproduces different moral philosophies and cultural values. Students will be involved in conducting original research, either individually or in small groups, about the ethnography of everyday speech and political discourse in settings of their choice. Through selected readings on linguistic construction of identity and the presentation of the political self, political performances and audience reactions, stance-taking, the construction of credibility and assertiveness, evidence and responsibility, vernacular moral and political philosophies, indexicality, reported speech, and heteroglossia, students will achieve a deeper appreciation of how speakers use language, as well as other semiotic resources (i.e., space, nonverbal behavior, cosmetics, and clothing), to construct meaning.

## **The Anthropology of Life Itself**

**Robert R. Desjarlais**  
*Open—Fall*

“Life is ecstasy,” wrote Emerson. This course will explore the intrigues and problematics of such a statement. What is life? What is a life? How do human beings value the gist of life (or not) in particular situations? In this course, we will consider these fundamental questions through the prism of anthropological inquiry. By delving into what life means for people in distinct cultural settings, how they perceive and engage with it and live it amongst others, we will be able get a better handle on the many social, biological, historical, and political dimensions of constructs of life—and death. In

particular, we will read a number of recent ethnographic and philosophical writings that take measure of the subject. We will consider bare life in zones of social abandonment in Brazil, ideas of well-being and existential dissatisfaction in Sierra Leone, the survival techniques of heroin addicts in San Francisco, the pull of suicide among Inuit youths, violence and memory in

India, and generative fashioning in the Nepal Himalayas. Along the way, we will give thought to some key writings by important theorists of life, such as Benedict de Spinoza, Michel Foucault, Giorgio Agamben, and Gilles Deleuze. In so doing, the course will offer students an intensive introduction to the field of sociocultural anthropology.

# Art History

## 2002-2003

### African Spaces: Architecture and Power South of the Sahara

*Dominique Malaquais*

*Advanced—Year*

Architecture, space, and landscape design as tools of power in societies south of the Sahara: these are the focus of this seminar. How do architectural planning, processes, forms, and ornamentation relate to socio-political and economic structures? How are buildings and spaces used to create and reinforce the power of ruling elites, to shape worldviews, perceptions of the past and present, approaches to history, modes of government, and socio-economic structures? These are some of the key questions we ask. Architectural practices used to challenge the rule of those in power — to resist, to rebel — are central as well. From buildings whose design and location openly defy the status quo, to graffiti, arson, and squatting, we consider how, over the past century, in key regions of Africa, the built environment has functioned as a site of resistance. These questions are considered in a variety of contexts, rural and urban, contemporary and past: the Bandigara Escarpment of Mali, home to the Dogon civilization; the Benin kingdom of Nigeria (thirteenth to twenty-first centuries); the Kuba kingdom of Congo in the nineteenth and early twentieth centuries; the chieftaincy of Bandjoun and related polities in the grasslands of West Cameroon today; the Malian city of Djenné, a center of Muslim erudition in the Middle Ages; Fang villages of Gabon in the twentieth century; Ndebele homesteads of the Southern Transvaal (South Africa), from the 1940s to the present. Contemporary urban sites studied include Bamako (Mali's capital), Douala (the economic capital of Cameroon), Johannesburg, and Cape Town. Readings stem from a wide variety of fields: anthropology and ethnography, history and art history, linguistics, economics, literary and music theory, dance and theatre studies, among others. Poetry and fiction play a central role as well.

### First-Year Studies: Africa: Art as Revolution, 1945-2003

*Dominique Malaquais*

*FYS*

Art has played a seminal role in Africa's twentieth and early twenty-first centuries' independence and liberation movements. Painting, sculpture, installation art, posters, textiles, photography, architecture, prose, poetry, music, film: from the mid-1940s to the present, these and other art forms have been central to the articulation and implementation of ideas about freedom and self-

determination. In the first semester, we focus on the years 1945-1970. We consider a core group of independence struggles: the overthrow of French rule in Cameroon and Algeria, Belgian colonial power in Congo, British imperialism in Ghana, and the nascent Afrikaner regime in 1950s South Africa. In each setting, we discuss the writings of key historical figures (Um Nyobé, Fanon, Lumumba, Nkrumah, Mandela) and explore approaches to political power, resistance, and national identity through the lens of diverse art forms. We consider also the euphoria of the immediate postindependence period. Here, urban spaces draw our attention: Bamako, the capital of Mali, which we explore through the eyes of Malian photographers active in the 1960s, and Lagos, Nigeria, where, in the early 1960s, fascinating developments were under way on the arts scene, in painting and sculpture, among playwrights, poets, and novelists. The second semester extends from the early 1970s to the present. We revisit the nations and cities considered in the first semester, from a different vantage point, addressing movements of resistance centered on the immense damage done in the name of European and American economic interests, with the help of dictatorial regimes sponsored by Western governments and corporations. Music as a weapon in demands for justice; poetry and theatre as sites of dissent; painting, sculpture, and installation art as vehicles for the articulation of pro-democracy movements: these modes of expression and the courage their production demands are our key foci. We close with an in-depth discussion of South Africa, 1990-2003.

### Greeks, Romans, and Barbarians

*David Castriota*

*Open—Year*

The study of the Greco-Roman world and its contribution to the evolution of ancient Mediterranean culture remains a primary object for classical studies. But what of the complex connections or interactions that existed between the urban cultures of the Greek and Roman world and the so-called "Barbarian" peoples? What does the term "Barbarian" imply as used by the Greeks and their Roman successors? Was it simply meant to denote "otherness," or did it signify notions of social and material cultural or technological inferiority as well? What did Greek culture in its formative stages borrow from its non-Greek neighbors? In the course of time, what technologies and modes of artistic statement did "Barbarian" peoples of Asia and Europe absorb from the classical world? How does consideration of such issues help us to gain a clearer understanding of the whole substance and rhetoric of Western cultural identity? The answers to these questions are neither simple nor easy. They require a careful look at the cultural dynamic between the Greeks, Etruscans, and Romans and an array of nonclassical peoples — Egyptians, Phoenicians, Persians, Scythians, Sarmatians,

Celts, and various Germanic tribes — through a vast panorama of space and time. We will approach the problem from the perspective of history, especially through such primary sources as the histories of Herodotos, Polybios, and Tacitus. But we will also consider the problem from the perspective of art history or archaeology, since it was in the domain of material culture — the art of ornament and display — that tribal peoples of Europe and Asia found their most important modes of statement and most tangible form of interaction with classical peoples to the west and south.

## **Impressionism/Post-Impressionism**

**Lee MacCormick Edwards**

*Open—Year*

This course will concentrate on the colorful visual world of the Impressionist painters, the roots of their style, the social and cultural environment of France in the final decades of the nineteenth century, the contrasting aesthetic of the Post-Impressionists, and the impact of these artists' vision on emergent Modernism. Why did the artists of the Impressionist movement break away from the stylistic tradition in which they had been trained? What was the significance of the modern life subject matter to which they were drawn? Why was their imagery considered so scandalous, indeed revolutionary? What caused the so-called crisis of Impressionism during the 1880s? How widespread was the influence of the Impressionist and Post-Impressionist styles? Sessions will include the new painting techniques of Turner, Constable, and Delacroix; the rebellion of Courbet; the conventions of landscape painting, and the Barbizon School; Monet, Renoir, and the birth of Impressionism; the cafes and nightlife of Manet and Degas; other contributors to the Impressionist exhibitions in Paris; the Post-Impressionist vision of Cézanne, Gauguin, and van Gogh; Impressionism and Post-Impressionism in America, Australia, England, Scandinavia, Italy, and the Netherlands; and the wondrous fantasy of the Symbolists, who flourished during the same period. Critical readings will include the works of Zola and Baudelaire. Students should be available for occasional museum and gallery visits and may take the course for one or both semesters.

## **Modern Architecture and Its Cities**

**Joseph C. Forte**

*Open—Year*

From the beginning of the Industrial Age to our postindustrial polycentric era, views of urban life and experiences of actual cities conditioned the sensibility and the production of many of the major figures in architecture. Monuments reflected diverse goals, populations, and political interests. Cities presented questions of diversity/homogeneity, hegemonic cultures/subcultures, individual/collective responsibility and will

that scholars, critics, architects, and urban planners struggled to express, problematize, or repudiate in built forms. In the first semester we will survey the major cities of the nineteenth century, the new industrial towns Manchester and Chicago, the new national capitals Berlin and Vienna, and the cities of plan and of progress — Paris and London — and try to understand the role of social and cultural forces, buildings, and architectural theory in shaping and in being shaped by their characters. Major movements to be explored will be William Morris and the English Arts and Crafts movement, the Chicago school, the historicism of the Baron Hausmann and Vienna Ringstrasse, and the radical architects of the Secession. Theorists of the new city like Camillo Sitte, Matta y Soria and the Linear City, and Ebenezer Howard and the Garden City will be studied both as imaginative independent thinkers and as respondents to social conditions and government policies. In the second semester figures treated include Frank Lloyd Wright and Broadacre City as well as the suburban Prairie House; Le Corbusier and the Plan Voisin for Paris; the Soviet deurbanists; Albert Speer and Berlin, the City of Power; and William Van Allen, Raymond Hood, Robert Moses and New York, the City of Capital. Postwar developments like Aldo Rossi and the City of Memory, Rem Koolhaas and the City Delirious, the British Estates Movement, Robert Venturi and the Postmodern City, the New Urbanism and the Strip City will also be studied. Readings for group conferences will include primary sources from Friedrich Engels and W. E. B. DuBois to Le Corbusier and Frank Lloyd Wright to contemporary theories of feminist design by Dolores Hayden and informational cities by Manuel Castells; independent projects can be done in selected cases second semester.

## **Modern Art and Art Since 1945**

**Judith Rodenbeck**

*Lecture, Open—Year*

This full-year course sequence will provide an introduction to the artistic practices that characterize Modernism and Postmodernism in the visual arts and to some of the critical debates around them. Taking a chronological approach, we will trace the twinned aspects of primitivism and mechanization, of figuration and abstraction, of autonomy and engagement, of purity and impurity, as they inflect the aesthetic production of key movements in the European and American contexts. Fall lectures will cover Modernism in the visual arts from Impressionism to the New York School. Work in the spring is addressed to critical and aesthetic problems that have dominated advanced artistic practices in the West since World War II, including the relationship of those problems to issues of "global" and "local" cultural production. We will be looking at a large number of artworks, authors, and texts, focusing our

critical energies on the debates that constitute and are constituted by those bodies of work. The emphasis is on covering a broad spectrum of art and critical ideas.

## **Picasso/Matisse**

**Judith Rodenbeck**

*Advanced—Fall*

In modern legend, the historical rivalry between Pablo Picasso and Henri Matisse dates to their mutual encounter on the rue de Fleurus in 1906 in the extraordinary milieu of Gertrude and Leo Stein's salon. The competition between the two, driven by ego as much as by style, can be approached from a number of directions and provides an enormously rich field for study based on the historical contiguity of competing formal strategies: e.g., in the early years, Matisse's Fauvism vs. Picasso's sentimental period, the large-scale ruptures with both those modes represented by "Le Bonheur de Vivre" and "Les Demoiselles D'Avignon," Matisse's development of the color field vs. Picasso's development of Cubism, the late works dealing with (Matisse's) blindness vs. (Picasso's) impotence. This is not a biographically focused course; rather, we will be examining the implications of the relative valuation of touch and sight, of distinct collage practices, of competing approaches to the monochrome, to line, and to color, as well as the primitivist problematics of Apollonian/Dionysian self-fashioning, using these two artists as our case material. Advanced seminar; prior study in art history, modernist literature, or twentieth-century art music strongly suggested; permission of instructor required.

## **Seventeenth-Century Art and Architecture: Problems in Style, Expression, and Society**

**Joseph C. Forte**

*Open—Year*

This class aims to integrate into a coherent historical narrative the diversity of aesthetic claims, national schools, religious professions, and individual styles that characterize the visual arts in seventeenth-century Europe. First semester will begin with the Italian grand manner of the sixteenth century and move quickly to the "reform" of paintings by the Italian artists, Caravaggio and the Carracci. The "Jesuit" style in the architecture of their mother church, Il Gesu, and naturalism of the reformers quickly affected the sculpture and architecture of Maderno, Bernini, and Borromini, the development of "Baroque" Rome under the Popes Urban VIII and Alexander VI. First semester will conclude with the study of the Flemish school, best characterized by the theatricality and brilliant colorism of Rubens and the Spanish school, represented by Zurbarán, Ribera, and Velázquez. Second semester, we will deal with the development of realistic painting in

Holland and the careers of Rembrandt and Vermeer. Finally, we will finish with France — the crossroads of north and south — with naturalistic painters like Georges de la Tour, classicists like Nicolas Poussin, and architectural ensembles like the Châteaux at Vaux-le-Vicomte and Versailles. After introductory discussions of the artistic and cultural heritage of each geographical area, or the theoretical frameworks of important masters' styles, based on contemporary sources, we will study a few representative works intensely through the use of slides. Issues addressed can be chronology and development of styles; the effect of patronage on style and meaning in a work; the effect of new religious, political, and social groups and institutions on the arts. Aesthetic issues will be raised: the disputed criteria for artistic excellence, contemplation vs. theatricality, epic vs. tragic, the natural vs. the perfect work, the architectural frame vs. the individual object. Conference work will be encouraged on works of art in New York museums, art, architecture, and theory from 1400 to the present, including women's patronage of cultural activities.

## **The Art of Islam**

**David Castriota**

*Open—Year*

To Western eyes, Islam has long appeared as the "other," as the traditional antithesis to Mediterranean and European culture. On religious grounds alone, however, this view is questionable, given the fact that Islam represents the culmination of a larger development beginning with Judaism and Christianity. From this perspective, the course will examine the evolution of Islamic art and society as a cognate or counterpart to late antique Rome, Byzantium, and medieval or Renaissance Europe. In the first semester, we will consider the factors and cultural forces that led to the rise of Islam and the formation of a distinctly Islamic art and architecture in the Umayyad and Abbasid Caliphates between the seventh and the tenth centuries A.D. In the second semester, we will look at the classic Islamic art of later periods, focusing on Seljuk and Ottoman Turkey as well as Persia and India in the Timurid, Safavid, and Mughal periods. We will consider all media, not only the great monuments but minor arts as well, with particular emphasis on textiles and ornament or decoration.

## **Theories of the Avant-Garde**

**Judith Rodenbeck**

*Advanced—Spring*

In its initial nineteenth-century usage, "avant-garde" was a military term, its sense of advance attack having revolutionary social implications. Though this political aspect was retained in certain artistic circles, "avant-garde" by the 1860s had already taken on a contradictory and to some extent incompatible set of

meanings, indicating a devotion either to artistic autonomy or to social engagement. These two projects, in their twined relations, form the spine of artistic modernism. This course will examine these competing models of artwork through specific cases drawn from nineteenth-, twentieth-, and twenty-first centuries practice. Reading will include primary sources and theoretical texts, with extended address to the theories elaborated by Renato Poggioli and Peter Bürger. Our aim is to develop a technical and contemporary understanding of the stakes, aims, drawbacks, and pragmatic uses of each position. Advanced seminar; prior modernist studies and permission of instructor required.

## 2003-2004

### Architectures of Exclusion: Prisons, Homelessness, Refugee Camps, Squatters' Movements

*Dominique Malaquais*

*Intermediate—Year*

How is exclusion constructed? How do contemporary societies punish those whom they deem deviant, dangerous, or simply unworthy? How is architecture used to effect such punishment? How do incarcerated women and men experience the spaces, rules, and daily routines of the prison? How are the mechanisms of the prison and spaces of the prison internalized by prisoners and by those who guard and visit them? What transformative effects do said mechanisms and spaces have? Can (and do) prisoners battle these effects? What is the nature of rebellion within prison walls? How is life lived in a refugee camp? How are space and place understood? What happens when the camp becomes "home"? How does one define the term home in such settings? How is the experience of leaving the camp lived? What happens after the camp? How does one build a home where there is no home whatsoever? How have different populations, under different conditions, regimes, and legal systems, responded to the challenge of homelessness? What are the nature, the politics, the dangers, and rewards of squatting? These questions are the focus of this course.

### Art and Myth in Ancient Greece

*David Castriota*

*Open—Year*

This course will examine the use of mythic imagery in the visual arts of the Greeks and peoples of ancient Italy from the eighth century B.C. to the later Roman Empire. Although concentrating on vase painting, wall painting, and sculpture, we will consider all media—both public and private. We will focus largely on problems of content or interpretation, with special attention to the role of patronage in the choice and

mode of presentation of the mythic themes. In order to appreciate the underlying cultural or religious significance of the myths and their visual expression, we will also examine the relation of the artworks to contemporary literature and the impact of significant historical events or trends. In the first semester we will examine the earlier Greek development from the Geometric to the Classical periods, focusing on the paradigmatic function of mythic narratives—especially the central conception of the hero and the role of the female in Greek religion and society. Discussions in the second semester will center on later Greek art and the adaptation of Greek myth in the art of the Etruscans and Romans. Class discussions will be based on assigned readings; conference work will address topics of particular interest to students.

### First-Year Studies: Modern Architecture and Its Cities

*Joseph C. Forte*

*FYS*

From the first Industrial Revolution to our postindustrial polycentric era, views of urban life and experiences of actual cities have conditioned the sensibility and the production of many of the major figures in architecture. Monuments reflected diverse goals, populations, and political interests. Cities presented questions of diversity/ homogeneity, hegemonic cultures/subcultures, and individual/collective responsibility and will that scholars, critics, architects, and urban planners struggled to express, problematize, or repudiate in built forms. In the first semester we will survey the major cities of the nineteenth century, the new industrial towns Manchester and Chicago, the new national capitals Berlin and Vienna, and the cities of plan and of "progress"—Paris and London—and try to understand the role of social and cultural forces, buildings, and architectural theory in shaping and in being shaped by their characters. Major movements to be explored will be William Morris and the English Arts and Crafts movement, the Chicago school, the historicism of the Baron Hausmann and Vienna Ringstrasse, and the radical architects of the Viennese Secession. Theorists of the new city like Camillo Sitte, Matta y Soria and the Linear City, and Ebenezer Howard and the Garden City will be studied both as utopian thinkers and as respondents to immediate social conditions and government policies. In the second semester figures treated include Frank Lloyd Wright and Broadacre City as well as the suburban Prairie House; Le Corbusier and the Plan Voisin for Paris; the Soviet deurbanists; Albert Speer and Berlin, the City of Power; and William Van Allen, Raymond Hood, Robert Moses and New York, the City of Capital. Postwar developments like Aldo Rossi and the City of Memory, Rem Koolhaas and the City Delirious, the British Estates Movement, Robert Venturi and the Postmodern City, the New Urbanism

and the Strip City will also be studied. Readings for group conferences will include primary sources from Friedrich Engels and W. E. B. DuBois to Le Corbusier and Frank Lloyd Wright to contemporary theories of feminist design by Dolores Hayden and informational cities by Manuel Castells. This is a course that tries to apply theory and to critique practice as modes of historical discourse. Thus course readings will come from a variety of sources: philosophical, critical, historical, and polemical.

## Photography: Histories and Theories

**Judith Rodenbeck**

*Open—Year*

This yearlong course will cover the history of photography from its contested invention in the early nineteenth century through the recent work of such artists as Cindy Sherman, Thomas Struth, and Andreas Gursky. From the beginning, debates have circulated around the “art” status of photography as a practice. We will also be looking at photography’s material histories (from “pencil of nature” through the development of the Leica to xerography and digitization) and at the practices and theoretical debates that have circulated through these histories. In the fall semester we will examine specific developments of the nineteenth and early twentieth century such as, for example, studio photography, photojournalism, and pictorialism. The spring semester will be devoted to twentieth-century photographic practices and criticism, with particular emphasis on three moments: the Soviet avant-garde, the Frankfurt School, and the contemporary aesthetic discourse.

## Representing: Art as Political Speech: Case Studies in Twentieth-Century Art

**Judith Rodenbeck**

*Open—Spring*

How and when do art and political activism coincide? What are the predicates for an effective and contemporary artistic practice on the part of nonmajority agents? Much of what is regarded as traditionally “political” art takes the form of Social Realism, a kind of art that uses a realist mode of representation to reflect current or wished-for social conditions. In taking up fundamentally conservative pictorial strategies, such work often undermines its own historical significance, no matter the radicality of its depicted content. This course will examine a set of case studies drawn from the American twentieth century in which the form as well as the content of art was understood to signify, in which form was understood to have political valence. Among the moments to be addressed are the debate between Alain Locke and W. E.

B. DuBois and the founding of the Harmon Foundation; the 1970’s projects Womanhouse and the Dinner Party; Robert Mapplethorpe’s “X Portfolio”; Richard Serra’s “Tilted Arc”; the curious position of Abstract Expressionism as both “communitistic” (according to a Michigan congressman) and as liberal democratic.

## Revolution to Romanticism: Art in the Era of Napoleon

**Lee MacCormick Edwards**

*Open—Fall*

While Napoleon’s political impact was extraordinary, his cultural legacy was equally dynamic and still has strong resonance today. This course will concentrate on two seemingly divergent styles which, nevertheless, were often intertwined—neo-Classicism and Romanticism. Neo-Classicism was the artistic style most favored by Napoleon, and it served to promote his republican ideals at the beginning of his career, and later, the aesthetic vision of his empire. His official painter, Jacques-Louis David, and David’s disciples and pupils such as Gros, Gérard, Girodet, and Ingres, helped to spread Napoleonic images of power far beyond French shores. How closely were art and the politics of the age entwined? How did artists employ the tools of propaganda? Why did the stylistic conflation of classical austerity and romantic fantasy occur? What was the significance of Napoleon’s global reach in the arts—painting, sculpture, architecture, decorative objects, and costume—among both his allies and his enemies? Sessions will include the roots of the classical revival in the late eighteenth century and the demise of Rococo style; David and the French Revolution; propaganda and caricature; Napoleon as military hero and the history of battle painting; the all-powerful Emperor and Goya’s images of dissent in Spain; Turner, Constable, and English art in the Napoleonic era; Runge, Friedrich, and the rise of German nationalism; Canova, Thorvaldsen, and monumental sculpture in Italy; Géricault and the fallen hero; and finally, the revolutionary vision of Delacroix and the romantic ideal.

## Roman Art and Cultural Transformation: Pagans, Jews, and Christians from the Age of Augustus to the Rise of Islam

**David Castriota**

*Open—Year*

Recent studies in the field of Roman art and history have come to stress the essence of the Roman experience as a constant process of self-reinvention. Once considered a derivative reiteration of the past, Roman culture now appears as a vital dialectic with the culture of the Greeks and the various other peoples that Rome came to include in its world empire. While most

of this new interest has focused on how Romans reinvented themselves in reaction to Greece, this course will expand the parameters of such an approach to include the Jews and the initially Jewish sect, the Christians, both of whom eventually provided the means for the final self-transformation of Rome into a new Christian imperium. We will focus on artistic monuments and on the ideology and rhetoric of Roman power. Our goal is to understand the greatest challenge that Rome ever faced—the absorption and redirection of Judeo-Christian principles that were fundamentally at odds with the theory and practice of Roman religion and political authority.

## The Art and Architecture of the Italian Renaissance

**Joseph C. Forte**

*Lecture—Year*

An in-depth survey of the major monuments of Italian art and architecture from 1300 to 1550. Equal emphasis will be given to the canon of art works by artists such as Giotto, Donatello, Brunelleschi, Botticelli, Leonardo da Vinci, and Michelangelo; to readings of major critics and historians of Italian art; and to the broader intellectual trends and social realities and movements that provide a context for our understanding the artist's and, to a lesser extent, the critics' creations. Thus, unified Italian churches will be juxtaposed with gender-segregated social practice, theories of genius with concepts of handicraft, pagan ideals with Christian rituals. Class papers will deal with developing a vocabulary for compositional analysis, critical issues in Italian intellectual and social history, and varied interpretive strategies, applied to works of visual art and culture. First semester features works from 1300 to 1480; second semester, art from 1480 to 1550. First-semester group conferences will be a close reading of texts surrounding Alberti's *On Painting*, the first polemical pamphlet about art in early modern history. In the second semester students will have the option of studying feminist criticism of Italian art or doing a conference project.

## Voices of Dissent: Politics, Dissidence, and Visual Culture in Twentieth-Century Africa

**Dominique Malaquais**

*Advanced—Year*

In the face of oppression, at war, from the streets, behind bars, and in exile, over the past one hundred years African artists and builders have spoken out, bearing witness and calling for change. More often than not, their voices have been stifled. The regimes they opposed have sought to silence them; the art market—galleries, museums, the canon, and its makers—has shunned them. This seminar brings them center stage. While its

primary foci are painting, sculpture, and the built environment, a wide range of other art forms are considered as well: theatre, dance, music, poetry, happenings, film, and video, among others.

Full descriptions of the courses may be found under the appropriate disciplines.

**Art and the Sacred in Medieval Civilization (p. 287), Religion in the Making of Europe (p. 293),**

## 2004-2005

### Ancient Albion—Art and Culture in the British Isles from Stonehenge to Sutton Hoo

**David Castriota**

*Open—Fall*

Given their position at the northwestern extreme of Europe, the art and culture of Britain and Ireland have often been described by the term "insular," in the sense of isolated, discrete, or peripheral, yet nothing could be further from the truth. No less than four Roman emperors spent time in Britain, and two came to power there. Indeed, throughout history cultural developments in the British Isles were intimately related to ideas and events on the European continent and the Mediterranean. Following this basic premise, the course will examine civilization in Britain and Ireland from the late Stone Age or Megalithic period, through the Bronze and Early Iron Ages with the coming of the Celts, down to late antiquity and the arrival of the Anglo-Saxons. At every turn we will consider interactions with the urban civilizations to the south and west—the early Aegean, Greece, and Rome—to discover that ancient Albion was an integral part of the political, religious, and economic forces that have shaped the art and history of Europe up to the present time.

### First-Year Studies: Thinking Art/ Works

**Judith Rodenbeck**

*FYS*

To the deceptively simple question "What is art?," the joke refrain has often been "I don't know, but I know it when I see it." This statement, in its apparent obduracy, betrays several fundamental insecurities. Leaving aside the aggressivity of its speaker, we might identify these through a series of questions: Is "art" a property particular to a given object or is it a product of the beholder's experience? How do we recognize it? What does it do, how does it work? Who makes it? Who experiences it? How and why? This first-year studies course traces the changes (and continuities) in the ways art has been thought about and through in Western tradition, from Plato to yesterday. Drawing on textual

sources from ancient Greece to the contemporary metropolis, we will ask what the visual arts might consist of and what their purposes might be. We will begin with the establishment of a common language with which to describe what it is we see when we look at works of art. Over the course of the year, we will attempt to articulate and to historicize—and, perhaps, to change—our own definitions of artwork, audience, purpose, etc.

## **From Grandeur to Lyricism: Chinese Art during the Song Dynasty (960-1279)**

**Shi-ye Liu**

*Open—Spring*

The Song dynasty occupies a special place in Chinese history, as its cultural performance maintained a high standard through the three centuries of its existence. In the art of painting in particular, Song masters displayed a whole spectrum of stylistic idioms from the monumental to the poetic on the one hand and from realism to abstraction on the other. The diversity and sophistication of Song art is, to a great extent, the consequence of the national tragedy in 1126 when a nomadic people took over north China and chased the native Chinese government to the south. The political and cultural relocation turned out to be a powerful stimulus to artistic development, resulting in the distinct, if not exactly contrasting, styles of the Northern Song and the Southern Song. This course examines Song art in different media such as painting, calligraphy, sculpture, and ceramics. The emphasis will be on painting, since Song painters formed the core of the classical tradition on which later Chinese artists drew. It is in Song art that we see for the first time the dialectics of realism versus anti-realism, the direct impact of intellectual trends on artistic creativity, and the imperial court's use of art to promote political causes. The issues we will explore in depth include the symbolism within and beyond representation, the influence of the north-south division, cultural as well as geographical, on artistic expression, the interaction between words and images, the relationship between style and subject matter, and the possible cross-media aesthetics in Song art.

Open to all interested students

## **Impressionism/Post- Impressionism/ Symbolism**

**Lee MacCormick Edwards**

*Open—Year*

This course will concentrate on the colorful visual world of the Impressionist painters, the roots of their style, the social and cultural environment of France in the final decades of the nineteenth century, the contrasting

aesthetic of the Post-Impressionists, and the impact of these artists' vision on Symbolism and emergent Modernism. Why did the artists of the Impressionist movement break away from the stylistic tradition in which they had been trained? What was the significance of the modern life subject matter to which they were drawn? Why was their imagery considered so scandalous, indeed revolutionary? What caused the so-called crisis of Impressionism during the 1880's? How widespread was the influence of the Impressionist and Post-Impressionist styles? Sessions will include the new painting techniques of Turner, Constable, and Delacroix; the rebellion of Courbet; the conventions of landscape painting and the Barbizon School; Monet, Renoir, and the birth of Impressionism; the cafes and nightlife of Manet and Degas; other contributors to the Impressionist exhibitions in Paris; the Post-Impressionist vision of Cézanne, Gauguin, and van Gogh; Bonnard, Vuillard, and the Nabis; Impressionism and Post-Impressionism in America, Australia, England, Scandinavia, Italy, and the Netherlands; and the wondrous fantasy of the Symbolist painters, who flourished during the same period. Critical readings will include the works of Baudelaire, Zola, and Mallarmé. Students should be available for occasional museum and gallery visits and may take the course for one or both semesters.

## **Modern Art and Art Since 1945**

**Judith Rodenbeck**

*Lecture, Open—Year*

This full-year course sequence provides an introduction to the artistic practices that characterize Modernism and Postmodernism in the visual arts and to some of the critical debates around them. Taking a chronological approach, we will trace the twinned aspects of primitivism and mechanization, of figuration and abstraction, of autonomy and engagement, of purity and impurity, as they reflect the aesthetic production of key movements in the European and American contexts. Fall lectures will cover Modernism in the visual arts from Impressionism to the New York School. Work in the spring is addressed to critical and aesthetic problems that have dominated advanced artistic practices in the West since World War II, including the tension between high art and the mass media, the problem of articulating historical memory in an abstract visual language, and issues of "global" and "local" cultural production. We will be looking at a large number of artworks, authors, and texts, focusing our critical energies on the debates that constitute and are constituted by those bodies of work. The emphasis in lectures is on covering a broad spectrum of art and critical ideas; group conferences are devoted to in-depth analyses of specific images and texts. *Open to any interested student.*

## Royal African Art: Kings and the Representation of Power

**Michelle Gilbert**

*Intermediate—Fall*

Kingships are linked to cosmology. They depend upon an ideology of rule and upon a set of beliefs about the person of a king: about his body corporeal and his body politic. As the epitome of the social system, the king represents an amalgam of time and space. But kings are not just symbols: they have power—as do queens and queen-mothers. And ritual is about power and is itself more or less political. We will study the topic of divine or sacred kingship with an emphasis on those that are still functioning in Africa and examine how the nature and power of kings are represented in art in various rites of kingship. We shall also consider, though in less detail, some kingships from other parts of the world.

## The Art and Architecture of Africa

**Michelle Gilbert**

*Open—Year*

In this yearlong course, our aim is to gain an understanding of the cultural depths, symbolic meanings, historical complexity, and dynamic transformations of sub-Saharan African art and architecture. We will decode the art of specific societies in order to see it as do those who produce and use it, and examine the historically particular and interactive nature of art to see how people create and contest representations of themselves through their art. We will ask: How are objects, masks, and space used in rites of passage? How is the body used as a metaphor for the house and village? How are cosmology, ethnicity, and art related? What happens when nomads settle? We will look at houses of God: shrines, tombs, and churches. We will view African films and videos with an eye to the social and cultural issues raised that are of concern to the societies to which these films speak. Finally, we will talk about art as property, the art market, and the representation of African art in museums, both in America and in Africa.

## The Art of Ancient Italy

**David Castriota**

*Open—Fall*

Politically, culturally, and artistically, the native people of ancient Italy maintained a unique relationship with their Greek neighbors. No other region was ever able to absorb Greek ideas so thoroughly and consistently, while also managing to preserve a unique cultural identity. Focusing on the visual arts, the course will examine this process in detail, beginning with the emergence of Etruscan and early Roman cultures of central and northern Italy and their relations with the Greek colonial settlements of southern Italy and Sicily, as well as with the Greek homelands to the east. We will also

look at the less well-known cultures of the Umbrians, the Picenes, the Veneti, and the Celts that coexisted and interacted with the early Etruscans and Romans. The course will culminate in the emergence of Rome and its empire as the ultimate heir and arbiter of Hellenic civilization.

## The Gems of Chinese Art

**Shi-ye Liu**

*Open—Year*

This course surveys the major monuments and artists in Chinese art from the height of the Bronze Age in the 13th century B.C.E. to the early 20th century. The end of the Tang dynasty in 907, a crucial turning point in Chinese history, will serve as the division of the course materials for the two semesters. Through the course of its long history, Chinese art expanded significantly in variety of form and media. It underwent radical shifts in stylistic and thematic preference due to stimuli both intrinsic and extrinsic to art. The works examined include bronze, painting, calligraphy, sculpture, architecture, and decorative arts. Primarily organized by dynastic chronology, the course focuses on select highlights of Chinese art. The goal is to grasp the richness and complexity of a series of monuments and masterpieces through in-depth discussions on related topics. We will take an interdisciplinary approach to explore the social and cultural contexts of artistic creativity as well as formal analyses of the objects. Besides writings on specific art works, the reading assignments include art theory, major trends in Chinese thought and religion, the interaction between art and literature, the socio-political currents conducive to the rise of certain arts, the permeation of elite and popular arts, and the ambiguity of the artist's status in China. The topics covered in this course have all been studied extensively, sometimes with conflicting conclusions. We will examine the existing theories on the arts, and speculate on the possibility of alternative interpretations based on different perspectives.

## The High Renaissance: Architecture, Painting, and Sculpture in Italy, 1480-1600

**Joseph C. Forte**

*Open—Year*

By drawing a mustache on a reproduction of the "Mona Lisa" in 1919, Marcel Duchamp tried through parody to express his complex relationship with the father of Italian High Renaissance painting, Leonardo da Vinci. Humor is, however, only one of many strategies for understanding the circumstances, issues, and discourses surrounding the visual culture of the Italian High Renaissance; another approach is to explore in detail the historical, social, aesthetic, and personal frames of the works of Leonardo, Michelangelo, Raphael, and

Titian. The first semester will deal with the works of the Florentine and Roman masters: Leonardo, Michelangelo, Raphael, Bramante, and others. The second will deal with the Northern Italian tradition, especially the Venetians: Giovanni Bellini, Giorgione, Titian, Tintoretto, Palladio, and Veronese. Unified Italian churches will be juxtaposed with gender-segregated social practice, theories of genius with concepts of handicraft, pagan ideals with Christian rituals. Other themes with the stylistics of Mannerism; the comparisons or paragon of poetry, painting, and sculpture; the development of the concept of genius in the sixteenth century; the relationship of art and poetry; the Reformation and the Catholic response; the Imperial Papacy and the Imperial Revival. Texts will include works on the philosophic and historical questions surrounding interpretation in the visual arts, primary and secondary sources on commissions, artists, and context, slide lectures geared to the readings that will hone visual acuity. Conference work can be done on European culture, art, or architecture from 1300-1800. Topics in feminist criticism, art theory, and technique welcomed.

## **The Silk Road: Transmission and Transformation of Cultural Artifact**

**Shi-ye Liu**

*Open—Fall*

This course examines the two-way traffic along the ancient Silk Road primarily from the 2nd century B.C.E. to the 8th century A.D. With China at the center, we will explore its interaction with India and Persia in the west and with Japan in the east. While the Silk Road profoundly reshaped Asian history in various aspects, we will be concerned with the production and transmission of art works by the diverse Eurasian cultures, focusing on a select group of objects that bear witness to this cross-cultural exchange such as cave-temples, paintings, sculptures, ceramics, and metalwork. It has been observed that the Chinese integrated certain foreign elements into their culture while rejecting others. The Japanese, on the other hand, had their own standard of selection, which differed from the Chinese. We will analyze a series of monuments and artifacts along the Silk Road to trace their formal transformation. Greater emphasis will be placed on the more controversial issues of interpreting this evolution through contextual studies, which examine the shifts of political power, the conflict between imported and indigenous religions, technological progress, and the intellectual trends in the native cultures. We will take a field trip to the exhibition "China: Dawn of a Golden Age, 200-750 AD," opening at the Metropolitan Museum of Art on October 12, 2004, which will complement our study in the classroom. The course is structured chronologically, ending with a summary (mainly textual) of the Silk

Road from the 13th to the 20th century, with emphasis on European explorers across the Eurasian steppes in the late 19th and early 20th century.

## **World Architecture and Urban Design: 1945-Present: Postwar, Postmodern, Post Theory**

**Joseph C. Forte**

*Intermediate—Year*

The theory and practice of architecture, the semantics, structure, and development of cities from 1945 to the present will be studied through close reading of primary and secondary texts, slide lectures, and discussion and site visits. Initial weeks will be spent developing familiarity with the assumptions and architects of High Modernism—Le Corbusier, Mies van der Rohe, Alvar Aalto—and the renegade organicists—Antoni Gaudí, Frank Lloyd Wright, Erich Mendelsohn. In the next weeks, we will cover the developing issues of monumentalities, spatialities, pop-technism, pomo-ornament, deconstructive constructionists, sustainable symbolists. Architects studied and situated will include Louis Kahn (United States), Arata Isozaki (Japan), Luis Barragán (Mexico), Zaha Hadid (United Kingdom and Iraq), Coop Himmelbau (Austria), and others. Cities to be used as case studies will be Tokyo and the Metabolists, Los Angeles and the Automobilitists, Paris and the Situationists, Brasília and the International Nationalists, New York and the post-September 11 Memorialists. Texts will include works by Gaston Bachelard, Michel Foucault, Aldo Rossi, Robert Venturi, Bernard Tschumi, Rem Koolhaas, Colin Rowe, Reyner Banham. Conference papers will be yearlong with intermittent reports to the group and a final presentation near term's end.

*Some background in urban studies, visual culture (art and film history), or modern literary theory preferable. With permission of the instructor.*

## **2005-2006**

### **African Art: Visualizing Power**

**Michelle Gilbert**

*Spring*

In this lecture class we shall make an in-depth examination of the art of a number of past and present societies in sub-Saharan Africa: we shall focus on art in life-cycle rites and as expressions of power—both secular and spiritual. This is not a survey, rather, we shall try to understand the art of specific societies as do those who produce and use it and try to gain a sense of the complex cultural meanings and the historical and dynamic transformation of African art. We will look at the symbolism and context of particular objects and concentrate on the way in which different societies construct the category of "art," recognizing that there

are groups for whom no such category exists, for whom art is such an embedded system as to be indistinguishable from any other. In group conferences certain broad theoretical problems concerning art as a cultural system will be raised; we will look at the role of the artist in Africa, at modes of display and representation of African art, and at current debates over cultural ownership and repatriation. There will be several trips to museums.

## **Art, Myth, and Ritual: Mostly in Africa**

**Michelle Gilbert**

*Advanced—Spring*

African art communicates, sometimes in oblique ways, knowledge about the everyday and the spirit worlds. Masks, divination objects, shrine sculpture, and royal regalia are all expressive and transformative objects. They represent and affirm society; they also transform terrible things. Rituals facilitate the transition of a person or group from one stage to another, from one world to another. In myth and in ritual objects, the natural and spiritual worlds, men and women, animals and spirits, the strange and the familiar, take on lives of their own in a compelling complexity. Ritual symbols are not just aesthetic; condensed expressions of authority, they contain built-in ambiguity. If we focus on art and the performative aspects of ritual, we are able to gain a more nuanced perspective of zones of stress, uncertainty, and power. In this class we shall consider the symbolism and social/political implications of rituals. How do rites and ritual objects communicate meaning about the structure of society? How are divisive statements made within ritual performances? What is the aesthetic and emotive appeal of indirection? What happens when imported ideas encounter local realities? We shall try to understand how the participants themselves view their own rites and ritual objects, and how the built-in ambiguity of ritual symbols makes them a safe medium for political aggression. To do this, we will examine the art, myth, and rituals of a number of societies in Africa and a few, for comparative purposes, from Oceania and the Americas.

## **British Art: Painting the Narrative, 1700-1910**

**Lee MacCormick Edwards**

*Open—Spring*

This course will examine the unique character of British art from the time of William Hogarth to the aesthetic climate of modernism at the beginning of World War I. A dramatic change in patronage of the arts and the growing importance of narrative in British painting caused an expansion in the choice of subject matter. Paintings of the period inspired by literature, theatre, history, and politics will be explored by examining

specific works of art and groups of artists. Sessions will include Hogarth and the English rococo; the heroic portraiture of Reynolds and Gainsborough; the visionary world of Blake and Fuseli; early landscape painting and the sporting picture; Turner and Constable; Victorian genre painting and the myth of "domestic bliss"; the Pre-Raphaelite rebellion and the Ruskinian ideal; social realism and images of poverty; later nineteenth-century trends of symbolism and the "problem picture"; the Idyllists and their vision of a preindustrial age; Whistler and the aesthetic movement; and British Impressionism and Bloomsbury. Parallels in Victorian American will also be discussed.

## **Dada and Surrealism**

**Judith Rodenbeck**

*Open—Year*

Two of the most legendary avant-garde artistic movements of the twentieth century, Dada and Surrealism continue to influence visual, literary, theatrical, and musical artistic production. This course will explore the histories of these movements, their aims, their successes and failures, and their enduring legacies. We will focus our examination largely through the motif of montage and will look at flat work, film, poetry, novels, plays, and music, as well as at the political analyses of the Dadas and Surrealists.

## **First-Year Studies: Art and Myth in the Ancient World**

**David Castriota**

*FYS*

In modern terms, myth has come to be commonly understood as the antithesis of history. Whereas history is taken as a reasoned, factual account of the past and how things came to be, myth appears to operate in the realm of fiction or fantasy. Myths may have the claim of venerable tradition, but they are no longer accepted as an accurate record of events. However, the ancient world made no such black- and-white distinctions. In antiquity, myth was accepted as early history. Its heroes were real, and their actions were thought to exemplify essential paradigms of political order and morality. Consequently, the course will apply a different approach in which myth is distinguished from history not by a truth test, but by virtue of its function as a means of cultural self-representation. We shall examine the myths of ancient Egypt, Mesopotamia, Greece, and Rome, both in their literary form and in various media of visual art. Throughout, our goal will be to understand the potency of these narratives as vehicles of social or cultural values and as tools of power legitimizing and justifying closely entwined notions of religious and political authority. The course will close by considering

how, in Late Antiquity, Christian narratives and ideologies in the literary and visual arts developed from the mythic traditions that preceded them.

## Greeks, Romans, and Barbarians

**David Castriota**

*Open—Year*

The study of the Greco-Roman world and its contribution to the evolution of ancient Mediterranean culture remains a primary object for classical studies. But what of the complex connections or interactions that existed between the urban cultures of the Greek and Roman world and the so-called “barbarian” peoples? What does the term “barbarian” imply as used by the Greeks and their Roman successors? Was it simply meant to denote “otherness,” or did it signify notions of social and material cultural or technological inferiority as well? What did Greek culture in its formative stages borrow from its non-Greek neighbors? In the course of time, what technologies and modes of artistic expression did “barbarian” peoples of Asia and Europe absorb from the classical world? How does consideration of such issues help us to gain a clearer understanding of the whole substance and rhetoric of Western cultural identity? The answers to these questions are neither simple nor easy. They require a careful look at the cultural dynamic between the Greeks, Etruscans, and Romans and an array of nonclassical peoples—Egyptians, Phoenicians, Persians, Scythians, Sarmatians, Celts, and various Germanic tribes—through a vast panorama of space and time. We will approach the problem from the perspective of history, especially through such primary sources as the histories of Herodotus, Polybios, and Tacitus. But we will also consider the problem from the perspective of art history or archaeology, since it was in the domain of material culture—the art of ornament and display—that tribal peoples of Europe and Asia found their most important modes of expression and most tangible form of interaction with classical peoples to the west and south.

## Revolution to Romanticism: Art in the Era of Napoleon

**Lee MacCormick Edwards**

*Open—Fall*

While Napoleon’s political impact was extraordinary, his cultural legacy was equally dynamic and still has strong resonance today. This course will concentrate on two seemingly divergent styles that, nevertheless, were often intertwined—neo-Classicism and Romanticism. Neo-Classicism was the artistic style most favored by Napoleon, and it served to promote his republican ideals at the beginning of his career, and later, the aesthetic vision of his empire. His official painter, Jacques-Louis David, and David’s disciples and pupils such as Gros,

Gérard, Girodet, and Ingres, helped to spread Napoleonic images of power far beyond French shores. How closely were art and the politics of the age entwined? How did artists employ the tools of propaganda? Why did the stylistic conflation of classical austerity and romantic fantasy occur? What was the significance of Napoleon’s global reach in the arts—painting, sculpture, architecture, decorative objects, and costume—among both his allies and his enemies? Sessions will include the roots of the classical revival in the late eighteenth century and the demise of Rococo style; David and the French Revolution; propaganda and caricature; Napoleon as military hero and the history of battle painting; the all-powerful Emperor and Goya’s images of dissent in Spain; Turner, Constable, and English art in the Napoleonic era; Runge, Friedrich, and the rise of German nationalism; Canova, Thorvaldsen, and monumental sculpture in Italy; Géricault and the fallen hero; and finally, the revolutionary vision of Delacroix and the Romantic ideal.

## The Art and Architecture of the Italian Renaissance

**Joseph C. Forte**

*Lecture, Open—Fall*

An in-depth survey of the major monuments of Italian art and architecture from 1300 to 1550. Equal emphasis will be given to the canon of artworks by artists such as Giotto, Donatello, Brunelleschi, Botticelli, Leonardo da Vinci, and Michelangelo; to readings of major critics and historians of Italian art; and to the broader intellectual trends and social realities and movements that provide a context for our understanding the artist’s and, to a lesser extent, the critics’ creations. Thus, unified Italian churches will be juxtaposed with gender-segregated social practice, theories of genius with concepts of handicraft, pagan ideals with Christian rituals. Class papers will deal with developing a vocabulary for compositional analysis, critical issues in Italian intellectual and social history, and varied interpretive strategies, applied to works of visual art and culture. Group conferences will be a close reading of texts surrounding the first polemical pamphlets about art in early modern history, Alberti’s *On Painting* and *On Architecture*, and will include works by Erwin Panofsky, Michael Baxandall, and Anthony Grafton.

*Open to any interested student.*

## To Look and To Read: Introduction to Art History and Its Methods

**Kent Minturn**

*Open—Year*

This seminar is designed to introduce students to the variety of methodological approaches that have been

used by art historians to interpret works of art. We will survey the major practices which have informed the study of visual art (Formalism, Iconography/ Iconology, Connoisseurship, Marxism, and Psychoanalysis, Feminism, and Structuralism/ Poststructuralism) through a rigorous analysis of texts by Aristotle, Pliny the Elder, Leon Battista Alberti, Giorgio Vasari, Giovanni Morelli, Sigmund Freud, Hubert Damsich, Immanuel Kant, T.J. Clark, Meyer Schapiro, Linda Nochlin, Laura Mulvey, Rosalind Krauss, and Homi Bhabha among others.

Students will be asked to look and to read; which is to say, for each methodological unit we will examine specific works by artists such as Jan van Eyck, Leonardo da Vinci, Edouard Manet, Jackson Pollock and Cindy Sherman. Students will be encouraged to hone their own critical skills and put traditional art historical methodologies to the test with the following questions in mind: Are these interpretive strategies still viable today, in our postmodern world? Should we discard older modes of interpreting works of art and replace them with all new approaches, or rather, should we simply augment and supplement canonical art history's methodologies with more timely concerns including, politics, gender issues, ideas about constructions of self, and multiculturalism?

## **Twentieth-Century Texture: Mechanical Transcription of the Real**

**Judith Rodenbeck**

*Advanced—Year*

Digital technology has indisputably affected the way we produce, distribute, and consume artworks. Today, more often than not when we take a picture, record a sound, or write a poem, it is notated in the lingua franca of a sequence of 0's and 1's. While optimists argue that these technologies revitalize traditional practices and present entirely new fields for artistic exploration, other critics have been less sanguine, noting that the very uniformity of the digital language inevitably reduces and even eliminates the textures specific to any given medium. For some critics, digitization has altered our relation to "the real." At issue in either position is the tension between form and content—precisely the tension that has sustained key modern debates in music, literature, and the visual arts. Understanding our twenty-first century position to be one of retrospection, this course will explore the notion of "texture" in advanced artistic practices of the twentieth century. Reading draws from Heidegger, Freud, Benjamin, Kafka, Beckett, Lacan, as well as from more current art historical analyses by Foster, Krauss, and others.

## **Visual Culture of the Harlem Renaissance**

**Camara Dia Holloway**

*Open—Spring*

This course serves as an introduction to the fine arts (painting, sculpture, graphic arts) and visual culture (photography, film, advertising, performance, and fashion) produced by people of African descent in America during the years between the two world wars. Like the writers who generated the literary movement known as the Harlem Renaissance, these black visual artists were called upon by the black leadership to invent a visual art capable of articulating African American identity, experience, and worldview. This course will consider the various ways that black artists responded to this mandate to create a Negro art. Artists examined include Aaron Douglas, Augusta Savage, Sargent Johnson, William H. Johnson, Archibald Motley, Charles Alston, James VanDerZee, Oscar Micheaux, Josephine Baker, and Paul Robeson. We will pay special attention to the key historiographic and methodological issues facing scholarship in this field and concentrate on developing the tools for future work in art history and/ or visual culture studies.

## **2006-2007**

## **African Art and Architecture**

**Michelle Gilbert**

*Open—Year*

In this yearlong course, our aim will be to gain an understanding of the cultural depths, symbolic meanings, historical complexity, and dynamic transformations of sub-Saharan African art and architecture. We will decode the art of specific societies in order to see it as do those who produce and use it and examine the historically particular and interactive nature of art to see how people create and contest representations of themselves through their art. We will ask the following: How are objects, masks, and space used in rites of passage? How is the body used as a metaphor for the house and village? How are cosmology, ethnicity, and art related? We will look at houses of God: shrines, tombs, and churches. We will view some African films and videos with an eye to the social and cultural issues raised that are of concern to the societies to which these films speak. Finally, we will talk about art as cultural property, the art market, and the representation of African art in museums, both in America and in Africa.

*Open to any interested student.*

## Art, Myth, and Ritual: Mostly in Africa

**Michelle Gilbert**  
*Spring*

African art communicates knowledge about the everyday and the spirit worlds, often in oblique ways. Masks, divination objects, shrine sculpture, and royal regalia are all transformative and expressive objects: they represent and affirm society; and they transform terrible things. Rituals facilitate the transition of a person or group from one stage to another, from one world to another. In myth and in ritual objects, the natural and spiritual worlds, men and women, animals and spirits, the strange and the familiar, take on lives of their own in a compelling complexity. Ritual symbols are not just aesthetic; condensed expressions of authority, they contain built-in ambiguity. If we focus on art and the performative aspects of ritual, we are able to gain a more nuanced perspective of zones of stress, uncertainty, and power. In this course, we shall ask the following: How do rites and ritual objects communicate meaning about the structure of society? How are divisive statements made within ritual performances? What is the aesthetic and emotive appeal of indirection? What happens when imported ideas encounter local realities? We shall try to understand how the participants themselves view their own rites and ritual objects and how the built-in ambiguity of ritual symbols makes them a safe medium for political aggression. To do this, we will examine art, myth, and ritual in a number of societies in Africa and, for comparative purposes, in Oceania and the Americas.

*Advanced.*

## Art in America

**Camara Dia Holloway**  
*Open—Year*

If it is true, as social historians of art claim, that art can reveal significant knowledge about the society that produced it, then what can art made in America tell us about the nation? The republic was formed during a period when the belief that the arts signaled the level of development that a civilization had attained was pervasive in the West. As the United States staked out its place in the geopolitical sphere, the perceived need for a national art that could demonstrate the nation's parity with the empire-building European nation-states was acute. With such important ramifications, the American audience has always been particularly vigilant regarding the nature of artistic production created and/or displayed in national, public forums. Cultural symbols circulating in the public sphere were expected to convey an appropriate and ennobling reflection of the nation. This course will examine works of art (painting, sculpture, graphic art, and occasionally architecture and photography) produced in accordance with the norms of

the Western fine arts tradition. We will consider how American artists adapted those conventions to develop an artistic language that responded to the demands of national and their own personal artistic ambitions. How was the nation envisioned? What were its professed ideals, and how were those values articulated? How did the nation negotiate the presence of peoples denied membership in the body politic? The fall semester will cover the late eighteenth and nineteenth centuries. The spring semester will address the twentieth century.

*Open to any interested student.*

## Consuming Architecture: Economics, Identity, and Control in the Built Environment

**Joseph C. Forte**  
*Advanced—Year*

An unforeseen consequence of the Industrial Revolution was the creation in the late nineteenth century of a new social and cultural classification, the consumer. Consumers could be defined as experiencing newly minted and profoundly problematic ideals of democratic access versus legal and social segregation, of group consensus versus individual choice, of manipulated versus free preference in culture and thus in urban planning, architecture, and design. In short, economics was seen to form identity, consumption to represent the self. First, the course will use architects/builders, painters, and writers both Continental and Colonial to provide an overview of how consumption was viewed historically in Late Medieval and Early Modern Europe. The Colonial dilemma will be viewed through the analysis of Monticello, Thomas Jefferson's home, temple of reason and center for a liberal slave economy. Next new forms, the department store, the public theatre, etc., will be studied along with the growth of the new capitals of commerce: London, New York, and Chicago. The role of consumption will be explored in the English and American Arts and Crafts Movement and in the notion of women in Art Nouveau as muse and consumer, mediating masculine roles of provider and producer and traditional feminine tasks as mother and wife. The role of the ideology and the effect of war and depression will be the focus of the second part of the course with emphasis on the growth of consumer theory as a derivative of social sciences applied to marketing and retail and the evolution of Economic Man as an antidote to the fractious reality of social class and competing political systems. Final lectures will be spent specifically on postwar phenomena, the growth of the suburbs and the shopping mall, the urban response to suburban dislocation, the notion of nonalienated production, style as purpose (Postmodernism?), the evolution of the festival city, new urbanism and the machine for buying in the work of the architects as varied as Victor Gruen, Richard Neutra,

Walter Gropius, Alvar Aalto, Walter Lapidus and John Portman, Philip Johnson, Hans Hollein, Arquitectonica, and Rem Koolhaas. Readings in history and theory, from Alberti's *De Familia* (*On Family Management*), Georg Simmel "On Jewelry" to Rem Koolhaas, *Harvard Design School Guide to Shopping*; essays by Kenneth Jackson, Dell Upton, Gwendolyn Wright, and Michael Sorkin; and museum exhibitions and catalogues such as *Art and the Empire City: New York, 1825-1861* and *Design Life Now, 2003-2006* will be studied. Design projects as conference work will be encouraged when coordinated with Claudia Hart's course, Virtual Architecture Using Maya. Participation in two-day residency by design theorist Victor Margolin in the fall and in a lecture series in the spring will be obligatory. Reading journal, three class projects per term, and class reports on conference work are required.

*Advanced. Students from social science are encouraged to interview.*

## **East vs. West: Europe, the Mediterranean, and Western Asia from Alexander the Great to the Fall of Constantinople**

**David Castriota**

*Lecture, Open—Year*

Historically, competition or conflict between the European or Mediterranean West and the regions of the Middle East has been seen as a struggle between Christian and Muslim worlds, with roots in the era of the Crusades whose precedent and implications reach into the present time. While this course will focus extensively on the medieval period, it seeks to do so by situating the relations between Christian Europe and the Muslim world within a larger context, as the result of geopolitical patterns that long antedated the emergence of Christianity or Islam. In the fall, the course will begin with the Greek invasion of the Near East under Alexander as a war of retribution for the Persian invasion of Greece over a century earlier. We will consider how the political structure and culture of the multiethnic Hellenistic Greek kingdoms emerged from the wreckage of the Persian Empire and how Rome subsequently built on Hellenistic Greek experience and conflict with the Near East in establishing its empire. We will examine the emergence of Christianity as an example of a Roman or Western response to an originally Eastern religion, and, conversely, the emergence of the Islamic faith and its new empire as an Eastern challenge to the Christianized Roman Empire of Late Antiquity. In the spring, we will see how this approach affords a very different view of the Crusades and the battle for the Holy Land as the outgrowth of longstanding cultural and political interactions or competitions that transcend religious faith and doctrine. The course will look at Christian and Muslim cultural

relations in Spain and then close by examining the rise of the Ottoman Turkish Empire, which originated as a Muslim regime in Eastern Europe, becoming a major power in Asia only after it had conquered the remaining symbol of the old Christian Roman Empire, Constantinople in 1453. We will consider primary historical and literary sources as well as major artistic monuments.

*Open to any interested student.*

## **First-Year Studies: Thinking Architectural Texts**

**Joseph C. Forte**

*FYS*

The question of architecture is the question of how human culture forms and informs the built environment. Yet the definition of this most practical of arts is anything but self-evident. Is "architecture" a property particular to a given object or a product of the beholder's experience? What does it do, and how does it work? Who makes it? Who experiences it? In short, we examine the how and why of this most social of arts, this most artistic of societal endeavors. This first-year studies course traces the changes (and continuities) in the ways architecture has been thought about in and through the Western tradition, from Plato to yesterday. Drawing on textual sources from ancient Greece to the contemporary metropolis, we will ask what architecture might consist of and what its purposes might be. We will begin with the establishment of a common language with which to describe what it is we see when we look at buildings. Over the course of the year, we will attempt to articulate and to historicize—and, perhaps, to change—our own definitions of artwork, audience, purpose, etc. Readings will include primary sources, critical essays, historical texts, and philosophical engagements with questions of function, beauty, order, and history. Assignments will deal with analyses of both urban forms and individual buildings, social questions and aesthetic ideals and will be geared both to the thinking artist and the artistic thinker.

## **Pax Romana: Rome from the Late Republic to Marcus Aurelius**

**David Castriota**

*Fall*

Traditionally, the art and culture of imperial Rome have been seen as a derivative extension of classical Greek civilization, interesting primarily for the wealth and extent of its production and for determining the final form in which the classical tradition was handed down to Western posterity. This course seeks to give such an approach a different twist—to see the Roman development as Greek culture under new management, a process in which the Romans reinvented themselves

in response to the world they inherited or appropriated from the Greeks. The course will examine the evidence of literature, military, and political history as well as major artistic monuments, tracing the Roman response to Greece from its origins in the Late Roman Republic in the second century B.C. down through the prosperous second century A.D., when the concept "Greco-Roman" had become a cultural reality.

*Open to any interested student.*

## **Royal African Art: Kings and the Representation of Power**

**Michelle Gilbert**

**Intermediate—Fall**

In this course, we will explore "divine kingship" in Africa and how it is represented in art and architecture. According to A. M. Hocart, "The first kings were dead kings." Maybe not. But the fact that kings die has, as Frazer noted, almost everywhere been seen as a problem. Medieval English jurists attempted to come to terms with the fact that royal bodies are mortal by means of the doctrine of the "king's two bodies." Gandamyths address the origins of death and the possibility, for kings, of overcoming it by killing others. Royal installation rites (which for obvious reasons tend to coincide with royal funerals) have thus been a constant foci of studies of African kingship. For the first third of the semester, we will focus on issues concerning the ritualization of power in Africa. This is the theoretical background for the remainder of the semester. We will ask a series of questions about the nature of power and authority in human society, the relation between creation and destruction in the reproduction of the social order, and the meaning of such terms as hierarchy, violence, and the state. The remainder of the semester will focus specifically on the art and architecture of a half dozen African kingdoms. We will examine how buildings and spaces reveal their meanings by their use in rites, ceremonies, and everyday life; how art objects delineate both physically and conceptually particular locales and statuses in the social world; and how they mark off spaces that are linked to an invisible realm and thus enable people to transcend their bodies and negotiate with that realm.

*Intermediate. Sophomores, juniors, and seniors.*

## **The Fall of the Roman Empire: Rome from the Soldier Emperors to the Barbarian Invasions**

**David Castriota**

**Spring**

The fall of the Roman Empire was not an event, but a process, one that unfolded slowly over several centuries. This course will examine how Rome went from a period

of unquestioned power and prosperity in the late second century A.D. into an era of economic, political, and military instability that resulted in a steady decline, punctuated by periodic revivals that ultimately failed. We will examine the evidence of literature, military and political history, and major artistic monuments. The course will focus on the root causes of this decline in Roman military and economic policy, in relentless pressure from barbarian Europe, and in competition with the neighboring Persian Empire. We will also consider the emergency of Christianity, not so much as a cause or symptom of decline, but as the cultural process through which the Romans reinvented themselves one last time.

*Open to any interested student.*

## **The World of Impressionism: Its Origin and Influence**

**Lee MacCormick Edwards**

**Open—Fall**

This course will concentrate on the shimmering visual world of the Impressionist painters, the roots of their style, the social and cultural environment of France in the era that spawned Impressionism, and the impact of these artists' vision on emergent Modernism. Why did the artists of the Impressionist movement break away from the stylistic tradition in which they had been trained? What was the significance of the modern life subject matter to which they were drawn? Why was their imagery considered so scandalous, indeed revolutionary? What caused the so-called crisis of Impressionism during the 1880's? How widespread was the influence of the Impressionist style? We shall travel from the new painting techniques of Turner, Constable, and Delacroix; include the rebellion of Courbet, the conventions of landscape painting, and the Barbizon School; Monet, Renoir, and the birth of Impressionism; the cafes and nightlife of Manet and Degas; other contributors to the Impressionist exhibitions in Paris; Impressionism in America, Australia, England, Scandinavia, Italy, and the Netherlands; and the emergence of Post-Impressionism in the art of Cézanne, Gauguin, and van Gogh.

*Open to any interested student.*

## **2007-2008**

## **African Art: Images of Transformation**

**Michelle Gilbert**

**Open—Spring**

In this seminar, we will examine in depth the art of a number of African societies and focus on art that is used in rites of passage to mark transitions from one status or condition to another. We will examine art objects used

in initiation rites that celebrate one's movement from childhood to adult. We will look at how an ordinary person becomes (and remains) a sacred king. Finally we will analyze the performance of weddings and funerals to see how they make use of space and architecture. In these ways, we will try to gain a sense of the complex cultural meanings, the ambiguity and expressive power, and the dynamic transformation of past and present African art.

## **Ancient Albion—Art and Culture in the British Isles from Stonehenge to the Viking Invasions**

**David Castriota**

*Open—Year*

Given their geographical setting at the northwestern extreme of Europe, the arts and cultures of "Albion," or Britain and Ireland, have often been described by the term "insular" in the sense of isolated, discrete, or peripheral, yet nothing could be further from the truth. No less than six Roman emperors spent time in Britain, and four came to power there. To a great extent, Irish clerics were responsible for the survival of classical learning during the Dark Ages. Indeed, throughout history cultural developments in the British Isles were intimately related to ideas and events on the European Continent and the Mediterranean. Following this basic premise, in the fall semester the course will examine civilization in Britain and Ireland from the late Stone Age or Megalithic period, through the Bronze and Early Iron Ages, to the coming of the Celts and the Roman conquest. In the spring, we will focus on later Roman Britain, Irish monasticism, and the emergence of Anglo-Saxon culture down to the arrival of the Vikings. At every turn, we will consider interactions with the urban civilizations to the south and west—the early Aegean, Greece, Rome, and the early medieval Continent—to discover that Albion was an integral part of the political, religious, and economic forces that have shaped the art and history of Europe up to the present time.

## **Christianity and the Roman Empire**

**Cameron C. Afzal, David Castriota**

*Open—Year*

Roman culture has traditionally been studied for its capacity to absorb and transform the ideas and beliefs of others, most notably those of the Greeks. This course, however, seeks to examine the interaction between traditional Greco-Roman religious belief or ideology and various religious movements within Judaism from the late Hellenistic period onward. Judaism of this period was itself complex and diverse, including the Pharisees, Sadducees, and breakaway groups like the Essenes, as well as the messianic movement that eventually produced Christianity. The course will consider such

developments against the background of Hellenistic Greek and Roman imperial religion and ruler glorification, various forms of Judaism in the Second Temple period, eventually focusing on the transition of Christianity from its initially Jewish setting into a movement that spread to peoples throughout the Roman Empire. We will study the Jesus movement, the spread of the Church under Paul, and the development of early Christian church institutions, doctrine, and theology as an evermore significant component of Greco-Roman culture, increasingly divergent from its Hellenistic Jewish origins, in the first Christian centuries. The course will conclude with the imperialization of Christianity as it became the dominant religion and ideology of a new Christian Roman empire under Constantine. Though focusing extensively on historical and religious texts, the course will also examine the evidence of artistic monuments.

## **Critical Models in Art and Theory, 1965 to the Present**

**Eva Diaz**

*Advanced—Spring*

This course seeks to consider the interrelationship between contemporary art and critical theory. Taking up methodologies of theory elaborated over the past decades such as post-structuralism, psychoanalytic theory, post-colonialism, and critical modernist studies, this course will re-examine art practice since 1965, institutional critique most centrally, in the light of its close connections to theory. Looking closely at the careers of artists such as Hans Haacke, Martha Rosler, Michael Asher, Mark Dion, Isaac Julien, and Andrea Fraser, particular attention will be paid to the function of theory in (post) modernist art discourse and to critical evaluations of the role of institutions in the fields of political theory, literary criticism, cultural geography, and cultural history.

## **Early Modern Art**

**Ruben Cordova**

*Open—Year*

The early 20th century was a period of extraordinary innovation in the arts. The Fall semester class treats the first quarter of the 20th Century, beginning with the late works of Paul Cézanne, whose strange, awkward paintings exerted an extraordinary influence over divergent movements, including Fauvism and Cubism. The phenomenon of Primitivism will be a central issue treated by this class, especially in the work of Henri Matisse, Georges Braque, and Pablo Picasso. Issues include the appropriation by European artists of forms taken from African and Oceanic cultures, as well as engagement with non-canonical work such as paintings by the naïve European artist Henri Rousseau, eccentric predecessors of Modernism such as El Greco, and various

forms of archaic European art. Authors include T.J. Clark, Hal Foster, William Rubin, and Thomas McEvilly. Other featured artists and movements include Paul Gauguin, Piet Mondrian, Italian Futurism, Russian Constructivism, and Dada. The Spring semester class treats the second quarter of the 20th Century, emphasizing Surrealism, from André Breton's First Surrealist Manifesto to the early works of Jackson Pollock.

## **First-Year Studies: Thinking Art/ Works**

**Judith Rodenbeck**

*FYS*

To the deceptively simple question, "What is art?" the refrain has often been, "I don't know, but I know it when I see it." This statement, in its apparent obduracy, betrays several fundamental insecurities. Leaving aside its aggressivity, we might identify these insecurities through a series of questions: Is "art" a property particular to a given object, or is it a product of the beholder's experience? How do we recognize it? What does it do, how does it work? Who makes it? Who experiences it? How and why? This first-year studies course traces the continuities and the changes in the ways art has been thought about and through in Western tradition, from Plato to yesterday. Drawing on textual sources from ancient Greece to the contemporary metropolis, we will ask what the visual arts might consist of and what their purposes might be. We will begin with the establishment of a common language with which to describe what it is we see when we look at works of art. Over the course of the year, we will attempt to articulate and to historicize—and, perhaps, to change—our own definitions of artwork, audience, purpose, etc. In the second semester, we will focus on the modern and the contemporary, with special units devoted to transnational models and critiques of modernism and Western aesthetics.

## **Mexico: Art and Culture**

**Ruben Cordova**

*Open—Fall*

The opposing belief systems of the leading imperial powers of the Old and New worlds collided with one another in Mexico. The violent consequences of this world historical encounter between the Spanish and the Aztecs left a legacy of tragedy, beauty, and magnificence, and gave rise to modern Mexico. This class provides an introduction to the Aztecs, including their principal gods, mythologies and religious practices, such as human sacrifice. Emphasis is placed on the post-1910 Revolutionary period, during which time Nationalist sentiments led to a rejection of Eurocentrism. This resulted in a positive reappraisal of indigenous civilizations and in a valorization of mestizaje (racial

mixing) and popular traditions. After looking at works by the Olmecs and the Aztecs, we turn to the printmaker José Guadalupe Posada, who was retrospectively repositioned as the progenitor of Modern Mexican art. Featured artists include the muralists Jean Charlot, Diego Rivera, José Clemente Orozco, and David Alfaro Siqueiros, as well as the innovative modernism of Frida Kahlo and María Izquierdo. We shall also examine Day of the Dead as a popular tradition in the context of highly contentious nationalist debates. Authors include Jean Charlot, Diego Rivera, Peter Wollen, Laura Mulvey, and Dawn Ades.

## **Revolution to Romanticism: Art in the Era of Napoleon**

**Lee MacCormick Edwards**

*Open—Fall*

While Napoleon's political impact was extraordinary, his cultural legacy was equally dynamic and still has strong resonance today. This course will concentrate on two seemingly divergent styles that, nevertheless, were often intertwined—neo-Classicism and Romanticism. Neo-classicism was the artistic style most favored by Napoleon, and it served to promote his republican ideals at the beginning of his career, and later, the aesthetic vision of his empire. His official painter, Jacques-Louis David, and David's disciples and pupils such as Gros, Gérard, Girodet, and Ingres, helped to spread Napoleonic images of power far beyond French shores. How closely were art and the politics of the age entwined? How did artists employ the tools of propaganda? Why did the stylistic conflation of classical austerity and romantic fantasy occur? What was the significance of Napoleon's global reach in the arts—painting, sculpture, architecture, decorative objects, and costume—among both his allies and his enemies? Sessions will include the roots of the classical revival in the late eighteenth century and the demise of rococo style; David and the French Revolution; propaganda and caricature; Napoleon as military hero and the history of battle painting; the all-powerful emperor and Goya's images of dissent in Spain; Turner, Constable, and English art in the Napoleonic era; Runge, Friedrich, and the rise of German nationalism; Canova, Thorvaldsen, and monumental sculpture in Italy; Géricault and the fallen hero; and finally, the revolutionary vision of Delacroix and the Romantic ideal.

## **The Art and Architecture of the Italian Renaissance**

**Joseph C. Forte**

*Open—Year*

An in-depth survey of the major monuments of Italian art and architecture from 1300 to 1550. Equal emphasis will be given to the canon of art works by artists such as

Giotto, Donatello, Brunelleschi, Botticelli, Leonardo da Vinci, and Michelangelo; to readings of major critics and historians of Italian art; and to the broader intellectual trends and social realities and movements that provide a context for our understanding the artist's and, to a lesser extent, the critics' creations. Thus, unified Italian churches will be juxtaposed with gender-segregated social practice, theories of genius with concepts of handicraft, pagan ideals with Christian rituals. The first semester will focus on a close reading of texts surrounding the first polemical pamphlets about art in early modern history, Alberti's *On Painting* and *On Architecture*, and will include works by Erwin Panofsky, Michael Baxandall, and Anthony Grafton. The second semester will engage the intellectual and aesthetic debates surrounding Michelangelo as genius, model, courtier, and outcast. Class papers will deal with developing a vocabulary for compositional analysis, critical issues in Italian intellectual and social history, and varied interpretive strategies, applied to works of visual art and culture. Conference projects can engage from a variety of critical and historical viewpoints, European art and architecture from 1300 to 1800, and relevant historical and literary issues from 1400 to 1700.

## **World Architecture and Urban Design: 1945-Present: Postwar, Postmodern, Post-Theory**

**Joseph C. Forte**

*Lecture, Open—Year*

The theory and practice, semantics and structure of architecture and the development of cities from 1945 to the present will be studied through close reading of primary and secondary texts, slide lectures, and discussions. Initial weeks will be spent developing familiarity with the assumptions and architects of High Modernism—Le Corbusier, Mies van der Rohe, Alvar Aalto—and the organicists—Antoni Gaudí, Frank Lloyd Wright, Erich Mendelsohn. In the next weeks, we will cover the developing issues of monumentalities, spatialities, pop-technism, pomo-ornament, deconstructive constructionists, and sustainable symbolists. Architects studied and situated will include Louis Kahn (U.S.), Arata Isozaki (Japan), Luis Barragan (Mexico), Zaha Hadid (U.K. and Iraq), Coop Himmelblau (Austria), and others. Emphasis will be equally on individual achievements and the problematic circumstances of cultural production and modern capital. Cities to be used as case studies will be Berlin and the Cold Warriors, Tokyo and the Metabolists, Los Angeles and the Critical Regionalists, Brasilia and the International Nationalists, New York and the Post-9/11 Memorialists. Group conference in the first semester will include works by Michel Foucault, Aldo Rossi, Robert Venturi, Bernard Tschumi, Rem Koolhaas, Colin Rowe, Reyner Banham. The second semester will focus either on readings in contemporary urbanism, analyses

of student's hometowns as urban planning, and development projects or design workshops dealing with campus or park design.

## **2008-2009**

### **Across the Atlantic: Arts of the African Diaspora**

**Susan Kart**

*Open—Year*

Despite a long history of interaction between African and European nations, the modern African diasporic situation arguably begins with the forced exodus of African peoples across the ocean as part of the transatlantic slave trade during the eighteenth and nineteenth centuries. The influx of African peoples into Europe, the United States, South America, and the Caribbean islands sparked a cultural transformation in these areas that endures to the present day. Beginning with the arts of the Antebellum South in the United States, we will then proceed to examine the African traditions present in the religious arts of Haiti, Cuba, and Brazil. We will then return to the United States to examine works by African American artists working in the postslavery years. We will finish with contemporary African artists, both those on the African continent and those living around the world. The theory of diaspora formation will be explored in readings by James Clifford, Melville Herskovitz, Fernando Ortiz, and Robert Farris Thompson, among others. Artists engaged by this class will include (among others) Dave the Potter; Henry Ossawa Tanner; Meta Warrick Fuller; Sokari Douglas Camp; Yinka Shonibare; Ousmane Sow; Moustapha Dimé; Ndary Lo; Renée Stout; Santería and Vodou altar-makers from Haiti, Puerto Rico, and Cuba; José Francisco Borges; Carrie Mae Weems, as well as individuals represented in major art exhibitions to be discussed by the class: The Dak'Art Biennale (2006 and 2008); A Century of African American Art: The Paul R. Jones Collection (2004); The short century: independence and liberation movements in Africa, 1945-1994 (2001); and Looking Both Ways: Art of the Contemporary African Diaspora (2003). The course is organized into geographical units to facilitate in-depth discussions incorporating both theory and object. These units—Art and Architecture of the Antebellum South; Caribbean Culture; The Harlem Renaissance and African American Art; and The Global Movement—provide directed analysis of aspects of diaspora culture, while tracing over a century and a half of art (circa 1850-2008). Students will select objects and themes from a single unit for their own research and will produce final papers and bibliographic records according to their interests.

## Art and Myth in Ancient Greece

**David Castriota**

*Open—Year*

This course will examine the use of mythic imagery in the visual arts of the Greeks and peoples of ancient Italy from the eighth century B.C. to the later Roman Empire. Although concentrating on vase painting, wall painting, and sculpture, we will consider all media—both public and private. We will focus largely on problems of content or interpretation, with special attention to the role of patronage in the choice and mode of presentation of the mythic themes. In order to appreciate the underlying cultural or religious significance of the myths and their visual expression, we will also examine the relation of the artworks to contemporary literature and the impact of significant historical events or trends such as the emergence of tyranny and democracy or the Greek conflict with Persia. In the first semester, we will examine the earlier Greek development from the Geometric to the classical periods, focusing on the paradigmatic function of mythic narratives—especially the central conception of the hero and the role of women in Greek religion and society. Discussions in the second semester will center on later Greek art and the adaptation of Greek myth in the art of the Etruscans and Romans. Class discussions will be based on assigned readings; conference work will address topics of particular interest to students.

## Art of the Americas: The Continents Before Columbus and Cortés

**Susan Kart**

*Open—Spring*

Pre-Hispanic visual culture will be the focus of this course. We will cross both Mesoamerica and the Andes. In Central America, our focus will be on the Olmec, Maya, and Aztec cultures, while in the Andes we will focus on the lowland Paracas, Nazca, and Moche, along with the highland Chavín, Wari, Tiahuanaco, and Inka city-states. Along with architecture, textiles, manuscripts, metallurgy, and sculpted works, we will consider primary sources and current debates in art history and archaeology. Early theorists of pre-Columbian art such as George Kubler, Junius Bird, Octavio Paz, Zelia Nuttall, Marilyn Bridges, and Tatiana Proskouriakoff will be discussed in conjunction with more recent scholarship by Anne Paul, Eszter Pasztory, Elizabeth Boone, Dorie Reents, and Richard Burger, among many others. Among the themes we will discuss: questions of cultural patrimony; art historical methodology, archaeological theory; the politics of collecting and museum exhibitions; and relationships between art historical and anthropological modes of interpretation. To this end, the course will make extensive use of the objects and libraries available at the

major collections of pre-Columbian art in New York City: the Metropolitan Museum of Art and its Goldwater Library and the American Museum of Natural History and its library, as well as the holdings available at the New York Public Library on 42nd Street. The course will include ample opportunities for viewing objects in both public and private collections, and students will compose their written projects around original objects they select for research.

## Arts of the African Continent

**Susan Kart**

*Open—Fall*

This course outline takes two things into consideration in its structure: (1) “Africa” is a concept that was created during the colonial period; as such our understanding of “African art” is based on colonial models of documentation and knowledge collection and (2) this is not a sub-Saharan art course. I am purposefully breaking that physical border of the Sahara to point out to students the diversity of cultures and arts on the continent, and also to familiarize them with the North African states, which are all too often presented to Americans as breeding grounds for terrorists, dictatorial governments, and suppressed women. With these two parameters in mind, I have built the course around a series of concepts that form a giant sweep of the continent, both chronologically and geographically. Albeit, this comes at the expense of a more in-depth probing of individual cultures and situations, but this is a survey, and its aim is to generate interest in the field and prepare students to tackle larger questions about specific cultures in more advanced-level classes. This course will use the Metropolitan’s Rockefeller collection of Africana art as an extended classroom and will focus on the objects available for study at the Met. This affords the opportunity to not only view the original objects and thus learn about the craftsmanship, scale, materials, and provenance of the pieces, but also to encourage students to use the museum’s resources. The course will have a thematic focus on issues of interchange of cultural ideas and art as manifested in religion and regional exchanges between peoples. I want to encourage students to think about the impact of Western religions (Christianity and Islam) on African societies, and the objects they produce, and also on how cultures (and objects) are interrelated with their neighbors. In other words, the class strives to eliminate thinking of African peoples as concrete units in easily definable boxes—Yoruba versus Igbo, Kongo versus Fang—as cultural borders are much more fluid than we imagine them to be. Finally, lest there be some confusion that art is no longer being produced in Africa and we are studying a set of arts now defunct thanks to colonial intrusion, the class will spend its final weeks exploring contemporary art movements in South Africa, the DRC, and Mali. The South African material will

also be a springboard for discussing how contemporary African art is received and perceived in the Western museum and by African art critics. Thus the class ends, drawing attention to the arts produced in modern times, bringing students' attention to the fact that their own generation in Africa is continually updating, redefining, and restructuring art the way it has always been since time immemorial on the continent.

## **First-Year Studies: Gods, Heroes, and Kings: Art and Power in the Ancient World**

**David Castriota**  
*FYS*

In modern terms, myth has come to be commonly understood as the antithesis of history. Whereas history is taken as a reasoned, factual account of the past and how things came to be, myth appears to operate in the realm of fiction or fantasy. Myths may have the claim of venerable tradition, but they are no longer accepted as an accurate record of events. However, the ancient world made no such black-and-white distinctions. In antiquity, myth was accepted as early history. Its heroes were real, and their actions were thought to exemplify essential paradigms of political order and morality. Consequently, the course will apply a different approach in which myth is distinguished from history not by a truth test, but by virtue of its function as a means of cultural self-representation. We will examine the myths of ancient Egypt, Mesopotamia, Greece, and Rome, both in their literary form and in various media of visual art. Throughout, our goal will be to understand the potency of these narratives as vehicles of social or cultural values and as tools of power legitimizing and justifying closely entwined notions of religious and political authority. The course will close by considering how, in Late Antiquity, Christian narratives and ideologies in the literary and visual arts developed from the mythic traditions that preceded them.

## **Modern Art and Art Since 1945**

**Judith Rodenbeck**  
*Lecture, Open—Year*

This full-year course sequence provides an introduction to the artistic practices that characterize modernism and postmodernism in the visual arts and to some of the critical debates around them. Taking a chronological approach, we will trace the twinned aspects of primitivism and mechanization, of figuration and abstraction, of autonomy and engagement, of purity and impurity, as they infect the aesthetic production of key movements in the European and American contexts. Fall lectures will cover modernism in the visual arts from Impressionism to the New York school. Work in the spring is addressed to critical and aesthetic problems that have dominated advanced artistic practices in the

West since World War II, including the tension between high art and the mass media, the problem of articulating historical memory in an abstract visual language, and issues of "global" and "local" cultural production. We will be looking at a large number of artworks, authors, and texts, focusing our critical energies on the debates that constitute and are constituted by those bodies of work. The emphasis in lectures is on covering a broad spectrum of art and critical ideas; group conferences are devoted to in-depth analyses of specific images and texts.

## **Problems by Design: Process, Program, and Production in Contemporary Architecture**

**Joseph C. Forte**  
*Intermediate—Year*

This course grounds analysis of contemporary architectural practice in theory, practice, and history of individual solutions to evolving media and methods of design. The emphasis will be on European and Asian practitioners, but not exclude the United States, institutional and intellectual frameworks, and explorations of global urbanism as reflexive elements. Topics covered will touch on careers of architects like Aldo Rossi, Jean Nouvel, Coop Himmelb(l)au, Rem Koolhaas, Lebus Woods, Santiago Calatrava, Rural and Urban Studio, Future Systems, MVRDV, West 8, Zaha Hadid, Kenneth Yeang, Foreign Office; movements like Rationalism, New Brutalism/Team 10, Situationalism, Postmodernism, Deconstructivism, New Urbanism/Townscape; design strategies like blobs, dots and folds, fractal form, fractured landscapes, datatowns and metacities, ascetic aesthetic/ minimalist consumption, megastructures, themed urbanism, transformational design grammars, and economic models for sustainable growth/development/design. Assignments involve analytical and critical papers, design problems, and class presentations on various typologies and modernities. Group work is emphasized; complements courses on urbanism, visual arts, environmental science and studies, literary theory, physics, and of course, art and architectural criticism and history.

*Sophomores and above.*

## **Sursum Corda (Lift Up Your Hearts): Problems in Style, Expression, and Society in the Art of Sixteenth- and Seventeenth-Century Europe**

**Joseph C. Forte**  
*Open—Year*

This course aims to integrate into a coherent historical narrative the diversity of aesthetic claims, national schools, religious professions, and individual styles that

characterize the visual arts in seventeenth-century Europe. The first semester will begin with the Italian grand manner of the sixteenth century and move quickly to the "reform" of paintings by the Italian artists, Caravaggio and the Carracci. The "Jesuit" style in the architecture of their mother church, Il Gesu, and the naturalism of the reformers quickly affected the sculpture and architecture of Maderno, Bernini, and Borromini, the development of "Baroque" Rome under the Popes Urban VIII and Alexander VI. The first semester will conclude with the study of the Flemish school, best characterized by the theatricality and brilliant colorism of Rubens and the Spanish school, represented by Zubaran, Ribera, and Velázquez. In the second semester, we will deal with the development of realistic painting in Holland and the careers of Rembrandt and Vermeer. Finally, we will finish with France—the crossroads of north and south—with naturalistic painters like Georges de La Tour, classicists like Nicolas Poussin, and architectural ensembles like the châteaux at Vaux-le-Vicomte and Versailles. After introductory discussions of the artistic and cultural heritage of each geographical area, or the theoretical frameworks of important masters' styles, based on contemporary sources, we will study a few representative works intensely through the use of slides. Issues addressed can be chronology and development of styles; the effect of patronage on style and meaning in a work; and the effect of new religious, political, and social groups and institutions on the arts. Aesthetic issues will be raised: the disputed criteria for artistic excellence, contemplation versus theatricality, epic versus tragic, the natural versus the perfect work, the architectural frame versus the individual object. Conference work will be encouraged on works of art in New York museums and art, architecture, and theory from 1400 to the present, including women's patronage of cultural activities.

## 2009-2010

### A Paradox for Painters: Problems in Imitation, Expression, and Reflexivity in the 17th-Century European Painting

Joseph C. Forte

Open—Fall

This class aims to integrate into a coherent historical narrative the diversity of aesthetic claims, national schools, religious professions, individual styles, and critical approaches that characterize painting in 17th-century Europe. The Italian grand manner of the 16th century—Michelangelo, Titian, etc.—provided a model and a paradox for painters of the following century. Had an apogee been reached, was invention now impossible? In short, how can artists proceed? Did the religious

"reform" of the 16th century, the struggle to innovate or preserve the dogma of the Catholic Church, change the rules for painters and their patrons, clients, and institutions? The theory and practice of the "reform" of paintings by the Italian artists Caravaggio and the Carracci are only the first attempts to answer these questions. Next, we study the development of the Flemish school, best characterized by the complex literacy process, theatricality, and brilliant colorism of Rubens and the social and religious concerns that frame the Spanish school, represented by Zubaran, Ribera, and Velázquez. We will deal with the development of realistic painting in Holland, its ideological and theological roots, and the careers of Rembrandt and Vermeer. Finally, we will finish with France—the crossroads of north and south—with naturalistic painters such as Georges de la Tour, classicists such as Nicolas Poussin, and the debates between proponents of classical art or sensuous painting, literary or visual models, theory or practice in picture theory and making. After introductory discussions of the artistic and cultural heritage of each geographical area, or the theoretical frameworks of important masters' styles based on contemporary sources, we will intensely study a few representative works through the use of slides. Issues addressed may be chronology and development of styles; the effect of patronage on style and meaning in a work; and the effect of new religious, political, and social groups and institutions on the arts. Aesthetic issues will be raised: the disputed criteria for artistic excellence, contemplation vs. theatricality, epic vs. tragic, the natural vs. the perfect work, the frame vs. the individual object. Readings will range broadly, with particular attention to modern critical approaches applied to 17th-century works. Conference work will be encouraged on works of art in New York museums, art, architecture, and theory from 1400 to the present, including women's patronage of cultural activities.

### Art and the Sacred in Late Antiquity and the Middle Ages

Lecture, Open—Spring

No time in history saw a richer, more varied expression of sacred art than the European Middle Ages. And no other age has known as powerful, as all-embracing a religious institution as the medieval church. In this interdisciplinary lecture course, we will ask why the Christian church and the art made in its service took such extraordinarily varied forms in the thousand-year period from the catacombs to Chartres, from the third century to the 13th. We will also ask why certain features of contemporary Christianity that are looked upon as quintessentially Catholic rather than Protestant were established not in the earliest years of the church but in Late Antiquity and the Middle Ages: monasteries and nunneries, the cult of the Virgin, a celibate clergy, and a papal monarchy with virtually unlimited powers.

Since Christianity is a religion not only for the here and now but for the afterlife, of special interest will be such perplexing beliefs as that we on earth might affect the fate of the dead in purgatory and, conversely, that some of the “very special dead” might assist the living or perhaps punish them. Perhaps the most distinguishing feature of the course will be studying these topics in visual, as well as written, texts; for instance, in the architecture and decoration of early Christian and Romanesque churches and, at St. Denis and Chartres, in the birth of the uniquely Western style that we call Gothic. By also examining how sacred words were illuminated in manuscripts linked to Lindisfarne, Kells, and Charlemagne’s court, we will attempt to engage with a novel expression of spirituality in the Middle Ages: the book as icon. Near the end of our course, we will follow men and women from all over Europe on their pilgrimages to Santiago de Compostela, stopping at such memorable French Romanesque churches as Vézelay, Conques, and Moissac. In New York museums, students will have opportunities to view chapels and cloisters brought from Europe, as well as sculptures, ivories, metalwork, stained glass, books, paintings, and tapestries that are among the world’s most precious treasures. Lectures will be devoted primarily to art; the weekly group conferences, to readings from the Middle Ages.

## **Beauty, Bridges, Boxes and Blobs: "Modern" Architecture from 1750 to the Present**

**Joseph C. Forte**

*Lecture, Open—Spring*

This course aims to give, through slides and readings, a comprehensive and nuanced understanding of modern architectural practice and theory from its origins in Enlightenment notions of ideal beauty, type, form, and scientific function to its latest iteration in Blobs, based on the theory of the abject, pop inflatable structures, and the science of topology. Along with major movements—Arts and Crafts, Technological Sublime, Art Nouveau, Bauhaus and Figures, William Morris, Frank Lloyd Wright, Le Corbusier, and Frank Gehry—we will learn to read architecture and read with architects, to contextualize form and its urban, sociopolitical and epistemological implications, and to see how architecture gives form to context. Group conferences will deal with primary sources. Two papers and an architectural notebook dedicated to class notes, readings, drawings, musings, etc. will be required.

## **East vs. West: Europe, the Mediterranean, and Western Asia from Alexander the Great to the Fall of Constantinople**

**David Castriota**

*Lecture, Open—Year*

Historically, competition or conflict between the European or Mediterranean West and the regions of the Middle East has been seen as a struggle between Christian and Muslim worlds, with roots in the era of the Crusades whose precedent and implications reach into the present time. While this course will focus extensively on the medieval period, it seeks to do so by situating the relations between Christian Europe and the Muslim world within a larger context, as the result of geopolitical patterns that long antedated the emergence of Christianity or Islam. In the fall, the course will begin with the Greek invasion of the Near East under Alexander as a war of retribution for the Persian invasion of Greece over a century earlier. We will consider how the political structure and culture of the multiethnic Hellenistic Greek kingdoms emerged from the wreckage of the Persian Empire and how Rome subsequently built on Hellenistic Greek experience and conflict with the Near East in establishing its empire. We will examine the emergence of Christianity as an example of a Roman or Western response to an originally Eastern religion and, conversely, the emergence of the Islamic faith and its new empire as an Eastern challenge to the Christianized Roman Empire of Late Antiquity. In the spring, we will see how this approach affords a very different view of the Crusades and the battle for the Holy Land as the outgrowth of longstanding cultural and political interactions or competitions that transcend religious faith and doctrine. The course will look at Christian and Muslim cultural relations in Spain and then close by examining the rise of the Ottoman Turkish Empire, which originated as a Muslim regime in Eastern Europe, becoming a major power in Asia only after it had conquered the remaining symbol of the old Christian Roman Empire, Constantinople, in 1453. We will consider primary historical and literary sources, as well as major artistic monuments.

## **Europe and Africa: Colonialism and Modernity in 19th-Century Art**

**Susan Kart**

*Intermediate—Year*

This class will explore the artistic products that resulted from the concurrent emergence of colonialism and the modern condition on the continents of Africa and Europe. Relationships between industrialism, immigration, and urbanism as they manifested in the arts in Europe and in its colonial territories will be identified and analyzed. Though structured colonial

relationships begin as early as the 15th century, the first semester of this course will focus on the 19th century, the height of the modern European territorial occupations of Africa. This century offers a wealth of material for examination and allows for significant analysis of how the arts of 19th-century Europe, Africa, and the Americas give visibility to their mutual histories, religions, conquests, and revolutions. The arts of the 19th century depict a world in flux: We see artistic producers struggling to define cultural identity, class status, and socio-political organization in an increasingly international environment. While art history surveys of the 19th century traditionally focus on French art, specifically the role of the Academy and Parisian artists and architects, this course will explore how "Europe" was variously defined over the course of the century through an inclusion of colonial objects, as well as the art and architecture of Europe beyond Paris. The World's Fairs (London 1851, Paris 1889 and 1900, and Chicago 1893) provide the opportunity to see this colonial exchange with the "other" take place on a grand scale, while private "Wunderkammers" in Europe reveal how wealthy Europeans ingested the exotica of other cultures. As Europe renegotiated its sense of identity, so, too, do we see the creation of "Africa" as a cultural and geographical concept during the 19th century. From this continent, we will examine objects made for both local use and international sale. We will investigate how modernity, through urbanization, trade, travel, and war, created the burgeoning artistic production in African nations during the 19th century. Formal analysis of objects will be balanced with discussions and readings of theoretical texts dealing with pertinent 19th-century issues such as the rise of urbanity and technology, the colonial enterprise, primitivism, exoticism, collections, viewership, and connoisseurship.

## **First-Year Studies: Making History of Non-Western Art History: Africa, Oceania, and the Americas**

**Susan Kart**  
FYS

This class examines the creation of the field of non-Western art, historically known as "AOA" or the Arts of Africa, Oceania, and the Americas. When the concept emerged, its purpose was to provide a means for classifying art of non-European manufacture into an organized system that would allow for understandings of value, merit, and quality in comparison (but not on par) with European arts. The perception was that non-European art was so different from European art that the two could not be compared using the same canonical systems of merit and value. The separation of European art from the art of "everywhere else" ensured the preeminence of its own art, while the art of the rest of the world (with the exception of Asia) was lumped together in a separate system. The legacy of this strategy

of "the West and the Rest" is seen today in museums that exhibit the arts of Africa, Oceania, and the Americas in a single gallery, in textbooks on non-Western art that include these three categories, and in a disparaging understanding of non-European art as "homogeneous," "primitive," "functional," and "pagan" in contrast to European art, which is "unique," "modern," "art-for-art's-sake" and (predominantly) "Christian." Arts from the "AOA" regions will be examined from within their own cultural contexts, as well as from within the European canons of art history. Art historical theories of art, value, display, the West, religion, colonialism, and conquest will be examined in conjunction with objects from around the world. In the last months of the course, we will focus on the "un-making" of this history, and students will propose new strategies for examining material culture from global perspectives. Students will evaluate exhibitions of non-Western material in New York collections and will design their own "corrective" exhibition as a final class project.

## **First-Year Studies: Thinking Architectural Texts**

**Joseph C. Forte**  
FYS

The question of architecture is the question of how human culture forms and informs the built environment. Yet the definition of this most practical of arts is anything but self-evident. Is "architecture" a property particular to a given object or a product of the beholder's experience? What does it do, and how does it work? Who makes it? Who experiences it? In short, we examine the how and why of this most social of arts, this most artistic of societal endeavors. This first-year studies course traces the changes (and continuities) in the ways architecture has been thought about in and through the Western tradition, from Plato to yesterday. Drawing on textual sources from ancient Greece to the contemporary metropolis, we will ask what architecture might consist of and what its purposes might be. We will begin with the establishment of a common language with which to describe what it is that we see when we look at buildings. Over the course of the year, we will attempt to articulate and to historicize—and, perhaps, to change—our own definitions of artwork, audience, purpose, etc. Readings will include primary sources, critical essays, historical texts, and philosophical engagements with questions of function, beauty, order, and history. Assignments will deal with analyses of both urban forms and individual buildings, social questions and aesthetic ideals, and will be geared both to the thinking artist and the artistic thinker.

## Photography: Histories and Theories

**Judith Rodenbeck**

*Open—Year*

This yearlong course will cover the history of photography from its contested invention in the early 19th century through the recent work of artists such as Cindy Sherman, Thomas Demand, and Tacita Dean. From the beginning, debates have circulated around the “art” status of photography as a practice. We will be looking at photography’s material histories (from “pencil of nature” through the development of the Leica to xerography and digitization) and at the practices and theoretical debates that have circulated through these histories. In the fall semester, we will examine specific developments of the 19th and early 20th centuries, such as studio photography, photojournalism, and pictorialism. The spring semester will be devoted to 20th-century photographic practices and theories, with particular emphasis on the overlap between photographic and artistic discourses. We will pay special attention to three moments: the Soviet avant-garde, the Frankfurt School, and contemporary aesthetic discourse.

## Reading Contemporary Art

**Judith Rodenbeck**

*Advanced—Year*

The field of contemporary art is riven by the debates about the constitution of the contemporary, of art, indeed of fields of study as bounded disciplinary enterprises. Within the last decade, a generation of mid-career art historians has begun to rewrite not only the history of contemporary art but also the way in which art history itself is written. Informed as much by Roland Barthes’s “death of the author” as by the multiple disciplinary imperatives of “visual culture,” the scholarship of these thinkers is reorienting our alignment to the topography of art history. This course is structured in two parts. The first part is addressed to close readings of key contemporary monographs. We will spend our time with book-length texts that are substantially revising historians’ views of art since the 1960s. Topics to be covered will range from minimalism, earth art, relational aesthetics, and performance to Senghorian negritude, feedback loops, and the temporality of globalization. The second aspect of the course, interwoven with this first, is an intensive examination of the modalities of contemporary writing about art, from the brief notice and the critical essay to the theoretical intervention and the monograph. This is a reading- and writing-intensive course.

## The Age of Arthur: Post-Roman Britain in History and Legend

**David Castriota**

*Intermediate—Spring*

The fate of the western Roman provinces during and after the collapse of the imperial center in the fifth century remains a major concern for historians of Late Antiquity, yet no single former Roman province has proven to be as obscure and resistant to serious historical study as Britain. Through much of the 20th century, a substantial body of historical research was devoted toward developing the figure of Arthur, a Post-Roman ruler or warlord who strove to preserve something of Roman imperial order and culture while stemming Germanic or Anglo-Saxon settlement. More recently, however, the tide of scholarship has turned against a historical Arthur. The fact remains that Arthur is unattested in any historical sources of the late antique or early medieval periods. Nor is there much evidence that Anglo-Saxon settlement was effectively shaped or contained by native Romano-British resistance. Consequently, the course will examine the origins of Arthur as a figure of legend rather than history, and we will examine the factors that led to Arthur being accorded historical status—first in the early medieval period and then in modern scholarship. At the same time, we will attempt to establish the basis for a genuine dynastic and political history of Britain from the fifth to the seventh centuries.

*With permission of instructor.*

## The Fall of the Roman Empire: Rome from the Soldier Emperors to the Barbarian Invasions

**David Castriota**

*Open—Fall*

The fall of the Roman Empire was not an event but a process, one that unfolded slowly over several centuries. This course will examine how Rome went from a period of unquestioned power and prosperity in the late second century A.D. into an era of economic, political, and military instability that resulted in a steady decline, punctuated by periodic revivals that ultimately failed. We will examine the evidence of literature, military, and political history and major artistic monuments. The course will focus on the root causes of this decline in Roman military and economic policy, under relentless pressure from barbarian Europe and in competition with the neighboring Persian Empire. We will also consider the emergence of Christianity, not so much as a cause or symptom of decline but as the cultural process through which the Romans reinvented themselves one last time.

## 2010-2011

### Across the Atlantic: Arts of the African Diaspora

**Susan Kart**

*Open—Spring*

Despite a long history of interaction between African and European nations, the modern global African situation arguably begins with the forced exodus of African peoples across the ocean as part of the trans-Atlantic slave trade during the 18<sup>th</sup> and 19<sup>th</sup> centuries. The influx of African peoples into Europe, the United States, South America, and the Caribbean islands sparked a cultural transformation in these areas that endures to the present day. Beginning with the arts of the Antebellum South in the United States, we will proceed to examine the African traditions present in the religious arts of Haiti, Cuba, and Brazil. We will then return to the United States to examine works by African-American artists working in the post-slavery years. We will finish with contemporary African artists, both those on the African continent and those living around the world. The theory of Diaspora formation will be explored in readings by James Clifford, Melville Herskovitz, Fernando Ortiz, and Robert Farris Thompson, among others. Artists engaged by this class will include (among others) Dave the Potter, Henry Ossawa Tanner, Meta Warrick Fuller, Sokari Douglas Camp, Ousmane Sow, Moustapha Dimé, Renée Stout, Santerfa and Vodou altar-makers from Haiti, Puerto Rico and Cuba, José Francisco Borges, Carrie Mae Weems, as well as individuals represented in major art exhibitions to be discussed by the class: *The Dak'Art Biennale* (2006 and 2008), *A Century of African American Art: the Paul R. Jones Collection* (2004), *The short century: independence and liberation movements in Africa, 1945-1994* (2001), and *Looking Both Ways: Art of the Contemporary African Diaspora* (2003).

*Open to any interested student.*

### Art of the Americas: The Continents Before Columbus and Cortés

**Susan Kart**

*Open—Fall*

Pre-Hispanic visual culture will be the focus of this course. We will cross both Mesoamerica (present-day Central America) and the Andes region of South America. In Central America, our focus will be on the Olmec, Maya, and Aztec cultures; in the Andes, we will focus on the lowland Paracas, Nazca, and Moche, along with the highland Chavín, Wari, Tiahuanaco, and Inka city-states. Along with architecture, textiles, manuscripts, metallurgy, and sculpted works, we will consider primary sources and current debates in art history and archaeology. Early theorists of pre-

Columbian art such as Junius Bird, Octavio Paz, Zelia Nuttall, Marilyn Bridges, and Tatiana Proskouriakoff will be discussed in conjunction with more recent scholarship by Anne Paul, Rebecca Stone-Miller, Elizabeth Boone, Dorie Reents, and Richard Burger, among many others. Among the themes we will discuss: art historical methodology, archaeological theory; the politics of collecting and museum exhibitions; and relationships between art historical and anthropological modes of interpretation. To this end, the course will make extensive use of the objects and libraries available at the major collections of pre-Columbian art in New York City: the Metropolitan Museum of Art and its Goldwater Library and the American Museum of Natural History and its library, as well as the holdings available at the New York Public Library on 42nd Street. The course will include ample opportunities for viewing objects in public collections, and students will compose their written projects around original objects they select for research.

*Open to any interested student.*

### Arts of Africa from 1950 to the Present

**Susan Kart**

*Lecture, Open—Spring*

This course is a continuation of the fall lecture. Students may continue from fall or enter into the spring semester without having taken the fall lecture. An important caveat: This is not a Sub-Saharan art class. The physical border of the Sahara is purposefully broken to point out to students the diversity of cultures and arts on the continent and also to familiarize them with the North African states, which are all too often presented to Americans as breeding grounds for terrorists, dictatorial governments, and suppressed women. Let there be some confusion that art is no longer being produced in Africa and that we are studying a set of arts now defunct thanks to colonial intrusion, this class will focus on exploring contemporary art movements in Africa and beyond, following artists of African descent as they exhibit and work around the world. The material will also be a springboard for discussing how contemporary African art is received and perceived in the Western museum and by African art critics. Artists covered include Yinka Shonibare, William Kentridge, El Anatsui, Ndary Lo, Wangeshi Mutu, and emerging artists from Senegal, Republic of Congo, Cameroon, and many others. Theorists and critics include Sidney Kasfir, Okwui Enwezor, Sylvester Ogbechie, Hal Foster, Johannes Fabian, Kobena Mercer, and more. This class will use New York City museums and art galleries as extended classrooms, which affords the opportunity to view the original objects and thus learn about the craftsmanship, scale, materials, and provenance of the

pieces and also encourages students to use museum and gallery resources.

*Open to any interested student.*

## Arts of Africa to 1950

**Susan Kart**

**Lecture, Open—Fall**

This class is built around a series of concepts that form a giant sweep of the continent, both chronologically and geographically. Albeit, this comes at the expense of a more in-depth probing of individual cultures and situations; but this is a survey, and its aim is to generate interest in the field and prepare students to tackle larger questions about specific cultures in advanced-level classes. This class will use the Metropolitan's Rockefeller collection of Africana as an extended classroom and will utilize the objects available for study at the Met. This affords the opportunity to view the original objects and thus learn about the craftsmanship, scale, materials, and provenance of the pieces and also encourages students to use the museum's resources. The course will have a thematic focus on issues of interchange of cultural ideas and art as manifested in religion and regional exchanges between peoples. Students are encouraged to think about the impact of world religions (Christianity and Islam) on African societies and the objects they produce and also on how cultures (and objects) are interrelated with their neighbors. In other words, the class strives to eliminate thinking of African peoples as concrete units in easily definable boxes (i.e., Yoruba vs. Igbo, Kongo vs. Fang, Europe vs. Africa), as cultural borders are much more fluid than we imagine them to be. Interested students may opt to continue with the spring continuation of the lecture, "Arts of Africa from 1950 to the Present."

*Open to any interested student.*

## Christianity and the Roman Empire

**Cameron C. Afzal, David Castriota**

**Open—Year**

Roman culture has traditionally been studied for its capacity to absorb and transform the ideas and beliefs of others, most notably those of the Greeks. This course, however, seeks to examine the interaction between traditional Greco-Roman religious belief or ideology and various religious movements within Judaism from the late Hellenistic period onward. Judaism of this period was itself complex and diverse, including the Pharisees, Sadducees, and breakaway groups such as the Essenes, as well as the messianic movement that eventually produced Christianity. The course will consider such developments against the background of Hellenistic Greek and Roman imperial religion and ruler glorification, various forms of Judaism in the Second Temple period, eventually focusing on the transition of Christianity from its initially Jewish setting into a movement that spread to peoples throughout the

Roman Empire. We will study the Jesus movement, the spread of the Church under Paul, and the development of early Christian church institutions, doctrine, and theology as an evermore significant component of Greco-Roman culture, increasingly divergent from its Hellenistic Jewish origins, in the first Christian centuries. The course will conclude with the imperialization of Christianity as it became the dominant religion and ideology of a new Christian Roman Empire under Constantine. Though focusing extensively on historical and religious texts, the course will also examine the evidence of artistic monuments.

*Open to any interested student.*

## Contemporary Art: Strategies and Tactics

**Judith Rodenbeck**

**Advanced—Year**

In his 1962 text, *The Open Work*, the Italian critic Umberto Eco described an enigmatic structural device shared by many works of contemporary advanced literature, music, and art. These works all made particular demands of their audiences: not unfinished; rather, they were deliberately indeterminate. The open work was a "work in movement" to be completed by its reader, auditor, viewer; it changed with each performance. Such a work, Eco argued, "sets in motion a new cycle of relations between the artist and his audience, a new mechanics of aesthetic perception, a different status for the artistic product in contemporary society. It opens a new page in sociology and in pedagogy, as well as a new chapter in the history of art. It poses new practical problems by organizing new communicative situations. In short, it installs a new relationship between the contemplation and the utilization of a work of art." Nearly half a century later, the reverberations of Eco's essay and the artistic experiments he referenced subtend many of the most generative contemporary art practices. Advanced artistic gestures, ranging from the development of tactical media to the performative redo, are outgrowths of "open" strategies developed under the umbrellas of chance and indeterminacy, of process and performance, as they were formulated in the 1950s. Taking as our starting point such projects as John Cage's *4'33"* (1952), Umberto Eco's open work, Allan Kaprow's theorizing of the happening (1959), and the Situationist *dérive*, this course will explore chance aesthetics and performative experiment in their historical and present-day articulations.

*Advanced.*

## First Year Studies: Thinking Art/Works

**Judith Rodenbeck**  
FYS

In response to the deceptively simple question, “What is art?” the joke refrain has often been, to borrow from Justice Potter Stewart, “I know it when I see it.” The apparent common sense of this statement, along with its obduracy, betrays several fundamental insecurities. Leaving aside the perplexed self-justification of its speaker, we might identify these insecurities through a series of questions: Is “art” a property particular to a given object, or is it a product of the beholder’s experience? How do we recognize it? What does it do, and how does it work? Who makes it? Who experiences it? How and why? This first-year studies course traces the changes (and continuities) in the ways art has been thought about and through in Western tradition from Plato to today. Drawing on textual sources from ancient Greece to the contemporary metropolis, we will ask what the visual arts might consist of and what their purposes might be. We will begin with the establishment of a common language with which to describe what it is that we see when we look at works of art and will develop a critical understanding of the moves made by art historians from Vasari to today to refine that language. Over the course of the year, we will attempt to articulate and to historicize—and, perhaps, to change—our own definitions of artwork, audience, purpose, etc.

## Greeks, Romans, and Barbarians

**David Castriota**  
*Open—Year*

The study of the Greco-Roman world and its contribution to the evolution of ancient Mediterranean culture remains a primary object for classical studies. But what of the complex connections or interactions that existed between the urban cultures of the Greek and Roman world and the so-called “barbarian” peoples? What does the term “barbarian” imply as used by the Greeks and their Roman successors? Was it simply meant to denote “otherness,” or did it signify notions of social and material cultural or technological inferiority, as well? What did Greek culture in its formative stages borrow from its non-Greek neighbors? In the course of time, what technologies and modes of artistic expression did “barbarian” peoples of Asia and Europe absorb from the classical world? How does consideration of such issues help us to gain a clearer understanding of the whole substance and rhetoric of Western cultural identity? The answers to these questions are neither simple nor easy. They require a careful look at the cultural dynamic between the Greeks, Etruscans, and Romans and an array of non-classical peoples—Egyptians, Phoenicians, Persians, Scythians, Sarmatians, Celts, and various Germanic

tribes—through a vast panorama of space and time. We will approach the problem from the perspective of history, especially through such primary sources as the histories of Herodotus, Polybios, and Tacitus. But we will also consider the problem from the perspective of art history or archaeology, since it was in the domain of material culture—the art of ornament and display—that tribal peoples of Europe and Asia found their most important modes of expression and most tangible form of interaction with classical peoples to the west and south. *Open to any interested student.*

## Problems by Design: Process, Program, and Production in Contemporary Architecture

**Joseph C. Forte**  
*Intermediate—Year*

This course grounds analysis of contemporary architectural practice in theory and individual responses to evolving media and methods of design from 1960 to the present. The emphasis will be on North American, Asian, and European architectural practitioners, institutional and intellectual frameworks, and explorations of global urbanism as reflexive elements. A survey of attitudes in the immediate postwar period will be juxtaposed with post-9/11 issues. Readings will involve works in philosophy, theory, criticism, politics, and social analysis. Topics covered will touch on careers of architects such as Aldo Rossi, Jean Nouvel, Coop Himmelb(l)au, Rem Koolhaas, Lebeus Woods, Santiago Calatrava, Rural and Urban Studio, Future Systems, MVRDV, West 8, Zaha Hadid, Kenneth Yeang, Foreign Office; movements such as Rationalism, New Brutalism/Team 10, Situationalism, Postmodernism, Deconstructivism, New Urbanism/Townscape; design strategies such as blobs, dots and folds, fractal form, fractured landscapes, datatowns and metacities, ascetic aesthetic/minimalist consumption, megastructures, themed urbanism, transformational design grammars, economic models for sustainable growth/development/design. Assignments involve analytical and critical papers, design problems, and class presentations on various typologies and modernities. Group work is emphasized. This course complements courses on urbanism, visual arts, environmental science and studies, literary theory, physics, and, of course, art and architectural criticism and history. *Open to sophomores and above.*

## “A Talent For Every Noble Thing”: Art and Architecture in Italy 1300-1600

**Joseph C. Forte**  
*Lecture, Open—Year*

An in-depth survey of the major monuments of Italian art and architecture from 1300 to 1550: Equal emphasis

will be given to the canon of art works by artists such as Giotto, Donatello, Brunelleschi, Botticelli, Leonardo da Vinci, and Michelangelo; to readings of major critics and historians of Italian art; and to the broader intellectual trends and social realities and movements that provide a context for our understanding of the artist's and, to a lesser extent, the critics' creations. Thus, unified Italian churches will be juxtaposed with gender-segregated social practice, theories of genius with concepts of handicraft, pagan ideals with Christian rituals. The first semester will focus on a close reading of texts surrounding the first polemical pamphlets about art in early modern history, Alberti's *On Painting* and *On Architecture*, and will include works by Erwin Panofsky, Michael Baxandall, and Anthony Grafton. The second semester will engage the intellectual and aesthetic debates surrounding Michelangelo as genius, model, courtier, and outcast. Class papers will deal with developing a vocabulary for compositional analysis, critical issues in Italian intellectual and social history, and varied interpretive strategies applied to works of visual art and culture. Conference projects may engage from a variety of critical and historical viewpoints, European art and architecture from 1300 to 1800, and relevant historical and literary issues from 1400 to 1700. *Open to any interested student.*

## 2011-2012

### A Paradox for Painters: Problems in Imitation, Expression, and Reflexivity in the 17th-Century European Painting

Joseph C. Forte

*Open—Spring*

This class aims to integrate into a coherent historical narrative the diversity of aesthetic claims, national schools, religious professions, individual styles, and critical approaches that characterize painting in 17th-century Europe. The Italian grand manner of the 16th century—Michelangelo, Titian, etc.—provided a model and a paradox for painters of the following century. Had an apogee been reached, was invention now impossible? In short, how can artists proceed? Did the religious “reform” of the 16th century, the struggle to innovate or preserve the dogma of the Catholic Church, change the rules for painters and their patrons, clients, and institutions? The theory and practice of the “reform” of paintings by the Italian artists Caravaggio and the Carracci are only the first attempts to answer these questions. Next, we study the development of the Flemish school, best characterized by the complex literacy process, theatricality, and brilliant colorism of Rubens and the social and religious concerns that frame the Spanish school, represented by Zúbarán, Ribera, and Velázquez. We will deal with the development of

realistic painting in Holland, its ideological and theological roots, and the careers of Rembrandt and Vermeer. Finally, we will finish with France—the crossroads of north and south—with naturalistic painters such as Georges de la Tour, classicists such as Nicolas Poussin, and debates between proponents of classical art or of sensuous painting, literary or visual models, theory or practice in picture theory and making. After introductory discussions of the artistic and cultural heritage of each geographical area or the theoretical frameworks of important masters' styles based on contemporary sources, we will intensely study a few representative works through the use of slides. Issues addressed may be chronology and development of styles; the effect of patronage on style and meaning in a work; and the effect on the arts of new religious, political, and social groups and institutions. Aesthetic issues will be raised: the disputed criteria for artistic excellence, contemplation vs. theatricality, epic vs. tragic, the natural vs. the perfect work, the frame vs. the individual object. Readings will range broadly, with particular attention to modern critical approaches applied to 17th-century works. Conference work will be encouraged on works of art in New York museums, art, architecture, and theory from 1400 to the present, including women's patronage of cultural activities.

### Arts of the African Continent

Susan Kart

*Lecture, Open—Spring*

“Africa” is a concept that was created during the colonial period. As such, our understanding of “African Art” is historically based on colonial models of documentation and knowledge collection. Once we understand this, we can engage more honestly with the diversity of cultures and arts on the continent. To understand this, we will read from a variety of art historical, anthropological, literary, and primary colonial sources, including Georg Schweinfurth, Joseph Conrad, Kwame Anthony Appiah, Johannes Fabian, Suzanne Blier, and Monica Visona—whose book, *A History of Art in Africa*, is used as the primary textbook for the course. We will also use the collections at the Metropolitan Museum of Art and the American Museum of Natural History as extended classrooms. This affords the opportunity not only to view the original objects and thus learn about the craftsmanship, scale, materials, and provenance of the pieces but also to encourage students to use the museum resources. The course will have a thematic focus on issues pertaining to the interchange of cultural ideas and art, as manifested in religion and regional exchanges between peoples. I want to encourage students to think about the impact of Western religions (Christianity and Islam) on African societies and the objects that they produce, as well as on how cultures (and objects) are interrelated with their neighbors. In other words, the class strives to eliminate

thinking of African peoples as concrete units in easily definable boxes—Sub-Saharan vs North African, Congo vs. Fang, Traditional vs Contemporary—as cultural borders are much more fluid than we imagine them to be. Finally, the class will explore contemporary art movements, drawing attention to the arts produced in modern times and bringing students’ attention to the fact that their own generation in Africa is continually updating, redefining, and restructuring the art of their times.

## **Arts of the Americas: The Continents Before Columbus and Cortés**

**Susan Kart**

*Lecture, Open—Fall*

Pre-Hispanic visual culture will be the focus of this class. We will cross on both Mesoamerica and the Andes. In Central America, our focus will be on the Olmec, Maya, and Aztec cultures; in the Andes, we will focus on the lowland Paracas, Nazca, and Moche, along with the highland Chavín, Wari, Tiahuanaco, and Inka city-states. Along with architecture, textiles, manuscripts, metallurgy, and sculpted works, we will consider primary sources and current debates in art history and archaeology. Early theorists of pre-Columbian art such as George Kubler, Junius Bird, Octavio Paz, Zelia Nuttall, Marilyn Bridges, and Tatiana Proskouriakoff will be discussed in conjunction with more recent scholarship by Anne Paul, Elizabeth Boone, and Dorie Reents, among many others. Among the themes we will discuss: questions of cultural patrimony, art historical methodology, archaeological theory, the politics of collecting and museum exhibitions, and relationships between art historical and anthropological modes of interpretation. To this end, the class will utilize the objects and libraries available at the major collections of pre-Columbian art in New York City: the Metropolitan Museum of Art and its Goldwater Library and the American Museum of Natural History and its library.

## **Beauty, Bridges, Boxes, and Brutes: “Modern” Architecture From 1750 to 1960**

**Joseph C. Forte**

*Lecture, Open—Fall*

This course aims to give, through slides and readings, a comprehensive and nuanced understanding of modern architectural practice and theory from its origins in Enlightenment notions of ideal beauty, type, form, and scientific function to its postwar iteration in the new Brutalism, based on truth to materials, concrete challenges, subconscious impulses, and a theory of the ugly. Along with major movements (Arts and Crafts, Technological Sublime, Art Nouveau, Bauhaus) and figures (William Morris, Frank Lloyd Wright, Le

Corbusier), we will learn to read architecture and to read with architects in order to contextualize form and its urban, sociopolitical, and epistemological implications and to see how architecture gives form to context. Group conferences will focus on primary sources, dealing with beauty, the sublime, ornament, destruction, and totalizing reason in architectural theory. Two papers and an architectural notebook dedicated to class notes, readings, drawings, musings, etc. will be required.

## **Making History of Non-Western Art History: Africa, Oceania, and the Americas**

**Susan Kart**

*Open—Year*

This class examines the creation of the field of non-Western art historically known as “AOA” or the Arts of Africa, Oceania, and the Americas. When the conceit emerged, its purpose was to provide a means for classifying art of non-European manufacture into an organized system that would allow for understandings of value, merit, and quality in comparison (but not on par) with European arts. The legacy of this strategy of “the West and the Rest” is seen today in museums, textbooks, galleries, and journals. Arts from the “AOA” regions will be examined from within their own cultural contexts, as well as within the European canons of art history. Art historical theories of art, value, display, the West, religion, colonialism, and conquest will be examined in conjunction with objects from around the world. We will focus on the “unmaking” of this unwieldy art historical category, and students will propose new strategies for examining material culture from global perspectives. Students will evaluate exhibitions of non-Western material in New York collections and will design their own “corrective” exhibition as a final class project. As the class is a service learning class in partnership with The Art Gallery at the Yonkers Riverfront Library, students will expand upon their classroom knowledge over the course of the year by directing curatorial, programming, and educational service learning opportunities at The Art Gallery and with Yonkers residents and high-school students. A possible travel component for a service learning/art exhibition project to Dakar Senegal in May 2012 is in the works for this class. Enrolled students will be kept up to date on this opportunity.

## **Performance Art**

**Judith Rodenbeck**

*Open—Year*

“Let’s murder the moonlight!”—Filippo Tommaso Marinetti (1909)

This course traces the history of “performance art,” a medium named in the 1960s but with roots in the avant-garde movements of the early 20<sup>th</sup> century. Distinct from theatre and emerging more often from the visual and musical arts, performance is a slippery object. Our explorations will be recursive. We will examine its history chronologically from Futurism and Dada to the happenings of the 1960s and up to present-day projects. Framing critical concepts—from ideas of the *gesamtkunstwerk* and synesthesia to the *trennung der elemente* of Berthold Brecht and from the “theater of cruelty” of Antonin Artaud to current formulations of performance, performativity, and the participatory—will guide a second pass, expanded to draw on examples from Wagner to Disney, from Stanislavski to Butler, and through the history of performance. We will also be considering formal issues, including questions concerning audience, the space/time of the event, the score, documentation, and the afterlives of performance.

## Problems By Design: Studies in the Theory and Practice of Contemporary Architecture

Joseph C. Forte

Lecture, Open—Spring

This course grounds analysis of contemporary architectural practice in theory and individual responses to evolving media and methods of design from 1960 to the present. The emphasis will be on North American, Asian, and European architectural practitioners, institutional and intellectual frameworks, and explorations of global urbanism as reflexive elements. A survey of attitudes in the immediate postwar period will be juxtaposed with post-9/11 issues. Readings will involve works in philosophy, theory, criticism, politics, and social analysis. Topics covered will touch on: careers of architects such as Aldo Rossi, Jean Nouvel, Coop Himmelb(l)au, Rem Koolhaas, Lebbeus Woods, Santiago Calatrava, Rural and Urban Studio, Future Systems, MVRDV, West 8, Zaha Hadid, Kenneth Yeang, Foreign Office; movements such as Rationalism, New Brutalism/Team 10, Situationism, Postmodernism, Deconstructivism, New Urbanism/Townscape; design strategies such as blobs, dots and folds, fractal form, fractured landscapes, datatowns and metacities, ascetic aesthetic/minimalist consumption, megastructures, themed urbanism, transformational design grammars, economic and informational models for sustainable growth/development/design. Three assignments will involve analytical and critical papers on new works—such as Diller and Scofidio’s High Line, Brian Tolle’s Irish Famine Museum, SANAA’s New Museum, and Frank Gehry’s Beekman Tower—or design problems inspired by various typologies and modernities. An artists’ notebook is an option for a final class project.

## The Fall of the Roman Empire

David Castriota

Open—Fall

The fall of the Roman Empire was not an event but a process, one that unfolded slowly over several centuries. This course will examine how Rome went from a period of unquestioned power and prosperity in the late second century AD into an era of economic, political, and military instability that resulted in a steady decline, punctuated by periodic revivals that ultimately failed. We will examine the evidence of literature, military, and political history and major artistic monuments. The course will focus on the root causes of this decline in Roman military and economic policy under relentless pressure from barbarian Europe and in competition with the neighboring Persian Empire. We will also consider the emergence of Christianity, not so much as a cause or symptom of decline but as the cultural process through which the Romans reinvented themselves one last time.

## The Greeks and their Neighbors: The Hellenization of the Mediterranean From the Homeric Age to Augustus

David Castriota

Open—Fall

Although the Romans come to mind most immediately as the people who absorbed and passed on the achievements of Greek civilization to the Western world, the transmission of Greek culture to Western posterity was a far more complex process involving various other peoples. Already during the early first millennium BC, Greek culture began to affect the neighboring peoples to the east, such as the Phrygians, Lydians, and Lycians, as well as the Greeks’ western neighbors in Italy: the Etruscans and Romans. In time, the Phoenicians and their western colony of Carthage and the western regions of the great Persian Empire would increasingly come to adopt many aspects of Greek material culture, art, and religion—even before the Asiatic conquests of Alexander the Great and his successors. It was this long and varied process that the Romans gradually inherited and fused into a pan-Mediterranean Greco-Roman *Pax Romana*, beginning with Augustus. The course will examine this process from the perspective of artistic monuments and literary or historical sources, as well.

## Writing Contemporary Art

Judith Rodenbeck

Advanced—Year

This course takes as its object the varieties of text that are produced within the ambit of what philosopher Arthur Danto calls the “artworld.” We will be reading art works, criticism, history, memoirs—texts that can be

literal, poetic, logical, experimental, encyclopedic or monosyllabic, “orate” or literate, open, imperative, ekphrastic. Authors range from Gertrude Stein to David Antin, from George Brecht to Mary Kelly, from Donald Judd to Rosalind Krauss. Exercises range from haiku to catalogue essay.

## **“La Piu Grassa Minerva (Minerva in Her Fullness)” Theories of Art and Architecture From 1300 to 1600**

**Joseph C. Forte**

*Open—Fall*

The nature of art has been described by the philosopher Richard Wollheim as “one of the most elusive of the traditional problems of human culture.” It has been defined as a vehicle for the expression or communication of emotions and ideas, a means of

exploring and appreciating formal elements for their own sake, and as mimesis or representation. An inquiry into the various ways that artists, patrons, and, a new phenomenon, art critics, developed a comprehensive theory of something we now know as the fine arts and addressed this issue from a complex perspective of religious belief, prescientific concepts of nature, complicated theories of the self, and an increasing interest in classical aesthetics, rhetoric, and poetics. Readings will cover theories of subject matter and formal composition, ideas and words, works and their authors. Focus will be on the theory and practice of Alberti, Leonardo da Vinci, Michelangelo, and Titian; historical phenomena and movements such as theory and the craftman’s skill; visual poetics and humanism; neo-Platonism and the limits of mimesis; Aristotelian poetics and moral narrative; Reformation iconoclasm; Counter Reform orthodoxy; and Venetian inventive naturalism.

# Asian Studies

## 2002-2003

### Chinese History: Tradition and Transformation

*Ellen Neskär*

*Lecture, Open—Fall*

Historians in both China and the West often depict the premodern Chinese empire as a homogenous monolith that endured with little change from its inception in the third century B.C.E. until the Mongol conquest in the thirteenth century. This course seeks to discover the origins and validity of that depiction. This will involve a close examination of the ways in which China created and conceived of its own history and the study of the rise and development of its cultural and political institutions. Topics covered will include the political and economic systems; international relations; the rise and unfolding of Confucianism, Daoism, and Buddhism; and the nature of its social and cultural practices. Class assignments will be varied, relying on scholarly articles as well as primary sources including government documents, memoirs, biographies, philosophical texts, and letters.

### First-Year Studies: Religion and Politics in China

*Ellen Neskär*

*FYS*

Recent news coverage of China has highlighted the Chinese government's persecution of religious groups, among them Falungong and Tibetan Buddhism, and has suggested that such persecution is a product of the Communist Party's failure to promote human rights and religious freedoms. At the same time, the government tolerates a widespread cult to the deceased Communist Party Chairman Mao Zedong as the god of wealth and business success. This course seeks to place China's attitudes toward religion within a broader historical and cultural context. We will focus on two related themes: how different religious groups in China interacted with and affected the state and how the state created its own religious structure and ultimately shaped the various religions. Questions to be raised will include the following: How did the traditional Chinese state conceive of the sacred role of the emperor? What assumptions led to its creation of a state religion that controlled private religious practices? How did the traditional religions of Buddhism, Daoism, and Confucianism both support and oppose the state? How did the state adopt the symbols and practices of these religions to legitimize its authority? How has the contemporary Chinese government borrowed, transformed, or eradicated the traditional relationships

between religious groups and the state? We will attempt to answer these questions from a multidisciplinary approach that encompasses institutional, economic, intellectual, and cultural perspectives. Although readings will include secondary sources, emphasis will be placed on primary documents. Sources will include government edicts and ritual manuals, legal cases, religious texts and temple records, private memoirs and diaries, miracle tales, and didactic fiction.

### Orientalism

*Sandra Robinson*

*Open—Year*

Orientalism was born as a fetish, came of age as a discipline, and matured to spawn a critical discourse. This seminar explores the career of the Orient as an idea, a product of external imaginings, with emphasis on its South Asian deployment. As an imaginary construct, orientalism continues to have tangible impact on the lives of its subjects. Orientalist thought emerged as an array of fears and desires projected onto peoples located "somewhere East of Suez." Orientalist assumptions became encoded as a system of serviceable knowledge in the scholarly disciplines that emerged from the Enlightenment. More recently, repudiations of orientalism have been central to critical discourse in literature and cultural studies. Through what gazes were the diverse cultures of Asia reduced to a master narrative of alterity? What characterizations of India can be found in the works of influential European philosophers, historians, poets, and painters? How did colonizers appropriate South Asian sciences and practices? Why did the colonized internalize orientalist values or risk opposition? The seminar draws from nineteenth- and twentieth-centuries English literature and British art to focus on depictions of an India at once picturesque and despotic. We analyze colonial portrayals of peoples of the Indian subcontinent in terms of the romance of empire. This idiom served to rationalize the British "civilising mission" with its political, economic, and psychological agendas. We trace the invention and uses of the term "Indian" as emblematic of the epoch, external designation presuming to reframe indigenous identity. Contemporary Western pop culture, media, advertising, and fashion continue to reproduce the Orient as commodity. The seminar ends with a study of contemporary South Asian writers whose responses to orientalism are transforming English literature and reshaping cosmopolitan, transnational cultures.

### Pilgrimage and Tourism

*Sandra Robinson*

*Open—Spring*

Devotees routinely traverse the landscape of the Indian subcontinent, moving among Hindu temples to connect one center of gendered energy to another. Some on pilgrimage trace the footprints of the Buddha, following

his journey toward enlightenment. Travelers visit Islamic sites where famous Sufis are buried. Such travelers are not bounded by sectarian affiliation; anyone might attend festivals of diverse religious traditions. How may we interpret such practices in light of recent moves toward religious separatism and communal violence? How can we study pilgrimage without romanticizing its practice? In their own narratives, pilgrims tell us that while their journeys may in part signify spiritual quests, their travels also satisfy recreational desires for vacations. Guided by current theories of cultural studies, this seminar explores practices and performances associated with popular tourist destinations in contemporary India. Travel narratives depict patterns of quest; of journey, arrival, and return; of displacement, transition, and liminality; of discovery, encounter, and personal transformation. Such narratives also raise issues of cultural appropriation, tourist economies and ecologies, development, and public health. We apply theories of Victor Turner, Arjun Appadurai, Walter Benjamin, and Zygmunt Bauman to the study of travelers' narratives. The interface of pilgrimage and tourism serves as an illustrative exercise in category formation; categories often used in the history of religions are deconstructed. Readings are drawn from cultural studies, anthropology and literature.

## Women, Family, and Gender in Chinese History

**Ellen Neskar**

*Advanced—Spring*

This course offers a two-part approach to women's history in China: an overview of the social, cultural, and political history of women from the early empires through the contemporary times and an exploration of path-breaking work in the field over the past twenty years. In the first part, topics to be explored include traditional attitudes toward women's place in the family and community, the legal, economic, and educational underpinnings of women's social and cultural roles, and changing notions of women's virtue. Readings will include scholarly research as well as primary documents in translation. The second part will look at attempts by scholars to develop a gendered history of China and to adapt the feminist discourse in Western scholarship to Chinese history. Particular attention will be paid to the current scholarly focus on the social and cultural practices of gender, the search for women's agency, multiple representations of women and gender, and the diversity of gendered identities and voices.

## Writing India: Nation and Narration

**Sandra Robinson**

*Intermediate—Fall*

The increasing visibility of writers from South Asia marks a dramatic movement in contemporary English literature. Many writers from the Indian subcontinent continue to narrate the tumultuous events surrounding the partition of India and Pakistan at the moment of independence from British rule in 1947. Their writings join past utopian imaginings with present legacies and dystopias. This seminar addresses themes of identity, fragmentation, hybridity, memory, and alienation that link this literature to contemporary writing from settings elsewhere in Asia, Africa, and Latin America. Accounts of Hindu/Muslim/Sikh communal violence reflect urgencies similar to those expressed in literatures of the Holocaust. The cultural space of India has been repeatedly transformed and redeployed according to varied cultural projects, political interests, and economic agendas. After briefly considering constructions of India in works of Kipling, Forster, and Orwell, we shall focus on India as remembered and imagined in selected works of Ved Mehta, V. S. Naipaul, Anita Desai, Salman Rushdie, Bapsi Sidhwa, Sara Suleri, Vikram Seth, and Arundhati Roy. Interdisciplinary approaches of cultural studies will be used critically as we pursue a literature that shifts increasingly from narrating the nation to narrating its fragments in transnational contexts.

## 2003-2004

### Body and Self in Asian Cultures

**Sandra Robinson**

*Open—Fall*

This seminar explores concepts of body and self in the varied cultures of India, with comparative case studies from China and Japan. Ideas and ideals of the body are culturally constructed, reflecting the social orders in which they prevail. Among such understandings, widely varied bodily practices can be found. Where are boundaries of persons viewed as fixed, porous, or fluid? Using spatial analyses current in cultural studies, we move toward a cultural geography of the body in Indian thought and practice. Why do some view Hindu personhood as a matter of "dividuality" rather than individuality? Are persons biamental, biomoral entities? How is caste oppression of dalits ("untouchables") rationalized in terms of bodily purity and pollution? Does a cartography of Japanese selves reflect the layering of multiply wrapped identities? How do Chinese medicine and martial arts point toward expanding human potential? Topics include technologies of the self, the body as microcosm, yoga as experimentation, theories of pain, psychosomatic healing, identity

markers, subject formation, and political subjection of the body through surveillance and control. Readings are drawn from cultural studies and anthropology.

## History in Fiction and Fiction in History

**Ellen Neskär**

*Open—Year*

In Chinese, the term for fiction is “small talk,” suggesting a concern with trivial matters that is clearly distinguished from the weightier intellectual project of history writing. And yet in libraries and catalogs, fact-based chronicles were classified as fiction, while biographies of ghosts were regarded as history. To further complicate matters, Chinese authors of history and fiction at no time claimed that these two modes of writing could be distinguished on the basis of form, function, or content. This course begins with the premise that separating history and fiction is not the most fruitful way of exploring Chinese literature and culture. Rather, it assumes that some historical texts are best approached through analytical techniques more usually applied to fiction, while some fiction is primarily concerned with the historical and political. The goal of this course is twofold. The first part is intended to introduce students to some of the great works of premodern Chinese history and fiction. To that end, we will read government-sponsored dynastic histories, biographies, private histories, Miscellaneous Jottings, short stories, tales of the strange, and novels. The second part of the goal is to attempt to unravel Chinese notions of history and fiction. To that end, we will read both premodern Chinese essays on narrative writing and genre analysis and contemporary studies of literary criticism.

## Performance Practices of Asia

**Shanti Pillai**

*Lecture—Spring*

This lecture course explores traditional and contemporary performance practices in Asia, including China, India, Japan, and Southeast Asia. We will seek to understand the aesthetics and purposes of these performances, in addition to the relationship that different genres have to daily life. Our work will proceed from a perspective that acknowledges the ethnic, religious, linguistic, and socioeconomic diversity of the region. We will also pay attention to how performances are conducted and adapted by Asian immigrant communities, as well as by non-Asian artists. Our work will be based on lectures, readings, discussions, videos, and live performance in class. During the semester we will examine the text and performance of classical plays and operas, contemporary theatrical productions, classical and modern forms of dance, folk performances, and rituals. We will discuss and compare dramaturgical

structure, staging, acting, gender conventions, actor/dancer training, the respective roles of performer and audience, and religious and political themes. We will explore the social and political contexts in which these performances take place, including the role that performance plays in formulating communal and national identities. In seeking to understand how performance practices defy simple categorization and have many levels of significance, we will deconstruct the rigid oppositions that have been used in the past in looking at Asian theatrical traditions.

## Readings in Daoism: <i>The Zhuangzi</i>

**Ellen Neskär**

*Intermediate—Fall*

This seminar centers on the careful reading of *The Zhuangzi*, one of the foundational texts of the Daoist tradition. Arguably the greatest piece of Chinese literature and philosophy, *The Zhuangzi* defies all categorization and instead invites readers to probe through its layers of myth, fantasy, jokes, short stories, philosophy, epistemology, social critique, and political commentary. In the end, *The Zhuangzi* plunges us into an examination of some of the core questions of philosophy: What is being? What is knowledge? What is the nature of human nature? The goal of this course is twofold. The first part is designed to thoroughly familiarize students with the text and the philosophical questions it raises. To do this, we will read through the text slowly and in minute detail. The second part of the goal is to look at the text in its broader historical context as well as its influence on later philosophical traditions. To do this, we will read traditional Chinese and contemporary Western textual history and criticism. We will devote particular attention to the ways in which *The Zhuangzi* has been interpreted and reinterpreted.

## Sacrifice

**Sandra Robinson**

*Intermediate—Fall*

This seminar begins with a study of sacrificial practices associated with Indo-European/Euro-Indian mythologies and ends with a critical inquiry into current legacies of those practices. Sacrifice bridges religious, political, and economic aspects of culture. As sacrament, it represents transformational mystery. As ceremonial exchange, it facilitates negotiations of status, observance of boundaries, and the redistribution of goods. In specific cultural settings, sacrifice functions as celebration, as manifestation of good will, as insurance, and as source of communion. The sacrifice of a scapegoat channels violence and thereby legitimizes acts of killing that serve social interests of surrogacy and catharsis. Seminar topics include gift exchange, fasting and feasting, the warrior ethic, martyrdom, victimization, bloodletting,

scarification, asceticism, and renunciation. Liturgies of Hindu puja offerings and of the Roman Catholic Eucharist provide core texts. Sacrificial themes from classical Indian and Hellenistic mythology are traced through contemporary literature and cinema. The seminar addresses the politics of sacrifice and alterity through three case studies: first, sati (widow immolation) in India; second, global representations of charity in Calcutta; and third, the targeting of scapegoats in our current political climate.

## The Globalization of Performance Practices

*Shanti Pillai*

*Open—Spring*

“Globalization” has become one of the most fashionable terms to be used in the popular media and academic literature, whether from the point of view of international political-economy, or out of interest for the movement of people, ideas, and images. Debates about global culture range from doomsday predictions of an impending McDonaldization of the world, to celebrations of the development of “hybridity.” In this class we will explore issues of globalization by examining the travel, translation, and transformation of various performance practices. Beginning with an overview of academic perspectives on the implications that shifts in the global economy have for social life in a variety of settings, we will then turn our attention to the ways in which localized performance traditions (many of which are already the product of much earlier cross-cultural exchanges) change aesthetically and take on new significances when practiced far away from centers of origin. We will examine not only the role that performance plays in formulating the national and/or cultural identity of migrating populations, but also how theatrical and ritual practices from various parts of the globe mix and mingle in the work of international performance artists. Our task throughout the semester will be to deconstruct the rigid dichotomy between concepts about the “global” and the “local,” in addition to understanding the sociopolitical consequences involved when artists from countries with considerable economic and political power borrow from traditions and collaborate with artists from other parts of the world. Our work in class will be based on readings, discussions, and videos covering material from Africa, Asia, Latin America, and the United States. For their final projects, students will be encouraged to conduct fieldwork research on one of the many globalized performance traditions currently practiced in New York City.

Full descriptions of the courses may be found under the appropriate disciplines.

## 2004-2005

### Chinese History: Tradition and Transformation

*Ellen Neskär*

*Lecture, Open—Fall*

Historians in both China and the West often depict the premodern Chinese empire as a homogenous monolith that endured with little change from its inception in the third century B.C.E. until the Mongol invasion in the thirteenth century. This course seeks to discover the origins and validity of that depiction. This will involve a close examination of the ways in which China created and conceived of its own history and the study of the rise and development of its cultural and political institutions. Topics covered will include the political and economic systems; international relations; the rise and unfolding of Confucianism, Daoism, and Buddhism; and the nature of its social and cultural practices. Class assignments will be varied, relying on scholarly articles as well as primary sources, including government documents, memoirs, biographies, philosophical texts, and letters.

### Chinese Philosophy and Social Practice

*Ellen Neskär*

*Intermediate—Year*

This course will take a two-pronged approach to Chinese philosophy: the study of Confucianism, Buddhism, and Daoism and an exploration of the social practices that were created in response to those traditions. The first will involve the close reading of texts in each of the intellectual traditions. Topics to be explored will include notions of the Dao (Tao) and the ways in which it might be attained by individuals and society; the essence of the mind, human nature, and the emotions and the ways in which they interact in behavior; the relationship between knowledge and action; and practices of inner self-cultivation and social engagement. Our exploration of social practices will involve a different set of texts, including school regulations and curricula, monastery rules and ritual

texts, "how-to" manuals for managing the family, records of charitable organizations, government documents, legal cases, diaries, and journals. Here we will consider the ways in which social, cultural, and political institutions were shaped and reshaped by the ongoing debates within Confucianism, Buddhism, and Daoism. The goal is to bring the two approaches together by exploring the various ways in which philosophical ideals unfolded in, or stood in tension with, daily life and practice.

*Open to sophomores, juniors, and seniors.*

## First-Year Studies: Cultures and Arts of India

**Sandra Robinson**

**FYS**

This course provides a foundation in cultural studies, a relatively new field of critical inquiry. After exploring India in this interdisciplinary manner, students are equipped for state-of-the-art global studies in anthropology, humanities, and the arts. Questions to be raised include the following: How do performing arts relate to and overlap with visual arts? How do ancient myths and images influence the arts today? What values underlie attempts to define genres and to distinguish "classical" from "folk" arts, and why are such boundaries now widely rejected? How does artistic production reflect patronage, sponsorship, access, and entitlement? Which arts traditionally have been available to women? How do form and function intersect in daily life? The Indian subcontinent hosts numerous cultures grounded in Hindu, Buddhist, Islamic, secular, and "tribal" or unassimilated traditions. In this course poetry and fiction will be studied in conjunction with nonverbal arts to illuminate Indian modes of thought and expression. Hindu temple architecture, Mughal miniature painting, and Dalit theatre will be explored in light of aesthetic, social, and political values. How can we understand Indian religions through arts media? Why are cuisine and body decoration included among classical arts in the Indian canon? How did British colonial values influence South Asian artists' identities and self-representations? The seminar culminates with readings from recent works of Salman Rushdie, Arundhati Roy, and other celebrated writers.

## Law and Order in Premodern China

**Ellen Neskär**

**Open—Spring**

Popular Western perception holds that law codes, legal institutions, and jurisprudence are relatively new to China, introduced through its engagement with the West. Yet China had all these beginning in the second century B.C.E. Perhaps more significant, traditional notions of law and legal justice continue to influence contemporary Chinese jurisprudence and legal practice.

This course will offer a three-part approach to the study of legal culture in premodern China that aims to bring together theoretical notions of law and order, institutional and structural aspects of the legal system, and cultural practices of justice and retribution. The first part will provide an overview of the state's creation and development of a law code and legal institutions in the medieval period. Topics to be explored include the theoretical and philosophical basis of the law code; the ways in which the state resolved the tension between Confucian humanistic ideals and penal law; the structure and function of the courts and judicial institutions; and the workings of the appeal system. The second part of the course will look more closely at the implementation of the law code in local courts through the study of case books and judicial judgments, precedent texts, magistrates' manuals, forensic guidelines, and journal accounts. Topics we will examine include the role and function of local judges, the processes by which penal cases were judged and punishments determined, and the rights and obligations of the various parties in a legal suit. The third part of the course will look at the ways the premodern judicial system both influenced and was influenced by popular culture and prevailing notions of law, retribution, and justice. Topics include the ways in which the court system shaped popular religious notions of justice and contributed to increasingly complicated notions of heaven and hell; the intersection of Buddhist notions of karma and Confucian notions of retribution with the legal system; the rise of popular fiction centered on the courtroom and the wise judge.

## Puja: South Asian Festival Cultures

**Sandra Robinson**

**Intermediate—Spring**

Festivals figure prominently in South Asian cultural calendars. Focused on Hindu myths and rites, this seminar explores puja festivals as a system of devotional offerings, social maintenance, economic renewal, and arts celebration. We take on three case studies: (1) Holi, the spring festival of color; (2) the Sivapuja, a carnival of death and rebirth; and (3) the Durgapuja, invoking the popular goddess of victory. In these festivals acrobats perform; "holy" men and women display austerities; street singers entertain; vendors vend; and temple priests compete to profit by curing ailments. Such a mix blurs obsolete academic distinctions between ritual and economic domains. Storytellers use scroll paintings to illustrate pan-Indian classical epics, courting audiences by weaving local current events into their recitations. In this study of public culture, topics include fasting and feasting; sacrifice; gift exchange; pilgrimage; healing practices; temple architecture. A festival encodes many aspects of its larger culture and provides cultural studies with rich sources for interdisciplinary interpretation. We use semiotic approaches such as those of Roland Barthes

in reading ethnographic reports and personal accounts by festival participants. The seminar highlights diverse expressive media found both within and surrounding puja ceremonies, with critical inquiry into the work of potters, priests and anthropologists.

## Writing India: Transnational Narratives

**Sandra Robinson**

*Intermediate—Fall*

The global visibility of South Asian writers has changed the face of contemporary English literature. Many writers from the Indian subcontinent continue to narrate the tumultuous events surrounding the partition of India and Pakistan at the time of independence from British rule. Their accounts of Hindu/Muslim/Sikh communal violence, from the mid- twentieth century to the present, reflect urgencies similar to those expressed in literatures of the Holocaust and its aftermath. South Asian narratives join utopian imaginings from the past with dystopic visions that prevail today. Such works often reject the nation-state as a viable cultural entity. In the seminar we ask questions such as these: How has the cultural space of India, including the name itself, been altered and redeployed according to various cultural projects, political interests, and economic agendas? In what ways do themes of identity, fragmentation, hybridity, memory, and alienation link South Asian literary production to writing from other postcolonial cultures? Readings begin with a brief, critical look at the earliest "global" constructions of India found not in Sanskrit texts, which recognized regional cultures, but in external writings by travelers from ancient Greece (commentaries by Megasthenes and others), from ancient China (Buddhist pilgrims' accounts), and from the premodern Middle East (Turkish and Persian chronicles). We reinterpret the colonial project so evident in an India portrayed by British writers including Kipling, Forster, and Orwell. The central focus of the seminar is on India as remembered and imagined in works of writers as diverse as Salman Rushdie, Sara Suleri, V. S. Naipaul, and Arundhati Roy. Their writings counternarrate orientalism as well as sectarianism. We use critical inquiry as we pursue a literature that shifts increasingly from narrating the nation to narrating its fragments in transnational contexts.

## 2005-2006

## First-Year Studies: Religion and Politics in China

**Ellen Nesar**

*FYS*

Recent news coverage of China has highlighted the Chinese government's persecution of religious groups, among them Falun Gong and Tibetan Buddhism, and has suggested that such persecution is a product of the Communist Party's failure to promote human rights and religious freedoms. At the same time, the government tolerates a widespread cult to the deceased Chairman Mao Zedong as the god of wealth and business success. This course seeks to place China's attitudes toward religion within a broader historical and cultural context. We will focus on two related themes: how different religious groups in China interacted with and affected the state and how the state created its own religious structure and ultimately shaped the various religions. Questions to be raised will include the following: How did the traditional Chinese state conceive of the sacred role of the emperor? What assumption led to its creation of a state religion that controlled private religious practices? How did the traditional religions of Buddhism, Daoism, and Confucianism both support and oppose the state? How did the state adopt the symbols and practices of these religions to legitimize its authority? How has the contemporary Chinese government borrowed, transformed, or eradicated the traditional relationships between religious groups and the state? We will attempt to answer these questions from a multidisciplinary approach that encompasses institutional, economic, intellectual, and cultural perspectives. Although readings will include secondary sources, emphasis will be placed on primary documents. Sources will include government edicts and ritual manuals, legal cases, religious texts and temple records, private memoirs and diaries, miracle tales, and didactic fiction.

## Images of India: Text/Photo/Film

**Sandra Robinson**

*Open—Spring*

This seminar examines the interface of colonial and postcolonial representations of India as imagined and imaged. Visual artists and writers from India, Pakistan, and Bangladesh are actively engaged in reinterpreting the British colonial impact on South Asia. Their work presents sensibilities of the colonized in counternarration to images previously established in the regime of the Raj. Highlighting previously unexposed impressions, such works inevitably supplement, usually challenge, and frequently undermine traditional accounts underwritten by imperialist interests. Colonial discourse depicted peoples of the Indian subcontinent both in terms of degradation and in terms of the romance of empire, thereby rationalizing various economic, political, and psychological agendas. The external invention and deployment of the term “Indian” is emblematic of the epoch, with colonial designation presuming to reframe indigenous identity. Postcolonial writers and artists are consequently preoccupied with issues of identity formation. What does it mean to have been conceived of as an Indian? What historical claims are implicit in allegories of the nation? How do such claims inform events taking place today, given the resurgence of Hindu fundamentalism? For this inquiry, sources include works by prominent South Asian writers, photographers, and filmmakers.

## Readings in Daoism: Zhuangzi and His Followers

**Ellen Neskar**

*Intermediate—Year*

This seminar centers on the careful reading of *The Zhuangzi*, one of the foundational texts of the Daoist tradition. Arguably the greatest piece of Chinese literature and philosophy, *The Zhuangzi* defies all categorization and instead invites readers to probe through its layers of myth, fantasy, jokes, short stories, philosophy, epistemology, social critique, and political commentary. In the end, Zhuangzi plunges us into an examination of some of the core questions of philosophy: What is being? What is knowledge? What is the nature of human nature? The goal of this course is twofold: to understand *The Zhuangzi* as it was written in the fourth century B.C.E. and to examine the ways in which it has been interpreted and reinterpreted through history. The first semester is designed to thoroughly familiarize students with the text and the philosophical questions it raises. To do this we will read through the text slowly and in minute detail. In the second semester we will look at the text in its broader historical context as well as its influence on later philosophical and artistic traditions. Readings will include the *Dao-de-jing*, Confucius, later Daoist philosophers, religious leaders,

poets, and painters. In addition we will read traditional Chinese and contemporary Western textual history and criticism.

*Open to sophomores, juniors, and seniors.*

## Sacrifice

**Sandra Robinson**

*Open—Spring*

This seminar begins with a study of sacrificial practices associated with Indo-European/Euro-Indian mythologies and ends with a critical inquiry into current legacies and practices. Sacrifice bridges religious, political, and economic aspects of culture. As sacrament, it represents transformational mystery. As ceremonial exchange, it facilitates negotiations of status, observance of boundaries, and the redistribution of goods. In specific cultural settings, sacrifice functions as celebration, as manifestation of good will, as insurance, as source of communion. The sacrifice of a scapegoat channels violence and thereby legitimizes acts of killing that serve social interests of surrogacy and catharsis. Seminar topics include gift exchange, fasting and feasting, the warrior ethic, martyrdom, victimization, bloodletting, scarification, asceticism, and renunciation. Liturgies of Hindu puja offerings and of the Roman Catholic Eucharist provide core texts. Sacrificial themes from classical Indian and Hellenistic mythology are traced through contemporary literature and cinema.

The seminar addresses the politics of sacrifice and alterity through three case studies: first, sati (widow immolation) in India; second, global representations of charity in Calcutta; and third, the targeting of scapegoats in the current transnational political climate.

## Senior Seminar: Alterity: Women and Orientalism

**Sandra Robinson**

*Advanced—Fall*

Alterity is “otherness” in its various aspects. New approaches to critical inquiry theorize the processes of imagining, projecting, objectifying, and repositioning that contribute to the construction of an other. These processes are examined within fields of power relations and cultural representation. Works of Frantz Fanon and Edward Said provide foundational texts for the study of alterity. Related theory is drawn from works of Ashis Nandy, Gayatri Spivak, Judith Butler, and Homi Bhabha. The fall semester of the senior seminar addresses alterity as seen in Orientalist representations of women. Using narrative fiction, memoirs, painting, photography, and film, we explore Orientalism as private fetish, as serviceable discipline, and as public discourse. Through what gazes were the diverse civilizations of Asia reduced to a master narrative of alterity? What representations of Indian women can be

found in works of influential European philosophers, historians, poets, and painters? To what extent were colonial subjects shaped by Orientalism and by resistance to it? The seminar draws on eighteenth-through twentieth-century European art and English literature to focus on depictions of an India deemed at once picturesque and despotic. Debates on social reform of sati (widow immolation) and female infanticide are scrutinized. We conclude with a study of portrayals of women in the mid-twentieth century during the struggle for independence and the partition of India and Pakistan.

*Advanced. Open to seniors and graduate students only.*

## 2006-2007

### Chinese History: Tradition and Transformation

**Ellen Neskär**

*Lecture, Open—Fall*

Historians in both China and the West often depict the premodern Chinese empire as a homogenous monolith that endured with little change from its inception in the third century B.C.E. until the Mongol invasion in the thirteenth century. This course seeks to discover the origins and validity of that depiction. This will involve a close examination of the ways in which China created and conceived of its own history and the study of the rise and development of its cultural and political institutions. Topics covered will include the political and economic systems; international relations; the rise and unfolding of Confucianism, Daoism, and Buddhism; and the nature of its social, cultural, and religious practices. Class assignments will be varied, relying on scholarly articles as well as primary sources, including government documents, memoirs, biographies, fiction, poetry, philosophical texts, and letters.

*Open to any interested student*

## Chinese Philosophy and Social Practice

**Ellen Neskar**

*Open—Year*

This course will take a two-pronged approach to Chinese philosophy: the study of Confucianism, Buddhism, and Daoism and an exploration of the social practices that were created in response to those traditions. The first approach will involve the close reading of texts in each of the intellectual traditions. Topics to be explored will include notions of the Dao (Tao) and the ways in which it might be attained by individuals and society; the essence of the mind, human nature, and the emotions and the ways in which they interact in behavior; the relationship between knowledge and action; and practices of inner self-cultivation and social engagement. Our exploration of social practices will involve a different set of texts, including school regulations and curricula, monastery rules and ritual texts, “how-to” manuals for managing the family, records of charitable organizations, government documents, legal cases, diaries, and journals. Here we will consider the ways in which social, cultural, and political institutions were shaped and reshaped by the ongoing debates within Confucianism, Buddhism, and Daoism. The goal is to bring the two approaches together by exploring the various ways in which philosophical ideals unfolded in, or stood in tension with, daily life and practice.

*Open to sophomores and above.*

## Gender in Myth and Ritual

**Sandra Robinson**

*Open—Year*

Mythologies shape and reflect gender values. This seminar addresses constructs of masculinity, femininity, and androgyny found in myths and rites of selected Indo-European linguistic traditions. Core texts include myths and liturgies from Indian and Greco-Roman cultures. We explore diverse classical themes and motifs including quest, transformation, renewal, combat, and rescue. Students are introduced to varied methods of literary criticism including poststructuralist and semiotic interpretation. In case studies (Krishna, Orpheus, Sati, Pygmalion) we trace specific representations of gender through history, concluding with contemporary legacies of these mythologies. How do cultures encode gender? How do ancient beliefs and practices provide templates for contemporary gender identities? Topics include creation myths, iconographies, attributes and functions of gods and goddesses, rites of initiation and sacrifice, witchcraft beliefs, healing rituals, and ceremonial spirit possession. We look critically at specific mythic motifs in the arts, particularly in opera and film, and in popular cultural domains such as etiquette, costume, and

“technologies of self.” We end by studying the cultural reproduction and uses of myths in commercial advertising.

*Open to any interested student.*

## Pilgrimage: South Asian Practices

**Sandra Robinson**

*Intermediate—Fall*

Pilgrimage figures prominently in Hindu, Buddhist, and Islamic traditions of South Asia. Fairs and festivals held at pilgrimage sites provide venues for religious expression, artistic performance, social negotiation, and economic exchange. Pilgrimage routes link public and domestic spaces, articulating networks of communication among diverse regions. This seminar addresses phenomena found in various modes of travel and tourism: commerce; attractions; spectacles; self-enrichment; prestige, etc. Pilgrimages often also include rites of initiation, acts of renunciation, sacramental ceremonies, holiday observances, and festive celebrations at temples and shrines. Through a study of travel memoirs, we explore themes of quest, discovery, and personal transformation. Through ethnographic accounts, we inquire critically into traditional mappings of “sacred geographies” and the promotion of local lore at competing pilgrimage centers. Postcolonial writings on spiritually inscribed journeys raise issues of dislocation, exile, memory, and identity. Films and photographic sources are used extensively. Readings are drawn from history of religions, cultural anthropology, and personal narrative.

*Intermediate. Open to sophomores, juniors, and seniors.*

## Reading China’s Revolution Through Literature

**Ellen Neskar**

*Open—Spring*

Some of the most revealing and groundbreaking prose written in twentieth-century China is to be found in neither history nor politics but in fiction and memoir. The premise of this course is that literature offers an important glimpse into the social and cultural effects of China’s revolutions. More specifically, the course will look at the literature produced following the 1911 revolution and May Fourth Movement, the 1949 communist revolution, and the Cultural Revolution (1966-1976). Although we will use some of the methods of literary analysis, the primary approach to the readings will be historical. Topics to be explored include the ways in which early writers viewed the problems of traditional literature, the proper form and function of revolution, and the role of literature in bringing about social change. We will also look at the ways in which some writers (among them, Lu Xun and Ding Ling) created new narrative techniques to embody their vision of

social realism and in which others adopted Western literary techniques to convey their self-image as “modern” or “international” writers.

*Open to any interested student.*

## Reel Asians

**Shanti Pillai**

*Open—Spring*

This course will examine depictions of Asia in recent, major feature films made in the United States. Our primary goal will be to understand how popular film constructs Asia as both a tantalizing and dangerous world that serves as an important point of reference for Western ideas about modernity. This includes thinking about how filmic narratives fashion Asians and Asian Americans as racial and cultural others who can affirm dominant ideas about the United States in relation to technology, globalization, sexuality, and immigration. Through readings, film viewings, and discussion, the class will explore the relationship that film has to postcolonial and diaspora experiences and the ways in which cinema may shape contestations of minority cultures. We will also interrogate the relationship between the creation of these films and the growing importance of Asia as an economic and political leader, as well as an exporter of global culture. In particular, the course will focus on the experience of Western travelers to Asia, depictions of Asia’s role in visions of the future, representations of women, and the experience of Asian Americans.

*Open to any interested student.*

## Writing India: Transnational Narratives

**Sandra Robinson**

*Intermediate—Spring*

The global visibility of South Asian writers has changed the face of contemporary English literature. Many writers from the Indian subcontinent continue to narrate tumultuous events that surrounded the 1947 partition of India and Pakistan upon independence from British imperial rule. Their writings join utopian imaginings and legacies of the past with dystopias and aspirations of today. This seminar addresses themes of identity, fragmentation, hybridity, memory, and alienation that link South Asian literary production to contemporary writing from settings elsewhere in Asia, Africa, and Latin America. Accounts of communal violence reflect urgencies similar to those expressed in literatures of the Holocaust. The cultural space of India has been repeatedly transformed and redeployed according to varied cultural projects, political interests, and economic agendas. After considering brief accounts of India as represented in ancient chronicles of Chinese, Greek, and Persian travelers, we explore modern

constructions of India in excerpts from Kipling, Forster, Orwell, and other writers of the Raj. The central focus of the seminar is on India as remembered and imagined in selected works of writers including Ved Mehta, V. S. Naipaul, Salman Rushdie, and Arundhati Roy. We use interdisciplinary critical inquiry as we pursue a literature that shifts increasingly from narrating the nation to narrating its diasporic fragments in transnational contexts.

*Intermediate. Open to sophomores, juniors, and seniors.*

Full descriptions of the courses may be found under the appropriate disciplines.

*Readings in the Japanese Language (p. 380), Herschel Miller Japanese*

## 2007-2008

## Body and Self in Asian Cultures

**Sandra Robinson**

*Open—Fall*

This seminar explores concepts of body and self in the varied cultures of India with comparative case studies from China and Japan. We study cultural constructions of personhood in relation to prevailing social orders. Diverse bodily practices are reflected in realms of medicine, law, public health, ethics, religion, ritual, and etiquette. Using spatial analyses current in cultural studies, we move toward a cultural geography of the body in Indian thought and practice. Boundaries of persons tend to be viewed alternately as fixed, porous, or fluid. Why do some view Hindu personhood as a matter more of “dividuality” than of individuality? In what ways are persons regarded as biamental, biomoral entities? How is caste oppression of dalit (“untouchable”) communities rationalized in terms of bodily purity and pollution? Does a cartography of Japanese selves reflect the layering of multiply wrapped identities? How do Chinese medicine and martial arts point toward the expansion of human potential? Topics include technologies of self, the body as microcosm, yoga as experimentation, theories of pain, practices of psychosomatic healing, location of identity markers, regimes of subject formation, and subjection of the body through protocols of surveillance and control. Readings are drawn from current cultural studies and anthropology.

## Chinese Literature: The Short Story

**Ellen Neskar**

*Intermediate—Fall*

This course begins with the notion that the short story offers a window onto the cultural, literary, and political traditions of China. We will focus on the close reading of stories from two pivotal periods in the Chinese social and literary history: the sixteenth and twentieth centuries. In part our goal will be to discover the continuities and transformations of the genre in both its content and form. Therefore, our approach to the texts will involve both literary and historical analysis. Topics for class discussion will include the nature and definitions of the individual; the relationship between the self and society; changing notions of honor, virtue, and individualism; and the role of fiction in promoting cultural norms and creating a Chinese modernity.

*Sophomores and above*

## First-Year Studies: Cultures and Arts of India

**Sandra Robinson**

*FYS*

The Indian subcontinent hosts numerous cultures grounded in Hindu, Buddhist, Islamic, secular, and “tribal” or unassimilated traditions. This interdisciplinary course explores the diverse cultural traditions of India through the visual and performing arts and through selected literature. Fiction and poetic narratives are studied in conjunction with nonverbal arts to illuminate Indian modes of thought and expression. Aesthetic, religious, economic, and political aspects of South Asian arts are viewed in light of transcultural theories of production and consumption. Questions raised include the following: How do arts of the twenty-first century reflect ancient myths and images? What social agendas underlie the definition of genres and conventional distinctions between classical and folk arts, and why are such boundaries now widely rejected? How does artistic production reflect patronage, sponsorship, access, and entitlement? Which arts were historically available to women? How did British colonial values influence South Asian artists’ identities and self-representations? Hindu temple sculpture, Mughal miniature painting, and Dalit theatre will be explored in light of sectarian histories and social caste practices. How is Indian public culture today (including the Bollywood film industry and other global media) transforming traditional values? Why are cuisine and body decoration included among classical arts in the Indian canon? How do form and function intersect in rickshaw art and other aspects of daily life? Sources include the music of Ravi Shankar, films of Satyajit Ray and Mira Nair, and work of prominent photographers and studio artists. The seminar culminates with readings

from recent works of Salman Rushdie, Arundhati Roy, and other postcolonial writers who continue to inscribe images of India onto the global scene.

## Human Nature and Social Order, East and West

**J. Mason Gentzler**

*Intermediate—Year*

Ideas about human nature provide the foundation for our views of society, government, and politics. Is it natural for human beings to live in structured social and political organizations? Are we naturally inclined to get along with one another? Or not? And what kind of social and political organization follows logically from the presence or absence of such an inclination? What is “nature” in the first place? These are questions that thinkers in all civilizations have tried to answer since ancient times. Through the study of classics of philosophy and literature from the European and East Asian traditions, this class will encounter and discuss familiar, and not-so-familiar, interpretations of human nature and proposals about how, taking into account whatever is assumed to be natural to human beings, both individual and social life might be improved. We will begin with the beginnings, Plato and Confucius. Then we will study later classics of political and social thought as well as plays and novels. We will of course compare and contrast ideas from these traditions, but we will also try to see how one tradition can illuminate another, how, for instance Akira Kurosawa’s film *Throne of Blood* presents a Confucian perspective on Shakespeare’s *Macbeth*. The scope of the course encourages students to choose from a wide range of topics for their individual conference projects.

*Sophomores and above*

## Modern China on the Move

**Martin Fromm**

*Open—Fall*

Many observers of China today see a paradox between communism and capitalism, state autocracy and market laissez-faire, tradition and modernity, commercial ally and nationalist foe. In this course, we will explore the emergence of this seemingly contradiction-ridden modern nation through the lenses of imperial expansion, global capitalism, and cultural encounter. We will approach China’s history as a dynamic constellation of human circulations that played a pivotal role in the shaping of the modern world as we know it. Some questions that will be addressed include how China expanded toward its current borders, how Chinese engaged with Western imperialism across political boundaries, how Chinese movements have shaped and been shaped by cultural developments across

Southeast Asia and the Pacific, and what roles ethnicity, race, and gender have played in the formation of global Chinese identities in the past and present.

## Modern China Within Contesting Empires

**Martin Fromm**

*Open—Spring*

The history of modern China from the middle of the nineteenth century to the founding of the People's Republic of China in 1949 is often told in terms of a decayed China at the mercy of Western imperialism. In this course, we will gain a more nuanced understanding of this history by directing our attention to one particular region known then as Manchuria, now the northeastern part of China. Particularly during the hundred years from the mid-nineteenth to the mid-twentieth century, this region became the focus of the world's attention as the hot spot of East Asia's modern transformation. We will examine how the Chinese who settled in this sparsely settled land became entangled in a struggle of national claims and imperial goals waged among China, Russia, Japan, and Korea. We will use this regional approach to understand how Chinese national identity emerged within competing East Asian aspirations for power and discourses of modernity. We will seek to understand the evolution of China into a modern nation from the perspectives of frontier, migration, and empire.

## Orientalism

**Sandra Robinson**

*Open—Spring*

This seminar explores the career of the Orient as an idea, a product of projected imaginings, with emphasis on its deployment in India. As an imaginary construct central to western cultures and politics, orientalist sensibilities continue to have tangible global impact. Orientalism was born as a fetish, came of age as a discipline, and matured to spawn a critical discourse. Orientalist thought blushed forth in Europe as an array of fears and desires projected onto peoples located "somewhere East of Suez." Orientalist assumptions became encoded as a system of serviceable knowledge in the enduring scholarly disciplines that crystallized in the Enlightenment. That legacy continues to be seen in many aspects of academic disciplines today. Repudiations of orientalism have been central to recent critical discourse in history, literature and cultural studies. Resulting controversies have prompted impassioned debates sometimes referred to as academic "culture wars." Through what gazes were the diverse civilizations of Asia reduced to a master narrative of otherness? What representations of India can be found in the works of influential European philosophers, historians, poets and painters? How did agents of the

British Raj appropriate South Asian sciences and practices? To what extent were colonial subjects shaped by orientalism and/or by resistance to it? The seminar draws on 18th through 20th century art and English literature to focus on depictions of an India at once picturesque and despotic. We trace the prior invention and uses of the term "Indian" as emblematic of the orientalist epoch, external designation presuming to reframe indigenous identity. We analyze colonial portrayals of peoples of the Indian subcontinent in terms of the romance of empire. This idiom served to rationalize Britain's "civilizing mission" with its political, economic, and psychological agendas. Today, American pop culture, media, advertising and fashion continue to reproduce the Orient as commodity. The seminar ends with a study of contemporary South Asian writers whose responses to orientalism are transforming English literature and reshaping cosmopolitan, transnational cultures. Open to sophomores, juniors and seniors.

## Yoga and Ayurveda

**Sandra Robinson**

*Open—Spring*

This seminar explores traditional disciplines of yoga and ayurveda. Ancient Indian teachings of psychophysical experimentation are studied with emphasis on theories and practices of hatha yoga. Indian interpretations of body and self form a foundation for these teachings. Hindu, Jain, and Buddhist foundations of yogic doctrines are considered. Yogic disciplines have broad implications for physical and mental hygiene, preventive medicine, and public health. Ayurvedic schools of medicine are introduced with respect to anatomy, physiology, respiration, digestion, and endocrine function. We draw on contemporary theories in the philosophy and anthropology of medicine in order to interpret techniques of the self that are embedded in ayurvedic teachings. With the increasing globalization of yogic and ayurvedic practice, their roles as cultural signifiers also point to important issues in postcolonial identity formation.

Full descriptions of the courses may be found under the appropriate disciplines.

## 2008-2009

### Chinese History: Tradition and Transformation

*Ellen Neskar*

*Lecture, Open—Fall*

Historians in both China and the West often depict the premodern Chinese empire as a homogeneous monolith that endured with little change from its inception in the third century B.C.E. until the Mongol invasion in the thirteenth century. This course seeks to discover the origins and validity of that depiction. This will involve a close examination of the ways in which China created and conceived of its own history and an exploration of the rise and development of its cultural and political institutions. Topics covered will include the rise and unfolding of Confucianism, Daoism, and Buddhism; the nature of China's social and cultural practices; the creation of its political and economic systems; and its changing international relations. Class assignments vary, relying mainly on primary sources, including government documents, memoirs, biographies, philosophical texts, and letters.

### First-Year Studies: Cultures and Arts of India

*Sandra Robinson*

*FYS*

The Indian subcontinent hosts numerous cultures grounded in Hindu, Buddhist, Islamic, secular, and "tribal" or unassimilated traditions. This interdisciplinary course explores the diverse cultural traditions of India through the visual and performing arts and through selected literature. Fiction and poetic narratives are studied in conjunction with nonverbal arts to illuminate Indian modes of thought and expression. Aesthetic, religious, economic, and political aspects of South Asian arts are viewed in light of transcultural theories of production and consumption. Questions raised in the fall include the following: How do arts of the twenty-first century reflect ancient myths and images? What social agendas underlie the definition of genres and conventional distinctions between "classical" and "folk" arts, and why are such boundaries now widely rejected? Why are cuisine and body decoration included among classical arts in the Indian canon? Which arts were historically available to women? How did British colonial values influence South Asian artists' identities and self-representations? Hindu temple sculpture, Moghul miniature painting, and Dalit theatre will be studied in light of sectarian

histories and social caste practices. In the spring, we explore Indian public culture today. How is the Bollywood film industry, together with other global media, transforming traditional values? How does artistic production reflect patronage, sponsorship, access, and entitlement? How do form and function intersect in rickshaw art and other aspects of daily life? Sources include the music of Ravi Shankar, films of Satyajit Ray and Mira Nair, and work of prominent photographers. The seminar culminates with readings from recent works of Salman Rushdie, Arundhati Roy, and other postcolonial writers who continue to inscribe images of India onto the global scene.

### Performing Identities: Class, Ethnicity, Gender, and Race in Contemporary Performance

*Shanti Pillai*

*Open—Spring*

This course will offer students methodologies to think critically about class, ethnicity, gender, and race and the role of performance in reproducing and subverting social constructions of self and other. We will begin by looking at how scholars and political activists have conceptualized class, ethnicity, gender, and race as both historically specific, structured relations of oppression, as well as fields of visual representation. Our discussion will challenge ontological claims about the nature of these social identities, in addition to exploring the ways in which these rubrics of difference intersect and must be thought about in relation to one another. We will apply our theoretical understanding toward examining the underlying assumptions and overt intentions of artists working in a range of performative media, both within popular culture and the avant-garde. We will explore how performances reproduce or subvert ideas about class, ethnicity, gender, and race through the use of stereotypes, drag, humor, irony, and other stylistic choices. Ultimately, our goal in this course will be twofold: to gain an understanding of the limitations and possibilities that contemporary artistic practices have for commenting on social issues and to gain a greater awareness of our own individual responses to performative representations of identity. The course is thus an opportunity for reflecting deeply about ourselves, seeing our experiences and attitudes in relation to broad social constructions and historical trajectories, and, most important, learning how to communicate and discuss our feelings and ideas about controversial subjects in ways that are productive and yet do not seek to hide behind a stifling political correctness. Class work will entail discussions based on readings and audiovisual materials, as well as maintaining a journal. Students will create their own performances as part of their final projects (no previous experience required).

## Readings in Daoism: Zhuangzi and His Followers

**Ellen Neskar**

*Intermediate—Spring*

This seminar centers on the careful reading of *The Zhuangzi*, one of the foundational texts of the Daoist tradition. Arguably the greatest piece of Chinese literature and philosophy, *The Zhuangzi*, defies all categorization and instead invites readers to probe through its layers of myth, fantasy, jokes, short stories, philosophy, epistemology, social critique, and political commentary. In the end, *Zhuangzi* plunges us into an examination of some of the core questions of philosophy: What is being? What is knowledge? What is the nature of human nature? The goal of this course is twofold: to understand the *Zhuangzi* as it was written in the fourth century B.C.E. and to examine the ways in which it has been interpreted and reinterpreted through history. To accomplish the first, we thoroughly familiarize ourselves with the text and the philosophical questions it raises through close and detailed reading. To accomplish the second goal, we will look at the text in its broader historical context as well as its influence on later philosophical and artistic traditions. Readings will include the *Dao-de-jing*, Confucius, later Daoist philosophers and religious leaders, poets, and painters.

## Sacrifice

**Sandra Robinson**

*Open—Spring*

This seminar begins with a study of sacrificial practices associated with Indo-European/Euro-Indian mythologies and ends with a critical inquiry into current legacies and practices. Sacrifice bridges religious, political, and economic aspects of culture. As sacrament, it represents transformational mystery. As ceremonial exchange, it facilitates negotiations of status, observance of boundaries, and the redistribution of goods. In specific cultural settings, sacrifice functions as celebration, as manifestation of goodwill, as insurance, as source of communion. The sacrifice of a scapegoat channels violence and thereby legitimizes acts of killing that serve social interests of surrogacy and catharsis. Seminar topics include gift exchange, fasting and feasting, the warrior ethic, martyrdom, victimization, bloodletting, scarification, asceticism, and renunciation. Liturgies of Hindu puja offerings and of the Roman Catholic Eucharist provide core texts. Sacrificial themes from classical Indian and Hellenistic mythology are traced through contemporary literature and cinema. The seminar addresses the politics of sacrifice and alterity through three case studies: first, sati (widow immolation) in India; second, global representations of charity in Calcutta; and third, the targeting of scapegoats in the current transnational political climate.

## Writing India: Transnational Narratives

**Sandra Robinson**

*Intermediate—Fall*

The global visibility of South Asian writers has changed the face of contemporary English literature. Many writers from the Indian subcontinent continue to narrate tumultuous events that surrounded the 1947 partition of India and Pakistan upon independence from British imperial rule. Their writings join utopian imaginings and legacies of the past with dystopias and aspirations of today. This seminar addresses themes of identity, fragmentation, hybridity, memory, and alienation that link South Asian literary production to contemporary writing from settings elsewhere in Asia, Africa, and Latin America. Accounts of communal violence reflect urgencies similar to those expressed in literatures of the Holocaust. The cultural space of India has been repeatedly transformed and redeployed according to varied cultural projects, political interests, and economic agendas. After considering brief accounts of India as represented in ancient chronicles of Chinese, Greek, and Persian travelers, we explore modern constructions of India in excerpts from Kipling, Forster, Orwell, and other writers of the Raj. The central focus of the seminar is on India as remembered and imagined in selected works of writers including Ved Mehta, V. S. Naipaul, Salman Rushdie, and Arundhati Roy. We use interdisciplinary critical inquiry as we pursue a literature that shifts increasingly from narrating the nation to narrating its diasporic fragments in transnational contexts.

## 2009-2010

### Images of India: Text/Photo/Film

**Sandra Robinson**

*Intermediate—Spring*

This seminar examines the interface of colonial and postcolonial representations of India as imagined and imaged. Visual artists and writers from India, Pakistan, and Bangladesh are actively engaged in reinterpreting the British colonial impact on South Asia. Their work presents sensibilities of the colonized in counter-narration to images previously established in the regime of the Raj. Highlighting previously unexposed impressions, such works inevitably supplement, usually challenge, and frequently undermine traditional accounts underwritten by imperialist interests. Colonial discourse depicted peoples of the Indian subcontinent both in terms of degradation and in terms of the romance of empire, thereby rationalizing various economic, political, and psychological agendas. The external invention and deployment of the term “Indian” is emblematic of the epoch, with colonial designation presuming to reframe indigenous identity. Postcolonial writers and artists are consequently preoccupied with issues of identity formation. What does it mean to have been conceived of as an Indian? What historical claims are implicit in allegories of the nation? How do such claims inform events taking place today, given the resurgence of Hindu fundamentalism? For this inquiry, sources include works by prominent South Asian writers, photographers, and filmmakers.

*Sophomores and above.*

### Pilgrimage, Tourism and Orientalism

**Sandra Robinson**

*Open—Year*

This seminar explores cultures of travel in South Asia by addressing diverse aspects of pilgrimage and tourism. We inquire into the proposition that, throughout history, pilgrimage and tourism have been functionally indistinguishable. What role, if any, do travelers' intentions play in defining categories of travel? Festivals at Hindu, Buddhist, and Islamic sites provide venues not only for religious expression but also for artistic performance, social negotiation, and economic exchange. Through anthropological accounts, we inquire critically into mappings of “sacred geographies” as we study strategies of travel promotion and trade in local artifacts at pilgrim/tourist centers. We also consider the optics of encounter, analyzing the privileged position of anthropologists and other travelers as they relate to the subjects of their gazes. Through 18th- to 20th century travel memoirs and paintings, we explore themes of exoticism, quest, discovery, and personal

transformation in light of orientalism. How have orientalist assumptions complicated global travel encounters? Is service tourism in India a legacy of the “civilizing mission” of British colonialism? Postcolonial travel narratives today continue to raise issues of identity and alterity, dislocation and exile, experience and memory. Current destination attractions illustrate the “society of the spectacle” and provide a series of case studies. Visual sources, including films and photographs, reveal complexities of crowd control, ecology, and public health, while depicting more lyrical aspects of festivals and holidays. Readings are drawn from history of religions, cultural anthropology, and personal narratives.

### Reading China's Revolutions through Literature

**Ellen Neskär**

*Open—Fall*

Some of the most revealing and groundbreaking prose written in 20th-century China is to be found in neither history nor politics but in fiction and memoir. The premise of this course is that literature offers an important glimpse into the social and cultural aspects of China's revolutions. More specifically, the course will look at the literature produced following the 1911 revolution and May Fourth Movement, the 1949 communist revolution, and the Cultural Revolution (1966-1976). Our approach to the readings will use the methods of both literary analysis and social history. Topics to be explored include the ways in which writers viewed the problems of traditional literature, the proper form and function of revolution, and the role of literature in bringing about social and political change. We will also look at the ways in which successive generations of writers created new narrative techniques or adopted Western literary styles to effect revolution.

### The Tao in Early Chinese Philosophy

**Ellen Neskär**

*Open—Spring*

All Chinese philosophers uphold the Tao (Way) as both an absolute principle and a path by which individuals attain perfection. They differ, of course, in their understanding of what the Tao means. This course will be devoted to a careful reading of a small number of foundational texts from the early Taoist and Confucian traditions. The goals of this seminar are twofold. First, it is designed to familiarize students with the seminal thinkers of Chinese philosophy – Confucius, Lao-zi, Zhuang-zi, and Mencius. The second goal is to explore more fully the debates among these thinkers concerning the nature of the Way and the manner in which it might be attained in the world.

## Writing India: Transnational Narratives

**Sandra Robinson**  
*Intermediate—Fall*

The cultural space of India has been repeatedly transformed and redeployed according to varied cultural projects, political interests, and economic agendas. In recent decades, the global visibility of South Asian writers has changed the face of contemporary English literature. Many writers from the Indian subcontinent continue to narrate tumultuous events that surrounded the 1947 partition of India and Pakistan with independence from British imperial rule. Their writings join utopian imaginings and legacies of the past with dystopias and aspirations of today. This seminar addresses themes of identity, fragmentation, hybridity, memory, and alienation that link South Asian literary production to contemporary writing from settings elsewhere in Asia, Africa, and Latin America. Accounts of communal violence reflect urgencies similar to those expressed in literatures of the Holocaust. After considering representations of India in ancient chronicles of Chinese, Greek, and Persian travelers, we explore orientalist constructions of India in excerpts from Kipling, Forster, Orwell, and other writers of the Raj. The central focus of the seminar is on India as imagined and remembered in selected works of writers, including Salman Rushdie, Arundhati Roy, and Jhumpa Lahiri. We use interdisciplinary critical inquiry as we pursue a literature that shifts increasingly from narrating the nation to narrating its diasporic fragments in transnational contexts.

*Sophomores and above.*

Full descriptions of the courses may be found under the appropriate disciplines.

Griffith Foulk *Religion*

## 2010-2011

### Chinese Philosophy: The Mind and Human Nature

**Ellen Neskar**  
*Open—Fall*

The nature of human nature, the proper functioning of the mind, and the relationship of both to the Tao are central preoccupations of Chinese philosophy. In this course, we will explore these concerns through a careful reading of the foundational texts from the early Taoist and Confucian traditions. Our goals are twofold: First, we will pay close attention to each philosopher's conceptions of the mind, emotions, human nature, thought, and knowledge. Second, we will examine the unfolding of the debates among the philosophers concerning the manner in which these conceptions relate to the Tao and shape the individual's practice of self-cultivation.

*Open to any interested student.*

### Reading in Taoism: The Zhuangzi

**Ellen Neskar**  
*Open—Spring*

This seminar centers on the careful reading of *The Zhuangzi*, one of the foundational texts of the Taoist tradition. Arguably, the greatest piece of Chinese literature and philosophy, *The Zhuangzi*, defies all categorization and, instead, invites readers to probe through its layers of myth, fantasy, jokes, short stories, philosophy, epistemology, social critique, and political commentary. In the end, *The Zhuangzi* plunges us into an examination of some of the core questions of philosophy: What is being? What is knowledge? What is the nature of human nature? The goal of this course is twofold: first, to familiarize ourselves with the text and the philosophical questions it raises through close and detailed reading; second, to understand *The Zhuangzi* within its broader historical context by looking at those texts to which it responds and which responded to it (including the *Dao-de-jing* and Confucius' *Analects*).  
*Open to any interested student.*

### Sacrifice

**Sandra Robinson**  
*Open—Spring*

This seminar centers on sacrificial practices using ancient and contemporary case studies. Sacrificial themes from ancient India and classical western traditions are studied through core texts, including: Euripides, *The Bacchae*; the Roman Catholic Eucharist; and Hindu liturgies for priestly and devotional offerings. We explore classical themes of sacrifice that survive today in contemporary literature and cinema. Sacrifice bridges religious, political, and economic aspects of

culture. As sacrament, it represents transformational mystery. As ceremonial exchange, it facilitates negotiations of status, observance of boundaries, and the redistribution of goods. In specific cultural settings, sacrifice functions as celebration, as manifestation of goodwill, as insurance, as source of communion. Seminar topics include gift exchange, fasting and feasting, the warrior ethic, victimization and martyrdom, bloodletting, scarification, asceticism, and renunciation. The sacrifice of a scapegoat channels violence and legitimizes acts of killing that serve social interests of surrogacy and catharsis. The seminar concludes by addressing the politics of sacrifice and alterity through recent critical inquiry into 1) *sati* (widow immolation) in India; 2) charity and service tourism; 3) court rituals and judicial proceedings; and 4) the targeting of ethnic scapegoats in transnational politics.  
*Open to any interested student.*

## Yoga and Ayurveda

**Sandra Robinson**

*Intermediate—Spring*

This seminar explores traditional disciplines of yoga and ayurveda, with a focus on theories and practices of hatha yoga. The psychophysical disciplines of India belong to joint domains of medicine, law, and religion. Indian interpretations of body and self form a foundation for these teachings. Hindu and Buddhist foundations of yogic doctrines are considered. Yoga has broad implications for physical and mental hygiene, preventive medicine, and public health. Ayurvedic medicine addresses anatomy, physiology, respiration, digestion, and endocrine function without compartmentalizing these systems. We draw on contemporary theories in the philosophy and anthropology of medicine in order to interpret techniques of the self that are embedded in ayurvedic teachings. With globalization, yoga and ayurveda as cultural signifiers have developed into a discourse, pointing to important issues in postcolonial identity formation.

*Intermediate. Open to sophomores and above.*

## 2011-2012

### Bitter Victories, Sweet Defeats

**Kevin Landdeck**

*Open—Year*

This seminar is a sustained look at a major aspect of East Asian history in the first half of the 20th century: war. The course will not be “military history” in the sense of battles and campaigns but, instead, a look at war’s deep impact on politics, society, and culture in China and Japan from the 1890s to the 1950s, as governments and people prepared for war, waged it, propagandized for it, and rebuilt in its wake. For China, we will focus on the link between prolonged warfare and revolution. The Second Sino-Japanese War (1937-45) was preceded by decades of violent struggles among warlords and revolutionary parties and was followed by the PRC’s first major international conflict, the Korean War. The importance of these long years of warfare for the Chinese revolution cannot be overstated. We will ask how men were mobilized, how wars affected civilians, how revolutionary leaders and parties made use of warfare, why some Chinese collaborated with the Japanese, and why a regime whose flag was barely hoisted over Tiananmen Square decided to fight one of the world’s superpowers. For Japan, war was no less crucial but in different ways. To understand Japan’s disastrous imperial adventure and the effects of defeat, we will reverse the China rubric to look at the connections between aggressive militarism and the Meiji political “revolution” (1868), as well as later brushes with social revolution. The Nanjing Massacre (December 1937) will be dissected, as we attempt to understand the anatomy of that atrocity. Finally, we will look at the ramifications of defeat. How was “responsibility” for the war determined? Using scholarly studies, fiction, and the photographs of Shomei Tomatsu, we will ask what it meant to be an occupied country and what changes US occupation brought in its wake. We will confront the difficult issue of Japan as “victim” by discussing the atomic bombs—a singular event in world history—and their cultural effects in Japan.

### Chinese Philosophy: Tao, Mind, and Human Nature

**Ellen Neskar**

*Intermediate, Sophomore and above—Year*

The nature of human nature, the proper functioning of the mind, and the relationship of both to the Tao are central preoccupations of Chinese philosophy. In the

first semester, we will explore these concerns through a careful reading of the foundational texts from the early Taoist and Confucian traditions. In the second semester, we will look at the ways in which later Neo-Taoist and Neo-Confucian philosophers reevaluated the classics and created metaphysical systems to ground their understanding of perfectibility of all people. Our goals are twofold: First, we will pay close attention to each philosopher's conceptions of the mind, emotions, human nature, thought, and knowledge. Second, we will examine the unfolding of the debates among the philosophers concerning the manner in which these conceptions relate to the Tao and shape the individual's practice of self-cultivation. Philosophers and texts will include: Confucius, Lao-tzu, Mencius, Chuang-tzu, Hsun-tzu, *Great Learning*, *Doctrine of the Mean*, Kuo Hsiang, and Chu Hsi.

## Empire to Nation

**Kevin Landdeck**

*Open—Spring*

What did it mean to be a subject of the Qing dynasty in 1800 or a citizen of one of the modern Chinese Republics founded in the 20th century? What changed in the course of that century and a half? This course is a reading seminar in China's fitful transition from the empire of the Manchu (Qing) dynasty (1644-1911) to the nation-state of the PRC (1949-present). The Qing dynasty was massive. From its height in the 18th century to the middle of the 20th, this continental power was remade into a member of the modern international community of nation-states. As we chart this process, recurring themes will be the changing nature of (state) sovereignty, relations with outsiders/foreigners, and the relationship of individuals to state power. We will examine the sinews of the Manchu dynasty's domestic authority, including the balancing act between the emperor's personal will and the bureaucracy's routinized power. Qing colonialism in Xinjiang will illuminate the multiethnic nature of its empire and its interactions with foreign "others." Despite internal challenges, external relations were what brought fundamental challenges to the imperial state—particularly the corrosive interactions with another imperial power, the seafaring British. The role of translation (of Western philosophy and international law) will be our entry point for China's slide into the modern international system of nation-states. The concept of race highlights how Chinese struggled with the definition of "nation" itself. From there, we will turn to the growth of a modern nation-state. Keeping in mind the distinction between rural and urban environments, the changing nature of power, the relationship between the state and individuals, and revolutionary political mobilization will be topics of particular interest.

## First-Year Studies: Cultures and Arts of India

**Sandra Robinson**

*FYS*

The Indian subcontinent hosts many diverse cultures grounded in Hindu, Buddhist, Islamic, secular, and unassimilated traditions. This multifaceted course explores the diverse cultural traditions of India through the visual and performing arts and through exemplary literature. Fiction and poetic narratives are studied in conjunction with nonverbal arts, as we explore modes of Indian thought and expression. Aesthetic, religious, economic, and political aspects of South Asian arts are viewed in light of transcultural theories of production and consumption. We study Hindu temple sculpture, Moghul miniature painting, and Dalit theatre, with attention to aesthetic principles, religious sectarian histories, caste hierarchies, and systems of patronage. Our inquiries address these questions: How do arts of the 21st century both reflect and transform traditional myths and images? What social agendas have led to conventional distinctions between "classical" and "folk" arts, and why are such definitions now widely rejected? Why does the Indian canon regard cuisine and body decoration to be classical art forms? Which arts were historically available to women? How did British colonial values influence South Asian artists' identities and self-representations? Sources include the music of Ravi Shankar, films of Satyajit Ray and Mira Nair, and work of prominent photographers. The seminar culminates with readings from recent works of Salman Rushdie, Arundhati Roy, and other postcolonial writers who continue to inscribe images of India onto the global scene.

## Images of India: Text/Photo/Film

**Sandra Robinson**

*Sophomore and above—Spring*

This seminar examines the interface of colonial and postcolonial representations of India as imagined and imaged. Visual artists and writers from India, Pakistan, and Bangladesh are actively engaged in reinterpreting the British colonial impact on South Asia. Their work presents sensibilities of the colonized in counter-narration to images previously established during the regime of the Raj. Highlighting previously unexposed impressions, such works inevitably supplement, usually challenge, and frequently undermine traditional accounts underwritten by imperialist interests. Colonial discourse depicted peoples of the Indian subcontinent both in terms of degradation and in terms of the romance of empire, thereby rationalizing various economic, political, and psychological agendas. The external invention and deployment of the term "Indian" is emblematic of the epoch, with colonial designation presuming to reframe indigenous identity. Postcolonial writers and artists are consequently preoccupied with

issues of identity formation. What does it mean to have been conceived of as an Indian? What historical claims are implicit in allegories of the nation? How do such claims inform events taking place today, given the resurgence of Hindu fundamentalism? For this inquiry, sources include works by prominent South Asian writers, photographers, and filmmakers.

## Personal Narratives

**Kevin Landdeck**

*Open—Fall*

This course explores the realm of private life and individual identity as revealed in forms of autobiographical writings from modern China. Ranging from the late Qing dynasty (1644-1911) and into the Reform era (1980s), our investigations will cover an eclectic mix of “personal” literature: diaries, memoirs, oral testimony, autobiographies, third-party anthropological reconstructions of individuals, and (auto)biographical fiction. We will encounter late imperial petty scholars, young urban women and their mothers with bound feet, peasants, radical revolutionaries, intellectuals, Maoist Red Guards, and factory workers. In a purely historical sense, the readings provide opportunities to understand the past by working directly with different types of sources. Yet, these personal stories not only open up windows on the lives and times of their writers but also allow us to explore the intersection between the practice of writing and identity construction, which some theorists argue is one of the distinctive elements of modernity. We will ask ourselves how these authors present themselves: What are their self-conceptions and self-deceptions? Where does their sense of “self” come from, and how do they construct private selves through writing? Why are they writing and for whom? We should even dare to ask whether these categories of “private” and “self” are even relevant. The rapid and often traumatic changes of these decades will cause us to consider how these people understood and situated themselves in wider society and the events of their time and, thus, will open up questions about the imaginative constructions of national (or social) communities that are smuggled inside these “personal” stories.

## Writing India: Transnational Narratives

**Sandra Robinson**

*Sophomore and above—Fall*

The global visibility of South Asian writers has changed the face of contemporary English literature. Many

writers from the Indian subcontinent continue to narrate tumultuous events that surrounded the 1947 partition of India and Pakistan with independence from British imperial rule. Their writings join utopian imaginings and legacies of the past with dystopias and thwarted aspirations of recent decades. More promising visions currently prevail. This seminar addresses themes of identity, fragmentation, hybridity, memory, and alienation that link South Asian literary production to contemporary writing from postcolonial cultures in Southeast Asia, Africa, and Latin America. Accounts of South Asian communal violence reflect urgencies resonant with those expressed in literatures of the Holocaust. The cultural space of India has been repeatedly transformed and redeployed according to varied cultural projects, political interests, and economic agendas. After briefly considering representations of India in travel chronicles of Chinese Buddhist pilgrims, Greek adventurers, and Turko-Persian conquerors, we explore modern constructions of India found in excerpts from Kipling, Forster, Orwell, and other writers of the British Raj. The central focus of the seminar is on India as remembered and imagined in selected works of writers, including Salman Rushdie, Vikram Seth and Arundhati Roy. We use interdisciplinary critical inquiry as we pursue a literature that shifts increasingly from narrating the nation to narrating its diasporic fragments in transnational contexts.

# Biology

## 2002-2003

### Contemporary Topics in Women's Biology

*Elena Gizang-Ginsberg*

This course is designed to discuss the biological principles and issues that are unique to women for their management of good health. The term "women's health" encompasses much more than reproductive health. It includes understanding the role of diet, nutrition and exercise in maintaining a healthy lifestyle, an understanding of beauty and body image myths and how they impact on our mental and physical well being, as well as a knowledge base about diverse chronic diseases which confront women today. Reproductive topics including menstruation, contraception, fertility, assisted reproductive technologies and gynecological treatments will also be addressed. We will also discuss how our society and its institutions, including the scientific process itself, have impacted on the creation and interpretation of biological information. Although this course is about the biology of women, it is specifically designed to emphasize "inclusiveness" rather than "exclusiveness" in today's world. Men and women interested in obtaining a better understanding of the structure and function of the female body during her lifespan will hopefully be able to develop a greater sensitivity to issues related to the physical, mental, and emotional well being of women. Open to all interested students.

### Developmental Biology

*Drew E. Cressman*

One of the wonders of life is that the fertilization of a single egg with a single sperm ultimately leads to the formation of an incredibly complex adult life form. Even more amazing is that for humans, most of the critical period of development occurs out of sight, in the womb of the mother. So how does a single fertilized cell undergo this journey into an adult organism? In this course, we will examine the processes by which organisms undergo early embryogenesis, beginning with the mechanisms of gamete formation and fertilization and proceeding through cleavage into different cell types and development of organs and the overall body plan. Additionally, we will examine the similarities and differences in the developmental biology of different species, ranging from worms to mammals. Finally, we will conclude the course by examining the causes and effects of abnormal development and congenital defects in embryonic and prenatal development.

### Drugs and the Brain

*Leah Olson*

What causes depression or schizophrenia? Are they mental disorders? Brain disorders? Why do drugs help these conditions? Why do humans and many other animals "like" the effect of psychotropic drugs? What is the basis for addiction to these drugs? All these questions are really questions about the brain — what it is and how it functions to generate "the mind." We now know that chemical messengers are used for communication between neurons in the brain, and that disorders in communication can result in severe behavioral disorders — Alzheimer's disease, anxiety, and schizophrenia, to name a few. As we learn more about how drugs relieve or promote disorders in chemical communication, and thus behavior, we learn more about what the brain is and how it functions. This course will be a study of the brain, focusing on chemicals as a tool to help unravel that mystery which is the mind.

### General Biology

*Leah Olson*

This course is a basic but in-depth survey of the major topics of biology, stressing the basic unity of life. We will concentrate most of our study in three basic areas. First, we will cover how cells work, exploring in detail cell and molecular biology and asking about the basic structure and functions of cells and how these functions are controlled and regulated by the nucleus. We then will move to successively higher levels of organization — tissue, organ, and organ system — focusing primarily on the human body. This area will include classical genetics, anatomy, and physiology as well as development and reproduction. Evolution, as the cornerstone of modern biology, is the third major focus of the course and will be used to inform all other studies. Weekly labs will supplement the classes.

### Human Physiology and Anatomy

*Elena Gizang-Ginsberg*

Did you ever wonder why you get dizzy when you are on a roller coaster ride or why your heart beats faster and your palms get sweaty when you are about to perform or give a pre-sentation? In this computer age we often know more about our computer's hard drive than our own "internal" hard drive. The human body is a complex system of anatomical design and physiological function. In this one-semester course, we will provide an overview of basic human anatomy of each body region by detailing the respective components of internal and external structure. We will analyze each organ system's physiology — examining how each system supports a specific function, such as those required for responsiveness, growth, movement, and metabolism. Organ systems to be studied include the integument, skeletal, muscular, nervous, cardiovascular, endocrine,

sensory, immune, and digestive systems. We will extensively discuss how these individual biological systems are intricately networked to ultimately result in the normal functioning of the entire human body. Relevant current-day issues as well as clinical anomalies will also be explored.

## Introduction to Genetics

### *Drew E. Cressman*

At the biological core of all life on Earth is the gene. The unique combination of genes in each individual ultimately forms the basis for that person's physical appearance, metabolic capacity, thought processes, and behavior. Therefore, in order to understand how life develops and functions, it is critical to understand what genes are, how they work, and how they are passed on from parents to offspring. In this course, we will begin by investigating the theories of inheritance first put forth by Mendel, and then progress to our current concepts of how genes are transmitted through individuals, families, and whole populations. We will also examine chromosome structure and the molecular functions of genes and DNA, and how mutations in DNA can lead to physical abnormalities and diseases such as Down's and Turner's syndromes or hemophilia. Finally, we will discuss the role of genetics in influencing such complex phenotypes as behavior and intelligence.

## Marine Biology

### *Raymond D. Clarke*

The ocean is the last of the great frontiers on Earth and is widely heralded as the source of our future energy and food resources. The ocean is believed to be the cradle of life and certainly supports a much greater variety of living things than the freshwater or terrestrial environments. What is the nature of life in the ocean? How does marine life capture and share the sun's energy? Why are some areas of the ocean rich in life and others almost devoid of life? Can we farm the seas? These and other questions will be discussed in a systematic inquiry into marine biology. We will study the physical characteristics of each of the major zones of the ocean, then examine the kinds of marine organisms and the adaptations that suit them to their characteristic zones. This will lead to a discussion of our present use of the seas and our impact on the organisms that live there. With this knowledge we will examine some of the exotic schemes proposed to harvest food and energy from the ocean and evaluate their probable effects on the ocean system. Classes will be supplemented by laboratory sessions and field trips. Conferences will be used to explain class material, to review the tests, and to discuss conference papers, which may be written on any basic or applied aspect of marine biology.

## The Biological Basis of Human Disease

### *Drew E. Cressman*

To ultimately cure a particular human disease, it is essential to understand the underlying causes of that disease. In the past decade, our knowledge of the cellular and molecular defects responsible for such syndromes as breast cancer, cystic fibrosis, and diabetes has increased exponentially. In this course, we will begin by reviewing some basic cell biology and genetics, and then we will address the biological causes of a variety of classes of human diseases, ranging from simple single gene disorders such as sickle cell anemia to complex syndromes such as diabetes and hypertension. Critical questions will include: How and when is the disease initiated? How is it propagated through the body? How does it avoid the immune system and how does the body respond? What types of therapy are applied to treat affected individuals? We will also examine animal model systems such as transgenic or knockout mice used to study these diseases, as well as the potential and pitfalls of treatments such as gene therapy, anti-angiogenic drugs, and tumor antigen immunization.

## The Research Experience

### *Raymond D. Clarke*

Science is a process of discovery and all science courses, indeed all college courses, are exercises in personal discovery for students. Of course, science is more than that; it is a social exercise of shared discovery by which new information is added to our common store of knowledge. This course will introduce students to the scientific process through direct experience: participation in manageable segments of a long-term research project on the environmental biology of coral reef fishes. In the process, they will learn the theoretical underpinnings, read the primary literature, and participate in hypothesis formulation, research design, data collection, statistical analysis, presentation of results, interpretation of results, and critical commentary on each other's work. At the completion of the course, students will have a greatly enhanced appreciation of the creativity, attention to detail, and single-minded focus that characterize scientific research. They will come to see how an idea leads to empirical observation and eventually appears in the scientific literature, perhaps also making its way into textbooks. This course is primarily for students who have taken a year of science with lab and are comfortable with quantitative reasoning.

## Virology

### *Drew E. Cressman*

Viruses are some of the smallest biological entities found in nature, yet at the same time perhaps the most notorious. Having no independent metabolic activity of

their own, they function as intracellular parasites depending entirely on infecting and interacting with the cells of a host organism to produce new copies of themselves. The effects on the host organism can be catastrophic, leading to disease and death. HIV has killed more than 18 million people since its identification and infected twice that number. Ebola, West Nile virus, herpes, and pox viruses — all well-known viruses yet shrouded in fear and mystery. During the course of this semester, we will examine the biology of viruses, discussing their physical and genetic properties, their interaction with host cells, their ability to commandeer the cellular machinery for their own reproductive needs, the effects of viral infection on host cells, and finally how viruses and other subviral entities may have originated and evolved. In addition, we will examine how viruses have been portrayed in literature, with readings including Laurie Garrett's *The Coming Plague* and Richard Preston's *The Hot Zone*.

## 2003-2004

### Biodiversity

#### *Raymond D. Clarke*

Ants, bacteria, jellyfish, fig trees, elephants, corals, fruit flies, snails, orchids, lichens, dolphins, viruses . . . What is biodiversity? How do we measure it? Do all species have the same value? How do we determine that value? In this course, we will explore the tremendous diversity of life produced by evolution and investigate the ways in which this diversity leads to ecosystem stability, a rather elusive concept. We will also investigate the mechanisms of speciation and extinction that contribute to diversity. Extinction is the only truly irreversible environmental change, and as such, should be the least tolerated of all the insults we are imposing on the earth. Are we headed toward a homogenized earth, with little sense of place as the same tolerant, weedy species come to occupy all regions, or will we maintain a stimulating, complex biological world that will provide us with aesthetic, intellectual, environmental, and economic value indefinitely? What are the strategies that are being employed to conserve biodiversity in the face of continuing pressure from growing human populations, increasing affluence, and military activity? While the topic of this course is a fundamental biological one, conference work may include aesthetics, economics, public policy, and various social issues.

### Biology of Living and Dying

#### *Leah Olson*

"He not busy being born is busy dying."

—Bob Dylan  
Researchers at the Massachusetts General Hospital have discovered that a gene used by the tiny worm *C. elegans* to regulate how much it eats, how fat it

becomes, and how long it lives is strikingly similar to the gene for the human insulin receptor. Poets and scientists agree. Eating and getting old, sex and death—these processes seemed inexorably linked. A single gene that governs what you eat and how long you live? What's the link? Why is obesity now described as an epidemic in the United States? Can we live longer by eating less? Why is it so hard for people to permanently lose weight? Why should there be a gene that causes aging? If aging is a deliberate, genetically programmed phenomenon and not just the body wearing out, might modern biology be able to find a cure? Is it even ethical to try to pursue a fountain of youth? This course will explore these and other questions about the biological regulation of eating and body weight and the process of aging and death.

### Differences in Biology and Health for Men and Women

#### *Elena Gizang-Ginsberg*

Fundamental differences between men and women have long been a topic of fascination and interest. Aristotle once wrote, "The female is softer in disposition, is more mischievous, less simple, more impulsive, and more attentive to the nurture of young; the male, on the other hand, is more spirited, more savage, more simple, and less cunning." Although this is a subjective commentary, scientists have continued to seek biological explanations for male and female differences. From the time that we are conceived through our twilight years, men and women differ in their genetic makeup and physiology. As a result, each sex is faced with different challenges and issues with regard to health. In this course, we will explore genetic and physiological differences between men and women during key life stages. They will include sexual differentiation during embryological development, sexual dimorphism and the brain, the mechanics of puberty, adulthood and the reproductive years, and the aging process. Relevant health topics will be extensively discussed with particular emphasis on why some issues are more pertinent for one sex rather than the other, such as differences in heart disease, immune disorders, drug metabolism, and longevity.

### Ecological Principles

#### *Raymond D. Clarke*

Ecology is the science of the relationship of living things to their living and nonliving environments. While providing the underpinnings for environmentalism, ecology exists independently as a basic science. This course will introduce the student to the major concepts of ecology: the flow of energy and cycling of nutrients through ecosystems, the regulation of population size, the ways in which species are grouped together to form natural communities, and the factors that contribute to the stability of natural systems. These concepts will help

students evaluate such current issues as biodiversity, global warming, ozone depletion, food production, and energy use. Classes will be augmented by field trips.

## First-Year Studies: Brain and Behavior

**Leah Olson**

Is there a biological basis for consciousness? Do animals have minds? How do biologists study emotions? Does genetics determine behavior? This course will examine a wide variety of questions about the brain and behavior, in both humans and nonhumans, by reading topical books and articles by researchers and scientists exploring both the biology and the philosophy of the mind. We will learn the basic biology of neuroscience, but much classroom time will be devoted to discussions of readings, by major thinkers, both contemporary and historical, including Descartes, Darwin, Steven Pinker, and Antonio Damasio, who have tried to understand the biological relationship between brain, mind, and behavior.

## General Biology

**Drew E. Cressman**

The number and diversity of living organisms on earth is staggering, so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival and their modes of interaction with each other and the environment form the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. As such, we cover a wide variety of topics ranging from the microscopic to the macroscopic and the laboratory to the field. The course will be divided into three parts. The first portion of the year will focus on the biology of cells and the chromosomal basis of inheritance. We will then turn our attention to the mechanisms of evolution and biological diversity. Finally, we will conclude by examining organismal functions and ecology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

## Human Genetics

**Drew E. Cressman**

The formation of an individual's life is dependent on a complex mix of cultural experiences, social interactions, and personal health and physiology. At the center of this intricate web lies the biological components unique to each of us, yet shared in some form by all life on earth—our genes. Genes contribute much to what makes each of us an individual, from hair color and body shape to intelligence and personality. In this course, we

will attempt to gain an understanding of how genes and chromosomes provide the basic blueprint that leads to these unique physical and behavioral characteristics. In doing so, we will discuss the central concepts of human genetics including the mechanisms and patterns of inheritance, sex-linked traits, the genetics of behavior, DNA and proteins, the role of mutations in causing disease, human origins and evolution, and the application of various genetic technologies such as gene therapy and genetically modified organisms. Readings will be drawn from texts as well as current popular-press and peer-reviewed articles. No previous background in biology is required, other than a curiosity and desire to understand the genetic mechanisms that shape human existence and make us who we are.

## Human Origins: The Forging of Our Species

**Raymond D. Clarke**

Most of the traditional liberal arts curriculum focuses on human culture, primarily Western culture of the last 2,500 years. However, anatomically modern humans have existed for perhaps 100,000 years, and the human lineage has about a five-million-year unique history on the African continent. In this course we will examine the history of our species from an evolutionary perspective. This will involve an examination of the modern theory of evolution, including some of the recent controversies. With this knowledge we will be able to understand the factors that cause a species to change, and we will be in a position to investigate the fossil record sensibly. After quickly exploring our connections to other groups, we will focus on ape-human comparisons and our own fossil history. This will be done from the traditional paleontological perspective as well as by using modern techniques from molecular and population biology. Such investigation naturally leads to a discussion of modern biological diversity of humans. Since many of our current ideas about our past are in a state of flux, the course also will introduce students to scientific controversy and the nature of scientific “proof.”

## Human Physiology and Anatomy

**Elena Gizang-Ginsberg**

Did you ever wonder why you get dizzy when you are on a roller coaster ride or why your heart beats faster and your palms get sweaty when you are about to perform or give a presentation? In this computer age we often know more about our computer's hard drive than our own “internal” hard drive. The human body is a complex system of anatomical design and physiological function. In this one-semester course, we will provide an overview of basic human anatomy of each body region by detailing the respective components of internal and external structure. We will analyze each organ system's

physiology—examining how each system supports a specific function, such as those required for responsiveness, growth, movement, and metabolism. Organ systems to be studied include the integument, skeletal, muscular, nervous, cardiovascular, endocrine, sensory, immune, and digestive systems. We will extensively discuss how these individual biological systems are intricately networked to ultimately result in the normal functioning of the entire human body. Relevant current-day issues as well as clinical anomalies will also be explored.

## Immunology

*Leah Olson*

The immune system is the vast and complex network of cells, and the chemical messengers that they secrete, which continuously fight to protect our bodies from attack by disease-causing organisms. With a well-functioning immune system, we are blissfully unaware of the myriad of assaults targeted against us daily—a parent can care for her or his child with chicken pox without risk of infection. The tragic consequences of an improperly functioning immune system are dramatically evident in AIDS and other immune disorders, including autoimmune diseases such as arthritis, lupus, and myasthenia gravis, as well as allergic reactions, including the increasingly prevalent asthma. Many of the questions of immune function are those of communication. How do the cells of the immune system know how and where to go to fight an intruder? How do they know what kind of attack to mount? How are they able to recognize foreign cells as distinct from the cells of our own bodies? Why does the hormonal environment of women make them more susceptible to autoimmune disorders? How does the mother's immune system know not to attack the fetus, a foreign tissue growing within her? These questions of communication are questions of basic cell and molecular biology and are at the forefront of both modern biology and medicine.

## Marine Biology

*Raymond D. Clarke*

The ocean is the last of the great frontiers on earth and is widely heralded as the source of our future energy and food resources. The ocean is believed to be the cradle of life and certainly supports a much greater variety of living things than the freshwater or terrestrial environments. What is the nature of life in the ocean? How does marine life capture and share the sun's energy? Why are some areas of the ocean rich in life and others almost devoid of life? Can we farm the seas? These and other questions will be discussed in a systematic inquiry into marine biology. We will study the physical characteristics of each of the major zones of the ocean and then examine the kinds of marine organisms and the adaptations that suit them to their characteristic zones. This will lead to a discussion of our

present use of the seas and our impact on the organisms that live there. With this knowledge we will examine some of the exotic schemes proposed to harvest food and energy from the ocean and evaluate their probable effects on the ocean system. Classes will be supplemented by laboratory sessions and field trips. Conferences will be used to explain class material, to review the tests, and to discuss conference papers, which may be written on any basic or applied aspect of marine biology.

## 2004-2005

## Biodiversity

*Raymond D. Clarke*

Ants, bacteria, jellyfish, fig trees, elephants, corals, fruit flies, snails, orchids, lichens, dolphins, viruses. . . . What is biodiversity? How do we measure it? Do all species have the same value? How do we determine that value? In this course we will explore the tremendous diversity of life produced by evolution and investigate the ways in which this diversity leads to ecosystem stability, a rather elusive concept. We will also investigate the mechanisms of speciation and extinction that contribute to diversity. Extinction is the only truly irreversible environmental change, and as such, should be the least tolerated of all the insults we are imposing on the earth. Are we headed toward a homogenized earth, with little sense of place as the same tolerant, weedy species come to occupy all regions, or will we maintain a stimulating, complex biological world that will provide us with aesthetic, intellectual, environmental, and economic value indefinitely? What are the strategies that are being employed to conserve biodiversity in the face of continuing pressure from growing human populations, increasing affluence, and military activity? While the topic of this course is a fundamental biological one, conference work may include aesthetics, economics, public policy, and various social issues.

## Cell Biology

*Drew E. Cressman*

Cells are the most basic unit of life on the planet—all life forms are simply conglomerations of cells, ranging from the individual bacterial cells to higher order plants and animals. Human themselves are made up of trillions of cells. So what exactly is a cell? What is it made of? How does it function? In a complex organism, how do cells communicate with one another and coordinate their activities? How do they regulate their growth? What role do genes play in controlling cellular function? This course will address these questions and introduce the basic biology of cells while keeping in mind their larger role in tissues and organs. If we can understand the structures and functions of the individual cells that

serve as the subunits of larger organisms, we can begin to understand the biological nature of humans and other complex life forms.

## Coral Reefs: Endangered Ecosystems

**Raymond D. Clarke**

There are many projections foretelling the disappearance of coral reefs. Indeed, most reefs today are mere shadows of their former selves. Unlike their terrestrial counterparts, these rainforests of the sea are being seriously degraded even in locations far removed from human activity. This course will explore the natural history and ecology of these arguably most diverse ecosystems on earth. We will investigate the biology of corals and their essential symbionts, emphasizing their great productivity and vulnerability to bleaching. We will discuss the physical structure of reefs, their food webs, their geological history, and the hypotheses accounting for their high species diversity. The important subject of dispersal will be examined in detail, with emphasis on its significance for reef recovery. We will explore the question of whether the world will have any coral reefs by 2100. Conference topics can range from the purely theoretical to explorations of environmental impacts of conservation policy. This course is designed for students with at least one college-level biology course.

## Drugs and the Brain

**Leah Olson**

What causes depression or schizophrenia? Are they mental disorders? Brain disorders? Why do drugs help these conditions? Why do humans and many other animals "like" the effect of psychotropic drugs? What is the basis for addiction to these drugs? All these questions are really questions about the brain—what it is and how it functions to generate "the mind." We now know that chemical messengers are used for communication between neurons in the brain, and that disorders in communication can result in severe behavioral disorders—Alzheimer's disease, anxiety, and schizophrenia, to name a few. As we learn more about how drugs relieve or promote disorders in chemical communication, and thus behavior, we learn more about what the brain is and how it functions. This course will be a study of the brain, focusing on chemicals as a tool to help unravel that mystery that is the mind.

## General Biology

**Drew E. Cressman**

The number and diversity of living organisms on earth is staggering, so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and the environment form

the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. As such, we cover a wide variety of topics ranging from the microscopic to the macroscopic and the laboratory to the field. The course will be divided into three parts. The first portion of the year will focus on the biology of cells and the chromosomal basis of inheritance. We will then turn our attention to the mechanisms of evolution and biological diversity. Finally, we will conclude by examining organismal functions and ecology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

## Genetics

**Drew E. Cressman**

At the biological core of all life on earth is the gene. The unique combination of genes in each individual ultimately forms the basis for that person's physical appearance, metabolic capacity, thought processes, and behavior. Therefore, in order to understand how life develops and functions, it is critical to understand what genes are, how they work, and how they are passed on from parents to offspring. In this course we will begin by investigating the theories of inheritance first put forth by Mendel, and then progress to our current concepts of how genes are transmitted through individuals, families, and whole populations. We will also examine chromosome structure and the molecular functions of genes and DNA and how mutations in DNA can lead to physical abnormalities and diseases such as Down and Turner syndromes or hemophilia. Finally, we will discuss the role of genetics in influencing such complex phenotypes as behavior and intelligence. Classes will be supplemented with weekly laboratory work.

## Human Origins: The Forging of Our Species

**Raymond D. Clarke**

Most of the traditional liberal arts curriculum focuses on human culture, primarily Western culture of the last 2,500 years. However, anatomically modern humans have existed for perhaps 100,000 years, and the human lineage has about a five-million-year unique history on the African continent. In this course we will examine the history of our species from an evolutionary perspective. This will involve an examination of the modern theory of evolution, including some of the recent controversies. With this knowledge we will be able to understand the factors that cause a species to change, and we will be in a position to investigate the fossil record sensibly. After quickly exploring our connections to other groups, we will focus on ape-

human comparisons and our own fossil history. This will be done from the traditional paleontological perspective as well as by using modern techniques from molecular and population biology. Such investigation naturally leads to a discussion of modern biological diversity of humans. Since many of our current ideas about our past are in a state of flux, the course also will introduce students to scientific controversy and the nature of scientific "proof."

## Introduction to Neuroscience

### Leah Olson

The study of the nervous system takes place at many levels, from the molecules that carry messages between and within individual cells of the nervous system, or the neuron, to complex behaviors—sensing, moving, learning, and feeling. This course will begin with an in-depth introduction to the basic cellular and molecular biology of the nervous system, exploring how nerve cells are designed to both integrate and communicate complex information. This background will serve as a foundation as we go on to explore how neurons are organized into even more complex nervous systems such as the human brain, capable of complex perceptions, learning, thinking, planning, and language. Although studies from human neurobiology are included, many studies from nonhumans will be used as models for understanding basic brain functions.

*Open to sophomores, juniors, and seniors. Some biology or psychology background is recommended.*

## Marine Biology

### Raymond D. Clarke

The ocean is the last of the great frontiers on earth and is widely heralded as the source of our future energy and food resources. The ocean is believed to be the cradle of life and certainly supports a much greater variety of living things than the freshwater or terrestrial environments. What is the nature of life in the ocean? How does marine life capture and share the sun's energy? Why are some areas of the ocean rich in life and others almost devoid of life? Can we farm the seas? These and other questions will be discussed in a systematic inquiry into marine biology. We will study the physical characteristics of each of the major zones of the ocean, then examine the kinds of marine organisms and the adaptations that suit them to their characteristic zones. This will lead to a discussion of our present use of the seas and our impact on the organisms that live there. With this knowledge we will examine some of the exotic schemes proposed to harvest food and energy from the ocean and evaluate their probable effects on the ocean system. Classes will be supplemented by laboratory sessions and field trips. Conferences will be used to explain class material, to review the tests, and to discuss conference papers, which may be written on any basic or applied aspect of marine biology.

## Origins: An Exploration of the Scientific

### Ryan Z. Hinrichs, Daniel King, Leah Olson, Michael Siff, Kanwal Singh

Life, the universe, and everything . . . where did it all come from? We will explore this question in a unique course taught by five Sarah Lawrence faculty representing five scientific disciplines. Our journey from the cosmological to the biological and beyond will raise questions such as: How old is the universe? Did anything exist before the Big Bang? How did atoms and molecules arise from the primordial universe? When did life arise on earth? How can "living" organic matter arise in a "dead" inorganic world? How do new species (including humans) arise? What is consciousness? Is the emergence of artificial life on the horizon, and how are computers advancing the development of artificial intelligence? How, in general, do complex, ordered systems and organisms arise from seemingly simple and often random interactions among elementary constituents? By considering these questions from different but complementary scientific perspectives, this course will explore the development of the scientific process itself, as well as how it is used to provide answers to these fundamental questions that humans have pondered since the origin of consciousness. We hope that students will emerge from this course with a better understanding of the patterns and common themes prevalent in the scientific approach to problem solving.

## Psychoneuroimmunology

### Leah Olson

This tongue twister has been coined to describe biology's newest field, a discipline that emphasizes the connections between the two most complex systems of the body—the nervous system and the immune system. The field investigates the possibility that the "mind" or mental states can influence health and attempts to understand the biological mechanisms that allow a two-way communication between them. The course will develop a strong general groundwork in both immunology and the brain, and also will include more specialized readings from psychoneuroimmunology.

## The Biology of Living and Dying

### Leah Olson

"He not busy being born is busy dying." —Bob Dylan  
Researchers at the Massachusetts General Hospital have discovered that a gene used by the tiny worm *C. elegans* to regulate how much it eats, how fat it becomes, and how long it lives is strikingly similar to the gene for the human insulin receptor. Poets and scientists agree. Eating and getting old, sex and death; these processes seemed inexorably linked. A single gene that governs what you eat and how long you live? What's the link? Why is obesity now described as an epidemic in the

United States? Can we live longer by eating less? Why is it so hard for people to permanently lose weight? Why should there be a gene that causes aging? If aging is a deliberate, genetically programmed phenomenon and not just the body wearing out, might modern biology be able to find a cure? Is it even ethical to try to pursue a fountain of youth? This course will explore these and other questions about the biological regulation of eating and body weight and the process of aging and death.

## 2005-2006

### Advanced Cell Biology: Regulation of Cell Function

**Drew E. Cressman**

The different kinds of cells in an organism, and the different ways that any cell can respond to changes in their environment, result from differences in the timing and level of expression of various genes that are responsible for their different cellular activity.

Therefore, a fundamental question in biology is to understand the mechanisms used by cells to regulate gene expression and subsequent cell function. Most regulation of gene function occurs at the level of DNA activity (transcription), and it has been estimated that 10 percent of all human genes encode the transcription factors responsible for this level of regulation. However, because of the complexity of the cell and the critical need to maintain normal cell function in a variety of environments, multiple mechanisms have evolved to modify and control cell activity. In this course we will focus on these various mechanisms, examining regulatory events at the level of transcription, translation, receptor activity and signal transduction, determination of cell fate, and the modification and localization of intracellular proteins. Once we understand how cells regulate their function, we can begin to imagine ways in which we may intervene to modify specific cell activities as well as how specific chemicals and compounds alter these regulatory mechanisms to the detriment of the cell. Classes will be designed to critically analyze research articles drawn from the primary literature.

### Drugs and the Brain

**Leah Olson**

What causes depression or schizophrenia? Are they mental disorders? Brain disorders? Why do drugs help these conditions? Why do humans and many other animals “like” the effect of psychotropic drugs? What is the basis for addiction to these drugs? All these questions are really questions about the brain—what it is and how it functions to generate “the mind.” We now know that chemical messengers are used for communication between neurons in the brain, and that disorders in communication can result in severe

behavioral disorders—Alzheimer’s disease, anxiety, and schizophrenia, to name a few. As we learn more about how drugs relieve or promote disorders in chemical communication, and thus behavior, we learn more about what the brain is and how it functions. This course will be a study of the brain, focusing on chemicals as a tool to help unravel that mystery which is the mind.

### Ecological Principles

**Raymond D. Clarke**

Ecology is the science of the relationship of living things to their living and nonliving environments. While providing the underpinnings for environmentalism, ecology exists independently as a basic science. This course will introduce the student to the major concepts of ecology: the flow of energy and cycling of nutrients through ecosystems, the regulation of population size, the ways in which species are grouped together to form natural communities, and the factors that contribute to the stability of natural systems. These concepts will help students evaluate such current issues as biodiversity, global warming, ozone depletion, food production, and energy use. Classes will be augmented by field trips.

*Primarily for students with advanced placement or previous college science.*

### First-Year Studies in Biology: A Journey Through the History of Life (Backward)

**Raymond D. Clarke**

This course is built around the recent book by Richard Dawkins: *The Ancestor’s Tale: A Pilgrimage to the Dawn of Evolution*. Starting with humans, the book (and the course) moves backward exploring the characteristics and biological innovations of the various groups with which we converge as we move down the tree of life until we end with the earliest bacteria. By starting with ourselves, we begin the journey with the familiar, and continue to the less familiar as we develop the knowledge to appreciate the traits of more exotic forms of life. In the process, we will come to fully appreciate biological diversity through an understanding of genetics and the process of evolution. Organisms will be investigated through the disciplines of anatomy, physiology, behavior, and ecology. The changing chemistry, climates, and geography of the earth, which provide the backdrop for evolutionary change, will be explored. By moving from one small twig down through the increasingly thick branches to the main trunk of the tree of life, we will develop a deep appreciation for the connectedness of all living things and for the amazing creativity of the evolutionary process. Occasional laboratory exercises will provide concrete examples of the life forms and processes discussed in class.

## General Biology

### *Drew E. Cressman*

The number and diversity of living organisms on earth is staggering, so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and the environment form the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. As such, we cover a wide variety of topics ranging from the microscopic to the macroscopic and the laboratory to the field. The course will be divided into three parts. The first portion of the year will focus on the biology of cells and the chromosomal basis of inheritance. We will then turn our attention to the mechanisms of evolution and biological diversity. Finally, we will conclude by examining organismal functions and ecology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

## Human Origins: The Forging of Our Species

### *Raymond D. Clarke*

Most of the traditional liberal arts curriculum focuses on human culture, primarily Western culture of the last 2,500 years. However, anatomically modern humans have existed for perhaps 100,000 years, and the human lineage has about a five-million-year unique history on the African continent. In this course we will examine the history of our species from an evolutionary perspective. This will involve an examination of the modern theory of evolution, including some of the recent controversies. With this knowledge we will be able to understand the factors that cause a species to change, and we will be in a position to investigate the fossil record sensibly. After quickly exploring our connections to other groups, we will focus on ape-human comparisons and our own fossil history. This will be done from the traditional paleontological perspective as well as by using modern techniques from molecular and population biology. Such investigation naturally leads to a discussion of modern biological diversity of humans. Since many of our current ideas about our past are in a state of flux, the course also will introduce students to scientific controversy and the nature of scientific “proof.”

## Immunology

### *Leah Olson*

The immune system is the vast and complex network of cells, and the chemical messengers that they secrete, that continuously fight to protect our bodies from attack

by disease-causing organisms. With a well-functioning immune system, we are blissfully unaware of the myriad of assaults targeted against us daily—a parent can care for her or his child with chicken pox without risk of infection. The tragic consequences of an improperly functioning immune system are dramatically evident in AIDS and other immune disorders, including autoimmune diseases such as arthritis, lupus, and myasthenia gravis, as well as allergic reactions, including the increasingly prevalent asthma. Many of the questions of immune function are those of communication. How do the cells of the immune system know how and where to go to fight an intruder? How do they know what kind of attack to mount? How are they able to recognize foreign cells as distinct from the cells of our own bodies? Why does the hormonal environment of women make them more susceptible to autoimmune disorders? How does the mother's immune system know not to attack the fetus, a foreign tissue growing within her? These questions of communication are questions of basic cell and molecular biology, and are at the forefront of both modern biology and medicine

## Origins: The Simplicity Behind Complexity

### *Ryan Z. Hinrichs, Daniel King, Leah Olson, Michael Siff, Kanwal Singh* **Origins: The Simplicity Behind Complexity**

*Mr. Hinrichs, Mr. King, Ms. Olson, Mr. Siff, Ms. Singh*

### LECTURE, SECOND SEMESTER

Life, the universe, and everything . . . where did it all come from? We will explore this question in a unique course taught by five Sarah Lawrence faculty representing five scientific disciplines. Our journey from the cosmological to the biological and beyond will raise questions such as, How do complex systems arise from simple (and often random) interactions among elementary constituents? Did anything exist before the Big Bang? How did atoms and molecules arise from the primordial universe? How can “living” organic matter arise in a “dead” inorganic world? Are human beings the only species that reason mathematically? What is the adaptive advantage of having “numbers sense”? Why is consciousness such a challenge to formalize? How does the advent of computers complicate the matter? By considering these questions from different but complementary scientific perspectives, this course will explore the development of the scientific process itself, as well as how it is used to provide answers to these fundamental questions. We hope that students will emerge from this course with a better understanding of the patterns and common themes prevalent in the scientific approach to problem solving.

*Open to any interested student.*

## Plants and Society: Contemporary Issues in Botany

**Kenneth M. Cameron**

Although we often take them for granted, plants shape our daily lives and our culture in fundamental ways. They provide the food that nourishes us, the medicine that heals us, the drugs that stimulate us, the fibers that clothe us, and the timber that shelters us. We symbolically mark holidays and special events in our lives with plants such as pumpkins, shamrocks, roses, evergreens, and lilies. Access to plant products including opium, tea, sugarcane, rubber, quinine, and spices have prompted societies to go to war. Moreover, much of the global economy is based on valuable commodities from plants or plant by-products (e.g., coal, oil, coffee, cocoa, and grain). As the primary producers of oxygen and consumers of carbon dioxide, plants not only sustain humans, but all of life on earth. In this course we will examine the role that plants play in an overstressed planet ecosystem and in human societies by addressing some problematic issues related to plants in our world. We will address the controversies surrounding genetically modified crops, organic farming, herbal medicine, eradication of invasive weeds, rising carbon dioxide levels, legalization of marijuana, rain forest destruction, tobacco regulation, and caffeine labeling, among others. Occasional field trips will be used to further emphasize the importance of plants in our world.

## Principles of Botany

**Peter Cameron**

Understanding the biology of plants is fundamental to understanding the complex web of life on earth and its evolutionary history. Nearly all other organisms, including humans, rely on plants directly or indirectly for their sources of food and oxygen. Plants are essential to our existence, and by studying them in detail, biologists learn more about our own species and the world we inhabit. This course is an introductory, scientific study of the plant kingdom. The first half of the course will address aspects of plant genetics, cells, growth, development, morphology, and anatomy. The second half will cover plant physiology, reproduction, diversity, evolution, and ecology. Weekly lectures and textbook readings will be supplemented with video presentations from *The Private Life of Plants* series, at least one field trip to the New York Botanical Garden, and occasional laboratory sessions. In addition to covering all aspects of plant biology, an introduction to bacteria, algae, and fungi will also be presented.

## 2006-2007

## Anatomy and Physiology

**Sanjoy Chakraborty**

In an era of incredible advancement in science and technology, perhaps the health care system, i.e., the understanding of the human body, is arguably the most astonishing of all. Those preparing for careers in the health sciences need to understand the human body in greater detail than ever before. Many students preparing for careers outside the biomedical areas also need to understand how the human body works. This course is beneficial for a wide variety of students. It includes such diverse fields as the social sciences, criminal justice, preschool through secondary education, athletics and fitness training, as well as the visual and performing arts. Moreover, knowing body mechanisms helps a person to make a difficult decision about one's own health or the health of loved ones and also prepare people to ask appropriate questions of their health providers. Anatomy and Physiology provides verbal and visual illustration of structures and function and demonstrates the majesty, harmony, and complexity of the human organism. Students will understand how different organ systems, organs, tissues, and finally, cells communicate with each other and perform daily functions. The beginning of the study concerns the acquisition of knowledge, but gradually it becomes important for students to develop the ability to solve practical, real-life problem. Students will also be given the opportunity to do hands-on work with fetal pig, sheep heart, and human skeleton. Relevant health problems or diseases will also be discussed.

*Open to any interested student.*

## Drugs and the Brain

**Leah Olson**

What causes depression or schizophrenia? Are they mental disorders? Brain disorders? Why do drugs help these conditions? Why do humans and many other animals "like" the effect of psychotropic drugs? What is the basis for addiction to these drugs? All these questions are really questions about the brain—what it is, and how it functions to generate "the mind." We now know that chemical messengers are used for communication between neurons in the brain, and disorders in communication can result in severe behavioral disorders—Alzheimer's disease, anxiety, and schizophrenia, to name a few. As we learn more about how drugs relieve or promote disorders in chemical communication, and thus behavior, we learn more about what the brain is and how it functions. This course will be a study of the brain, focusing on chemicals as a tool to help unravel that mystery which is the mind.

## Field Botany

**Kenneth M. Cameron**

More than three thousand species of vascular plants are found in New York State, and most of these grow in the metropolitan New York area. They are classified into about two hundred different families with names like Asteraceae (the sunflower family), Poaceae (grasses), Liliaceae (lilies), and Aceraceae (maples). Although this diversity is small in comparison to many tropical parts of the world, our flora is an important one and has been well-documented in Gleason and Cronquist's *Manual of Vascular Plants of Northeastern United States and Adjacent Canada*. This course is designed for both the science and non-science student who wishes to learn more about the local plants and plant communities growing in our area. During the winter months, we will become familiar with the technical terminology applied to plant structures, alternative systems of plant classification, rules of botanical nomenclature, and methods of plant study both in the laboratory and in the field. As spring approaches, classes will be held outdoors as often as possible. These weekly outdoor field excursions will take us to different habitats near and far. By the end of the course, students will become intimately familiar with and easily able to identify at least forty different families and more than one hundred native plant species.

*Open to any interested student.*

## General Biology

**Leah Olson, Raymond D. Clarke**

The number and diversity of living organisms on earth is staggering, so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and the environment form the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. As such, we cover a wide variety of topics ranging from the microscopic to the macroscopic and the laboratory to the field. The course will be divided into three parts. The first portion of the year will focus on the biology of cells and the chromosomal basis of inheritance. We will then turn our attention to the mechanisms of evolution and biological diversity. Finally, we will conclude by examining organismal functions and ecology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

*Open to any interested student.*

## Human Genetics

**Drew E. Cressman**

The formation of an individual's life is dependent on a complex mixture of cultural experiences, social interactions, and personal health and physiology. At the center of this intricate web lies the biological components unique to each of us, yet shared in some form by all life on earth—our genes. Genes contribute much to what makes each of us an individual, from hair color and body shape to intelligence and personality. Such genes and traits are inherited from our parents, yet environmental factors can profoundly influence their function in different individuals. Stunning advancements in the field of genetics are reported every day, from the identification of new genes for particular traits to the development of gene-based tests for human diseases. But what exactly are genes and how do they work in humans? In this course, we will explore how genes and chromosomes provide the basic blueprint that leads to our unique physical and behavioral characteristics. In doing so, we will discuss the central concepts of human genetics, including the mechanisms and patterns of inheritance, sex-linked traits, the genetics of behavior, DNA and proteins, the role of mutations in causing disease, human origins and evolution, and the application of various genetic technologies such as gene therapy and genetically modified organisms. Readings will be drawn from texts as well as current popular-press and peer-reviewed articles. No previous background in biology is required, other than a curiosity and desire to understand the genetic mechanisms that shape human existence and make us who we are.

*Open to any interested student.*

## Human Origins: The Forging of Our Species

**Raymond D. Clarke**

Most of the traditional liberal arts curriculum focuses on human culture, primarily Western culture of the last 2,500 years. However, anatomically modern humans have existed for perhaps 100,000 years, and the human lineage has about a five-million-year unique history on the African continent. ## The Biology of Living and Dying

**Leah Olson**

“He not busy being born is busy dying.”

—Bob Dylan

Researchers at the Massachusetts General Hospital have discovered that a gene used by the tiny worm *C. elegans* to regulate how much it eats, how fat it becomes, and how long it lives is strikingly similar to the gene for the human insulin receptor. Poets and scientists agree. Eating and getting old, sex and death; these processes seemed inexorably linked. A single gene that governs what you eat and how long you live? What's the link? Why is obesity now described as an epidemic in the United States? Can we live longer by eating less? Why is it so hard for people to permanently lose weight? Why should there be a gene that *causes* aging? If aging is a deliberate, genetically programmed phenomenon and

not just the body wearing out, might modern biology be able to find a cure? Is it even ethical to try to pursue a fountain of youth? This course will explore these and other questions about the biological regulation of eating and body weight and the process of aging and death.

*Open to any interested student.*

## The Feeling Brain: The Biology and Psychology of Emotions

**Elizabeth Johnston, Leah Olson**

*Intermediate—Spring*

The processing of emotion was an enduring concern for early biologists and psychologists. Charles Darwin devoted a monograph to the expression of emotion in men and animals, and he argued for an evolutionary understanding of emotions as a biological phenomenon; William James considered emotions a key topic in his investigations of the science of mental life. Despite this early interest, emotions were not a major focus in the development of modern cognitive neuroscience. Instead, efforts to understand mental life focused primarily on reason or cognition. Recently, this neglect of emotions has been redressed through the growth of the new interest area of “affective neuroscience.” This integration of psychological and biological approaches has been fueled by an increasing awareness of the function of emotions in mental life, and by technological and experimental advances, such as brain imaging, which have allowed the development of sophisticated experimental approaches to the study of emotions. In this course, we will begin with the early history of investigation of emotions in order to define our terms, and then proceed quickly to the new experimental work being developed in both humans and animal models. Some of the questions to be entertained are, What brain systems regulate emotions? How do emotions modulate memories? How are different emotions processed by the brain? How do emotions and reason interact to shape decision making?

*Intermediate.*

## Virology

**Drew E. Cressman**

Viruses are some of the smallest biological entities found in nature, yet at the same time perhaps the most notorious. Having no independent metabolic activity of their own, they function as intracellular parasites depending entirely on infecting and interacting with the cells of a host organism to produce new copies of themselves. The effects on the host organism can be catastrophic, leading to disease and death. HIV has killed more than eighteen million people since its identification and infected twice that number. Ebola, West Nile virus, herpes, and pox viruses are all well-known viruses yet shrouded in fear and mystery. During

the course of this semester, we will examine the biology of viruses, discussing their physical and genetic properties, their interaction with host cells, their ability to commandeer the cellular machinery for their own reproductive needs, the effects of viral infection on host cells, and finally how viruses and other subviral entities may have originated and evolved. In addition, we will examine how viruses have been portrayed in literature, with readings including Laurie Garrett's *The Coming Plague* and Richard Preston's *The Hot Zone*.

*Intermediate. Previous course work in biology is required.*

## 2007-2008

### Anatomy and Physiology

**Laura Klein**

If any science course can be said to be universally and intimately linked to the human experience, it is the study of how the body functions through actions and interactions of its structures. Students planning to focus on biology, medicine, or an allied health field will find that Anatomy and Physiology is a core course. However, anyone can gain insights into their own interests and areas of inspiration from exploring the workings of the human body. We have all, as infants, stared fascinated at the discovery of our own hand and, depending on our individual interests, continue to wonder about any number of diverse issues that concern human form and function. The question of how a familial inherited disease becomes expressed can lead to investigation into the ethical considerations involved in disclosing such genetic information. Investigation into environmental effects that disrupt pulmonary physiology and favor the development of asthma or emphysema can be critical to shaping public policy concerning environmental standards. Insights into how a painter perceives color composition or a dancer or athlete experiences subtle movements can suggest creative new approaches to these art forms. In order for this one-semester course to fill the needs of such a diverse student population, it will emphasize and revisit important concepts that pertain to all the levels of organization from cell to organism and to all systems of the human body. These systems will be explored as members of a few groups that are conceptually related with regard to function. Finally, students will be able to tailor their exploration to suit their individual goals through their independent reading and research and in group projects and presentations that expand the breadth of the class exposure to include the in-depth explorations of their fellow students.

### Cell Biology

**Drew E. Cressman**

Cells are the most basic units of life on the planet—all life forms are simply conglomerations of cells, ranging

from the individual bacterial cells to higher order plants and animals. Humans themselves are made up of trillions of cells. So what exactly is a cell? What is it made of? How does it function? In a complex organism, how do cells communicate with one another and coordinate their activities? How do they regulate their growth? What role do genes play in controlling cellular function? This course will address these questions and introduce the basic biology of cells while keeping in mind their larger role in tissues and organs. If we can understand the structures and functions of the individual cells that serve as subunits of larger organisms, we can begin to understand the biological nature of humans and other complex life forms.

### Ecological Principles

**Raymond D. Clarke**

Ecology is the science of the relationship of living things to their living and non-living environments. While providing the underpinnings for environmentalism, ecology exists independently as a basic science. This course will introduce the student to the major concepts of ecology: the flow of energy and cycling of nutrients through ecosystems, the regulation of population size, the ways in which species are grouped together to form natural communities, and the factors that contribute to the stability of natural systems. These concepts will help students evaluate such current issues as biodiversity, global warming, ozone depletion, food production, and energy use. Classes will be augmented by field trips.

### First-Year Studies: Conflicts in Biology

**Drew E. Cressman**

As the frontiers of science are pushed forward, conflicts naturally emerge between new hypotheses and established ideas. Biology is no exception to this rule. Since the time of the ancient Greeks, new proposals examining the biological nature of humans and the living world have initially met with resistance and even ridicule before becoming established as modern paradigms. What appears obvious now was once regarded as revolutionary, while it is conceivable that current ideas one day will be regarded as bordering on the absurd. Oftentimes these conflicts arise not only due to the convergence of scientific principles, but also result from personality clashes of the individuals involved in the research area. Paradigm shifts have occurred in a variety of biological fields, ranging from early ideas on heredity and evolution to more recent advances in prions and mad cow disease, animal model usage, sex determination, cutting-edge cancer therapies, and the interplay between genes and the environment. Using these and other examples, we will examine the progress of biological thought and the persistence of the scientific method in changing our understanding of life.

## General Biology

**Raymond D. Clarke, Leah Olson**

The number and diversity of living organisms on earth is staggering, so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and the environment form the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. As such, we cover a wide variety of topics ranging from the microscopic to the macroscopic and the laboratory to the field. The course will be divided into three parts. The first portion of the year will focus on the biology of cells and the chromosomal basis of inheritance. We will then turn our attention to the mechanisms of evolution and biological diversity. Finally, we will conclude by examining organismal functions and ecology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

*Ms. Olson, first semester*

*Mr. Clarke, second semester*

## Human Origins: The Forging of Our Species

**Raymond D. Clarke**

Most of the traditional liberal arts curriculum focuses on human culture, primarily Western culture of the last 2,500 years. However, anatomically modern humans have existed for perhaps 100,000 years, and the human lineage has about a five-million-year unique history on the African continent. In this course, we will examine the history of our species from an evolutionary perspective. This will involve an examination of the modern theory of evolution, including some of the recent controversies. With this knowledge we will be able to understand the factors that cause a species to change, and we will be in a position to investigate the fossil record sensibly. After quickly exploring our connections to other groups, we will focus on ape-human comparisons and our own fossil history. This will be done from the traditional paleontological perspective as well as by using modern techniques from molecular and population biology. Such investigation naturally leads to a discussion of modern biological diversity of humans. Since many of our current ideas about our past are in a state of flux, the course also will introduce students to scientific controversy and the nature of scientific “proof.”

## Introduction to Genetics

**Drew E. Cressman**

At the biological core of all life on earth is the gene. The unique combination of genes in each individual ultimately forms the basis for that person's physical appearance, metabolic capacity, thought process, and behavior. Therefore, in order to understand how life develops and functions, it is critical to understand what genes are, how they work, and how they are passed on from parents to offspring. In this course, we will begin by investigating the theories of inheritance first put forth by Mendel and then progress to our current concepts of how genes are transmitted through individuals, families, and whole populations. We will also examine chromosome structure and the molecular functions of genes and DNA, and how mutations in DNA can lead to physical abnormalities and diseases such as Down and Turner's syndromes, hemophilia, and cancer. Finally, we will discuss the role of genetics in influencing such complex phenotypes as behavior and intelligence. Classes will be supplemented with laboratory work.

## Marine Biology

**Raymond D. Clarke**

The ocean is the last of the great frontiers on earth and is widely heralded as the source of our future energy and food resources. The ocean is believed to be the cradle of life and certainly supports a much greater variety of living things than the freshwater or terrestrial environments. What is the nature of life in the ocean? How does marine life capture and share the sun's energy? Why are some areas of the ocean rich in life and others almost devoid of life? Can we farm the seas? These and other questions will be discussed in a systematic inquiry into marine biology. We will study the physical characteristics of each of the major zones of the ocean and then examine the kinds of marine organisms and the adaptations that suit them to their characteristic zones. This will lead to a discussion of our present use of the seas and our impact on the organisms that live there. With this knowledge, we will examine some of the exotic schemes proposed to harvest food and energy from the ocean and evaluate their probable effects on the ocean system. Classes will be supplemented by laboratory sessions and field trips. Conferences will be used to explain class material, to review the tests, and to discuss conference papers, which may be written on any basic or applied aspect of marine biology.

## Psychoneuroimmunology

**Leah Olson**

This tongue twister has been coined to describe biology's newest field, a discipline that emphasizes the connections between the two most complex systems of the body—the nervous system and the immune system.

The field investigates the possibility that the “mind” or mental states can influence health and attempts to understand the biological mechanisms that allow a two-way communication between them. The course will develop a strong general groundwork in both immunology and the brain and also will include more specialized readings from psychoneuroimmunology.

## The Feeling Brain: The Biology and Psychology of Emotions

*Elizabeth Johnston, Leah Olson*

The processing of emotion was an enduring concern for early biologists and psychologists. Charles Darwin devoted a monograph to the expression of emotion in men and animals, and he argued for an evolutionary understanding of emotions as a biological phenomenon; William James considered emotions a key topic in his investigations of the science of mental life. Despite this early interest, emotions were not a major focus in the development of modern cognitive neuroscience. Instead, efforts to understand mental life focused primarily on reason or cognition. Recently, this neglect of emotions has been redressed through the growth of the new interest area of “affective neuroscience.” This integration of psychological and biological approaches has been fueled by an increasing awareness of the function of emotions in mental life and by technological and experimental advances, such as brain imaging, which have allowed the development of sophisticated experimental approaches to the study of emotions. In this course, we will begin with the early history of investigation of emotions in order to define our terms and then proceed quickly to the new experimental work being developed in both humans and animal models. Some of the questions to be entertained: What brain systems regulate emotions? How do emotions modulate memories? How are different emotions processed by the brain? How do emotions and reason interact to shape decision making?

## Topics in Cell Biology

*Leah Olson*

Cell biological pathways that define the basic metabolic processes of cells are currently understood to be responsible for cell aging and cell death. That is, the very processes essential for maintaining life—the breakdown and processing of food—are the pathways that eventually cause death. This understanding—that nutrient pathways are central in informing cellular decisions about life and death—recently lead to the stunning experiment that showed that feeding mice large amounts of resveratrol, the ingredient in red wine thought to be responsible for the “French paradox,” could significantly extend the healthy life span of mice. What are these pathways? This course will explore these and related topics that are on the cutting edge of work

in cell biology. The course will be conducted as a journal club; that is, students will be reading and making presentation from the primary literature on selected topics primarily centered on issues related to nutrient processing and cell senescence and aging. Topics covered will include insulin receptor signaling that functions to maintain levels of blood glucose and how defects in those signaling pathways give rise to diabetes; other nutrient-sensing pathways in the cell; cell death, or apoptosis; oxygen-free radical production and its regulation; and fat metabolism. We will also be tying the mechanisms being studied at the cell level to issues related to the regulation of eating, obesity, aging, and other organismal level functions.

## 2008-2009

### Cell Biology

*Drew E. Cressman*

Cells are the most basic unit of life on the planet—all life forms are simply conglomerations of cells, ranging from the individual bacterial cells to higher-order plants and animals. Humans themselves are made up of trillions of cells. So what exactly is a cell? What is it made of? How does it function? In a complex organism, how do cells communicate with one another and coordinate their activities? How do they regulate their growth? What role do genes play in controlling cellular function? This course will address these questions and introduce the basic biology of cells while keeping in mind their larger role in tissues and organs. If we can understand the structures and functions of the individual cells that serve as the subunits of larger organisms, we can begin to understand the biological nature of humans and other complex life forms. Classes will be supplemented with laboratory work.

### Drugs and the Brain

*Leah Olson*

What causes depression or schizophrenia? Are they mental disorders? Brain disorders? Why do drugs help these conditions? Why do humans and many other animals “like” the effect of psychotropic drugs? What is the basis for addiction to these drugs? All these questions are really questions about the brain—what it is, and how it functions to generate “the mind.” We now know that chemical messengers are used for communication between neurons in the brain, and disorders in communication can result in severe behavioral disorders—Alzheimer’s disease, anxiety, and schizophrenia, to name a few. As we learn more about how drugs relieve or promote disorders in chemical communication, and thus behavior, we learn more about what the brain is and how it functions. This course will be a study of the brain, focusing on chemicals as a tool to help unravel that mystery which is the mind.

## First-Year Studies: Brain and Behavior

### Leah Olson

Is there a biological basis for consciousness? Do animals have minds? How do biologists study emotions? Does genetics determine behavior? This course will examine a wide variety of questions about the brain and behavior, in both humans and nonhumans, by reading topical books and articles by researchers and scientists exploring both the biology and the philosophy of the mind. We will learn the basic biology of neuroscience, but much classroom time will be devoted to discussions of readings, by major thinkers, both contemporary and historical, including Descartes, Darwin, Steven Pinker, and Antonio Damasio, who have tried to understand the biological relationship between brain, mind, and behavior.

## General Biology

### Raymond D. Clarke, Drew E. Cressman

The number and diversity of living organisms on earth is staggering, so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and the environment form the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. As such, we cover a wide variety of topics ranging from the microscopic to the macroscopic and the laboratory to the field. The course will be divided into three parts. The first portion of the year will focus on the biology of cells and the chromosomal basis of inheritance. We will then turn our attention to the mechanisms of evolution and biological diversity. Finally, we will conclude by examining organismal functions and ecology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

Mr. Cressman, *FALL SEMESTER*

Mr. Clarke, *SPRING SEMESTER*

## Introduction to Genetics

### Drew E. Cressman

At the biological core of all life on earth is the gene. The unique combination of genes in each individual ultimately forms the basis for that person's physical appearance, metabolic capacity, thought processes, and behavior. Therefore, in order to understand how life develops and functions, it is critical to understand what genes are, how they work, and how they are passed on from parents to offspring. In this course, we will begin by investigating the theories of inheritance first put forth

by Mendel and then progress to our current concepts of how genes are transmitted through individuals, families, and whole populations. We will also examine chromosome structure and the molecular functions of genes and DNA, and how mutations in DNA can lead to physical abnormalities and diseases such as Down and Turner syndromes, hemophilia, and cancer. Finally, we will discuss the role of genetics in influencing such complex phenotypes as behavior and intelligence. Classes will be supplemented with laboratory work.

*Open to any interested student with permission of the instructor.*

## Oceans in Peril

### Raymond D. Clarke

Living on land, humans have always been more sensitive to disruptions in terrestrial environments than in the aquatic. For most of history, we considered the oceans to be essentially limitless sources of fish and absorbers of waste. Local collapses of fish populations have been appreciated for many hundreds of years, but there always were new frontiers to exploit. We are now expanding into the last frontier, the deep sea, and rapidly depleting the slow-growing, long-lived species that live there. While we remove fish and other organisms at unsustainable rates, we are inadvertently dumping a host of toxic chemicals such as mercury into the system and they are coming back to haunt us. Other pollutants are generating an increasing number of "dead zones." And most pervasive is the carbon dioxide we are releasing into the biosphere causing a warming that is right now gravely altering arctic ice-based ecosystems and tropical coral reef ecosystems. Furthermore, the additional carbon dioxide is acidifying the oceans, which greatly stresses organisms with limestone skeletons, such as clams, corals, and several forms of plankton that form the base of open-water food chains. These disruptions act synergistically to degrade marine ecosystems and render them less diverse, less valuable, and less interesting. In this course, we will not only come to appreciate the damage being done, but will consider the ways in which we can mitigate the damage and restore the function of many marine ecosystems. To this end, we will have to return to history and try to get a perspective on what a pristine marine system looks like.

*Intermediate. Open to students who have taken a previous college biology course.*

## Principles of Botany

### Kenneth G. Karol

Understanding the biology of plants is fundamental to understanding the complex web of life on earth and its evolutionary history. Nearly all other organisms, including humans, rely on plants directly or indirectly for their food and oxygen. Consequently, plants are

essential to our existence and by studying them in detail we learn more about our own species and the world we inhabit. This course is an introductory survey of botany. The first half of the course will examine aspects of plant anatomy, morphology, physiology, and development. The second half will cover plant genetics, reproduction, diversity, and evolution. Weekly lectures and textbook readings will be supplemented with video presentations from *The Private Life of Plants* series and occasional laboratory sessions. In addition to covering many facets of plant biology, an introduction to bacteria and algae will also be presented.

## Psychoneuroimmunology

**Leah Olson**

This tongue twister has been coined to describe biology's newest field, a discipline that emphasizes the connections between the two most complex systems of the body—the nervous system and the immune system. The field investigates the possibility that the “mind” or mental states can influence health and attempts to understand the biological mechanisms that allow a two-way communication between them. The course will develop a strong general groundwork in both immunology and the brain and also will include more specialized readings from psychoneuroimmunology.

## 2009-2010

### Advanced Cell Biology: Regulation of Cell Function

**Drew E. Cressman**

The different kinds of cells in an organism and the different ways that any cell can respond to changes in their environment result from differences in the timing and level of expression of various genes that are responsible for their different cellular activity. Therefore, a fundamental question in biology is to understand the mechanisms used by cells to regulate gene expression and subsequent cell function. Most regulation of gene function occurs at the level of DNA activity (transcription), and it has been estimated that 10% of all human genes encode the transcription factors responsible for this level of regulation. However, because of the complexity of the cell and the critical need to maintain normal cell function in a variety of environments, multiple mechanisms have evolved to modify and control cell activity. In this course, we will focus on these various mechanisms, examining regulatory events at the level of transcription, translation, receptor activity and signal transduction, determination of cell fate, and the modification and localization of intracellular proteins. Once we understand how cells regulate their function, we can begin to imagine ways in which we may intervene to modify specific cell activities, as well as how specific

chemicals and compounds alter these regulatory mechanisms to the detriment of the cell. Readings are drawn entirely from the primary literature covering the latest developments in cell biology.

## Ecology

**Raymond D. Clarke**

Ecology is the science of the relationship of living things to their living and non-living environments. While providing the underpinnings for environmentalism, ecology exists independently as a basic science. This course will introduce the student to the major concepts of ecology: the flow of energy and cycling of nutrients through ecosystems, the regulation of population size, the ways in which species are grouped together to form natural communities, and the factors that contribute to the stability of natural systems. In addition to the fundamental principles, we will explore the observational and experimental support for these ideas, both qualitative and quantitative. These methods and concepts will help students evaluate such current issues as biodiversity, global warming, food production, and energy use. Classes will be augmented by field trips.

*Intermediate.*

## General Biology

**Drew E. Cressman, Leah Olson**

The number and diversity of living organisms on Earth is staggering and so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and with the environment form the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

*Drew Cressman will teach this course in the fall; Leah Olson will teach this course in the spring.*

## Human Genetics

**Drew E. Cressman**

The formation of an individual's life is dependent upon a complex mixture of cultural experiences, social interactions, and personal health and physiology. At the center of this intricate web lies the biological components that are unique to each of us yet shared, in some form, by all life on earth—our genes. Genes contribute much to what makes each of us an individual, from hair color and body shape to intelligence and personality. Such genes and traits are inherited from our parents, yet environmental factors can profoundly influence their function in different individuals. Stunning advancements in the field of genetics are reported every day, from the identification of new genes for particular traits to the development of gene-based tests for human diseases. But what exactly are genes, and how do they work in humans? In this course, we will explore how genes and chromosomes provide the basic blueprint that leads to our unique physical and behavioral characteristics. In doing so, we will discuss the central concepts of human genetics, including: the mechanisms and patterns of inheritance, sex-linked traits, the genetics of behavior, DNA and proteins, the role of mutations in causing disease, human origins and evolution, and the application of various genetic technologies such as stem cells and genetically modified organisms. Readings will be drawn from texts, as well as from current popular-press and peer-reviewed articles. No previous background in biology is required other than a curiosity and desire to understand the genetic mechanisms that shape human existence and make us who we are.

## Introduction to Neuroscience

**Leah Olson**

The study of the nervous system takes place at many levels, from the molecules that carry messages between and within individual cells of the nervous system, or the neuron, to complex behaviors—sensing, moving, learning, and feeling. This course will begin with an in-depth introduction to the basic cellular and molecular biology of the nervous system, exploring how nerve cells are designed to both integrate and communicate complex information. This background will serve as a foundation as we go on to explore how neurons are organized into even more complex nervous systems such as the human brain, capable of complex perceptions, learning, thinking, planning, and language. Although studies from human neurobiology are included, many studies from nonhumans will be used as models for understanding basic brain functions.

*Open to sophomores, juniors, and seniors. Some biology or psychology background is recommended.*

## Marine Biology

**Raymond D. Clarke**

The ocean is the last of the great frontiers on Earth and is widely heralded as the source of our future energy and food resources. The ocean is believed to be the cradle of life and certainly supports a much greater variety of living things than the freshwater or terrestrial environments. What is the nature of life in the ocean? How does marine life capture and share the sun's energy? Why are some areas of the ocean rich in life and others almost devoid of life? Can we farm the seas? These and other questions will be discussed in a systematic inquiry into marine biology. We will study the physical characteristics of each of the major zones of the ocean and then examine the kinds of marine organisms and the adaptations that suit them to their characteristic zones. In addition to covering many facets of plant biology, an introduction to bacteria and algae will also be presented.

## The Feeling Brain

**Elizabeth Johnston, Leah Olson**

**Intermediate—Fall**

The processing of emotion was an enduring concern for early biologists and psychologists. Charles Darwin devoted a monograph to the expression of emotion in men and animals and argued for an evolutionary

understanding of emotions as a biological phenomenon. William James considered emotions a key topic in his investigations of the science of mental life. Despite this early interest, emotions were not a major focus in the development of modern cognitive neuroscience. Instead, efforts to understand mental life focused primarily on reason or cognition. Recently, this neglect of emotions has been redressed through the growth of the new interest area of “affective neuroscience.” This integration of psychological and biological approaches has been fueled by an increasing awareness of the function of emotions in mental life and by technological and experimental advances, such as brain imaging, which have allowed the development of sophisticated experimental approaches to the study of emotions. In this course, we will begin with the early history of the investigation of emotions in order to define our terms and then proceed quickly to the new experimental work being developed in both humans and animal models. Some of the questions to be entertained are: What brain systems regulate emotions? How do emotions modulate memories? How are different emotions processed by the brain? How do emotions and reason interact to shape decision-making?

*This is a joint seminar.*

## Virology

### Drew E. Cressman

Viruses are some of the smallest biological entities found in nature yet, at the same time, perhaps the most notorious. Having no independent metabolic activity of their own, they function as intracellular parasites depending entirely on infecting and interacting with the cells of a host organism to produce new copies of themselves. The effects on the host organism can be catastrophic, leading to disease and death. HIV has killed more than 18 million people since its identification and infected twice that number. Ebola, West Nile virus, herpes and pox viruses are all well-known viruses yet shrouded in fear and mystery. During the course of this semester, we will examine the biology of viruses, discussing their physical and genetic properties, their interaction with host cells, their ability to commandeer the cellular machinery for their own reproductive needs, the effects of viral infection on host cells, and finally how viruses and other subviral entities may have originated and evolved. In addition, we will examine how viruses have been portrayed in literature, with readings including Laurie Garrett's *The Coming Plague* and Richard Preston's *The Hot Zone*.

*Advanced. Previous course work in biology is required.*

## 2010-2011

## Anatomy and Physiology

### Open—Spring

If any science course can be considered universally and intimately linked to the human experience, it is the study of how the body functions through actions and interactions of its structures. Students planning to focus on biology, medicine, or an allied health field will find that Anatomy and Physiology is a core course. However, anyone can gain insights into their own interests and areas of inspiration from exploring the workings of the human body. We have all, as infants, stared fascinated at the discovery of our own hand and, depending on our individual interests, continue to wonder about any number of diverse issues that concern human form and function. The question of how a familial inherited disease becomes expressed may lead to investigation into the ethical considerations involved in disclosing such genetic information. Investigation into environmental effects that disrupt pulmonary physiology and favor the development of asthma or emphysema can be critical to shaping public policy concerning environmental standards. Insights into how a painter perceives color composition or how a dancer or athlete experiences subtle movements may suggest creative new approaches to these art forms. In order for this one-semester course to fill the needs of such a diverse student population, it will emphasize and revisit important concepts that pertain to all the levels of organization, from cell to organism and to all systems of the human body. These systems will be explored as members of a few groups that are conceptually related with regard to function. Finally, students will be able to tailor their exploration to suit their individual goals through their independent reading and research and in group projects and presentations that expand the breadth of the class exposure to include the in-depth explorations of their fellow students.

*Open to any interested student.*

## Biological Basis of Human Disease

### Drew E. Cressman

### Open—Spring

To ultimately cure a particular human disease, it is essential to understand the underlying causes of that disease. In the past decade, our knowledge of the cellular and molecular defects responsible for such syndromes as breast cancer, cystic fibrosis, and diabetes has increased exponentially. In this course, we will begin by reviewing some basic cell biology and genetics; then, we will address the biological causes of a variety of classes of human diseases, ranging from simple single-gene diseases such as sickle cell anemia to complex syndromes such as diabetes and hypertension. Critical questions will include how and when is the disease initiated? How is it propagated through the body? How does it avoid the

immune system, and how does the body respond? What types of therapy are applied to treat affected individuals? We will also examine animal model systems such as transgenic or knockout mice used to study these diseases, as well as the potential and pitfalls of treatments such as gene therapy, silencing RNA, anti-angiogenic drugs, and tumor antigen immunization.  
*Open to any interested student.*

## Cell Biology

**Drew E. Cressman**

*Intermediate—Spring*

Cells are the most basic unit of life on the planet—all life forms are simply conglomerations of cells, ranging from the individual bacterial cells to higher order plants and animals. Humans themselves are made up of trillions of cells. So what exactly is a cell? What is it made of? How does it function? In a complex organism, how do cells communicate with one another and coordinate their activities? How do they regulate their growth? What role do genes play in controlling cellular function? This course will address these questions and introduce the basic biology of cells while keeping in mind their larger role in tissues and organs. If we can understand the structures and functions of the individual cells that serve as the subunits of larger organisms, we can begin to understand the biological nature of humans and other complex life forms. Classes will be supplemented with weekly laboratory work.  
*Intermediate.*

## General Biology I: Cellular and Molecular Biology

**Drew E. Cressman**

*Lecture, Open—Fall*

Biology, the study of life on Earth, encompasses structures and forms ranging from the very minute to the very large. In order to grasp the complexities of life, we begin this study with the cellular and molecular forms and mechanisms that serve as the foundation for all living organisms. The initial part of the semester will introduce the fundamental molecules critical to the biochemistry of life processes. From there, we branch out to investigate the major ideas, structures, and concepts central to the biology of cells, genetics, and the chromosomal basis of inheritance. Finally, we conclude the semester by examining how these principles relate to the mechanisms of evolution. Throughout the semester, we will discuss the individuals responsible for major discoveries, as well as the experimental techniques and processes by which such advances in biological understanding are made. This semester-long course is designed to be followed in sequence by “General Biology 2: Organismal and Population Biology.” Classes will be supplemented with weekly laboratory work.  
*Open to any interested student.*

## General Biology II: Organismal and Population Biology

**Raymond D. Clarke**

*Intermediate, Lecture—Spring*

The number and diversity of living organisms on Earth is staggering and so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and with the environment form the basis of endless and fascinating study. This course is designed to follow “General Biology 1: Cellular and Molecular Biology,” and the sequence is a fundamental introduction to the science of life—the broad field of biology. In this component, we will explore the diversity of life, how biologists attempt to order this diversity through systematics, the anatomy and physiology of various life forms, and the ways they interact behaviorally and ecologically. In addition to describing structures and examining mechanisms, we will explore the processes of hypothesis formation, experimental design, and the interpretation of results. Classes will be supplemented with weekly laboratory work.

*Intermediate.*

## Introduction to Genetics

**Drew E. Cressman**

*Open—Fall*

At the biological core of all life on Earth is the gene. The unique combination of genes in each individual ultimately forms the basis for that person's physical appearance, metabolic capacity, thought processes, and behavior. Therefore, in order to understand how life develops and functions, it is critical to understand what genes are, how they work, and how they are passed on from parents to offspring. In this course, we will begin by investigating the theories of inheritance first put forth by Mendel and then progress to our current concepts of how genes are transmitted through individuals, families, and whole populations. We will also examine chromosome structure and the molecular functions of genes and DNA and how mutations in DNA can lead to physical abnormalities and diseases such as Down and Turner syndromes, hemophilia, and cancer. Finally, we will discuss the role of genetics in influencing such complex phenotypes as behavior and intelligence. Classes will be supplemented with weekly laboratory work.

*Open, with permission, to any interested student.*

## Introduction to Neuroscience

**Leah Olson**

*Intermediate—Spring*

The study of the nervous system takes place at many levels, from the molecules that carry messages between and within individual cells of the nervous system, or the

neuron, to complex behaviors—sensing, moving, learning, and feeling. This course will begin with an in-depth introduction to the basic cellular and molecular biology of the nervous system, exploring how nerve cells are designed to both integrate and communicate complex information. This background will serve as a foundation as we go on to explore how neurons are organized into even more complex nervous systems, such as the human brain, that are capable of complex perceptions, learning, thinking, planning, and language. Although studies from human neurobiology are included, many studies from nonhumans will be used as models for understanding basic brain functions.

*Open to sophomores and above. Some biology or psychology background is recommended.*

## Marine Biology

**Raymond D. Clarke**

*Open—Fall*

The ocean, the last of the great frontiers on Earth, is widely heralded as the source of our future energy and food resources. The ocean is believed to be the cradle of life and certainly supports a much greater variety of living things than the freshwater or terrestrial environments. What is the nature of life in the ocean? How does marine life capture and share the sun's energy? Why are some areas of the ocean rich in life and others almost devoid of life? Can we farm the seas?

These and other questions will be discussed in a systematic inquiry into marine biology. We will study the physical characteristics of each of the major zones of the ocean and then examine the kinds of marine organisms and the adaptations that suit them to their characteristic zones. This will lead to a discussion of our present use of the seas and our impact on the organisms that live there. With this knowledge, we will examine some of the exotic schemes proposed to harvest food and energy from the ocean and evaluate their probable effects on the ocean system. Classes will be supplemented by laboratory sessions and field trips. Conferences will be used to explain class material, to review the tests, and to discuss conference papers, which may be written on any basic or applied aspect of marine biology.

*Open to any interested student.*

## The Biology of Living and Dying

**Leah Olson**

*Open—Fall*

"He not busy being born is busy dying." —Bob Dylan  
Researchers at Massachusetts General Hospital have discovered that a gene used by the tiny worm *C. elegans* to regulate how much it eats, how fat it becomes, and how long it lives is strikingly similar to the gene for the human insulin receptor. Poets and scientists agree. Eating and getting old, sex and death...these processes

seemed inexorably linked. A single gene that governs what you eat and how long you live: What's the link? Why is obesity now described as an epidemic in the United States? Can we live longer by eating less? Why is it so hard for people to permanently lose weight? Why should there be a gene that *causes* aging? If aging is a deliberate, genetically programmed phenomenon and not just the body wearing out, might modern biology be able to find a cure? Is it even ethical to try to pursue a fountain of youth? This course will explore these and other questions about the biological regulation of eating and body weight and the process of aging and death.  
*Open to any interested student.*

## The Feeling Brain: The Biology and Psychology of Emotions (biology)

**Elizabeth Johnston, Leah Olson**

*Intermediate—Fall*

The processing of emotion was an enduring concern for early biologists and psychologists. Charles Darwin devoted a monograph to the expression of emotion in men and animals and argued for an evolutionary understanding of emotions as a biological phenomenon. William James considered emotions a key topic in his investigations of the science of mental life. Despite this early interest, emotions were not a major focus in the development of modern cognitive neuroscience. Instead, efforts to understand mental life focused primarily on reason or cognition. Recently, this neglect of emotions has been redressed through the growth of the new interest area of "affective neuroscience." This integration of psychological and biological approaches has been fueled by an increasing awareness of the function of emotions in mental life and by technological and experimental advances, such as brain imaging, which have allowed the development of sophisticated experimental approaches to the study of emotions. In this course, we will begin with the early history of the investigation of emotions in order to define our terms and then quickly proceed to the new experimental work being developed in both human and animal models. Some of the questions to be entertained are: What brain systems regulate emotions? How do emotions modulate memories? How are different emotions processed by the brain? How do emotions and reason interact to shape decision-making? *This is a joint seminar.*

*Open to sophomores and above.*

## Topics in Cell Biology

**Leah Olson**

*Advanced—Spring*

Cell biological pathways that define the basic metabolic processes of cells are currently understood to be responsible for cell aging and cell death; that is, the very processes that are essential for maintaining life—the breakdown and processing of food—are the pathways

that eventually cause death. This understanding—that nutrient pathways are central in informing cellular decisions about life and death—recently led to the stunning experiment that showed that feeding mice large amounts of resveratrol, the ingredient in red wine thought to be responsible for the “French paradox,” could significantly extend the healthy lifespan of mice. What are these pathways? This course will explore these and related topics that are on the cutting edge of work in cell biology. The course will be conducted as a journal club; that is, students will be reading and making presentations from the primary literature on selected topics primarily centered on issues related to nutrient processing and cell senescence and aging. Topics covered will include: insulin receptor signaling, which functions to maintain levels of blood glucose, and how defects in those signaling pathways give rise to diabetes; other nutrient-sensing pathways in the cell; cell death, or apoptosis; oxygen-free radical production and its regulation; and fat metabolism. We will also be tying the mechanisms being studied at the cell level to issues related to the regulation of eating, obesity, aging, and other organismal-level functions.

*Advanced.*

## 2011-2012

### Anatomy and Physiology

**Beth Ann Ditkoff**

*Open—Fall*

Anatomy is the branch of science that explores the bodily structure of living organisms, while physiology is the study of the normal functions of these organisms. In this course, we will explore the human body in both health and disease. Focus will be placed on the major body units such as skin, skeletal, muscular, nervous, endocrine, cardiovascular, respiratory, digestive, urinary and reproductive systems. By emphasizing concepts rather than the memorization of facts, we will make associations between anatomical structures and their functions. The course will take a clinical approach to health and illness, with examples drawn from medical disciplines such as radiology, pathology, and surgery. A final conference paper is required at the conclusion of the course. The topic will be chosen by each student to emphasize the relevance of anatomy/physiology to our understanding of the human body.

### Biology of Cancer

**Drew E. Cressman**

*Intermediate—Fall*

Cancer is likely the most feared and notorious of human diseases, being devastating in both its scope and its prognosis. It has been described as an alien invader inside one's own body, characterized by its insidious spread and devious ability to resist countermeasures.

Cancer's legendary status is rightfully earned, accounting for 13% of all human deaths worldwide and killing an estimated eight million people annually. In 1971, President Richard Nixon declared a “war on cancer” and, since then, more than \$200 billion has been spent on cancer research. While clinical success has been modest, tremendous insights have been generated in understanding the cellular, molecular, and genetic mechanisms of this disease. In this course, we will explore the field of cancer biology, covering topics such as tumor viruses, cellular oncogenes and tumor suppressor genes, cell immortalization, multistep tumorigenesis, cancer development and metastasis, and the treatment of cancer. In addition, we will discuss new advances in cancer research and draw from recent articles in the published literature.

### Ecology

**Raymond D. Clarke**

*Intermediate—Spring*

Ecology is the science of the relationship of living things to their living and nonliving environments. While providing the underpinnings for environmentalism, ecology exists independently as a basic science. This course will introduce the student to the major concepts of ecology: the flow of energy and cycling of nutrients through ecosystems, the regulation of population size, the ways in which species are grouped together to form natural communities, and the factors that contribute to the stability of natural systems. In addition to the fundamental principles, we will explore the observational and experimental support for these ideas, both qualitative and quantitative. These methods and concepts will help students evaluate such current issues as biodiversity, global warming, food production, and energy use. Classes will be augmented by field trips.

### General Biology I: Cellular and Molecular Biology

**Drew E. Cressman**

*Lecture, Open—Fall*

Biology, the study of life on Earth, encompasses structures and forms ranging from the very minute to the very large. In order to grasp the complexities of life, we begin this study with the cellular and molecular forms and mechanisms that serve as the foundation for all living organisms. The initial part of the semester will introduce the fundamental molecules critical to the biochemistry of life processes. From there, we branch out to investigate the major ideas, structures, and concepts central to the biology of cells, genetics, and the chromosomal basis of inheritance. Finally, we conclude the semester by examining how these principles relate to the mechanisms of evolution. Throughout the semester, we will discuss the individuals responsible for major discoveries, as well as the experimental techniques and

process by which such advances in biological understanding are made. Classes will be supplemented with weekly laboratory work.

## General Biology II: Organismal and Population Biology

**Leah Olson**

*Lecture, Open—Spring*

The number and diversity of living organisms on Earth is staggering—and so common that we often take their very existence for granted. Yet the nature of these organisms, their mechanisms of survival, and their modes of interaction with each other and with the environment form the basis of endless and fascinating study. This course serves as a fundamental introduction to the science of life—the broad field of biology. As such, we cover a wide variety of topics, ranging from the microscopic to the macroscopic and from the laboratory to the field. The course will be divided into three parts. The first portion of the year will focus on the biology of cells and the chromosomal basis of inheritance. We will then turn our attention to the mechanisms of evolution and biological diversity. Finally, we will conclude by examining organismal functions and ecology. In addition to the science involved, we will discuss the individuals responsible for major discoveries and the process of hypothesis formation, experimental design, and interpretation of results. Classes will be supplemented with weekly laboratory work.

## Introduction to Genetics

**Drew E. Cressman**

*Open—Spring*

At the biological core of all life on Earth is the gene. The unique combination of genes in each individual ultimately forms the basis for that person's physical appearance, metabolic capacity, thought processes, and behavior. Therefore, in order to understand how life develops and functions, it is critical to understand what genes are, how they work, and how they are passed on from parents to offspring. In this course, we will begin by investigating the theories of inheritance first put forth by Mendel and then progress to our current concepts of how genes are transmitted through individuals, families, and whole populations. We will also examine chromosome structure and the molecular functions of genes and DNA and how mutations in DNA can lead to physical abnormalities and diseases such as Down's and Turner's syndromes or hemophilia. Finally, we will discuss the role of genetics in influencing such complex phenotypes as behavior and intelligence. Classes will be supplemented with weekly laboratory work.

## Marine Biology

**Raymond D. Clarke**

*Open—Fall*

The ocean is the last of the great frontiers on Earth and is widely heralded as the source of our future energy and food resources. The ocean is believed to be the cradle of life and certainly supports a much greater variety of living things than the freshwater or terrestrial environments. What is the nature of life in the ocean? How does marine life capture and share the sun's energy? Why are some areas of the ocean rich in life and others almost devoid of life? Can we farm the seas? These and other questions will be discussed in a systematic inquiry into marine biology. We will study the physical characteristics of each of the major zones of the ocean and then examine the kinds of marine organisms and the adaptations that suit them to their characteristic zones. This will lead to a discussion of our present use of the seas and our impact on the organisms that live there. With this knowledge, we will examine some of the exotic schemes proposed to harvest food and energy from the ocean and evaluate their probable effects on the ocean system. Classes will be supplemented by laboratory sessions and field trips. Conferences will be used to explain class material, to review the tests, and to discuss conference papers, which may be written on any basic or applied aspect of marine biology.

## Principles of Botany

**Kenneth G. Karol**

*Open—Fall*

Understanding the biology of plants is fundamental to understanding the complex web of life on Earth and its evolutionary history. Nearly all other organisms, including humans, directly or indirectly rely on plants for their food and oxygen. Consequently, plants are essential to our existence; and by studying them in detail, we learn more about our own species and the world that we inhabit. This course is an introductory survey of botany. The first half of the course will examine aspects of plant anatomy, morphology, physiology, and development. The second half will cover plant genetics, reproduction, diversity, and evolution. In addition to covering many facets of plant biology, an introduction to bacteria and algae will also be presented. Weekly lectures and textbook readings will be supplemented with occasional laboratory sessions.

## Topics in Cell Biology

**Leah Olson**

*Advanced—Spring*

Cell biological pathways that define the basic metabolic processes of cells are currently understood to be responsible for cell aging and cell death; that is, the very

processes that are essential for maintaining life—the breakdown and processing of food—are the pathways that eventually cause death. This understanding—that nutrient pathways are central in informing cellular decisions about life and death—recently led to the stunning experiment that showed that feeding mice large amounts of resveratrol, the ingredient in red wine thought to be responsible for the “French paradox,” could significantly extend the healthy lifespan of mice. What are these pathways? This course will explore these and related topics that are on the cutting edge of work in cell biology. The course will be conducted as a journal club; that is, students will be reading and making presentations from the primary literature on selected topics primarily centered on issues related to nutrient processing and cell senescence and aging. Topics covered will include: insulin receptor signaling, which functions to maintain levels of blood glucose, and how defects in those signaling pathways give rise to diabetes; other nutrient-sensing pathways in the cell; cell death, or apoptosis; oxygen-free radical production and its regulation; and fat metabolism. We will also be tying the mechanisms being studied at the cell level to issues related to the regulation of eating, obesity, aging, and other organismal-level functions.

## Virology

**Drew E. Cressman**

**Advanced—Spring**

Viruses are some of the smallest biological entities found in nature—yet, at the same time, perhaps the most notorious. Having no independent metabolic activity of their own, they function as intracellular parasites, depending entirely on infecting and interacting with the cells of a host organism to produce new copies of themselves. The effects on the host organism can be catastrophic, leading to disease and death. HIV has killed more than 18 million people since its identification and has infected twice that number. Ebola, West Nile virus, herpes, and pox viruses—are all well-known viruses yet shrouded in fear and mystery. During the course of this semester, we will examine the biology of viruses, discussing their physical and genetic properties, their interaction with host cells, their ability to commandeer the cellular machinery for their own reproductive needs, the effects of viral infection on host cells, and finally how viruses and other subviral entities may have originated and evolved. In addition, we will examine how viruses have been portrayed in literature, with readings that include Laurie Garrett's *The Coming Plague* and Richard Preston's *The Hot Zone*.

# Chemistry

## 2002-2003

### Atmospheric Chemistry

**Ryan Z. Hinrichs**

The sky appears endless . . . and so it has long been viewed as a vast, even infinite sink for dumping the gaseous waste of our industrialized society. However, the rise of urban populations coupled with increased use of technology demonstrated the sky's finiteness with the emergence of regional pollution: smog and acid rain. More recently, the issues have become global, including stratospheric ozone depletion and greenhouse gases. One role of the scientific community involves accurately assessing the extent of these environmental issues. A major challenge of these assessments relates to differentiating between human influences and natural atmospheric processes. We will consider the current state of knowledge on tropospheric and stratospheric chemistry — the lower and upper atmosphere. With this knowledge and the most recent data, we will assess the current condition of Earth's atmosphere.

### Biochemistry

**Mali Yin, Michael Malin**

Biochemistry is the chemistry of biological systems. This course will introduce students to the basic principles and concepts of biochemistry. Topics will include the structure and function of biomolecules such as amino acids, proteins, enzymes, nucleic acids, RNA, DNA, and bioenergetics. This knowledge will then be used to study the pathways of metabolism. Prerequisite: Organic Chemistry and General Biology.

### General Chemistry

**Ryan Z. Hinrichs**

All matter, including the Earth, our bodies, and the air we breathe, comprises inconceivably small atoms and molecules. This understanding of our physical world has been formulated through hypothesis and experimentation and is at the core of chemistry: the study of matter and its transformations. We will begin by considering the contemporary model of matter, which utilizes quantum mechanics in understanding atomic structure and chemical bonding in molecules. Then we'll explore the "bang" of chemistry, discussing transformations of matter — or chemical reactions. Using ideas such as thermodynamics, dynamic equilibria, and chemical kinetics, we'll seek to understand these (sometimes dramatic) chemical reactions. Just as experimentation played a fundamental

role in the formulation of these ideas, it plays an integral part in learning them. Laboratory experiments will complement topics discussed in seminar.

### Organic Chemistry

**Mali Yin, Michael Malin**

This course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory students will learn the basic techniques used in the synthesis, isolation, and identification of organic compounds. Prerequisite: General Chemistry or its equivalent.

### The Science of Photography

**Ryan Z. Hinrichs**

At the turn of the twentieth century, refinements in the photographic process resulted in widespread use of the camera, greatly influencing our society. Now, at the turn of the twenty-first century, digital technology is facilitating a new photographic revolution. These revolutions were founded on advances in science. But what are the underlying scientific principles of photography? How do photographic films and papers capture images? What is inside a digital camera? But first, perhaps we should step back and ask what allows us to see these images to begin with? In answering these questions, our discussions will center on how various molecules and materials interact with light. We will consider the role of rod and cone cells in human vision, experiment with silver halides and black-and-white photography, and explore the principles of color and digital photography.

## 2003-2004

### Environmental Chemistry

**Mali Yin**

This course provides an introduction to basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, and surface water and groundwater pollution. We will then consider how human activities such as transportation, energy production, and chemical industries influence the environment.

## First-Year Studies: Chemical Induced Revolutions

**Ryan Z. Hinrichs**

Chemistry endeavors to understand our physical world on an atomic and molecular level. Over the centuries, this pursuit has facilitated a proliferation of ideas and the discovery and synthesis of compounds that have changed the human experience. For example, the discovery of oxygen ignited the chemical revolution; light sensitive materials, the photographic revolution; silicon chips, the digital revolution; radioactivity ushered in the nuclear age; the discovery of DNA's double helix catalyzed the genetic revolution; and the overflowing pharmacopoeia resulted in the psychedelic and pharmaceutical revolutions. We will consider these influential molecules—how their utilitarian properties arise from their molecular structures. Furthermore, to gain insight into the process and evolution of scientific thought, we will consider the circumstances, scientists, and experiments central to these discoveries. Many ethical questions will arise during our discussions because “advances” may bring unintended consequences, such as global warming and the threat of nuclear and chemical weapons. By exploring these revolutions, this course seeks to understand the relationship between the microscopic world and the World.

## General Chemistry

**Ryan Z. Hinrichs**

All matter, including the earth, our bodies, and the air we breathe, comprises inconceivably small atoms and molecules. This understanding of our physical world has been formulated through hypothesis and experimentation and is at the core of chemistry: the study of matter and its transformations. We will begin by considering the contemporary model of matter, which utilizes quantum mechanics in understanding atomic structure and chemical bonding in molecules. Then we'll explore the “bang” of chemistry, discussing transformations of matter—or chemical reactions. Using ideas such as thermodynamics, dynamic equilibria, and chemical kinetics, we'll seek to understand these (sometimes dramatic) chemical reactions. Just as experimentation played a fundamental role in the formulation of these ideas, it plays an integral part in learning them. Laboratory experiments will complement topics discussed in seminar.

## Nutrition

**Mali Yin**

Nutrition is the sum of all interactions between us and the food we consume. The study of nutrition includes the nature and general role of nutrients in forming structural material, providing energy, and helping to regulate metabolism. How do food chemists synthesize

the fat that can't be digested? Can this kind of fat satisfy our innate appetite for fats? Are there unwanted side effect and why? What constitutes a healthy diet? What are the consequences of severely restricted food intake seen in prevalent emotional disorders such as anorexia and bulimia? These and other questions will be discussed. We will also discuss the effect of development, pregnancy, emotional state, and disease on nutritional requirements. We will also consider effects of food production and processing on nutrition value and food safety.

## Organic Chemistry

**Mali Yin**

This yearlong course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

## 2004-2005

## Biochemistry

**Mali Yin**

Biochemistry is the chemistry of biological systems. This course will introduce students to the basic principles and concepts of biochemistry. Topics will include the structure and function of biomolecules such as amino acids, proteins, enzymes, nucleic acids, RNA, DNA, and bioenergetics. This knowledge will then be used to study the pathways of metabolism.

## Environmental Chemistry

**Mali Yin**

This course provides an introduction to basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, and surface water and groundwater pollution. We will then consider how human activities such as transportation, energy production, and chemical industries influence the environment.

## General Chemistry

**Ryan Z. Hinrichs**

Chemistry seeks to understand our physical world on an atomic and molecular level. This microscopic conceptualization uses the elements of the periodic table as building blocks for a vast array of molecules, ranging

from water to DNA, and has been formulated through hypothesis and experimentation. We will analyze experiments and data to formulate the contemporary model of matter, using electrostatic forces and quantum mechanics to understand atomic structure and chemical bonding in molecules. With a firm understanding of molecular structure, we will explore the "bang" of chemistry, discussing transformations of matter—or chemical reactions. Ideas such as thermodynamics, dynamic equilibria, and chemical kinetics will allow us to quantitatively understand these chemical reactions. Just as experimentation played a fundamental role in formulating these ideas, it plays an integral part in learning them; laboratory experiments will complement topics discussed in seminar.

## Organic Chemistry

### Mali Yin

This yearlong course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

*Prerequisite: General Chemistry or its equivalent.*

## Origins: An Exploration of the Scientific

### Ryan Z. Hinrichs, Daniel King, Leah Olson, Michael Siff, Kanwal Singh

Life, the universe, and everything . . . where did it all come from? We will explore this question in a unique course taught by five Sarah Lawrence faculty representing five scientific disciplines. Our journey from the cosmological to the biological and beyond will raise questions such as: How old is the universe? Did anything exist before the Big Bang? How did atoms and molecules arise from the primordial universe? When did life arise on earth? How can "living" organic matter arise in a "dead" inorganic world? How do new species (including humans) arise? What is consciousness? Is the emergence of artificial life on the horizon, and how are computers advancing the development of artificial intelligence? How, in general, do complex, ordered systems and organisms arise from seemingly simple and often random interactions among elementary constituents? By considering these questions from different but complementary scientific perspectives, this course will explore the development of the scientific process itself, as well as how it is used to provide answers to these fundamental questions that humans have pondered

since the origin of consciousness. We hope that students will emerge from this course with a better understanding of the patterns and common themes prevalent in the scientific approach to problem solving.

## Photographic Chemistry

### Ryan Z. Hinrichs

J. N. Niépce produced the first extant photograph by coating a pewter plate with asphalt; the exposure time was 8-10 hours. In less than 200 years, photographic materials have become more sensitive by over eight orders of magnitude (100,000,000 times), and digital advances are making other revolutionary breakthroughs. This course will trace the chemical history of photography by examining a sample of the more than 100 photographic processes. We will seek to understand how each photographic material interacts with light on a chemical and molecular level. Emphasis will be placed on silver gelatin, color and digital photography, as well as representative alternative processes. We will also cover several related topics, including the nature of light, optics, and the biochemistry of human vision and color perception. Group conferences will be conducted as laboratories to experiment with select historical and alternative processes.

## 2005-2006

## Earth's Climate: Past and Future

### Ryan Z. Hinrichs

Earth's average surface temperature increased by  $0.6 \pm 0.2$  °C over the last century. Will this trend continue? One challenge in predicting future climate change involves accurately assessing the causes of past climatic variations and differentiating between anthropogenic forcing and natural processes. This course reconstructs earth's climatic history dating back over four billion years—to when life first originated on earth and forever altered its climate—using evidence such as sediment composition, isotopic ratios, and ice cores. A theoretical model consistent with this evidence requires the consideration of variations in solar radiation intensity; tectonic activity and continental configurations; orbital cycles; glacial coverage and land albedo; ocean circulations; vegetation; and atmospheric processes and composition, including greenhouse gases. Only after we have considered the current understanding of earth's past and present climate will we turn to predicting future climate change. Central to this final discussion will be the role of uncertainty in science and its implications for policy decisions.

## Environmental Chemistry

### Mali Yin

This course provides an introduction to basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, and surface water and groundwater pollution. We will then consider how human activities such as transportation, energy production, and chemical industries influence the environment.

## General Chemistry

### Ryan Z. Hinrichs

Chemistry seeks to understand our physical world on an atomic and molecular level. This microscopic conceptualization uses the elements of the periodic table as building blocks for a vast array of molecules, ranging from water to DNA, and has been formulated through hypothesis and experimentation. We will analyze experimental data to formulate the contemporary model of matter, using electrostatic forces and quantum mechanics to understand atomic structure and chemical bonding in molecules. *Intermediate. Prerequisite: General Chemistry or its equivalent.*

## Origins: The Simplicity Behind Complexity

### Ryan Z. Hinrichs, Daniel King, Leah Olson, Michael Siff, Kanwal Singh

## Origins: The Simplicity Behind Complexity

*Mr. Hinrichs, Mr. King, Ms. Olson, Mr. Siff, Ms. Singh*

### LECTURE, SECOND SEMESTER

Life, the universe, and everything . . . where did it all come from? We will explore this question in a unique course taught by five Sarah Lawrence faculty representing five scientific disciplines. Our journey from the cosmological to the biological and beyond will raise questions such as, How do complex systems arise from simple (and often random) interactions among elementary constituents? Did anything exist before the Big Bang? How did atoms and molecules arise from the primordial universe? How can "living" organic matter arise in a "dead" inorganic world? Are human beings the only species that reason mathematically? What is the adaptive advantage of having "numbers sense"? Why is consciousness such a challenge to formalize? How does the advent of computers complicate the matter? By considering these questions from different but complementary scientific perspectives, this course will explore the development of the scientific process itself, as well as how it is used to provide answers to these fundamental questions. We hope that students will emerge from this course with a better understanding of the patterns and common themes prevalent in the scientific approach to problem solving.

*Open to any interested student.*

## Quantum Chemistry

**Ryan Z. Hinrichs**

Quantum chemistry emphasizes a microscopic view of chemical systems. This requires the application of quantum mechanics to atoms and molecules as a theoretical basis because electrons and nuclei do not obey classical mechanics. Much of the experimental support for quantum chemical theory comes from spectroscopy, which uses light to probe the microscopic properties of matter. This course balances theory and experiment in constructing the chemist's modern molecular view. Major topics include electronic structure of atoms and molecules; computation chemistry; molecular vibrations and rotations; thermal energy distributions; and electronic, vibrational, and rotational spectroscopy.

*Intermediate. Course prerequisites: General Chemistry and a familiarity with calculus, or permission of the instructor.*

## 2006-2007

## Analytical Chemistry

**Ryan Z. Hinrichs, Mali Yin**

Analytical Chemistry explores the instruments, procedures, and analyses used to separate, identify, and quantify the chemical components of real-world samples. Topics include quantitative treatment of aqueous equilibrium, gravimetric and volumetric techniques, statistical analysis of data, and modern methods of instrumental analysis.

*Intermediate.*

## Biochemistry

**Mali Yin**

Biochemistry is the chemistry of biological systems. This course will introduce students to the basic principles and concepts of biochemistry. Topics will include the structure and function of biomolecules such as amino acids, proteins, enzymes, nucleic acids, RNA, DNA, and bioenergetics. This knowledge will then be used to study the pathways of metabolism.

*Intermediate. Prerequisites: Organic Chemistry and General Biology.*

## Environmental Chemistry

**Mali Yin**

This course provides an introduction to basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, and surface water and groundwater pollution. We will then consider how

human activities such as transportation, energy production, and chemical industries influence the environment.

*Open to any interested student.*

## First-Year Studies: The Extraordinary Chemistry of Everyday Life

**Mali Yin**

Everything we eat, wear, and do involves chemistry. This yearlong course examines the chemistry of our everyday life—the way things work. The emphasis of this course is on understanding the everyday use of chemistry. We will introduce chemistry concepts with everyday examples, such as household chemicals and gasoline, which show how we already use chemistry and reveal why chemistry is important to us. We will concentrate on topics of current interest such as environmental pollution and the substances that we use in our daily lives that affect our environment and us. We will emphasize practical applications of chemistry to issues involving food and nutrition.

## General Chemistry

**Ryan Z. Hinrichs**

Chemistry seeks to understand our physical world on an atomic and molecular level. This microscopic conceptualization uses the elements of the periodic table as building blocks for a vast array of molecules, ranging from water to DNA, and has been formulated through hypothesis and experimentation. We will analyze experimental data to formulate the contemporary model of matter, using electrostatic forces and quantum mechanics to understand atomic structure and chemical bonding in molecules. With a firm understanding of molecular structure, we will explore the “bang” of chemistry, discussing transformations of matter—or chemical reactions. Ideas such as thermodynamics, dynamic equilibria, and chemical kinetics will allow us to quantitatively understand these chemical reactions. Just as experimentation played a fundamental role in formulating these ideas, it plays an integral part in learning them; laboratory experiments will complement topics discussed in seminar.

*Open to any interested student.*

## Global Warming

**Ryan Z. Hinrichs**

*First Semester*

Earth's average surface temperature increased by  $0.6 \pm 0.2$  °C during the twentieth century, and it is projected to rise by an additional  $1.4$  to  $5.8$  °C by 2100. Climate models indicate that this warming is due in large part to

human activities that have raised the concentrations of greenhouse gases to unprecedented levels. Indeed, ice-core data shows that current levels of carbon dioxide are higher now than at any point during the last 650,000 years. However, focusing only on average global warming oversimplifies the dynamics of our changing climate; some regions have experienced minor cooling while others, such as the arctic, have warmed more dramatically. And surface temperatures are only part of the picture: total hurricane intensities are increasing with warmer ocean waters, sea levels are expected to rise with warming waters and melting glaciers, deserts are expanding due to changes in precipitation and land-use practices, and the WHO estimates that 150,000 lives are lost annually because of climate change. Although all parts of the globe are experiencing climatic changes, social inequalities make developing countries more vulnerable than developed countries raising issues of environmental justice. This course will explore the science, politics, and social consequences of global warming. We will read primary literature and analyze ice-core data to understand the causes of climate change and differentiate between anthropogenic forcing and natural processes. Using case studies, we will examine the potential impacts on developed and developing countries, and we will consider the various policy options for addressing global warming.

*Open to any interested student.*

## Inorganic Chemistry

**Mali Yin, Ryan Z. Hinrichs**

*Semester: as needed (conference course)*

Inorganic Chemistry covers the bonding, structure, properties, and reactivity of all elements on the periodic table. Topics include coordination chemistry of the transition metals, organometallic chemistry, and bioinorganic chemistry. Laboratory experiments cover synthesis and instrumental analysis of inorganic and organometallic compounds.

*Intermediate.*

## Inventing Photography: A Chemical History

**Ryan Z. Hinrichs**

Although chemists have long known that certain chemicals respond to the action of light, the first extant photograph was not produced until 1826 when J. N. Niépce placed a pewter plate coated with asphalt in his camera obscura. Heliography, as Niépce called his process, was not practical because it required an eight-to ten-hour exposure and only produced a faint image. It did, however, serve as a starting point for L. Daguerre, who forged a collaboration with Niépce and invented a new process—daguerreotypes—whose magical images

excited the world and placed photography on a trajectory toward ubiquity. Daguerre's announcement was not welcome news to W. H. F. Talbot, who was independently perfecting his own photographic process. Talbot's images pale in comparison to daguerreotypes, but his salt-paper process evolved into modern silver gelatin photography. In less than two hundred years, over a hundred different photographic processes have been invented. This course will trace the chemical history of photography by examining a sample of the processes, including heliography, daguerreotypes, salt-paper prints, silver gelatin, and color photography. We will also consider the grass photographs of H. Ackroyd and D. Harvey and recent advances using genetically modified bacteria to capture images. Emphasis will be placed on understanding how each photographic material interacts with light on a molecular level and the scientific and cultural factors that led to each discovery. Additional topics will include the nature of light, optics, the biochemistry of vision, and color perception. When possible, laboratory experiments will complement seminar discussions.

*Open to any interested student.*

## Organic Chemistry

**Michael Malin**

This yearlong course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

*Intermediate. Prerequisite: General Chemistry or its equivalent.*

## Physical Chemistry

**Ryan Z. Hinrichs**

*Semester: As needed (conference course)*

Physical Chemistry I—Quantum Chemistry (last offered spring 2006): Application of quantum mechanics to chemical systems. Major topics include electronic structure of atoms and molecules, computation chemistry, molecular vibrations and rotations, and spectroscopy. Physical Chemistry II—Thermodynamics: application of the laws of thermodynamics to chemical systems, including statistical mechanics and kinetics.

*Intermediate.*

## 2007-2008

### Chemistry for Liberal Artists

#### Michael Malin

Artists create beautiful works with a wide variety of materials. In this course, we will explore the connection between chemistry and artist's materials. Each material has a composition and molecular architecture that are the keys to understanding how it works. Basic principles of structure and reactivity will be developed in a nonmathematical way. Topics will include acrylics, adhesives, dyes, inks, etching acids, glass, ceramics, drying of oils, pigments, paints, polymers, plastics, solvents, and compatibility of materials. Precautions in working with materials will also be discussed.

### Environmental Chemistry

#### Mali Yin

This course provides an introduction to the basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, global warming, and surface water and groundwater pollution. We will then consider how human activities such as transportation, energy production, and chemical industries influence the environment.

### General Chemistry I

#### Michael Malin

Chemistry is called the molecular science. The physical and biological world contains an almost infinite variety of molecules ranging from small (nitric oxide, sodium chloride, water) to intermediate (glucose, Prussian Blue) to large (asphalt, nylon, DNA). The objectives of chemistry are to isolate chemical substances from natural sources, to create new ones by synthesis, and to describe the properties of chemical materials. We will begin by developing the concept of atomic structure and the bonding tendencies of atoms. Then, with an understanding of molecular structure, we will explore how one molecule is transformed into another. Topics will include atomic and molecular structure; liquids, solids, and gases; and classes of chemical reactions, thermochemistry, and periodic properties of the elements. The laboratory will emphasize basic techniques in synthetic and quantitative chemistry.

### General Chemistry II

#### Michael Malin

General Chemistry II is a continuation of General Chemistry I. Topics will include the properties of solutions, reaction rates, equilibrium, thermodynamics, acids and bases, electrochemistry, and introduction to

organic chemistry and nuclear chemistry. The laboratory will emphasize basic techniques in synthetic and quantitative chemistry.

### Organic Chemistry

#### Mali Yin

This yearlong course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

*Prerequisite: General Chemistry or its equivalent.*

### The Extraordinary Chemistry of Everyday Life

#### Michael Malin

Everything, including us, is composed of chemical compounds. Are you curious about why antioxidants are present in gasoline and also in foods? You have been washed with soap since the day you were born, so what exactly is soap and how does it function? How do Brita filters purify water? What is the poison in poison ivy? How do tooth whiteners work? How does caffeine act as a stimulant? These are some of the questions we might ask about the profusion of products available to us. In this course, we will explore the connection between chemistry and the contemporary world. Basic principles of molecular architecture and chemical reactions will be developed in a non-mathematical way. Topics will include consumer products, polymers, fuels, food, drugs, natural products, and more.

## 2008-2009

### Biochemistry

#### Mali Yin

Biochemistry is the chemistry of biological systems. This course will introduce students to the basic principles and concepts of biochemistry. Topics will include the structure and function of biomolecules such as amino acids, proteins, enzymes, nucleic acids, RNA, DNA, and bioenergetics. This knowledge will then be used to study the pathways of metabolism.

*Prerequisites: Organic Chemistry and General Biology.*

## Environmental Chemistry

### Mali Yin

This course provides an introduction to basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, global warming, and surface water and groundwater pollution. We will then consider how human activities such as transportation, energy production, and chemical industries influence the environment.

## Organic Chemistry

### Mali Yin

This yearlong course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

*Prerequisite: General Chemistry or its equivalent.*

## 2009-2010

## Environmental Chemistry

### Mali Yin

This course provides an introduction to basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, global warming, and surface water and groundwater pollution. We will then consider how human activities such as transportation, energy production, and chemical industries influence the environment.

## General Chemistry I

### Todd Tippetts

Chemistry is called the molecular science. The physical and biological world contains an almost infinite variety of molecules, ranging from small (e.g., nitric oxide, sodium chloride, water) to intermediate (e.g., glucose, Prussian Blue) to large (e.g., asphalt, nylon, DNA). The objectives of chemistry are to isolate chemical substances from natural sources, to create new ones by synthesis, and to describe the properties of chemical materials. We will begin by developing the concept of atomic structure and the bonding tendencies of atoms. Then, with an understanding of molecular structure, we will explore how one molecule is transformed into another. Topics will include atomic and molecular

structure; liquids, solids, and gases; and classes of chemical reactions, thermochemistry and quantitative study of chemical reactions, as well as the periodic properties of the elements. The laboratory will emphasize basic techniques in synthetic and quantitative chemistry.

## General Chemistry II

### Todd Tippetts

A continuation of General Chemistry I, topics will include the properties of solutions, reaction rates, equilibrium, thermodynamics, acids and bases, electrochemistry, and an introduction to organic chemistry and nuclear chemistry. The laboratory will emphasize basic techniques in synthetic and quantitative chemistry.

## Organic Chemistry

### Sean Boson, Mali Yin

This course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

*Prerequisite: General Chemistry or its equivalent. Sean Boson will teach this course in the fall; Mali Yin will teach this course in the spring.*

## 2010-2011

## Biochemistry

### Intermediate—Spring

Biochemistry is the chemistry of biological systems. This course will introduce students to the basic principles and concepts of biochemistry. Topics will include the structure and function of biomolecules such as amino acids, proteins, enzymes, nucleic acids, RNA, DNA, and bioenergetics. This knowledge will then be used to study the pathways of metabolism.

*Intermediate. Prerequisites: Organic Chemistry and General Biology.*

## First-Year Studies: The Extraordinary Chemistry of Everyday Life

**Mali Yin**

**FYS**

Everything we eat, wear, and do involves chemistry. This yearlong course examines the chemistry of our everyday life—the way things work. The emphasis of this course is on understanding the everyday use of chemistry. We will introduce chemistry concepts with everyday examples, such as household chemicals and gasoline, that show how we already use chemistry and reveal why chemistry is important to us. We will concentrate on topics of current interest, such as environmental pollution, and the substances that we use in our daily lives that affect our environment and us. We will emphasize practical applications of chemistry to issues involving food and nutrition.

## From Alchemy to Chemistry

**Colin D. Abernethy**

**Open—Fall**

Tracing its origins back to ancient Egypt, alchemy was a dark, often forbidden, art whose practitioners wrote cryptic, encoded, symbolic, and often-secretive texts. Driven by the desire to turn base metals into gold and to discover the Philosophers' Stone and, with it, the secret of immortality, alchemists studied the transmutation of physical substances. Despite its unsavory reputation, alchemy was practiced by some of the most extraordinary individuals in the history of humanity's intellectual development: Jabir ibn-Hayyan, Roger Bacon, Paracelsus, and Robert Boyle. Indeed, Isaac Newton, widely regarded as the father of modern science, wrote more alchemical manuscripts than on any other subject. In this course, we will investigate the essence of alchemy and its turbulent history. The course will then explore the legacy of alchemy: how the work of the alchemists enabled the scientists of the 18th and 19th centuries to transform alchemical lore into the modern science of chemistry.

*Open to any interested student.*

## General Chemistry I

**Colin D. Abernethy**

**Lecture, Open—Fall**

Chemistry is the study of the properties, composition, and transformation of matter. It is central to the production of the materials required for modern life; for example, the synthesis of pharmaceuticals to treat disease, the manufacture of fertilizers and pesticides required to feed an ever-growing population, and the development of efficient and environmentally benign energy sources. This course provides an introduction to the fundamental concepts of modern chemistry. We will

begin by examining the structure and properties of atoms, which are the building blocks of the elements and the simplest substances in the material world around us. We will then explore how atoms of different elements can bond with each other to form an infinite variety of more complex substances called compounds. This will lead us to an investigation of several classes of chemical reactions: the processes by which substances are transformed into new materials with different physical properties. Along the way, we will learn how and why the three states of matter (solids, liquids, and gases) differ from one another and how energy may be either produced or consumed by chemical reactions. In weekly laboratory sessions, we will perform experiments to illustrate and test the theories presented in the lecture part of the course. These experiments will also serve to develop practical skills in both synthetic and analytic chemical techniques.

*Open to any interested student.*

## General Chemistry II

**Colin D. Abernethy**

**Lecture—Spring**

This course is a continuation of General Chemistry I. We will begin with a detailed study of both the physical and chemical properties of solutions. This will enable us to consider the factors that affect both the rates and direction of chemical reactions. We will then investigate the properties of acids and bases and the role that electricity plays in chemistry. The course will conclude with introductions to nuclear chemistry and organic chemistry. Weekly laboratory sessions will allow us to demonstrate and test the theories described in the lecture segment of the course.

*Open to any interested student.*

## Green Chemistry: A Scientific Method to Protect Ourselves and Our Environment

**Colin D. Abernethy**

**Spring**

Humanity's knowledge and application of chemistry has significantly enhanced the quality of life for billions of people. Revolutionary pharmaceuticals used to treat once debilitating or killer diseases, new fertilizers to enhance crop yields, and synthetic materials to provide improved clothing and shelter have all contributed to rising living standards and longevity. However, these achievements have come with a cost; the manufacture, use, and disposal of chemicals harmful to our environment threaten the long-term wellbeing of both humans and other species. Chemists have responded to environmental concerns by developing Green Chemistry, a philosophy and methodology designed to place human and environmental health at the heart of

their endeavors. This course introduces students to the moral obligations of chemists and other scientists to work for both the benefit of society and the wider natural world. It guides students to an understanding of how the Twelve Principles of Green Chemistry can be applied to minimize health and environmental dangers posed by today's chemical industry.

*Open to any interested student.*

## Organic Chemistry

**Mali Yin**

*Intermediate—Year*

This course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

*Intermediate. Prerequisite: General Chemistry or its equivalent.*

## 2011-2012

## Environmental Chemistry

**Mali Yin**

*Open—Fall*

This course provides an introduction to basic concepts of chemistry and their application to current environmental issues. Topics include acid rain, ozone depletion, air pollution, global warming, and surface water and groundwater pollution. We will then consider how human activities such as transportation, energy production, and chemical industries influence the environment.

## First-Year Studies: Green Chemistry: An Environmental Revolution

**Colin D. Abernethy**

*FYS*

Humanity's knowledge and application of science and technology have significantly enhanced the quality of life for billions of people. New sources of affordable energy for the world's ever-increasing population, revolutionary pharmaceuticals used to treat once debilitating or killer diseases, synthetic fertilizers used to enhance crop yields, and advanced materials used to provide improved clothing and shelter have all contributed to rising living standards and longevity.

These achievements, however, have come at a cost. The manufacture, use, and disposal of chemicals harmful to our environment threaten the long-term well-being of both humans and other species. Chemists have responded to these environmental concerns by developing "Green Chemistry," a revolutionary philosophy and methodology designed to place human and environmental health at the heart of their endeavors. This course introduces students to the moral obligations of scientists to work for both the benefit of society and for the wider natural world. It guides students to an understanding of how the Twelve Principles of Green Chemistry can be applied to minimize health and environmental dangers posed by today's agricultural, mining, manufacturing, and energy industries.

## General Chemistry I

**Colin D. Abernethy**

*Lecture, Open—Fall*

Chemistry is the study of the properties, composition, and transformation of matter. It is central to the production of the materials required for modern life; for example, the synthesis of pharmaceuticals to treat disease, the manufacture of fertilizers and pesticides required to feed an ever-growing population, and the development of efficient and environmentally benign energy sources. This course provides an introduction to the fundamental concepts of modern chemistry. We will begin by examining the structure and properties of atoms, which are the building blocks of the elements—the simplest substances in the material world around us. We will then explore how atoms of different elements can bond with each other to form an infinite variety of more complex substances called compounds. This will lead us to an investigation of several classes of chemical reactions, the processes by which substances are transformed into new materials with different physical properties. Along the way, we will learn how and why the three states of matter (solids, liquids, and gases) differ from one another and how energy may be either produced or consumed by chemical reactions. In weekly laboratory sessions, we will perform experiments to illustrate and test the theories presented in the lecture part of the course. These experiments will also serve to develop practical skills in both synthetic and analytic chemical techniques.

## General Chemistry II

**Colin D. Abernethy**

*Lecture, Open—Spring*

This course is a continuation of General Chemistry I. We will begin with a detailed study of both the physical and chemical properties of solutions. This will enable us to consider the factors that affect both the rates and the direction of chemical reactions. We will then investigate the properties of acids and bases and the role

that electricity plays in chemistry. The course will conclude with introductions to nuclear chemistry and organic chemistry. Weekly laboratory sessions will allow us to demonstrate and test the theories described in the lecture segment of the course.

## Nutrition

**Mali Yin**

*Open—Spring*

Nutrition is the sum of all interactions between us and the food we consume. The study of nutrition includes the nature and general role of nutrients in forming structural material, providing energy, and helping to regulate metabolism. How do food chemists synthesize the fat that can't be digested? Can this kind of fat satisfy our innate appetite for fats? Are there unwanted side effects and why? What constitutes a healthy diet? What are the consequences of severely restricted food intake seen in prevalent emotional disorders such as anorexia or bulimia? These and other questions will be discussed.

We will discuss the effect of development, pregnancy, emotional state, and disease on nutritional requirements. We will also consider the effects of food production and processing on nutrition value and food safety.

## Organic Chemistry

**Mali Yin**

*Intermediate—Year*

This yearlong course is a systematic study of the chemistry of carbon compounds. Introductory topics include bonding, structure, properties, reactions, nomenclature, stereochemistry, spectroscopy, and synthesis of organic compounds from a functional group approach. More advanced topics include reaction mechanisms, chemistry of aromatic compounds, carbonyl compounds, and biomolecules such as carbohydrates and amino acids. In the laboratory, students learn the basic techniques used in the synthesis, isolation, and identification of organic compounds.

## 2002-2003

### Hello World! An Invitation to Computer Science

**Michael Siff**

What is computer science? Ask 100 computer scientists and you will likely receive 100 different answers. In this course we will not only attempt to provide an answer, but also discuss why it is such a challenging question. Along the way we will introduce fundamental computer science concepts such as algorithms, digital circuits, programming languages, and networking. We will also consider how these concepts relate to some of the most visible applications of computer science: the Internet, database management systems, and artificial intelligence.

### Information Society: How Computers Affect Our Everyday Lives

**Michael Siff**

They are everywhere in our homes, offices, and classrooms and in less obvious places like telephones, televisions, and kitchen appliances. Soon they may be in our wallets and maybe even in our brains. In this course, we will consider four different, but overlapping, ways in which the ubiquity of networked computers affects society. First, how do computers alter our "quality of life" through the use of electronic mail, Web searching, and electronic commerce? What is the economic impact of computers — not just the price of Microsoft stock — but also in terms of the dot-com mania and the ideal of a cashless society? How do we deal with ethical issues relating to the use of computers like digital-copyright problems, First Amendment concerns, and privacy and security of the Internet? What effect do computers have on our culture, in terms of both content (e.g., book and movie plots) and process (e.g., digital film)? Finally, we will attempt to tie together these four areas by considering the future of computers including quantum computers, the next-generation internet, artificial intelligence, and virtual reality.

### Programming and Problem Solving: A First Course in Computer Science

**Sarah Allen**

This course is a yearlong introduction to traditional topics in computer science using a nontraditional first language, Java. Java provides an opportunity for

beginning students to learn object-oriented programming while furnishing an exciting interface to Internet and the World Wide Web. A combination of theory and practice, the course is designed to teach students about the fundamental principles of problem solving with a computer while providing them with the programming skills necessary to continue in the discipline. Emphasis is placed on the design of clearly written, well-structured programs while working to develop the skills required to implement graphical interfaces and handle event-driven modules. Topics covered the first semester include primitive data type, control structures, methods, and algorithms. The second semester addresses more advanced topics like encapsulation, abstract data types, and algorithm analysis. A required weekly lab supports the course material; in the lab students gain hands-on experience under the supervision of the instructor. Conference work allows students to investigate a broad range of issues arising from the uses of technology, explore other programming languages, or learn Internet programming.

### Software Design and Development

**Michael Siff**

Donald E. Knuth, one of the world's most distinguished computer scientists, has said both "computer programs are fun to write" and "software is hard." The goal of this course is to give students a taste of what it is like to design and develop real software. The quotes by Knuth illustrate two themes of this course that are not necessarily at odds: The challenge of writing good software should not offset the pleasure derived from writing it. Some of the main topics we will cover include why developing reliable software is inherently difficult, the importance of abstraction, the separation of design from implementation, and how to write software in teams. We will study data structures such as hash tables, trees, and graphs; algorithms such as dynamic programming and greedy algorithms; and programming paradigms such as network sockets and interprocess communications. This course will involve several substantial software projects including a yearlong group project. Permission of the instructor is required. Students should have at least one semester of programming experience, preferably in C, C++, or Java.

## 2003-2004

### Achilles, the Tortoise, and Alan Turing: The Limits of Computation

**Michael Siff**

Can computers solve any problem? The answer, provided by Alan Turing, was emphatically "no." However, Turing also thought that computers would one day be as "intelligent" as humans. In this course, we aim to show what Turing did—that there are very definite

limits to computation, but that those limits do not preclude Turing's dream of thinking machines. Using Douglas Hofstadter's Pulitzer Prize-winning book, *Gödel, Escher, Bach*, as our guide, we will investigate the limits of computation, the foundations of computer science, and artificial intelligence. Along the way, we will consider how the concepts of recursion and infinity arise in surprising areas such as music, art, and literature. In particular we will consider some stories and essays of Lewis Carroll and Jorge Luis Borges.

## Compilers: How Computers Execute Their Programs

**Michael Siff**

Compilers are often known as translators and for good reason: their job is to take programs written in one language and translate them to another language (usually assembly or machine language) that a computer can execute. It is perhaps the ideal meeting between the theoretical and practical sides of computer science.

Modern compiler implementation offers a synthesis of the following: language theory—how languages (both natural languages and programming languages) can be represented on and recognized by a computer; software design and development—how practical software can be developed in a modular way, e.g., how components of one compiler can be connected to components of another compiler to form a new compiler; and computer architecture—understanding how modern computers work. During the semester, we will write a program implementing a nontrivial compiler. Conference work will allow students to pursue different aspects of compilers such as compilation of object-oriented languages, automatic garbage collection, compiler optimizations, and applications of compiler technology to natural-language translation.

## Hello World: An Introduction to Computer Science

**Michael Siff**

What is computer science? Ask 100 computer scientists, and you will likely receive 100 different answers. In this course we will not only attempt to provide an answer but also discuss why it is such a challenging question. Along the way we will introduce fundamental computer-science concepts such as algorithms, digital circuits, programming languages, and networking. We will also consider how these concepts relate to some of the most visible applications of computer science: the Internet, database management systems, and artificial intelligence.

## Programming and Problem Solving: An Introduction to Computer Science

**Sarah Allen**

This course is a yearlong introduction to traditional topics in computer science using a nontraditional first language, Java. Java provides an opportunity for beginning students to learn object-oriented programming while furnishing an exciting interface to Internet and the World Wide Web. A combination of theory and practice, the course is designed to teach students about the fundamental principles of problem solving with a computer while providing them with the programming skills necessary to continue in the discipline. Emphasis is placed on the design of clearly written, well-structured programs while working to develop the skills required to implement graphical interfaces and handle event-driven modules. Topics covered the first semester include primitive data type, control structures, methods, and algorithms. The second semester addresses more advanced topics like encapsulation, abstract data types, and graphical user interfaces. A required weekly lab supports the course material; in the lab students gain hands-on experience under the supervision of the instructor. Conference work allows students to investigate a broad range of issues arising from the uses of technology, explore other programming languages, or learn Internet programming.

## Robotics

**Michael Siff**

In many science-fiction stories, robots are depicted as a new species that are here to supplant human beings. In this course we will learn why, for the foreseeable future, this is more fiction than science. We will draw on a diverse collection of sources ranging from Isaac Asimov to Marvin Minsky. We will consider some fundamentals of the theory of robotics including sensors, motion planning, feedback control, and communication with other computing devices. We will also discuss some ethical issues involving the use of robots, in particular, the effects of robots as human replacements in the workforce. The course will feature a lab component, in which students will work in teams to construct and evaluate increasingly more complex, kit-based mobile robots.

## 2004-2005

## An Introduction to Computer Science Using the Internet

**Sarah Allen**

This course will use the Internet as a vehicle to explore fundamental concepts in computer science. It will enable students to understand the World Wide Web by

examining the fundamental technologies that make it possible. Topics include problem-solving techniques; algorithm and system design; control of a computer using HTML and JavaScript; network design; software translation; digital circuits; and the theory of computation. Students learn the basic principles of computer programming by building applications for the Internet. This is not a course in Web design, although students will build Web pages; it is a survey of the major topics in computer science. The course does not assume any programming experience, but assumes that the student is comfortable working with a computer.

## Artificial Minds: The Search for Thinking Machines

**Sarah Allen**

As science has continued to reveal with increasing precision the ways that matter and energy arrange themselves into life, the mind has largely eluded physical explanation. How does thinking arise from brain cells, and how can thought control the body? Some feel intelligent behavior can best be understood by trying to reproduce it, and often reproduction means simulation by a computer. Scientists who believed they could find the structures that underlie thought and show that the mind, like life, arises from patterns underneath started the field of artificial intelligence halfway through the last century. Students will examine some of the areas of focus in artificial intelligence research, including knowledge representation, search methodologies, propositional and predicate logic, machine learning and probabilistic reasoning. Students will explore several methods used to create "thinking" machines, including the use of declarative, object-oriented programming languages designed to draw conclusions from a set of facts and network-generating languages that attempt to simulate the brain's neural network. *Students should have at least one semester of programming experience, preferably in C++ or Java.*

## Computer Architecture: The Hardware/Software Interface

**Michael Siff**

The focus of this course is on the selection and interconnection of components to create a computer. There are two essential categories of components in modern computers: the hardware (the physical medium of computation) and the software (the instructions executed by the computer). As technology becomes more complex, the distinction between hardware and software blurs. We will study why this happens, as well as why hardware designers need to be concerned with the way software designers write programs and vice versa. Along the way we will learn how computers work from higher-level programming languages such as C down to the basic zeroes and ones of machine code.

Specific topics include Boolean logic, circuit design, computer arithmetic, assembly language, and memory hierarchies. Conference work will allow students to investigate additional aspects of computer architecture such as parallelism, pipelining, and input/output devices. *Permission of the instructor is required. Students should have at least one semester of programming experience, preferably in C, C++, or Java.*

## Computer Programming: An Introduction

**Michael Siff**

We open by posing two deceptively elusive questions: "What is a computer?" and "What is a computer program?" These questions motivate our study of computer programming—the science and art of using computers to solve problems. Is a computer just a fancy calculator? We show how computers can be programmed not only to perform numerical calculations, but much more. Starting with the very basics, we work our way up to write some games (such as hangman, mastermind, and twenty questions) and some rudimentary application software (a word processor, an address organizer, and a drawing tool). Along the way we explore data structures such as arrays, linked lists, and trees, and we study algorithms and techniques for analyzing the efficiency of our algorithms in terms of both time and memory. We study these concepts from an object-oriented viewpoint, making use of such notions as data abstraction (the separation of what a program does from how it does it), modularity (programs written in separate components each with distinct functionality), and polymorphism. We focus on general principles of computer programming that can be applied to a wide range of programming languages (specifically, we will consider the languages Scheme, PHP, Java, and C++). We emphasize the design of clearly written, well-structured programs and develop the skills required to implement graphical interfaces and handle event-driven modules. In addition to our seminar meetings, we will have a weekly laboratory to gain hands-on programming experience. No prior knowledge of programming is expected, although students should be comfortable working with a computer.

## Cryptology: Privacy and Security on the Internet

**Michael Siff**

Cryptology is the science (and art) of encoding and decoding information to enable private communication. With the ubiquity of the Internet and the World Wide Web, cryptology has begun to play a crucial role in everyday life. This course addresses questions such as: How can you send and receive e-mail without fear that unintended parties are privy to the contents of your messages? When you surf the Web, who else knows what

pages you visit? How can you trust that a Web site or e-mail has actually been written by its purported author? Should you be willing to use your credit card or Social Security numbers online? Can cryptology help establish a cashless society? To answer these questions, we go back in time and begin with an historical survey of cryptological techniques from ancient times up to the World War II and Alan Turing's codebreaking efforts against the German Enigma machine. We then consider how computers have changed the theory and practice of cryptology, facilitating both cryptography (encryption) and cryptanalysis (decryption). We discuss how the advent of computer networks and the Web have ushered in an era of new challenges and new opportunities in cryptology. We consider applications of modern cryptology to several hot-button issues such as cyber terrorism, spam and viruses, and electronic voting. We also consider the role of the First Amendment in the debate over government regulation of cryptology. In particular, we will ask ourselves: How do we balance our electronic needs between security and privacy? We will conclude with a discussion of the ramifications of quantum mechanics on the future of cryptology.

## Origins: An Exploration of the Scientific

**Ryan Z. Hinrichs, Daniel King, Leah Olson, Michael Siff, Kanwal Singh**

Life, the universe, and everything . . . where did it all come from? We will explore this question in a unique course taught by five Sarah Lawrence faculty representing five scientific disciplines. Our journey from the cosmological to the biological and beyond will raise questions such as: How old is the universe? Did anything exist before the Big Bang? How did atoms and molecules arise from the primordial universe? When did life arise on earth? How can "living" organic matter arise in a "dead" inorganic world? How do new species (including humans) arise? What is consciousness? Is the emergence of artificial life on the horizon, and how are computers advancing the development of artificial intelligence? How, in general, do complex, ordered systems and organisms arise from seemingly simple and often random interactions among elementary constituents? By considering these questions from different but complementary scientific perspectives, this course will explore the development of the scientific process itself, as well as how it is used to provide answers to these fundamental questions that humans have pondered since the origin of consciousness. We hope that students will emerge from this course with a better understanding of the patterns and common themes prevalent in the scientific approach to problem solving.

## 2005-2006

### Compilers: How Computers Execute Their Programs

**Michael Siff**

Compilers are often known as translators and for good reason: their job is to take programs written in one language and translate them to another language (usually assembly or machine language) that a computer can execute. It is perhaps the ideal meeting between the theoretical and practical sides of computer science. Modern compiler implementation offers a synthesis of (1) language theory: how languages (both natural languages and programming languages) can be represented on and recognized by a computer; (2) software design and development: how practical software can be developed in a modular way—e.g., how components of one compiler can be connected to components of another compiler to form a new compiler; and (3) computer architecture: understanding how modern computers work. During the semester, we will write a program implementing a nontrivial compiler for a novel programming language of our own design. Topics we will cover along the way include the difference between interpreters and compilers; regular expressions and finite automata; context-free grammars and the Chomsky hierarchy; type checking and type inference; contrasts between syntax and semantics; and graph coloring as applied to register allocation. Conference work will allow students to pursue different aspects of compilers such as compilation of object-oriented languages, automatic garbage collection, compiler optimizations, and applications of compiler technology to natural-language translation. *Open to any interested student.*

*Permission of the instructor is required. Students should have at least one semester of programming experience, preferably in C, C++, or Java.*

### Databases

**Michael Siff**

A modern database system is a collection of interrelated facts, recorded on digital media, and a set of computer programs to access those facts. These days, databases crop up almost everywhere: spreadsheets, electronic mail, cellular phones, personal digital assistants, flight-reservation systems, and many other places. This course attempts to shed light on why and how our society has become so dependent on information processing. We examine software and hardware techniques that lead to the efficient storage and retrieval of information. Topics include the relational model, SQL, the object-relational model, ACID properties, and more. We will develop Web-accessible database applications using PHP and open-source database software.

*Intermediate. Permission of the instructor is required. Students should have at least one semester of programming experience, preferably in C, C++, or Java.*

## Googling the Telecosm: The Internet, the Web, and the Future of Information

**Michael Siff**

They are everywhere. In our homes, offices, and classrooms and in less obvious places like telephones, televisions, and kitchen appliances. Some may already be in our wallets and soon, perhaps, in our brains. In this course we will consider different, but overlapping ways in which information-processing devices, and specifically networked computers, affect society. Questions we will address include, How do computers alter our “quality of life” through the use of electronic mail, Web searching, and electronic commerce? What is the economic impact of computer networks—not just the price of Microsoft stock—but also in terms of the dot-com mania, the open-source revolution, and the ideal of a cashless society? What are the ethical and legal ramifications of the Internet’s facilitation of music and video piracy, distribution of pornography, and cyberterrorism? How are privacy and First Amendment rights intertwined with these concerns? What effect do computers have on our culture, in terms of both content (e.g., book and movie plots) and process (e.g., digital film)? In part, to address this question, we will read cyberpunk fiction of William Gibson and Neal Stephenson. Finally, we will attempt to tie together these questions by considering the future of ubiquitous networked computing including Internet 2, tele-immersion, and virtual reality.

## Hello World! An Invitation to Computer Science

**Michael Siff**

What is computer science? Ask 100 computer scientists and you will likely receive 100 different answers. In this course we will not only attempt to provide an answer, but also discuss why it is such a challenging question. Along the way we will introduce fundamental computer science concepts such as algorithms, digital circuits, programming languages, and networking. We will also consider how these concepts relate to some of the most visible applications of computer science: the Internet, database management systems, and artificial intelligence.

## Origins: The Simplicity Behind Complexity

**Ryan Z. Hinrichs, Daniel King, Leah Olson, Michael Siff, Kanwal Singh**  
**Origins: The Simplicity Behind Complexity**

*Mr. Hinrichs, Mr. King, Ms. Olson, Mr. Siff, Ms. Singh*

### LECTURE, SECOND SEMESTER

Life, the universe, and everything . . . where did it all come from? We will explore this question in a unique course taught by five Sarah Lawrence faculty representing five scientific disciplines. Our journey from the cosmological to the biological and beyond will raise questions such as, How do complex systems arise from simple (and often random) interactions among elementary constituents? Did anything exist before the Big Bang? How did atoms and molecules arise from the primordial universe? How can “living” organic matter arise in a “dead” inorganic world? Are human beings the only species that reason mathematically? What is the adaptive advantage of having “numbers sense”? Why is consciousness such a challenge to formalize? How does the advent of computers complicate the matter? By considering these questions from different but complementary scientific perspectives, this course will explore the development of the scientific process itself, as well as how it is used to provide answers to these fundamental questions. We hope that students will emerge from this course with a better understanding of the patterns and common themes prevalent in the scientific approach to problem solving.

*Open to any interested student.*

## Programming and Problem Solving: An Introduction to Computer Science

**Sarah Allen**

This course is a yearlong introduction to traditional topics in computer science using a nontraditional first language, Java. Java provides an opportunity for beginning students to learn object-oriented programming while furnishing an exciting interface to the Internet and the World Wide Web. A combination of theory and practice, the course is designed to teach students about the fundamental principles of problem solving with a computer while providing them with the programming skills necessary to continue in the discipline. Emphasis is placed on the design of clearly written, well-structured programs while working to develop the skills required to implement graphical interfaces and handle event-driven modules. Topics covered in the first semester include primitive data type,

control structures, methods, and algorithms. The second semester addresses more advanced topics like encapsulation, abstract data types, and graphical user interfaces. A required weekly lab supports the course material; in the lab students gain hands-on experience under the supervision of the instructor. Conference work allows students to investigate a broad range of issues arising from the uses of technology, explore other programming languages, or learn Internet programming.

## 2006-2007

### Computation and Cognition

**James Marshall**

To what extent is your brain like a computer? The central metaphor of cognitive science views the brain as a complex biological computing machine, the physical properties of which give rise to the mind's capacity for perception, misconception, introspection, remembering, forgetting, and consciousness. But what exactly does it mean to view thought as a complex computation? How far does this metaphor take us in practice, and what insights does it offer? In this course, we will investigate the nature of computation and its relationship to human—and possibly machine—intelligence. We will do this in a hands-on way, by writing computer programs that model cognitive processes such as language, perception, memory, and learning. We will study abstract models of computation called Turing machines and what they may tell us about the ultimate limits of the mind. We will read and discuss a number of important papers from artificial intelligence, and we will explore the idea of embodied cognition by experimenting with robots.

*Open to any interested student.*

### Computer Science: An Accelerated Introduction

**James Marshall**

This course is an accelerated introduction to computer science using the object-oriented programming language Java. Students will learn about the fundamental principles of problem solving with a computer while gaining the programming skills necessary to continue in the discipline. Throughout the course, we will emphasize the design of clearly written, well-structured programs. Starting with the basics, we will work our way up to implementing graphical interfaces with event-driven modules. Along the way, we will explore data structures such as arrays, linked lists, and trees and study several important algorithms and techniques for analyzing the efficiency of our algorithms. Class periods will include intensive lab work involving hands-on interaction at the computer. Conference work will allow

students to investigate a broad range of issues arising from the uses of technology, explore other programming languages, or learn Internet programming.

*Open to any interested student.*

### Fear and Loathing in Cyberspace

**Michael Siff**

The Internet was developed at the height of the cold war as a way to maintain a robust communication system in the event of a nuclear attack. It is ironic, then, that the same technology may now pose security threats of a wholly different nature—namely, “cyberterrorism.” In this seminar, we contrast the doomsday myths popularized by movies such as *War Games* with more mundane scenarios such as total disruption of electronic commerce. Along the way, we address questions such as, Can a few individuals disable the entire Internet? How does modern cryptology allow people to communicate secretly and anonymously? Can hackers launch missiles or uncover blueprints for nuclear power plants? Can they do it from remote computers on the other side of the world? And terrorism is not the only reason to be afraid of the Internet. We will also investigate other computer-security issues including spam, computer viruses and worms, identity theft, and cyberstalking of the MySpace-Facebook generation. Meanwhile, protecting ourselves from cyberterrorism may introduce us to other risks. For the other side of the coin, we go back to 1948, earlier in the cold war, when George Orwell penned his now classic dystopian vision of the future in which the government (a.k.a. “Big Brother”) was able to observe just about every move its citizens made. With our reliance on cell phones, text messages, and electronic mail, have we, nearly sixty years later, unwittingly signed ourselves up to live in an Orwellian society? Or can other technologies keep 1984 at bay? Our goal is to investigate if and how society can strike a balance so as to achieve computer security without substantially curtailing rights to free speech and privacy.

*Open to any interested student.*

### Hello World: An Overview of Computer Science

**James Marshall**

A famous computer scientist once said that computer science is no more about computers than astronomy is about telescopes. But if not about computers, then what is computer science all about? In this course, we will not only attempt to provide an answer but also discuss why it is such a fascinating question. Along the way, we will explore fundamental computer science concepts such as algorithms, programming languages, logic circuits, the basic design of a digital computer, the ultimate limits of computation, the possibility of artificial intelligence, and the social impact of computers and the World Wide

Web. We will also consider the history and development of computer technology and the Internet, as well as the question of where it all may be leading in the future.

*Open to any interested student.*

## Programming Paradigms

### Michael Siff

In this seminar, we survey the different genres of programming languages, from the procedural worlds of C, Fortran, and Pascal to the object-oriented worlds of C++, Java, and Smalltalk to the functional worlds of Lisp, Scheme, and Standard ML to the scripting worlds of Perl, PHP, and Python. In the process, we learn how major trends in computer science are often intertwined with the development of programming languages. For instance, we consider the parallel development of C and the UNIX operating system; the rise of Java along with the World Wide Web; and the surprising overlap between formal logic, artificial intelligence research, and database theory as seen in languages such as Prolog. Other topics include domain specific languages, the interplay between user interfaces and support for concurrency, and the competing roles of commercial software developers and the open-source movement in the evolution of programming-language design. Finally, we discuss what trends to expect in the next generation of programming languages. Each student will be responsible for studying and presenting a novel programming language (such as Erlang or Joy) or a language paradigm (such as aspect-oriented or example-centric).

*Intermediate. Permission of the instructor is required. Students should have at least one semester of programming experience, preferably in C, C++, or Java.*

## Robotics

### James Marshall

This course provides a hands-on introduction to robotics, an exciting and thriving subfield of artificial intelligence. We will study a variety of robot programming paradigms, including reactive and behavior-based control methods, as well as adaptive methods, such as neural networks and genetic algorithms, which allow robots to learn from experience. We will use a software system called Pyro, which will enable us to experiment interactively with robots—both real and simulated—using the Python programming language. We will also read and discuss a number of papers on developmental robotics, a newly emerging research area inspired by developmental psychology and neuroscience, which studies how autonomous robots can acquire their behavior and knowledge strictly through their sensory experiences and interactions with their

environment. Students will have many opportunities for extended hands-on exploration through open-ended lab projects and conference work.

*Intermediate. No previous knowledge of Python or robot hardware is needed, but students should be comfortable programming in a high-level language such as Java or C++.*

## 2007-2008

## Compilers: How Computers Execute Their Programs

### Michael Siff

Compilers are often known as translators and for good reason: their job is to take programs written in one language and translate them to another language (usually assembly or machine language) that a computer can execute. It is perhaps the ideal meeting between the theoretical and practical sides of computer science. Modern compiler implementation offers a synthesis of (1) language theory: how languages (both natural languages and programming languages) can be represented on and recognized by a computer; (2) software design and development: how practical software can be developed in a modular way—e.g., how components of one compiler can be connected to components of another compiler to form a new compiler; and (3) computer architecture: understanding how modern computers work. During the semester, we will write a program implementing a nontrivial compiler for a novel programming language of our own design. Topics we will cover along the way include the difference between interpreters and compilers; regular expressions and finite automata; context-free grammars and the Chomsky hierarchy; type checking and type inference; contrasts between syntax and semantics; and graph coloring as applied to register allocation. Conference work will allow students to pursue different aspects of compilers such as compilation of object-oriented languages, automatic garbage collection, compiler optimizations, and applications of compiler technology to natural-language translation.

*Permission of the instructor is required. Students should have already taken at least one semester of computer programming (C, C++, or Java) and a course in computer architecture.*

## Computer Architecture: The Hardware/Software Interface

### Michael Siff

The focus of this course is on the selection and interconnection of components to create a computer. There are two essential categories of components in modern computers: the hardware (the physical medium of computation) and the software (the instructions executed by the computer). As technology becomes

more complex, the distinction between hardware and software blurs. We will study why this happens, as well as why hardware designers need to be concerned with the way software designers write programs and vice versa. Along the way, we will learn how computers work from higher-level programming languages such as C down to the basic zeroes and ones of machine code. Specific topics include Boolean logic, circuit design, computer arithmetic, assembly language, and memory hierarchies. Conference work will allow students to investigate additional aspects of computer architecture such as parallelism, pipelining, and input/output devices.

*Permission of the instructor is required. Students should have at least one semester of programming experience, preferably in C, C++, or Java.*

## Computer Science: An Accelerated Introduction

**James Marshall**

This course is an accelerated introduction to computer science using the Python programming language. Students will learn about the fundamental principles of problem solving with a computer while gaining the programming skills necessary to continue in the discipline. Throughout the course, we will emphasize the design of clearly written, well-structured programs. We will begin with procedural programming and work our way up to object-oriented concepts such as classes, methods, and inheritance. Along the way, we will explore graphics and GUI programming, basic data structures such as lists and dictionaries, object-oriented design, sorting and searching algorithms, recursion, and techniques for analyzing the efficiency of algorithms. Weekly lab sessions will reinforce the concepts covered in class through extensive practice involving hands-on interaction at the computer.

## Data Structures and Functional Programming

**James Marshall**

In this course, we will study a variety of data structures and algorithms that are important for the design of sophisticated computer programs, along with abstraction techniques for controlling program complexity. For our study of data structures, we will use Java, a strongly typed, object-oriented language. Topics to be covered include types and polymorphism, linked lists, stacks, queues, priority queues, trees, and graphs, as well as event-driven programming and graphical user interfaces. Our study of functional programming will focus on recursion—one of the most powerful concepts in computer science—and recursively defined data structures, using the Scheme programming language. The central underlying theme tying together all of these topics is the notion of an abstract data type, and the

related notions of information hiding and encapsulation, which we will emphasize throughout the course. Class periods will include lab work involving hands-on interaction at the computer.

*Students should have at least one semester of programming experience in an object-oriented language such as Python, Java, or C++.*

## First-Year Studies: Is the Singularity Near?

**James Marshall**

Something profound is happening on planet earth. The past one hundred years have witnessed the most rapid and far-reaching technological advances in human history. Think of the world of 1907, as compared to the world of 2007. Back then automobiles, flying machines, and the telegraph were curiosities only recently invented, and television, space travel, computers, mobile phones, and the Internet were as yet unimagined, still decades away in the future. What of the next one hundred years? A growing number of serious, highly respected scientists and scholars have come to believe that the relentlessly accelerating pace of technological change over the next few decades will soon transform our human civilization into something radically different, almost unrecognizable, an event that will mark the beginning of a new “posthuman” era in evolutionary history. This event, often called the “singularity,” will be driven by advances in molecular biology, genetic engineering, nanotechnology, and machine intelligence. Ray Kurzweil, a well-known technologist and AI pioneer, has argued that the transition from biologically based to technologically based evolution is natural and inevitable and will bring enormous benefits to society. Others, taking a more pessimistic view of the human future, warn of the increasing risk of self-extinction posed by the development of evermore powerful technologies and worry that our genes may have finally outsmarted themselves this time. How realistic is the singularity scenario, and just how seriously should we take these ideas? In this course, we will explore these questions in depth, focusing in particular on developments in computational intelligence and on placing these ideas within the larger context of human and cosmic evolution.

## Hello World! An Invitation to Computer Science

**Michael Siff**

What is computer science? Ask 100 computer scientists and you will likely receive 100 different answers. In this course, we will not only attempt to provide an answer, but also discuss why it is such a challenging question. Along the way, we will introduce fundamental computer

science concepts such as algorithms and the study of their efficiency, digital circuits, programming languages, and networking. We will also consider how these concepts relate to some of the most visible applications of computer science: the Internet and the Web, database management systems, and artificial intelligence. In particular, we will explain why searching the Web syntactically (using keywords) is practical no matter how many pages are out there, while searching it semantically (for what we really mean) remains a daunting task. We will illustrate how simple circuits can be used to solve complex problems and how the power of abstraction tells us that the core principles of computer science apply regardless of whether computers are constructed from silicon, DNA, or tinkler toys. Finally, we will show that computers cannot solve all problems and, in particular, they cannot universally prevent system crashes and the “Blue Screen of Death.” On the other hand, we will argue that while there are very definite limits to computation, those limits do not preclude the dream of “thinking” machines. Group conferences will offer students hands-on experience with several different programming languages, applications, and simulations and will stress the distinction between markup languages for Web design (such as HTML and XML) and programming languages such as Python and Java.

## The Incredible Shrinking World

*Michael Siff*

... Or how technology connects everyone and everything, for better or worse. The title refers to the miniaturization of electronic computers and the resulting increase in computing power, decrease in cost to harness that power, and near ubiquity of computer networks. The title also refers to how technology brings people and places together—making distances formerly thought of as insurmountable evermore trivial. This happens physically, as jet planes allow people to travel around the world in fewer hours than the distance they have traveled in time zones. But, much more, this happens virtually: it allows information of all kinds (text, voice, images, movies, and more) to flow across those distances almost instantly. In this course, we will consider how a wide variety of information can be represented using bits on digital computers and how it can be transmitted accurately and efficiently on the Internet. We will emphasize leapfrogging technologies and their role in the developing world and debate whether programs like One Laptop per Child help bridge the digital divide. We will focus on how technology affects travel, whether it replaces travel via Skype, videoconferencing, and Web-based virtual museums or facilitates travel via GPS, Google Maps, and online travel agencies. And how, once there, technology dramatically alters the experience of being far away from home. We will also consider the dark side

of a highly connected society: the more BlackBerrys, the more workaholics; the more cell-phone calls, text messages, and e-mails exchanged, the less privacy; the more iPods, the more music and video piracy; and the greater reach of the Internet, the greater the distribution of spam and pornography. Finally, we will ask what happens when face-recognition software catches up with digital cameras and YouTube?

## 2008-2009

### An Introduction to Computer Science Using the Internet

*Sarah Allen*

This course will use the Internet as a vehicle to explore fundamental concepts in computer science. It will enable students to understand the World Wide Web by examining the fundamental technologies that make it possible. Topics include problem-solving techniques; algorithm and system design; control of a computer using HTML and JavaScript; network design; software translation; digital circuits and the theory of computation. Students learn the basic principles of computer programming by building applications for the Internet. This is not a course in Web design, although students will build Web pages; it is a survey of the major topics in computer science. The course does not presume any programming experience, but assumes that the student is comfortable working with a computer.

### Artificial Minds

*James Marshall*

Though science has continued to reveal with increasing precision the ways in which patterns of matter and energy arrange themselves into life, the mind has largely eluded physical explanation. How does thinking arise from brain cells, and how can thought control the body? Researchers in artificial intelligence believe that the best way to understand the mind is to reproduce it in a machine. They have been exploring ways to program computers to behave intelligently since the middle of the last century. How far has the field of AI come since then, and what are its prospects for the future? In this course, we will examine the major paradigms of AI research in detail, from symbolic approaches such as knowledge representation, propositional and predicate logic, and search methodologies, to more recent approaches that focus on adaptation and learning, such as neural networks, genetic algorithms, artificial life, and robotics. We will also investigate the idea of swarm intelligence and machine creativity, and consider some important philosophical questions surrounding AI including consciousness, the mind-body problem, and the Turing Test.

## Computer Science: An Accelerated Introduction

**James Marshall**

This course is an accelerated introduction to computer science using the Python programming language. Students will learn the fundamental principles of problem solving with a computer while gaining the programming skills necessary for further study in the discipline. Throughout the course, we will emphasize the design of clearly written, well-structured programs. We will begin with procedural programming and work our way up to object-oriented concepts such as classes, methods, and inheritance. Along the way, we will explore graphics programming, basic data structures such as lists and dictionaries, multidimensional arrays, sorting and searching algorithms, recursion, and techniques for analyzing the efficiency of algorithms. Weekly lab sessions will reinforce the concepts covered in class through extensive hands-on interaction at the computer.

## Databases

**Michael Siff**

A modern database system is a collection of interrelated facts, recorded on digital media, and a set of computer programs to access those facts. These days, databases crop up almost everywhere: social networks such as Facebook, electronic mail, cellular phones, personal digital assistants, flight-reservation systems, and many other places. This course attempts to shed light on why and how our society has become so dependent on information processing by examining software (and to a lesser extent hardware) techniques that lead to the efficient storage and retrieval of information. Major topics include relational database design, query languages such as SQL, the object-relational model, ACID properties, and the client-server paradigm. Each student will be responsible for designing and implementing a Web-accessible database application of her or his choosing using open-source database software and a Web-application programming language such as PHP, Python, or Ruby. Students will work on their projects throughout the course and will demonstrate them to rest of the class at the close of the semester. We will also consider Web-application frameworks such as Ruby on Rails and Django. In addition to regular reading assignments, there will be several problem sets and short programming assignments. There will also be a more substantial programming assignment used to illustrate issues pertaining to the practical implementation of database systems. Suggested conference topics include alternative database models; data mining; database privacy and identity theft; Geographical Information Systems (GIS); and the implementation of a miniature database system.

*Permission of the instructor is required. Students should have at least one semester of programming experience in C, C++, Java, or Python.*

## First-Year Studies: Googling the Telecom—The Internet and the Future of Information

**Michael Siff**

They are everywhere. In our homes, offices, and classrooms and in less obvious places like telephones, televisions, and kitchen appliances. Some may already be in our wallets and soon, perhaps, in our brains. In this course, we will consider different but overlapping ways in which information-processing devices, and specifically networked computers, affect society. Questions we will address include, How do computers alter our quality of life through the use of instant messaging, electronic mail, Web searching, social networks, and electronic commerce? What is the economic impact of computer networks—not just the price of Google stock—but also in terms of the dot-com mania, the open-source revolution, and the ideal of a cashless society? What are the ethical and legal ramifications of the Internet's facilitation of music and video piracy, distribution of pornography, and cyberterrorism? We will also investigate other computer security issues including spam; computer viruses and worms; identity theft; and cyberstalking of the MySpace-Facebook generation. How are privacy and First Amendment rights intertwined with these concerns? What effect do computers have on our culture, in terms of both content (e.g., book and movie plots) and process (e.g., digital film)? In part to address this question, we will read the cyberpunk fiction of William Gibson and Neal Stephenson. Finally, we will attempt to tie together these questions by considering the future of ubiquitous networked computing, including the next generation Internet, virtual reality, and teleimmersion.

## Object-Oriented Programming: Structuring the World with Classes

**Sarah Allen**

Problem solving in an object-oriented language requires more than learning new language structures. It requires a new way of thinking, shifting from a procedural approach that emphasizes algorithms and data structures to thinking about objects. Objects are software packages of behaviors and states and manipulating interacting objects is at the heart of object-oriented programming. Topics covered in the course include encapsulation, inheritance, abstract data types, and polymorphism. The language of instruction is Java, a popular OO language with substantial libraries to support the creation of sophisticated graphical user interfaces. Frequent labs support the course material; in the labs students gain

hands-on experience under the supervision of the instructor. Conference work allows students to investigate a broad range of issues arising from the uses of technology, explore other programming languages, or learn Internet programming.

*Open to any interested student with permission of the instructor required. Students should have at least one semester of programming experience.*

## Robotics

### James Marshall

This course provides a hands-on introduction to robotics, an exciting and thriving subfield of artificial intelligence. We will study a variety of robot programming paradigms, including reactive and behavior-based control, as well as adaptive methods such as neural networks and genetic algorithms, which allow robots to learn from experience. We will use a software system called Pyro that will enable us to experiment interactively with robots—both real and simulated—using the Python programming language. We will also spend some time discussing developmental robotics, a newly emerging research area inspired by developmental psychology and neuroscience, which studies how autonomous robots can acquire their behavior and knowledge strictly through their sensory experiences and interactions with their environment. Students will have many opportunities for extended exploration through open-ended lab projects and conference work.

*No previous knowledge of Python or robot hardware is needed, but students should be comfortable programming in a high-level object-oriented language such as Java or C++.*

## 2009-2010

## A is for Abstraction

### Michael Siff

What is computer science? Ask 100 computer scientists, and you will likely receive 100 different answers. In this course, we will not only attempt to provide an answer but also discuss why it is such a challenging question. Along the way, we will introduce fundamental computer-science concepts such as abstraction, algorithms and the study of their efficiency, digital circuits, programming languages, and networking. We will also consider how these concepts relate to some of the most visible applications of computer science: the Internet and the Web, database management systems, and artificial intelligence. In particular, we will explain why searching the Web syntactically (using keywords) is practical no matter how many pages are out there, while searching it semantically (for what we really “mean”) remains a daunting task. We will illustrate how simple

circuits can be used to solve complex problems and how the power of abstraction tells us that the core principles of computer science apply regardless of whether computers are constructed from silicon, DNA, or tinker toys. Finally, we will show that computers cannot solve all problems and, in particular, cannot universally prevent system crashes and the “Blue Screen of Death.” On the other hand, we will argue that while there are very definite limits to computation, those limits do not preclude the dream of “thinking” machines. We will illustrate how simple circuits can be used to solve complex problems and how the power of abstraction tells us that the core principles of computer science apply regardless of whether computers are constructed from silicon, DNA, or tinker toys. Finally, we will show that computers cannot solve all problems and, in particular, cannot universally prevent system crashes and the “Blue Screen of Death.” On the other hand, we will argue that while there are very definite limits to computation, those limits do not preclude the dream of “thinking” machines. Group conferences will offer students hands-on experience with several different programming languages, applications, and simulations and will stress the distinction between markup languages for Web design (such as HTML and XML) and programming languages such as Python and Java.

## Principles of Programming Languages

**James Marshall**

A famous computer scientist once remarked that if you don't understand interpreters, you can still write programs—and you can even be a competent

programmer, but you can't be a master. This course explores the principles of programming language design through the study and implementation of interpreters. We will see how to design our own languages by starting from a high-level semantic description and systematically deriving a low-level implementation through the application of a series of program transformations. Along the way, we will become acquainted with the lambda calculus (the mathematical basis of modern programming language theory), syntactic abstraction, scoping mechanisms, continuations, lazy evaluation, nondeterministic evaluation, type checking, and other topics if time permits. We will use the Scheme programming language as our "meta-language" for exploring these issues in a precise, analytical way, similar to the way in which mathematics is used to describe phenomena in the natural sciences. Our great advantage over mathematics, however, is that we can test our ideas about languages, expressed in the form of interpreters, by directly executing them on the computer.

*Permission of the instructor is required. No prior knowledge of Scheme is needed, but students should have at least one semester of programming experience.*

## Privacy v. Security on the Internet

**Michael Siff**

The Internet was developed at the height of the Cold War as a way to maintain a robust communication system in the event of a nuclear attack. It is ironic, then, that the same technology may put us at risk of 21st-century security threats such as electronic surveillance, aggregation and mining of personal information, and cyberterrorism. In this lecture, we contrast doomsday myths popularized by movies such as "War Games" with more mundane scenarios such as total disruption of electronic commerce. Along the way, we address questions such as: Does modern technology allow people to communicate secretly and anonymously? Can a few individuals disable the entire Internet? Can hackers launch missiles or uncover blueprints for nuclear power plants from remote computers on the other side of the world? We will also investigate other computer-security issues, including spam, computer viruses, and identity theft. Meanwhile, with our reliance on cell phones, text messages, and electronic mail, have we unwittingly signed ourselves up to live in an Orwellian society? Or can other technologies keep "1984" at bay? Our goal is to investigate if and how society can strike a balance so as to achieve computer security without substantially curtailing rights to free speech and privacy. Along the way, we will introduce the science of networks and describe the underlying theories that make the Internet at once tremendously successful and also so challenging to regulate. A substantial portion of the course will be devoted to introductory cryptography—the science (and

art) of encoding and decoding information to enable private communication. We will conclude with a discussion of how cutting-edge technologies, such as quantum cryptography and quantum computing, may impact the privacy of electronic communications in the near future. Group conferences will include a mix of seminar-style debates over privacy rights and hands-on laboratories in which students will experiment with network simulators and code-making and code-breaking software.

## The Computational Beauty of Nature

**James Marshall**

This course will explore the concepts of emergence and complexity within natural and artificial systems. Simple computational rules interacting in nonlinear ways can produce rich and complicated patterns of behavior and may account for much of what we think of as "beautiful" or "interesting" in the world. We will investigate a multitude of topics, including fractals, chaos, strange attractors, complex systems, cellular automata, self-organizing systems, neural networks, genetic algorithms, classifier systems, and artificial life. Throughout the course, we will emphasize computer experimentation rather than programming, using the computer as a laboratory in which to design and run simulations of complex systems and observe their behaviors.

## 2010-2011

### Artificial Minds

**Michael Siff**

*Lecture, Open—Spring*

Though science has continued to reveal, with increasing precision, the ways in which patterns of matter and energy arrange themselves into life, the mind has largely eluded physical explanation. How does thinking arise from brain cells, and how can thought control the body? Researchers in artificial intelligence (AI) believe that the best way to understand the mind is to reproduce it in a machine. They have been exploring ways to program computers to behave intelligently since the middle of the last century. How far has the field of AI come since then, and what are its prospects for the future? In this course, we will examine the major paradigms of AI research in detail, from symbolic approaches such as knowledge representation, propositional and predicate logic, and search methodologies to more recent approaches that focus on adaptation and learning such as neural networks, genetic algorithms, artificial life, and robotics. We will also investigate the idea of swarm intelligence and machine creativity and consider some important philosophical questions surrounding AI,

including consciousness, the mind-body problem, and the Turing Test.

*Open to any interested student.*

## Computer Science: An Accelerated Introduction

**James Marshall**

*Open—Fall*

This course is an accelerated introduction to computer science using the Python programming language. Students will learn the fundamental principles of problem solving with a computer while gaining the programming skills necessary for further study in the discipline. Throughout the course, we will emphasize the design of clearly written, well-structured programs. We will begin with basic procedural programming and work our way up to object-oriented concepts such as classes, methods, and inheritance. Along the way, we will explore graphics programming, data structures such as lists and dictionaries, file processing, multi-dimensional arrays, recursion, sorting and searching algorithms, and binary trees. Weekly lab sessions will reinforce the concepts covered in class through extensive hands-on practice at the computer.

*Open to any interested student.*

## Digital Zeitgeist

**Michael Siff**

*Open—Fall*

From social networking via the iPhone, Facebook, and Twitter to massively multiplayer online games, computer technology plays an ever-increasing role in our daily lives. Where may this phenomenon be taking us in the immediate and not-so-immediate future? Is there (or should there be) anything we can (or should) do about it? The miniaturization of electronic computers—and the resulting increase in computing power, decrease in short-term cost to harness that power, and ubiquity of computer networks—brings people and places together, making distances formerly thought of as insurmountable evermore trivial. With the advent of gigabit fiber-optic networks, smart phones, flip cameras, and RFID tags, information of all kinds (text, voice, images, movies, and more) can flow around the world, between people and objects and back again, in an instant. In this course, we will consider how information can be represented using bits on digital computers and how it can be communicated accurately, efficiently, and “automatically” on the Internet. We will consider some historical context: How does the rise of the Internet compare with the development of the printing press, the telegraph, radio, and television? We will focus on the evolution (or some would say revolution) in new media and how that leads to what journalist Bob Garfield refers to as the “Chaos Scenario,” as well as the Internet’s effect on traditional media (newspapers, magazines,

books, radio, television, film, quaint objects known as “records,” you name it) and marketing as it all migrates online. In many ways, the plethora of smaller, cheaper, faster networked devices improves our quality of life, but we will also consider the dark side of a highly connected society: The more iPhones and BlackBerrys, the more workaholics; the more cell-phone calls, text messages, and e-mails exchanged, the less privacy; the more iPods and iPads, the more music and video piracy; and the greater the reach of the Internet, the greater the distribution of spam and pornography and the likelihood of cyber terrorism. To tie many of these themes together, we will read some dystopian cyberpunk fiction that may make your hair (virtual or otherwise) stand on end. This is not a technical course; though, at times we will discuss some details that lie behind certain crucial technologies—in particular, the Internet and the World Wide Web.

*Open to any interested student.*

## First-Year Studies: Achilles, the Tortoise, and the Mystery of the Undecidable

**James Marshall**

*FYS*

In this course, we will take an extended journey through Douglas Hofstadter’s Pulitzer Prize-winning book *Gödel, Escher, Bach*, which has been called “an entire humanistic education between the covers of a single book.” The key question at the heart of the book is: How can minds possibly arise from mere matter? Few people would claim that individual neurons in a brain are “conscious” in anything like the normal sense in which we experience consciousness. Yet, self-awareness emerges, somehow, out of a myriad of neuronal firings and molecular interactions. How can individually meaningless physical events in a brain, even vast numbers of them, give rise to meaningful awareness, to a sense of self? And could we duplicate such a process in a machine? Considering these questions will lead us to explore a wide range of ideas from the foundations of mathematics and computer science to molecular biology, art, and music and to the research frontiers of modern-day cognitive science and neuroscience. Along the way, we will closely examine Gödel’s incompleteness theorem, mathematical logic and formal systems, the limits of computation, and the future prospects for artificial intelligence.

## Multimedia Programming

**Michael Siff**

*Open—Spring*

This course explores, via introductory computer programming, how different types of media (specifically, text, sounds, images, and movies) are represented

digitally and manipulated by computers. We will write programs that allow the user to display and edit photographic images, including the ability to alter color properties, convert to grayscale, lighten and darken, create "negative" effects, mirror, rotate, and scale. We will investigate algorithms for creating more advanced effects such as edge detection, blurring, and red-eye reduction. We will also write programs that allow the user to create, play, and edit sound files, including the ability to modulate pitch, timing, and volume; to combine multiple sounds into chords; and to create echo effects. Finally, we will write interactive programs that allow the user to create simple animations. This is *not* a course to learn how to use software such as Photoshop and Maya; rather it is a course to learn the fundamentals of computer science by learning to program basic multimedia applications.

*Open to any interested student. No programming experience is necessary.*

## Predicting the Future

**Michael Siff**

*Open—Fall*

From social networking via the iPhone, Facebook, and Twitter to massively multiplayer online games, computer technology plays an ever-increasing role in our daily lives. Where may this phenomenon be taking us in the immediate and not-so-immediate future? Is there (or should there be) anything we can (or should) do about it? The miniaturization of electronic computers—and the resulting increase in computing power, decrease in short-term cost to harness that power, and ubiquity of computer networks—brings people and places together, making distances formerly thought of as insurmountable evermore trivial. With the advent of gigabit fiber-optic networks, smart phones, flip cameras, and RFID tags, information of all kinds (text, voice, images, movies, and more) can flow around the world, between people and objects and back again, in an instant. In this course, we will consider how information can be represented using bits on digital computers and how it can be communicated accurately, efficiently, and "automatically" on the Internet. We will consider some historical context: How does the rise of the Internet compare with the development of the printing press, the telegraph, radio, and television? We will focus on the evolution (or some would say revolution) in new media and how that leads to what journalist Bob Garfield refers to as the "Chaos Scenario," as well as the Internet's effect on traditional media (newspapers, magazines, books, radio, television, film, quaint objects known as "records," you name it) and marketing as it all migrates online. In many ways, the plethora of smaller, cheaper, faster networked devices improves our quality of life, but we will also consider the dark side of a highly connected society: The more iPhones and BlackBerrys, the more workaholics; the more cell-phone calls, text messages,

and e-mails exchanged, the less privacy; the more iPods and iPads, the more music and video piracy; and the greater the reach of the Internet, the greater the distribution of spam and pornography and the likelihood of cyber terrorism. To tie many of these themes together, we will read some dystopian cyberpunk fiction that may make your hair (virtual or otherwise) stand on end. This is not a technical course; though, at times we will discuss some details that lie behind certain crucial technologies—in particular, the Internet and the World Wide Web.

*Open to any interested student.*

## Robotics

**James Marshall**

*Intermediate—Spring*

This course provides a hands-on introduction to robotics, an exciting and thriving subfield of artificial intelligence. We will study a variety of robot programming paradigms, including reactive and behavior-based control, as well as neural networks and genetic algorithms, which allow robots to learn from experience. We will use the Python programming language to experiment interactively with both real and simulated robots. We will also discuss a newly emerging research area, inspired by developmental psychology and neuroscience, called developmental robotics that studies how autonomous robots can acquire their knowledge and behavior strictly through their sensory experiences and interactions with the world. Students will have many opportunities for extended exploration through open-ended lab projects and conference work. No previous knowledge of Python or robot hardware is needed, but students should be comfortable programming in a high-level, object-oriented language such as Java or C++.

*Intermediate.*

## Web Programming and the Theory of Databases

**Michael Siff**

*Intermediate—Fall*

A modern database system is a collection of interrelated facts, recorded on digital media, and a set of computer programs to access those facts. In the 21st century, databases have become ubiquitous via the Web and "cloud computing" to the point that users may not even realize where their data is stored, how it is accessed, and who has access to it. This course attempts to shed light on why and how our society has become so dependent on information processing by examining software (and to a lesser extent hardware) techniques that lead to the efficient storage and retrieval of information. We will illustrate these principles by designing databases using open-source platforms (such as MySQL), designing Web sites to manipulate those databases using client-side

technologies (such as HTML, CSS, Javascript, and AJAX) and server-side programming languages (such as PHP and Python). Major topics include relational database design, query languages (such as SQL, XQuery, and XSLT), the object-relational model, ACID properties, and the client-server paradigm. Each student will be responsible for designing and implementing a Web-accessible database application of her or his choosing, using open-source database software and a Web-application programming language such as PHP, Python, or Ruby. Students will work on their projects throughout the course and will demonstrate them to rest of the class at the close of the semester. We will also consider Web-application frameworks such as Ruby on Rails and Django. In addition to regular reading assignments, there will be several problem sets and short programming assignments. There will also be a more substantial programming assignment used to illustrate issues pertaining to the practical implementation of database systems. Suggested conference topics include data mining, database privacy, Geographical Information Systems (GIS), and the implementation of a miniature database system.

*Intermediate. Permission of the instructor is required.*

*Students should be familiar with the basics of HTML and have at least one semester of programming experience.*

## 2011-2012

### Information and the Arrow of Time

**Michael Siff, Kanwal Singh**

*Intermediate, Sophomore and above—Spring*

What is information? What is entropy? How can the utterly reliable and predictable behavior of computers as we know them arise from subatomic particles governed by the wholly nondeterministic rules of quantum mechanics? Are quantum computers exponentially superior to their classical counterparts? Do the limits of classical computation apply to these machines? What are the philosophical implications of quantum computers; and, in particular, might they lend support to the many-worlds hypothesis? Will a practical quantum computer be built in the near future? If so, is it possible that these devices will demolish electronic privacy as we know it? This course will cover topics at the intersection of quantum physics and computer science, with an aim toward exploring how the fundamental laws of quantum mechanics impact the representation and manipulation of information on computers. Topics will include bits and qubits; the Nyquist limit; the basics of Shannon information theory; quantum computers and quantum cryptography; energy, entropy, and reversibility; the EPR paradox; and spooky action at a distance.

### Objects and Algorithms for Interactive Media

**Matthew Parker**

*Intermediate, Small seminar—Fall*

One of the primary challenges of learning object-oriented programming (OOP) is to find real-world applications that demonstrate how concepts such as encapsulation, subtype polymorphism, and inheritance empower a programmer or a team of programmers to develop sophisticated, robust software. This class will attempt to meet that challenge by exploring OOP as it applies to the implementation of digital games and interactive art. Students will learn the process of iterative design and its relationship to game and interface development through the creation of prototypes. Projects will be built in Processing, but the concepts discussed will be applicable to other object-oriented languages and digital formats. The class will focus on core programming techniques, data structures, and algorithms as they apply to game and installation development. A main goal will be for students to understand why object-oriented code can be powerful, dynamic, and easier to manage. We will also examine interactive programming concepts such as collision detection, level construction, the use of sprite sheets to animate characters, application flow, and basic ways to make game elements appear intelligent. Class discussions and guest speakers will help contextualize the power and potential of games and installations in our culture. Assignments will consist primarily of programming but will also include readings, presentations, and the critical evaluation of digital games.

### Privacy v. Security on the Internet

**Michael Siff**

*Lecture, Open—Spring*

The Internet was developed at the height of the Cold War as a way to maintain a robust communication system in the event of a nuclear attack. It is ironic, then, that the same technology may put us at risk of 21st century security threats such as electronic surveillance, aggregation and mining of personal information, and cyberterrorism. In this lecture, we contrast doomsday myths popularized by movies such as "War Games" with more mundane scenarios such as total disruption of electronic commerce. Along the way, we address questions such as: Does modern technology allow people to communicate secretly and anonymously? Can a few individuals disable the entire Internet? Can hackers launch missiles or uncover blueprints for nuclear power plants from remote computers on the other side of the world? We will also investigate other computer security issues, including spam, computer viruses, and identity theft. Meanwhile, with our reliance on Facebook, Twitter, cell phones, text messages, and electronic mail, have we unwittingly signed ourselves up to live in an

Orwellian society? Or can other technologies keep “1984” at bay? Our goal is to investigate if and how society can strike a balance so as to achieve computer security without substantially curtailing rights to free speech and privacy. Along the way, we will introduce the science of networks and describe the underlying theories that make the Internet at once tremendously successful and so challenging to regulate. A substantial portion of the course will be devoted to introductory cryptology—the science (and art) of encoding and decoding information to enable private communication. We will conclude with a discussion of how cutting-edge technologies such as quantum cryptography and quantum computing may impact the privacy of electronic communications in the near future. Group conferences will include a mix of seminar-style debates over privacy rights (e.g., on the ethics of Wikileaks) and hands-on laboratories in which students will experiment with network simulators and code-making and code-breaking software.

## Software Design and Development

**Matthew Parker**

*Intermediate, Small seminar—Spring*

Donald E. Knuth, one of the world's most distinguished computer scientists, has said both that “computer programs are fun to write” and that “software is hard.” The goal of this course is to give students a taste of what it is like to design and develop real software. Knuth's quotes illustrate two themes of this course that are not necessarily at odds: The challenge of writing good software should not offset the pleasure derived from writing it. Some of the main topics that we will cover include the power of abstraction, the separation of design from implementation, version control, the selection of development environments, the creative use of existing software libraries and tools, the benefits of a flexible approach, the role of maintaining good documentation, and how to write software in teams. No place is the adage “there is no substitute for experience” more relevant than in software engineering. With that in mind, this course is intended to be hands-on. Design and development techniques will be taught primarily by designing and developing a semester-long software project. Examples of project categories include (but are not limited to) digital games and mobile applications.

## The Soul of the Machine

**Michael Siff**

*Open—Fall*

The focus of this course is on the selection and interconnection of components used to create a computer. There are two essential categories of components in modern computers: the hardware (the physical medium of computation) and the software (the instructions executed by the computer). As technology becomes more complex, the distinction between hardware and software blurs. We will study why this happens, as well as why hardware designers need to be concerned about the way software designers write programs and vice versa. Along the way, we will learn how computers work from higher level programming languages, such as Java, Python and C, down to the basic zeroes and ones of machine code. Specific topics include Boolean logic, circuit design, computer arithmetic, assembly language, memory hierarchies, and time permitting, mobile architectures. Students should have at least one semester of programming experience, preferably in C, C++, Java, or Python.

## The Way of the Program

**Michael Siff**

*Open—Fall*

This course is an introduction to computer science and the art of computer programming, using the elegant, yet easy-to-learn programming language Python. Students will learn the fundamental principles of problem solving with a computer while gaining the programming skills necessary for further study in the discipline. Throughout the course, we will emphasize the power of abstraction and the benefits of clearly written, well-structured programs. We will begin with basic procedural programming and work our way up to object-oriented concepts such as classes, methods, and inheritance. Along the way, we will explore fundamental concepts such as algorithms and their complexity, binary representations of analog data, digital logic, recursion and, time permitting, network communication. Other topics include introductory computer graphics, file processing, efficient storage and retrieval of data, and some principles of game design and implementation. Weekly laboratory sessions will reinforce the concepts covered in class through extensive hands-on practice at the computer.

# Dance

## 2002-2003

### African Dance

**Robin Gee**

*Open—Year*

This introductory course will examine the cultural tradition of various African countries through song, dance, and music. We will focus on specific ethnic groups, primarily in West Africa, and explore the relationship between dance and music with an emphasis on developing movement vocabulary and technical skills. No previous African dance experience is required.

### Anatomy/Kinesiology

**Peggy Gould**

*Open—Year*

Study of musculoskeletal anatomy with emphasis on the moving body as well as on basic kinesiology. The course will include movement practice (Irene Dowd's "Spirals"), lecture, drawings, and practicum (using what we are learning to analyze specific movements and activities). Students will develop skills in movement analysis from the perspective of functional anatomy. This is an introductory-level course.

### Anatomy Seminar

**Peggy Gould**

*Advanced—Year*

This is an opportunity for students who have completed Anatomy/Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

### Argentine Tango

**S Feuer**

*Open—Fall*

An introduction to the history and practice, romance and sensuality of the Argentine tango, waltz, and milonga. Students will learn both leader and follower roles, Salidas (basic steps) in the crossed and normal systems of walking, caminatas (walking patterns), and giros (turns) as well as bleos, ganchos, ochos, paradas, and sacadas. The emphasis will be on musicality and the social, improvisational tango as it is danced in the dance halls of Buenos Aires and around the world.

### Ballet I

**Barbara Forbes**

*Open—Year*

A course in the fundamentals of ballet technique for the beginning student. Open to any interested student; no previous training is required. Yearlong course; students may enter in the second semester with permission of instructor only.

### Ballet II

**Jose Martinez**

*Intermediate—Year*

For students who have had some previous training. This course will emphasize the principles of alignment, rhythm, and style in preparation for more advanced vocabulary. Admission will be by audition. Non-Dance Thirds may attend with permission of the instructor. Yearlong course; students may enter in the second semester with permission of instructor only.

### Ballet III

**Barbara Forbes**

*Advanced—Year*

For students who have reached a degree of proficiency in the study of ballet. This course will emphasize general technique through awareness of alignment, style, and musicality. Non-Dance Thirds may attend with the permission of the instructor. Yearlong course; students may enter in the second semester with permission of instructor only.

### Contact Improvisation/Partnering

**Kathy Westwater**

*Advanced—Year*

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contract Improvisation, which emerged in the 1960s out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration.

### Dance Composition A

**Emily Devine**

*Open—Year*

Exploration and manipulation of dance and performance materials, including space, text, music, and a variety of existing and invented movement vocabularies, with special focus on structuring original material. Students will explore the unique problems posed by creating both individual and group works. This

course will include independent work, group discussions, and periodic informal showings of work developed in class.

## Dance Composition B

**Dan Hurlin**

*Intermediate—Year*

This course will focus on examining craft in the service of choreographic expression. Students will be required to embody manipulations of movement material to better understand different points of view and to explore time and space structures and see how they affect quality and content. Required for Dance Making.

## Dance History

**Rose Anne Thom**

*Open—Year*

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

## Dance Making

**Dan Hurlin, Sara Rudner, John A. Yannelli**

*Advanced—Year*

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. With supervision of the faculty, student composers in the class will be given the opportunity to compose works in collaboration with the more advanced choreographers. Students are encouraged to take Lighting Design and Stagecraft for Dance. Prerequisites: Dance Composition, Movement and Music, and permission of the instructor. See instructor for other prerequisites.

## Dance Meeting

*Open—Year*

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance

therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers.

## First-Year Studies in Dance

**Sara Rudner**

*FYS*

Students in First-Year Studies in Dance will participate fully in the Dance program as it is described above. In physical practice classes attention will be given to sharpening the students' awareness of time and space and to disciplining the body to move with energy, clarity, and ease. The study of functional anatomy will help ensure accurate use of the body. In improvisation we will work toward movement and compositional fluency through individual and group problem solving. In dance history students will be introduced to dance in the United States as it has evolved from the early twentieth century to the present. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to express their written and oral responses to their experiences as dancers. Emphasis will be placed on developing perceptual and analytical skills.

## Improvisation A

**Emily Devine**

*Open—Year*

## Improvisation B: A Compositional Approach

**Kathy Westwater**

*Intermediate—Year*

Students begin by identifying and exploring individual and group motivations for moving. Using improvisational methods, students then develop and expand their movement. The creation of improvisational scores is explored as well, in tandem with the elements of dance composition: time, space, energy, and shape. The class culminates with students directing their own and performing in each others' site specific scores. Beginning Improvisation in a prerequisite or with permission from the instructor.

## Improvisation C

**Sara Rudner**

*Advanced—Year*

These courses will expand on the natural abilities of the students through group and individual problem solving. Emphasis will be on the development of skills involving time, nuances of energy, and the dancers' relationship to the surrounding space, including the other dancers. Structures for interaction will be arrived at as a class or

individually. Different sources of material and approaches will be explored. Work at times will be outdoors.

## Labanotation/Repertory

**Rose Anne Thom**

*Open—Year*

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

**Aaron Copp, Tyler Micoleau**

*Open—Year*

Theoretical study of and practical experience in designing lighting for dance. For all dance students; recommended especially for students in Dance Making.

## Modern and Postmodern Practice

**Emily Devine, Gerald Casel, Renee Redding-Jones, Nicholas Leichter**

*Open—Year*

Beginning through advanced levels of dance movement styles. For the beginning student emphasis will be on the development of basic skills, energy, strength, control, and rhythmic awareness. Intermediate and advanced students will study more complex movement patterns, explore movement problems, and concentrate on the demands of performance. On all levels attention will be given to sharpening the student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound and anatomical principles. Open to theatre and music students with the permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of instructor only.

## Music for Dancers

**William Catanzaro**

*Open—Year*

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to

different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments.

## Performance Project

**Kyle deCamp**

*Open—Year*

New Performance Project with choreographer/director Kyle deCamp. Open to advanced students in theatre and dance, interested in cross-genre, physical theatre for students who want to move with rigor and precision, participate in creating and performing a new work. Participation for one or two students as skilled assistant directors possible. By interview/audition.

## Repertory

**1 Hoffbauer, Sanchez**

*Spring*

First half of the second Semester — seven weeks

## Repertory

**Y Rainer**

*Spring*

Ms. Rainer's Trio - second half of the second Semester — six weeks

## Tap

**Roxane Butterfly**

*Open—Spring*

This tap class offers what any accomplished tap-dancer should know: how to use both rhythms and space to venture into choreography as well as improvisation. The first weeks will be spent on learning the basic rhythm tap rudiments and various style elements from the Original Hoofers (with emphasis on Jimmy Slyde's vocabulary). Then we will focus on the repertoire of "BeauteeZ'n the Beat" as an exploration of the choreographic possibilities of tap, progressing into an initiation of improvisation as the ultimate goal of tap as the language of self-statement.

## Teaching Conference

**Rose Anne Thom**

*Advanced—Year*

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, oral, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools. For advanced and graduate students.

## T'ai Chi Ch'uan A and B

**Margaret Matsumoto**

*Open—Year*

T'ai chi ch'uan is a Chinese-based system for health, stress reduction, meditation in movement, and nonaggressive self-defense. It is offered through the Dance department as the movement art that it truly is, helping the body to balance and integrate from the movement center. The practice of t'ai chi teaches us to relax while in motion, thereby bringing more consciousness and grace to all expressive and daily-life movement. This beginners' course teaches the basic sequence of moves so that students can practice them on their own.

## Yoga A, B, and C

**Ellen Saltonstall, Patti Bradshaw**

*Advanced, Intermediate, Open—Year*

This course provides an opportunity to study and practice alignment, strength, and flexibility. By offering clear principles of biomechanics and balance muscular and energetic action, yoga can inform and support any style of dance. In addition to biomechanics, this study can help dancers express movement from the inner body, helping to interweave technique and artistry.

## 2003-2004

### African Dance

*Open—Year*

This introductory course will examine the cultural tradition of various African countries through song, dance, and music. We will focus on specific ethnic groups, primarily in West Africa, and explore the relationship between dance and music with an emphasis on developing movement vocabulary and technical skills. No previous African dance experience is required. *Yearlong course; students may enter the second semester with permission of the instructor only.*

### Anatomy/Kinesiology

**Peggy Gould**

*Open—Year*

Study of musculoskeletal anatomy with emphasis on the moving body as well as on basic kinesiology. The course will include movement practice (Irene Dowd's "Spirals"), lecture, drawings, and practicum (using what we are learning to analyze specific movements and activities). Students will develop skills in movement analysis from the perspective of functional anatomy. This is an introductory-level course. *Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Anatomy Seminar

**Peggy Gould**

*Advanced—Year*

This is an opportunity for advanced students who have completed Anatomy/ Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

*Advanced. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Ballet I

**Barbara Forbes**

*Open—Year*

A course in the fundamentals of ballet technique for the beginning student.

## Ballet II

**Merceditas Mañago-Alexander**

*Intermediate—Year*

For students who have had some previous training. This course will emphasize the principles of alignment, rhythm, and style in preparation for more advanced vocabulary.

*Non-Dance Thirds may attend with permission of the instructor. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Ballet III

**Barbara Forbes**

*Advanced—Year*

For students who have reached a degree of proficiency in the study of ballet. This course will emphasize general technique through awareness of alignment, style, and musicality.

*Non-Dance Thirds may attend with the permission of the instructor.*

## Bharatanatyam: Classical South Indian Dance

**Shanti Pillai**

*Open—Spring*

This course will introduce students to the history and technique of this classical dance form. We will focus on the basic posture and steps, the percussive use of the feet, hand gestures, and the relationship of dance, music, and narrative. Throughout the semester we will have opportunities to reflect on the differences and similarities that we note in relation to our experience with the practice of Western dance forms.

## Contact Improvisation/Partnering

**Kathy Westwater**

*Open—Year*

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960's out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration. *Permission of the instructor is required. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance Composition A

**Neil Greenberg**

*Open—Year*

Exploration and manipulation of dance and performance materials, including space, text, music, and a variety of existing and invented movement vocabularies, with special focus on structuring original material. Students will explore the unique problems posed by creating both individual and group works. This course will include independent work, group discussions, and periodic informal showings of work developed in class.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance Composition B

**Dan Hurlin**

*Intermediate—Spring*

This course will focus on examining craft in the service of choreographic expression. Students will be required to embody manipulations of movement material to better understand different points of view and to explore time and space structures and see how they affect quality and content. Required for Dance Making.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance History

**Rose Anne Thom**

*Open—Year*

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help

the student relate his or her own work to the development of the art and to encourage creative critical perception.

*For all students beginning the Dance program.*

## Dance Making

**Dan Hurlin, Sara Rudner, John A.**

**Yannelli, Neil Greenberg**

*Year*

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. Students are encouraged to take Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

*Open—Year*

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers.

## Dance Training Conference

**Peggy Gould**

*Open—Year*

Students will meet at least twice per semester with the teacher to identify specific challenges in their Movement Practice classes. In consultation with Movement Practice faculty members, we will work on analyzing individual situations, setting short- and long-term training goals and creating practical strategies to achieve those goals, utilizing supplemental strength, flexibility, and kinesthetic awareness exercises. This course is required for all students taking a Dance Third and is designed to support the work being done in Movement Practice classes.

## Feldenkrais™: Awareness Through Movement

**Barbara Forbes**

*Open—Year*

This work involves verbally guided movement sequences in sitting, lying on the floor, or standing, which allow the student to develop awareness, flexibility, and coordination. These subtle, precisely structured movement explorations involve thinking, sensing, and imagining and offer a sense of release from

habitual patterns. The lessons consist of comfortable, easy movements that gradually evolve into movements of greater range and complexity.

## First-Year Studies in Dance

**Rose Anne Thom**

**FYS**

The dance program encourages students to explore vital aspects of dance in a variety of movement forms, improvisation, and dance history. In physical practice classes, attention will be given to sharpening the student's awareness of space and time and to disciplining the body to move with energy and precision while developing basic physical skills, strength, control, and an understanding of functional anatomy. In improvisation classes we will begin with the use of the natural movement ability of the students. Vocabulary, strength, and awareness will be expanded through informal group and individual problem solving. In dance history students will be introduced to the history of concert dance in the United States from the early twentieth century to the present. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to express their oral and written perceptions. Emphasis is placed on developing the skills necessary for independent research and study.

## Improvisation A: Beginning Improvisation, Improvisation B

**Neil Greenberg, Emily Devine**

**Year**

These courses will expand on the natural abilities of students through group and individual problem solving. Emphasis will be on the development of skills involving timing, nuances of energy, and the dancers' relationship to the surrounding space, including the other dancers. Structures for interaction will be arrived at as a class or individually. Different sources of material and approaches will be explored. Work at times will be outdoors.

## Improvisation C: Scoring

**Kathy Westwater**

**Intermediate—Spring**

This is an advanced exploration of the making of improvisational scores for movement. "Real-time composition," or the act of crafting a dance spontaneously, will be the outcome of our considerations of time, energy, space, and shape. Here the creative process will occur in condensed time, where the gap between moments of inspiration and execution increasingly narrows, thus heightening our experience as both creators and performers. Additionally, the use of voice, text, sound, objects, and environment will be considered as extensions of our movement practices.

Students will develop their own scores involving other members of the class to be shown and discussed in class.

*Prerequisite: Improvisation A or B or permission of the instructor.*

## Labanotation/Repertory

**Rose Anne Thom**

**Open—Year**

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

**Aaron Copp, Tyler Micoileau**

**Open—Year**

Theoretical study of and practical experience in designing lighting for dance.

*For all dance students; recommended especially for students in Dance Making.*

## Modern and Postmodern Practice

**Sara Rudner, Emily Devine, Renee Redding-Jones, Gerald Casel**

**Open—Year**

Beginning through advanced levels of dance movement styles. For the beginning student, emphasis will be on the development of basic skills, energy, strength, control, and rhythmic awareness. Intermediate and advanced students will study more complex movement patterns, explore movement problems, and concentrate on the demands of performance. On all levels attention will be given to sharpening the student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

*Open to theatre and music students with the permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Music for Dancers

**William Catanzaro**

**Open—Year**

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse

rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments. *Yearlong course; students may enter in the second semester with permission of the instructor only.*

## **Performance Project: Barefoot Balanchine™**

**Wilhelmina Frankfurt**

*Open—Fall*

Barefoot Balanchine is a project celebrating the centennial of George Balanchine's birthdate. Designed and taught by former NYCB soloist Wilhelmina Frankfurt, the project will focus on the ballets that George Balanchine created that were not danced on pointe. Although George Balanchine is most widely known for his work in the neo-classical idiom, he also explored many forms of dance in several media. There will be an informal performance of this project at the beginning of the spring semester.

*By permission of instructor.*

Balanchine is a trademark of the George Balanchine Trust.

## **Performance Project: Meredith Monk's "Plateau"**

*Open—Spring*

Students will learn and perform Meredith Monk's "Plateau", a work for six dancer/singers. The course will meet in the spring. Participation will be determined through audition.

## **Samba: Brazil**

**Fernanda Meyer**

*Open—Fall*

This unique art form narrates a history of cultural contact and conflict between Africans, Europeans, and the indigenous peoples of Brazil. Its rhythmic and gestural vocabulary expresses a joyful, spontaneous, and spiritual way of being. Samba praises its historical roots and rituals, taking gestures from religious and martial dance, but is constantly evolving to express the struggle of actual urban life. In this dance, we have a cultural body that speaks with rapid feet movement, whirling hips, and gracious, elegant arm gestures.

## **Senior Seminar**

**Sara Rudner**

*Advanced—Year*

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the

nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## **Teaching Conference**

**Rose Anne Thom**

*Advanced—Year*

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## **T'ai Chi Ch'uan A and B**

**Margaret Matsumoto**

*Open—Year*

T'ai chi ch'uan is a Chinese-based system for health, stress reduction, meditation in movement, and nonaggressive self-defense. It is offered through the Dance department as the movement art that it truly is, helping the body to balance and integrate from the movement center. The practice of t'ai chi teaches us to relax while in motion, thereby bringing more consciousness and grace to all expressive and daily-life movement. This beginners' course teaches the basic sequence of moves so that students can practice them on their own.

## **Yoga A, B, and C**

**Patti Bradshaw, Susan Braham**

*Open—Year*

These classes offer students the opportunity to practice the ancient art of Yoga in the context of a dance program. This study emphasizes the union of spirit, mind, and body through practices that include breathing techniques, vocalization, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## **2004-2005**

## **African Dance**

**Nia Love**

*Open—Year*

This course is an exploration of the various dance styles, forms, and symbols attributed to the classical societies of Western Africa. The course will focus on those dances whose origins are (historically) found in the Old Mali

Empire (i.e., Mali, Senegal, the Gambia, Guinea) as well as in Ghana. It will specifically examine the dance styles of the Serer, Djiolla, Bambara, Wolof, Malinke, Manding, and Twi people of these regions. The objective of the course is to familiarize the student with the significance of African dance movement across the African diaspora with a contemporary understanding, to develop a movement vocabulary, and to place the various dances in their historical, social, and cultural contexts. The course will emphasize the development of African dance technique(s), the execution of steps and phrases, as well as a basic understanding of the use of rhythm, poly-rhythm, syncopation, and timing in African diaspora performance genres. It will introduce students to general concepts of African religious, historical, cultural, social, metaphysical, and aesthetic ideas and ideals as expressed through dance.

## Afrohopatazz

**Christalyn E. Wright**

*Open—Year*

This class will focus on movement phrases that are inspired by street/urban dynamics. We will explore West African, Afro-Caribbean, and hip-hop (as seen in music videos) dances integrated with contemporary dance techniques. This class is high energy and requires exceptional physical stamina.

## Anatomy/Kinesiology

**Peggy Gould**

*Open—Year*

Study of musculoskeletal anatomy with emphasis on the moving body as well as on basic kinesiology. The course will include movement practice (Irene Dowd's "Spirals"), lecture, drawings, and practicum (using what we are learning to analyze specific movements and activities). Students will develop skills in movement analysis from the perspective of functional anatomy. This is an introductory-level course.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Anatomy Seminar

**Peggy Gould**

*Advanced—Year*

This is an opportunity for advanced students who have completed Anatomy/ Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Ballet

**Barbara Forbes, Merceditas Mañago-Alexander**

*Open—Year*

Ballet classes at Sarah Lawrence College are designed to enhance the qualities of ease, grace, and symmetry that define the aesthetic of classical ballet as well as guide students to find the creative and expressive freedom within this traditional form. To this end we will explore alignment with an emphasis on anatomical principles and find strategies that enlist the appropriate neuromuscular effort needed to achieve optimal integration of mind and body. Beginners will use a body-friendly approach to learn basic ballet vocabulary and terminology. Emphasis will also be placed on musicality, use of energy, and transference of weight in exercises and enchainments. Intermediate and advanced levels will explore basic ballet principles in depth and complexity, using the language of ballet as a powerful, poetic means of communication.

*Open to theatre and music students with the permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of the teacher only.*

## Beginning Improvisation

**Emily Devine**

*Open—Year*

This components will expand on the natural abilities of students through group and individual problem solving. Emphasis will be on the development of skills involving timing, nuances, or energy, and the dancers' relationship to the surrounding space as well as the other dancers. Structures for interaction will be arrived at as a class or individually. Different sources of material and approaches will be explored. Work at times will be outdoors.

*This is a yearlong component and is open to theatre and music students with permission of the instructor. Students may enter in the second semester with permission of the instructor only.*

## Bharatanatyam: Classical South Indian Dance

**Shanti Pillai**

*Open—Spring*

This course will introduce students to the history and technique of this classical dance form. We will focus on the basic posture and steps, the percussive use of the feet, hand gestures, and the relationship of dance, music, and narrative. Throughout the semester we will have opportunities to reflect on the differences and similarities that we note in relation to our experience with the practice of Western dance forms.

## Composition A

**Sara Rudner, Dan Hurlin**

*Open—Fall*

This component is designed to demystify and enliven the process of making dances. We will engage in exercises that explore how to use the basic elements of time, space and generate movement. Our goal is to realize intention through structure, action, text, and sound. The class will include independent work, informal showings, and group discussions and will meet twice a week. A composition laboratory will be made available to all students.

## Composition B

**Kathy Westwater**

*Intermediate—Year*

We will explore numerous approaches to composing the body in time and space, with improvisation figuring prominently as a tool to engage our creativity. Exploring, perceiving, identifying, manipulating, characterizing, framing, and editing a physical language—these actions will constitute the investigative/compositional practices of this class. Other media in relationship to the body will be considered, including text, environment, sound, video, and objects. Students will be asked to create movement studies; perform in each others studies; and present, observe, and discuss studies.

*Prerequisite: Beginning Improvisation.*

## Contact Improvisation

**Kathy Westwater**

*Open—Year*

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960's out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration. *Permission of the instructor is required. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance History

**Rose Anne Thom**

*Open—Year*

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art.

The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

*For all students beginning the Dance program.*

## Dance Making

**Sara Rudner, Dan Hurlin, John A. Yannelli**

*Advanced—Year*

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. Students are encouraged to take Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

*Open—Year*

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance Training Conference

**Peggy Gould**

*Open—Year*

Students will meet at least twice per semester with the teacher to identify specific challenges in their Movement Practice classes. In consultation with Movement Practice faculty members, we will work on analyzing individual situations, setting short- and long-term training goals, and creating practical strategies to achieve those goals, utilizing supplemental strength, flexibility, and kinesthetic awareness exercises. This course is required for all students taking a Dance Third and is designed to support the work being done in Movement Practice classes.

## Diaghilev's Ballets Russes

**Rose Anne Thom**

*Open—Spring*

From 1909-1929, Sergei Diaghilev, the Russian impresario, directed an astonishing artistic enterprise in Western Europe called the Ballets Russes. Initially a

company of Russian dancers, choreographers, painters, and composers, the Ballets Russes's roster grew to include major European artists from the worlds of art, literature, music, and dance. Diaghilev brought them together, encouraging and directing their innovative collaborations. Included among them were innovators such as Fokine, Nijinsky, Balanchine, Stravinsky, Ravel, Satie, Bakst, Picasso, and Massine. During the company's twenty-year history, its repertoire illustrated the major artistic movements of the early twentieth century from Symbolism to Constructivism. We will study the dances on videotape and slides and read histories, biographies, and criticism, in our attempt to re-create and appreciate the richness of this unique company.

*Open to any interested student. This class is a full seminar. It is not part of a dance third, nor is previous dance experience a prerequisite.*

## Feldenkrais TM: Awareness Through Movement

**Barbara Forbes**

*Open—Year*

This work involves verbally guided movement sequences in sitting, lying on the floor, or standing, which allow the student to develop awareness, flexibility, and coordination. These subtle, precisely structured movement explorations involve thinking, sensing, and imagining and offer a sense of release from habitual patterns. The lessons consist of comfortable, easy movements that gradually evolve into movements of greater range and complexity.

## First-Year Studies in Dance

**Emily Devine**

*FYS*

The Dance program encourages students to explore vital aspects of dance in a variety of movement forms, improvisation, and dance history. In physical practice classes, attention will be given to sharpening the student's awareness of space and time and to disciplining the body to move with energy and precision while developing basic physical skills, strength, control, and an understanding of functional anatomy. In improvisation classes we will begin with the use of the natural movement ability of the students. Vocabulary, strength, and awareness will be expanded through informal group and individual problem solving. In dance history students will be introduced to the history of concert dance in the United States from the early twentieth century to the present. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to express their oral and written perceptions and to develop analytical skills.

## Improvisation A

**Emily Devine**

*Open—Year*

This components will expand on the natural abilities of students through group and individual problem solving. Emphasis will be on the development of skills involving timing, nuances, or energy, and the dancers' relationship to the surrounding space as well as the other dancers. Structures for interaction will be arrived at as a class or individually. Different sources of material and approaches will be explored. Work at times will be outdoors.

*This is a yearlong component and is open to theatre and music students with permission of the instructor. Students may enter in the second semester with permission of the instructor only.*

## Labanotation/Repertory

**Rose Anne Thom**

*Open—Year*

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

**Aaron Copp, Tyler Micoleau**

*Open—Year*

Theoretical study of and practical experience in designing lighting for dance.

*For all dance students; recommended especially for students in Dance Making.*

## Modern and Postmodern Practice

**Sara Rudner, Emily Devine, Renee Redding-Jones, Merceditas Mañago-Alexander, Peggy Gould**

*Open—Year*

Beginning through advanced levels of dance movement styles. For the beginning student, emphasis will be on the development of basic skills, energy, strength, control, and rhythmic awareness. Intermediate and advanced students will study more complex movement patterns, explore movement problems, and concentrate on the demands of performance. On all levels attention will be given to sharpening the student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

*Open to theatre and music students with the permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of the teacher only.*

## Modern and Postmodern Practice

**Emily Devine, Renee Redding-Jones, Keith S. Sabado**

**Year**

For students new to the study of dance, the fundamental class will develop skills basic to all movement studies, i.e., dynamic alignment through coordination and integration of the neuro/skeletal/muscular system, strength, balance, basic spatial and rhythmic awareness. For the beginning student, emphasis will be on the continued development of basic skills, energy use, strength, and control. Introduction of stylistic forms and their development will begin at this level. Intermediate and advanced students will study more complex movement patterns, explore movement problems, and concentrate on the demands of performance. At all levels attention will be given to sharpening each student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

## Music for Dancers

**William Catanzaro**

**Open—Year**

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Performance Art

**Dan Hurlin**

**Open—Spring**

"Performance art is an event that takes place in the time and space in which the event takes place." —Lee Breuer  
This course will look at the strategies and contingencies involved in making work that purposely falls outside of the boundaries of existing disciplines. Drawing on elements and inspiration from all artistic practices, including writing, theatre, visual art, installation, sculpture, dance, sound, music, and new media, students will create original works throughout the semester. The course will be structured around a study of historical precedents of performance art, beginning with the

Futurist Movement and Dada, and ending with the present day.

*Open to music, theatre, and visual arts students.*

## Performance Project

**Open—Spring**

Dance artist Sally Silvers will work with students on an original dance that will be performed at the end of the semester. Ms. Silvers says about her work, "I am deep digging, constantly refiguring, looking for boundaryless movement available to dance—to find the uncoded, nonidiomatic shapes and rhythms of the body outside of canonized genres or codified vernaculars—to keep it raw—to get at a social look of the body while taking flight on the poetry of an art form. Structurally, conceptually influenced by radical work in film, music, and poetry, my work is also committed to a 'social modernism,' to social and political (and not just personal) change."

## Postmodern Dance

**Rose Anne Thom**

**Open—Fall**

Applied to dance the term "postmodern" has had varied meanings for dancers, choreographers, writers, and audiences for the past forty years. But its genesis in the activities of the Judson Dance Theater in Greenwich Village in the mid-1960's is rarely disputed. Encouraged by the compositional experimentation of choreographer Merce Cunningham and composer John Cage, the Judson artists questioned established assumptions about dance and dancing. The answers found in their work dramatically altered modern dance, precipitating what is inclusively called postmodern dance. In this course we will study the work of artists who comprised the Judson Dance Theater and those who have been influenced by them, up to the present day. Students will be required to attend live performances in New York City and to use the resources of the Research Collection of the New York Public Library for the Performing Arts at Lincoln Center for both class and conference work.

*Open to any interested student. This class is a full seminar.*

*It is not part of a dance third, nor is previous dance experience a prerequisite.*

## Senior Seminar

**Sara Rudner**

**Advanced—Year**

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## Special Dance/Theatre Project: An Exploration of Human Rights

### Open—Year

Human rights will be investigated from an economic, social, and cultural perspective. We will consider issues such as universal rights, women and children's rights, health rights, etc., as reflected in community and global organizations. Are there more questions than answers? Interviews, readings, film, visuals, movement, theatre, and vocals, when appropriate, will be utilized in the examination of the subject matter. Students will be expected to participate in artistic exercises as part of the exploration.

## T'ai Chi Ch'uan A and B

### Margaret Matsumoto

#### Open—Year

T'ai Chi Ch'uan is a Chinese-based system for health, stress reduction, meditation in movement, and nonaggressive self-defense. It is offered through the Dance department as the movement art that it truly is, helping the body to balance and integrate from the movement center. The practice of T'ai Chi teaches us to relax while in motion, thereby bringing more consciousness and grace to all expressive and daily-life movement. This beginners' course teaches the basic sequence of moves so that students can practice them on their own.

## Tap Dance

### Roxane Butterfly

#### Open—Fall

This tap class offers what any accomplished tap dancer should know: how to use both rhythms and space to venture into choreography as well as improvisation. The first weeks will be spent on learning the basic rhythm tap rudiments and various style elements from the Original Hoofers (with emphasis on Jimmy Slyde's vocabulary). Then we will focus on the repertoire of "BeauteeZ'n the Beat" as an exploration of the choreographic possibilities of tap, progressing into an initiation of improvisation as the ultimate goal of tap as the language of self-expression.

## Teaching Conference

### Rose Anne Thom

#### Advanced—Year

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Yoga A, B, and C

### Patti Bradshaw, Susan Braham

#### Open—Year

These classes offer students the opportunity to practice the ancient art of Yoga in the context of a dance program. This study emphasizes the union of spirit, mind, and body through practices that include breathing techniques, vocalization, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## Yoga A, B, and C

### Patti Bradshaw, Susan Braham

#### Open—Year

These classes offer students the opportunity to practice the ancient art of Yoga in the context of a dance program. This study emphasizes the union of spirit, mind, and body through practices that include breathing techniques, vocalization, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## 2005-2006

## African Dance

#### Open—Year

In this class students will explore the fundamental aesthetic of African dance. There will be an emphasis on rhythm as we work to internalize the intricacies of African polyrhythm. Grounding, strength, and stability are important to African dance, and students will spend time exploring their cultural meaning and importance. Learning African dance exposes students to better understand what dance means in African culture. This class builds personal awareness as it transcends cultural boundaries. Class will be accompanied by live drumming.

## Afrohopatazz

### Christalyn E. Wright

#### Open—Year

This class will focus on movement phrases that are inspired by street/urban dynamics. We will explore West African, Afro-Caribbean, and hip-hop (as seen in music videos) dances integrated with contemporary dance techniques. This class is high energy and requires exceptional physical stamina.

## Anatomy/Kinesiology

**Peggy Gould**

*Open—Year*

Study of musculoskeletal anatomy with emphasis on the moving body as well as on basic kinesiology. The course will include movement practice (Irene Dowd's "Spirals"), lecture, drawings, and practicum (using what we are learning to analyze specific movements and activities). Students will develop skills in movement analysis from the perspective of functional anatomy. This is an introductory-level course.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Anatomy Seminar

**Peggy Gould**

*Advanced—Year*

This is an opportunity for advanced students who have completed Anatomy/ Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

*Advanced. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Aspects of World Dance

**Rose Anne Thom**

*Open—Spring*

The dancing body is a map of cultural identity. Through readings, videotapes, and live performances, we will observe extraordinary dance traditions from around the world, examining the origins and vocabularies of each form, where and when these dances are performed, and who does the dancing. Central to our discussion will be the shifting meanings in a style as it evolves and travels across boundaries, not just geographic, but from one group to another. The role of musical and theatrical elements will be a vital part of this study.

*Open to any interested student. This course is a full seminar, not a component of the Dance program. Dance experience is not a prerequisite.*

## Ballet

**Barbara Forbes, Merceditas Mañago-Alexander**

*Open—Year*

Ballet classes at Sarah Lawrence College are designed to enhance the qualities of ease, grace, and symmetry that define the aesthetic of classical ballet as well as guide students to find the creative and expressive freedom within this traditional form. To this end we will explore

alignment with an emphasis on anatomical principles and find strategies that enlist the appropriate neuromuscular effort needed to achieve optimal integration of mind and body. Beginners will use a body-friendly approach to learn basic ballet vocabulary and terminology. Emphasis will also be placed on musicality, use of energy, and transference of weight in exercises and enchainments. Intermediate and advanced levels will explore basic ballet principles in depth and complexity, using the language of ballet as a powerful, poetic means of communication.

*Open to theatre and music students with the permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of the teacher only.*

## Beginning Improvisation

**Sara Rudner**

*Open—Year*

This components will expand on the natural abilities of students through group and individual problem solving. Emphasis will be on the development of skills involving timing, nuances, or energy, and the dancers' relationship to the surrounding space as well as the other dancers. Structures for interaction will be arrived at as a class or individually. Different sources of material and approaches will be explored. Work at times will be outdoors.

*This is a yearlong component and is open to theatre and music students with permission of the instructor. Students may enter in the second semester with permission of the instructor only.*

## Composition A

**Emily Devine**

*Open—Year*

An exploration and manipulation of movement and performance materials with an emphasis on structuring original material, this component is designed to demystify and enliven the process of making dances. The class will include independent work, informal showings, and group discussions and will meet once a week.

## Composition B

**Kathy Westwater**

*Intermediate—Year*

We will explore numerous approaches to composing the body in time and space with improvisation figuring prominently as a tool to engage our creativity, in addition to various classical, modern, and postmodern compositional methods. Perceiving, manipulating, and shaping an individual, physical language—these actions will constitute the investigative practices of this class. Other media in relationship to the body will be considered, including text, environment, sound, and

objects. Students will be asked to create movement studies; perform in each others' studies; and present and discuss their studies.

*Prerequisite: Beginning Improvisation.*

## Contact Improvisation

**Kathy Westwater**

**Open—Year**

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960's out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration.

*Permission of the instructor is required. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance History

**Rose Anne Thom**

**Open—Year**

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

*For all students beginning the Dance program. Open to any interested student.*

## Dance Making

**Sara Rudner, Dan Hurlin, John A. Yannelli**

**Advanced—Year**

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. Students are encouraged to take Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

**'Open—Year**

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance Training Conference

**Peggy Gould**

**Open—Year**

Students will meet at least once per semester with the instructor to address individual dance training issues. We will examine these issues by discussing progress, specific challenges, short-term and long-term goals. In addition, we will develop practical strategies to achieve those goals by means of supplemental strength, flexibility, kinesthetic awareness, and coordination exercises. This course is required for all students taking a Dance Third. It is designed to support the work being done in movement practice classes and departmental performance projects.

## Feldenkrais™: Awareness Through Movement

**Barbara Forbes**

**Open—Year**

This work involves verbally guided movement sequences in sitting, lying on the floor, or standing, which allow the student to develop awareness, flexibility, and coordination. These subtle, precisely structured movement explorations involve thinking, sensing, and imagining and offer a sense of release from habitual patterns. The lessons consist of comfortable, easy movements that gradually evolve into movements of greater range and complexity.

## First-Year Studies in Dance

**Sara Rudner**

**FYS**

The Dance program encourages students to explore vital aspects of dance in a variety of technical practices, creative studies, and dance history. In practice classes attention will be given to sharpening each student's awareness of space and time, and to disciplining the body to move with energy and precision while developing basic skills, strength, control, and an understanding of functional anatomy. In improvisation classes we will explore somatic intelligence and imagination and mine the natural movement ability of

each student; vocabulary and awareness will be expanded through informal group and individual problem solving. In dance history students will be introduced to the history of concert dance in the United States from the early twentieth century to the present. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to express their oral and written perceptions and to develop analytical skills.

## Flamenco Dance

**Meira Goldberg**

*Open—Year*

Gypsies and Goya's aristocrats, the swirl of a cape and the flash of a gold-toothed smile, the clatter of castanets and a wailing song, wild and indomitable ferocity, and seductive, almond-eyed beauties. . . . These are just a few of the images associated with flamenco, the popular dance and music of Spain. This course provides an in-depth introduction to the pulsing rhythms, languid arm movements, and powerful footwork of flamenco dance. The course is designed to provide the basis for understanding, appreciating, and participating in flamenco as an expression of individuality and of culture. Movement, rhythm, power of expression and communication will be cultivated through studio experiences with flamenco dance techniques as well as through films, selected readings, and trips to see live performance.

## Improvisation A

**Emily Devine**

*Open—Year*

In these components we will explore various ways of generating movement; the impact of changes in timing, energy, sound, etc.; and the relationship of dancers to one another and to the surrounding space. We will investigate different sources of material and approaches through individual and group problem-solving.

## Labanotation/Repertory

**Rose Anne Thom**

*Open—Year*

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

**Aaron Copp, Tyler Micolesau**

*Open—Year*

Theoretical study of and practical experience in designing lighting for dance.

*For all dance students; recommended especially for students in Dance Making.*

## Music for Dancers

**William Catanzaro**

*Open—Year*

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Performance Art

**Dan Hurlin**

*Open—Spring*

"Performance art is an event that takes place in the time and space in which the event takes place."

—Lee Breuer

This course will look at the strategies and contingencies involved in making work that purposely falls outside of the boundaries of existing disciplines. Drawing on elements and inspiration from all artistic practices, including writing, theatre, visual art, installation, sculpture, dance, sound, music, and new media, students will create original works throughout the semester. The course will be structured around a study of historical precedents of performance art, beginning with the Futurist Movement and Dada, and ending with the present day.

*Open to theatre, music, dance, and visual arts students.*

## Performance Project

**Neil Greenberg**

*Open—Fall*

The instructor will utilize video technology to record his improvisations that will then be learned "verbatim" by students. This process involves gathering information

from a source external to the body, a two-dimensional video image, and translating it to a three-dimensional, real, idiosyncratic physicality. The instructor will then structure the movement into choreographic sequences, and the dancers will experiment with the performance of the material from different points of departure. To support this investigation, the instructor will present somatic information and exercises, as well as offer methods of presentation from experimental theatre and film. There will be a performance at the conclusion of the semester. Participation is through audition.

## Senior Seminar

**Sara Rudner**

**Advanced—Year**

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## Social Conscience in Modern Dance

**Rose Anne Thom**

**Open—Fall**

From its very beginnings in the solo dances of Isadora Duncan in the early part of this century, to the interdisciplinary explorations of Ralph Lemon in this decade, modern dance has reflected its social and political environment. Each generation absorbs the influences of its time resulting in altered aesthetics and changing bodies. While we trace the development of the art through the century, we will focus on eras when heightened artistic expression in dance parallels political and social turmoil: the depression of the 1930's, the civil rights and antiwar activities of the 60's, the feminist movement of the 70's, and the AIDS crisis of the 80's and 90's. Live and videotaped performances as well as important documentaries will supplement historical, biographical, and critical readings.

*Open to any interested student. This course is a full seminar, not a component of the Dance program. Dance experience is not a prerequisite.*

## T'ai Chi Ch'uan A and B

**Margaret Matsumoto**

**Open—Year**

T'ai Chi Ch'uan is a Chinese-based system for health, stress reduction, meditation in movement, and nonaggressive self-defense. It is offered through the Dance department as the movement art that it truly is, helping the body to balance and integrate from the movement center. The practice of T'ai Chi teaches us to relax while in motion, thereby bringing more

consciousness and grace to all expressive and daily-life movement. This beginners' course teaches the basic sequence of moves so that students can practice them on their own.

## Teaching Conference

**Rose Anne Thom**

**Advanced—Year**

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Yoga A, B, and C

**Patti Bradshaw, Susan Braham**

**Year**

These classes offer students the opportunity to practice the ancient art of Yoga in the context of a dance program. This study emphasizes the union of spirit, mind, and body through practices that include breathing techniques, vocalization, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## 2006-2007

### African Dance

**Open—Year**

In this course, students will explore the fundamental aesthetic of African dance. There will be an emphasis on rhythm as we work to internalize the intricacies of African polyrhythm. Grounding, strength, and stability are important to African dance, and students will spend time exploring their cultural meaning and importance. Learning African dance exposes students to better understand what dance means in African culture. This course builds personal awareness as it transcends cultural boundaries. It will be accompanied by live drumming.

### Afrohopatazz

**Christalyn E. Wright**

**Open—Year**

Afrohopatazz is an eclectic fusion of West African, American hip-hop dance and culture, and modern jazz that is seamlessly woven together to create one

movement style. We will focus on phrases inspired by street/urban dynamics. This class is high energy and requires exceptional physical stamina.

## Anatomy in Action

**Peggy Gould**

**Open—Year**

How is it possible for humans to move in the multitude of ways that we do? Come and learn to develop your X-ray vision of the human body in motion, in a course that combines movement practice, drawing, and lecture with problem solving. In this course, movement is the basis for exploration of our profoundly adaptable anatomy. In addition to making drawings as we study the entire musculoskeletal system, we will learn Irene Dowd's "Spirals™," a comprehensive warm-up/cool-down designed to mobilize all joints and muscles to their fullest range of motion. Insights gained in this course can provide tremendous inspiration in the creative process.

*Introductory-level course. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Anatomy Seminar

**Peggy Gould**

**Advanced—Year**

This is an opportunity for advanced students who have completed Anatomy/ Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

*Advanced. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Ballet

**Barbara Forbes, Merceditas Mañago-Alexander**

**Open—Year**

Ballet studies guide students in creative and expressive freedom by enhancing qualities of ease, grace, and symmetry that define the form. To this end, we will explore alignment with an emphasis on anatomical principles and enlist the appropriate neuromuscular effort needed to dance with optimal integration of every aspect of the individual body, mind, and spirit. Level 1 students will use a body-friendly approach to learning basic ballet vocabulary and terminology. Emphasis will be placed on musicality, use of energy, and transference of weight at the barre, in center work, and in

combinations. Levels 2 and 3 will further develop the ability to use the language of ballet as a powerful means of communication.

*Open to theatre and music students with permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of the teacher only.*

## Composition A, B, and C

**Kathy Westwater, Sara Rudner, Neil Greenberg**

**Open—Fall**

Movement is the birthright of every human being. These components explore its expressive and communicative possibilities by introducing different strategies for making dances. Problems posed run the gamut from conceptually driven dance/theatre to structured movement improvisations. These approaches vary depending on faculty. Learn to mold kinetic vocabularies of your own choice and incorporate sound, objects, visual elements, and text to contextualize and identify your vision. Students will be asked to create and perform studies, direct one another, and share and discuss ideas and solutions with peers. Students are not required to make finished products, but involve themselves in the joy of creation.

*Beginning Improvisation is either a prerequisite or should be taken at the same time.*

## Contact Improvisation

**Kathy Westwater**

**Open—Year**

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960's out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration.

*Permission of the instructor is required. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance and Media

**Open—Year**

The field of dance has developed to include the use of multimedia in performance and documentation. This component will introduce and explore video, film, and digital and aural media as tools for communication and their implications for somatic practice. Areas of study

will include choreographing for the camera and designing camera movement for dance, video and sound editing, methods of documentation, and the integration of media into live performance.

## Dance History

**Rose Anne Thom**

**Open—Year**

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

*For all students beginning the Dance program. Open to any interested student.*

## Dance Making

**Sara Rudner, Emily Devine, John A. Yannelli, Sanchez**

**Advanced—Year**

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. Students are encouraged to take Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

**Open—Year**

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance Training Conference

**Peggy Gould**

**Open—Year**

Students will meet at least once per semester with the instructor to address individual dance training issues.

We will examine these issues by discussing progress, specific challenges, and short-term and long-term goals. In addition, we will develop practical strategies to achieve those goals by means of supplemental strength, flexibility, kinesthetic awareness, and coordination exercises. This course is required for all students taking a Dance Third. It is designed to support the work being done in movement practice classes and departmental performance projects.

## Feldenkrais: Awareness Through Movement®

**Barbara Forbes**

**Open—Year**

Moshe Feldenkrais believed that “rigidity, mental or physical, is contrary to the laws of life.” His system of somatic education develops awareness, flexibility, and coordination as students are verbally guided through precisely structured movement explorations. The lessons are done lying on the floor, sitting or standing, and they gradually increase in range and complexity. Students are required to bring very fine attention to their experience in order to develop their capacity for spontaneous effortless action. Self-generated learning will release habitual patterns, offer new option, and enhance the integrated activity of the entire nervous system.

## First-Year Studies in Dance

**Rose Anne Thom**

**FYS**

The Dance program encourages students to explore vital aspects of dance in a variety of technical practices, creative studies, and dance history. In practice classes, attention will be given to sharpening each student's awareness of space and time and to disciplining the body to move with energy and precision while developing basic skills, strength, control, and an understanding of functional anatomy. In improvisation classes, we will explore somatic intelligence and imagination and mine the natural movement ability of each student; vocabulary and awareness will be expanded through informal group and individual problem solving. In dance history, students will be introduced to the history of concert dance in the United States from the early twentieth century to the present. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to express their oral and written perceptions and to develop analytical skills.

## Flamenco Dance

**La Meira**

**Open—Year**

Gypsies and Goya's aristocrats, the swirl of a cape and the flash of a gold-toothed smile, the clatter of castanets and a wailing song, wild and indomitable ferocity and

seductive, almond-eyed beauties.... These are just a few of the images associated with flamenco, the popular dance and music of Spain. This course provides an in-depth introduction to the pulsing rhythms, languid arm movements, and powerful footwork of flamenco dance. It is designed to provide the basis for understanding, appreciating, and participating in flamenco as an expression of individuality and of culture. Movement, rhythm, power of expression, and communication will be cultivated through studio experiences with flamenco dance techniques as well as through films, selected readings, and trips to see live performance.

## Graduate Seminar I

### Fall

This seminar, required for all graduate students, encourages students to learn about the world of dance by conducting research and by analyzing and writing about aspects of dance that interest them. In conferences, and under faculty guidance, students also engage in individualized projects that advance their creative and intellectual goals.

## Graduate Seminar II

### Fall

This seminar, required for all graduate students, is designed to encourage students to make connections between dance, theatre, music, writing and the visual arts, and to make them aware of and conversant with the creative process always at work in the world. Choreographic projects will be presented and discussed in seminars and conferences.

## Graduate Seminar III

### Fall

This seminar emphasizes a dynamic foundation for dancing, offering participants an opportunity to refine their technique and analytical skills. Relevant aspects of functional anatomy are presented and considered throughout the class. Students are encouraged and coached to increase awareness of their current strategies as well as to broaden their range of movement possibilities.

## Improvisation—Beginning and Improvisation A and B

**Emily Devine, Sara Rudner, Neil Greenberg**

*Intermediate, Open—Year*

Merge your mind and body in the moment through dance improvisation. This invaluable creative mode will help you recognize, embody, and develop sensations and ideas in motion. Internal and external perceptions will be honed while looking at movement from many points of view as an individual or in partnership with others.

Beginning Improvisation is required for all students new to the Dance program. This class is an entry into the creative trajectory that later leads to composition and dance making.

Improvisation A is recommended for students who have already taken beginning improvisation and want to explore this form further.

## Labanotation/Repertory

**Rose Anne Thom**

*Open—Year*

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design for Dance

**Aaron Copp, Tyler Micoleau, Jane Cox**

*Advanced—Year*

The art of illuminating dance is the subject of this component. We will examine the theoretical and practical aspects of designing lights for dance. Students will create original lighting designs for Dance program concerts. Preference will be given to graduate students and seniors.

## Modern and Postmodern Practice

**Emily Devine, Renee Redding-Jones, Keith S. Sabado**

*Open—Year*

For students new to the study of dance, the fundamental class will develop skills basic to all movement studies, i.e., dynamic alignment through coordination and integration of the neuro/skeletal/muscular system, strength, balance, and basic spatial and rhythmic awareness. For the beginning student, emphasis will be on the continued development of basic skills, energy use, strength, and control. Introduction of stylistic forms and their development will begin at this level. Intermediate and advanced students will study more complex movement patterns, explore movement problems, and concentrate on the demands of performance. At all levels attention will be given to sharpening each student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

## Music for Dancers

**William Catanzaro**

*Open—Year*

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Performance Project

**Jeanine Durning**

*Open—Spring*

Dance artist Jeanine Durning will be working with students throughout the spring semester. Ms. Durning's work often brings together artists from dance, theater, music, and visual design to create live performance that has been described as "bold, madly exquisite, and full of complex passions." Durning's interest lies in the observation of human behavior, interactions, and situations. Her reinterpretation of this observation is rooted in the physical body and its delicate, awkward, mysterious, and sometimes fractured expressions. Durning's multifaceted choreography is an amalgam of experimental dance forms, formalism, kinetics, behavior, metaphor, image, and refined detail.

## Performance Project: Twyla Tharp's "The Fugue"

**Way**

*Open—Year*

Inspired in part by "A Musical Offering" by Johann Sebastian Bach, this dance trio represents the start of a new direction in the Tharpian canon. Since its creation, it has become a Tharp classic, in which the rigorously plotted choreography draws audiences inside its intriguing workings. "The Fugue's" primary phrase of movement is a twenty-count theme that dancers variously execute by way of reversals, inversions, and resequencings, all shaded by individually graded "attacks and coordinations."

## Senior Seminar

**Sara Rudner**

*Advanced—Year*

This class is designed to support the creative and technical practices, as well as the practical concerns of

students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## T'ai Chi Ch'uan A and B

**Margaret Matsumoto**

*Open—Year*

T'ai Chi Ch'uan is a Chinese-based system for health, stress reduction, meditation in movement, and nonaggressive self-defense. It is offered through the Dance department as the movement art that it truly is, helping the body to balance and integrate from the movement center. The practice of T'ai Chi teaches us to relax while in motion, thereby bringing more consciousness and grace to all expressive and daily-life movement. This beginners' course teaches the basic sequence of moves so that students can practice them on their own.

## Tap Dance

**Roxane Butterfly**

*Open—Year*

This tap course offers what any accomplished tap dancer should know: how to use both rhythms and space to venture into choreography as well as improvisation. The first weeks will be spent on learning the basic rhythm tap rudiments and various style elements from the Original Hoofers (with emphasis on Jimmy Slyde's vocabulary). Then we will focus on the repertoire of "BeauteeZ'n the Beat" as an exploration of the choreographic possibilities of tap, progressing into an initiation of improvisation as the ultimate goal of tap as the language of self-expression.

## Teaching Conference

**Rose Anne Thom**

*Advanced—Year*

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Yoga

**Patti Bradshaw, Susan Braham**

*Open—Year*

These courses offer students the opportunity to study the ancient art of Yoga. Classes emphasize the union of spirit, mind, and body through practices that include breathing techniques, vocalizations, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## 2007-2008

### Anatomy in Action

**Peggy Gould**

*Year*

How is it possible for humans to move in the multitude of ways that we do? Come and learn to develop your X-ray vision of the human body in motion, in a course that combines movement practice, drawing, and lecture with problem solving. In this course, movement is the basis for exploration of our profoundly adaptable anatomy. In addition to making drawings as we study the entire musculoskeletal system, we will learn Irene Dowd's "Spirals™," a comprehensive warm-up/cool-down designed to mobilize all joints and muscles to their fullest range of motion. Insights gained in this course can provide tremendous inspiration in the creative process.

*Introductory-level course. Yearlong course; students may enter in the second semester with permission of the instructor only.*

### Anatomy Seminar

**Peggy Gould**

*Advanced—Year*

This is an opportunity for advanced students who have completed Anatomy/ Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

*students may enter in the second semester with permission of the instructor only*

### Argentinean Tango

*Year*

Acquire a tango vocabulary of movement and the leading and following techniques in a close embrace. Topics include balance; posture; tango walk; basic steps; rhythms (tango, milonga, and waltz tango); traspie;

connection (communicating with torso, tango embrace and mark); sacadas; hooks; ornaments; musicality; and styles. Note: Bring shoes that allow you to pivot. High heels for women and leather-soled shoes for men are recommended.

## Ballet

**Barbara Forbes, Mercedes Mañago-Alexander**

*Open—Year*

Ballet studies guide students in creative and expressive freedom by enhancing qualities of ease, grace, and symmetry that define the form. To this end, we will explore alignment with an emphasis on anatomical principles and enlist the appropriate neuromuscular effort needed to dance with optimal integration of every aspect of the individual body, mind, and spirit. Level 1 students will use a body-friendly approach to learning basic ballet vocabulary and terminology. Emphasis will be placed on musicality, use of energy, and transference of weight at the barre, in center work, and in combinations. Levels 2 and 3 will further develop the ability to use the language of ballet as a powerful means of communication.

*Open to theatre and music students with permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of the teacher only.*

## Composition A, B

**Dan Hurlin, Sara Rudner**

*Year*

Movement is the birthright of every human being. These components explore its expressive and communicative possibilities by introducing different strategies for making dances. Problems posed run the gamut from conceptually driven dance/theatre to structured movement improvisations. These approaches vary depending on faculty. Learn to mold kinetic vocabularies of your own choice and incorporate sound, objects, visual elements, and text to contextualize and identify your vision. Students will be asked to create and perform studies, direct one another, and share and discuss ideas and solutions with peers. Students are not required to make finished products, but involve themselves in the joy of creation.

*Beginning Improvisation is either a prerequisite or should be taken at the same time.*

## Contact Improvisation

**Kathy Westwater**

*Year*

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation,

which emerged in the 1960's out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration.

*Permission of the instructor is required. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Contemporary African Dance

**Maia Claire Garrison**

**Year**

This class fuses elements of traditional West African dance with other popular "African-derived" movement forms. The genre is not strictly structured and allows dancers to interpret the moves in various ways.

## Dance and Technology

**Tony Schultz**

**Year**

This class will be run as a laboratory, mixing dance and computing. Students will experiment with designing interactive multimedia systems using Max/MSP/Jitter. These dance machines will provide new compositional approaches and forms for generating and disseminating dance. They can also serve as dynamic environments for digitally mediated live performances. Class readings will help place the work within a broader cultural context. No programming experience is required.

## Dance History

**Rose Anne Thom**

**Open—Year**

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

*For all students beginning the Dance program. Open to any interested student.*

## Dance Making

**Dan Hurlin, Sara Rudner, John A. Yannelli**

**Year**

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. Students are encouraged to take Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

**Year**

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers.

*students may enter in the second semester with permission of the instructor only*

## Dance Training Conference

**Liz Rodgers**

**Year**

Students will meet at least once per semester with the instructor to address individual dance training issues. We will examine these issues by discussing progress, specific challenges, and short-term and long-term goals. In addition, we will develop practical strategies to achieve those goals by means of supplemental strength, flexibility, kinesthetic awareness, and coordination exercises. This course is required for all students taking a Dance Third. It is designed to support the work being done in movement practice classes and departmental performance projects.

## Diaghilev's Ballets Russes

**Rose Anne Thom**

**Spring**

From 1909 to 1929, Sergei Diaghilev, the Russian impresario, directed an astonishing artistic enterprise in Western Europe called the Ballets Russes. Initially a company of Russian dancers, choreographers, painters, and composers, the Ballets Russes's roster grew to include major European artists from the worlds of art, literature, music, and dance. Diaghilev brought them together, encouraging and directing their innovative collaborations. Included among them were innovators such as Fokine, Nijinsky, Balanchine, Stravinsky, Ravel,

Satie, Bakst, Picasso, and Massine. During the company's twenty-year history, its repertoire illustrated the major artistic movements of the early twentieth century from symbolism to constructivism. We will study the dances on videotape and slides and read histories, biographies, and criticism in our attempt to re-create and appreciate the richness of this unique company.

*Open to any interested student. This course is a full seminar. It is not part of a Dance Third nor is previous dance experience a prerequisite.*

## Feldenkrais: Awareness Through Movement®

**Barbara Forbes**

**Year**

Moshe Feldenkrais believed that "rigidity, mental or physical, is contrary to the laws of life." His system of somatic education develops awareness, flexibility, and coordination as students are verbally guided through precisely structured movement explorations. The lessons are done lying on the floor, sitting or standing, and they gradually increase in range and complexity. Students are required to bring very fine attention to their experience in order to develop their capacity for spontaneous effortless action. Self-generated learning will release habitual patterns, offer new option, and enhance the integrated activity of the entire nervous system.

## First-Year Studies in Dance

**Peggy Gould**

**FYS**

First-Year Studies in Dance includes a full Dance Third, a series of coordinated component courses that consists of twelve to fifteen hours of in-class time, including a daily, required practice class. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to express their oral and written perceptions of diverse elements of dance and to develop analytical skills. In practice classes, attention will be given to sharpening each student's awareness of space and time and to disciplining the body to move with energy and precision, while developing basic skills, strength, control, and an understanding of functional anatomy. In improvisation classes, we will explore somatic intelligence and imagination and mine the natural movement ability of each student; vocabulary and awareness will be expanded through informal group and individual problem solving. In dance history, students will be introduced to the history of concert dance in the United States from the early twentieth century to the present. The Dance program encourages students to explore vital aspects of dance in a variety of technical

practices, creative studies, and dance history. The First-Year Studies course offers increased focus and intensity to those efforts.

## FreeStyle

**Maia Claire Garrison**

**Year**

Taking inspiration from both old school and new school hip-hop, this class merges the two. High energy and playful, students will be encouraged to use their bodies in ways that involve many different stylistic techniques.

## Improvisation—Beginning and Improvisation A and B

**Emily Devine, Peggy Gould, Kathy Westwater**

**Year**

Merge your mind and body in the moment through dance improvisation. This invaluable creative mode will help you recognize, embody, and develop sensations and ideas in motion. Internal and external perceptions will be honed while looking at movement from many points of view as an individual or in partnership with others. Beginning Improvisation is required for all students new to the Dance program. This class is an entry into the creative trajectory that later leads to composition and dance making. Improvisation A and B are recommended for students who have already taken beginning improvisation and want to explore this form further.

## Labanotation/Repertory

**Rose Anne Thom**

**Advanced—Year**

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Lighting Design for Dance

**Tyler Micoeau, Josh Epstein**

**Year**

The art of illuminating dance is the subject of this component. We will examine the theoretical and practical aspects of designing lights for dance. Students will create original lighting designs for Dance program concerts. Preference will be given to graduate students and seniors.

## Modern and Postmodern Practice

*Emily Devine, Merceditas Mañago-Alexander, Keith S. Sabado*

### Year

For students new to the study of dance, the fundamental class will develop skills basic to all movement studies, i.e., dynamic alignment through coordination and integration of the neuro/skeletal/muscular system, strength, balance, and basic spatial and rhythmic awareness. For the beginning student, emphasis will be on the continued development of basic skills, energy use, strength, and control. Introduction of stylistic forms and their development will begin at this level. Intermediate and advanced students will study more complex movement patterns, explore movement problems, and concentrate on the demands of performance. At all levels attention will be given to sharpening each student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

## Music for Dancers

*William Catanzaro*

### Year

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments.

*students may enter in the second semester with permission of the instructor only*

## Performance Project: Trisha Brown's "Line Up"

*Vicky Shick*

### Year

"Line Up," a classic postmodern dance, was choreographed in 1997 by world-renowned choreographer Trisha Brown, one of the original members of the Judson Dance Theater. It will be reconstructed by Vicki Shick, who danced with Ms. Brown for many years.

*This class is open by audition to sophomores, juniors, seniors, and graduate students.*

## Postmodern Dance

*Rose Anne Thom*

### Open—Fall

Applied to dance the term postmodern has had varied meanings for dancers, choreographers, writers, and audiences for over forty years. But its genesis in the activities of the Judson Dance Theater in Greenwich Village in the mid-1960's is rarely disputed. Encouraged by the compositional experimentation of choreographer Merce Cunningham and composer John Cage, the Judson artists questioned established assumptions about dance and dancing. The answers found in their work dramatically altered modern dance, precipitating what is inclusively called postmodern dance. In this course, we will study the work of artists who comprised the Judson Dance Theater and those who have been influenced by them, up to the present day, looking at recorded dances and documentaries, as well as reading histories, biographies, and criticism. Students will be required to attend live performances in New York City and to use the resources of the Research Collection of the New York Public Library for the Performing Arts at Lincoln Center for both class and conference work.

*Open to any interested student. This course is a full seminar. It is not part of a Dance Third nor is previous dance experience a prerequisite.*

## Senior Seminar

*Sara Rudner*

### Year

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## Tap Dance

*Roxane Butterfly*

### Year

This tap course offers what any accomplished tap dancer should know: how to use both rhythms and space to venture into choreography as well as improvisation. The first weeks will be spent on learning the basic rhythm tap rudiments and various style elements from the Original Hoofers (with emphasis on Jimmy Slyde's vocabulary). Then we will focus on the repertoire of "BeauteeZ'n the Beat" as an exploration of the choreographic possibilities of tap, progressing into an initiation of improvisation as the ultimate goal of tap as the language of self-expression.

## Teaching Conference

**Rose Anne Thom**

**Year**

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## T'ai Chi Ch'uan

**Margaret Matsumoto**

**Year**

T'ai Chi Ch'uan is a Chinese-based system for health, stress reduction, meditation in movement, and nonaggressive self-defense. It is offered through the Dance department as the movement art that it truly is, helping the body to balance and integrate from the movement center. The practice of T'ai Chi teaches us to relax while in motion, thereby bringing more consciousness and grace to all expressive and daily-life movement. This beginners' course teaches the basic sequence of moves so that students can practice them on their own.

## Yoga

**Patti Bradshaw**

**Year**

These courses offer students the opportunity to study the ancient art of Yoga. Classes emphasize the union of spirit, mind, and body through practices that include breathing techniques, vocalizations, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## 2008-2009

## African Dance

**Open—Year**

In this course, students will explore the fundamental aesthetic of African dance. There will be an emphasis on rhythm as we work to internalize the intricacies of African polyrhythm. Grounding, strength, and stability are important to African dance, and students will spend time exploring their cultural meaning and importance. Learning African dance exposes students to better understand what dance means in African culture. This

class builds personal awareness as it transcends cultural boundaries. Class will be accompanied by live drumming.

## Anatomy in Action

**Peggy Gould**

**Open—Year**

How is it possible for humans to move in the multitude of ways that we do? Come and learn to develop your X-ray vision of the human body in motion, in a course that combines movement practice, drawing, and lecture with problem solving. In this course, movement is the basis for exploration of our profoundly adaptable anatomy. In addition to making drawings as we study the entire musculoskeletal system, we will learn Irene Dowd's "Spirals™," a comprehensive warm-up/cool-down designed to mobilize all joints and muscles to their fullest range of motion. Insights gained in this course can provide tremendous inspiration in the creative process.

*Introductory-level course. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Anatomy Seminar

**Peggy Gould**

**Advanced—Year**

This is an opportunity for advanced students who have completed Anatomy / Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

*Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Argentinean Tango

**Annabella Lenzu**

**Open—Year**

Acquire a tango vocabulary of movement and the leading and following techniques in a close embrace. Topics include balance; posture; tango walk; basic steps; rhythms (tango, milonga, and waltz tango); traspie; connection (communicating with torso, tango embrace and mark); sacadas; hooks; ornaments; musicality; and styles. Note: Bring shoes that allow you to pivot. High heels for women and leather-soled shoes for men are recommended.

## Aspects of World Dance

**Rose Anne Thom**

*Open—Fall*

The dancing body is a map of cultural identity. Through readings, videotapes, and live performances, we will observe extraordinary dance traditions from around the world, examining the origins and vocabularies of each form, where and when these dances are performed, and who does the dancing. The role of musical and theatrical elements will be a vital part of this study. Central to our discussion will be the shifting meanings in a style as it evolves and as it travels across boundaries, not just geographic, but from one group to another.

*This class is a full seminar and not part of a Dance Third. Dance experience is not a prerequisite.*

## Ballet

**Barbara Forbes, Merceditas Mañago-Alexander**

*Open—Year*

Ballet studies guide students in creative and expressive freedom by enhancing qualities of ease, grace, and symmetry that define the form. To this end, we will explore alignment with an emphasis on anatomical principles and enlist the appropriate neuromuscular effort needed to dance with optimal integration of every aspect of the individual body, mind, and spirit. Level 1 students will use a body-friendly approach to learning basic ballet vocabulary and terminology. Emphasis will be placed on musicality, use of energy, and transference of weight at the barre, in center work, and in combinations. Levels 2 and 3 will further develop the ability to use the language of ballet as a powerful means of communication.

*Open to theatre and music students with permission of the appropriate faculty. Yearlong course; students may enter in the second semester with permission of the teacher only.*

## Composition A, B

**Dan Hurlin, Susan Rethorst, Sara Rudner, Donna Uchizono**

*Year*

Movement is the birthright of every human being. These components explore its expressive and communicative possibilities by introducing different strategies for making dances. Problems posed run the gamut from conceptually driven dance/theatre to structured movement improvisations. These approaches vary depending on faculty. Learn to mold kinetic vocabularies of your own choice and incorporate sound, objects, visual elements, and text to contextualize and identify your vision. Students will be asked to create and perform studies, direct one another, and share and

discuss ideas and solutions with peers. Students are not required to make finished products, but involve themselves in the joy of creation.

*Beginning Improvisation is either a prerequisite or should be taken at the same time.*

## Contact Improvisation

**Kathy Westwater**

*Year*

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960's out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration.

*Permission of the instructor is required. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## Dance/Movement Therapy: Fundamentals

**Cathy Appel**

*Open—Year*

In this process-oriented course, we will study the theory and practice of dance/ movement therapy. Through experiential and collaborative learning, we will examine the historical, developmental, cultural, and clinical aspects of dance's ability to heal and promote change. Students will also explore their own relationships to dance from the perspectives of personal growth and social action.

## Dance and Tech/Media

**Tony Schultz**

*Open—Year*

This class will be run as a laboratory, mixing dance and computing. Students will experiment with designing interactive multimedia systems using Max/MSP/Jitter. These dance machines will provide new compositional approaches and forms for generating and disseminating dance. They can also serve as dynamic environments for digitally mediated live performances. Class readings will help place the work within a broader cultural context. No programming experience is required.

## Dance History

**Rose Anne Thom**

**Open—Year**

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

*For all students beginning the Dance program. Open to any interested student.*

## Dance Making

**Dan Hurlin, Sara Rudner, Kathy Westwater, John A. Yannelli**

**Year**

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. Students are encouraged to take Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

**Open—Year**

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers.

*Course taught by dance faculty and guests. Students may enter in the second semester with permission of the instructor only.*

## Dance Training Conference

**Liz Rodgers**

**Open—Year**

Students will meet at least once per semester with the instructor to address individual dance training issues. We will examine these issues by discussing progress, specific challenges, and short-term and long-term goals. In addition, we will develop practical strategies to achieve those goals by means of supplemental strength, flexibility, kinesthetic awareness, and coordination

exercises. This course is required for all students taking a Dance Third. It is designed to support the work being done in movement practice classes and departmental performance projects.

## Feldenkrais: Awareness Through Movement®

**Barbara Forbes**

**Open—Year**

Moshe Feldenkrais believed that “rigidity, mental or physical, is contrary to the laws of life.” His system of somatic education develops awareness, flexibility, and coordination as students are verbally guided through precisely structured movement explorations. The lessons are done lying on the floor, sitting or standing, and they gradually increase in range and complexity. Students are required to bring very fine attention to their experience in order to develop their capacity for spontaneous effortless action. Self-generated learning will release habitual patterns, offer new option, and enhance the integrated activity of the entire nervous system.

## First-Year Studies in Dance

**Emily Devine**

**FYS**

First-Year Studies in Dance consists of a full Dance Third with twelve to fifteen hours of in-class time, including a daily physical practice class at an appropriate level. In First-Year Studies in Dance, students will have an additional weekly forum to develop analytical skills, both oral and written. In practice classes, attention will be given to training the body to move with energy and precision, awareness of space and time, building strength and control, and an understanding of functional anatomy. In improvisation classes, we will explore somatic intelligence and imagination through the natural movement abilities of each student; vocabulary and awareness will be expanded through group and individual problem solving. In dance history, students will explore the history of concert dance in the United States from the early twentieth century to the present. All of these components are designed to encourage individual investigation and community.

## Flamenco Dance

**La Meira**

**Open—Year**

Gypsies and Goya's aristocrats, the swirl of a cape and the flash of a gold-toothed smile, the clatter of castanets and a wailing song, wild and indomitable ferocity, and seductive, almond-eyed beauties. . . . These are just a few of the images associated with flamenco, the popular dance and music of Spain. This course provides an in-depth introduction to the pulsing rhythms, languid arm movements, and powerful footwork of flamenco dance. It is designed to provide the basis for understanding,

appreciating, and participating in flamenco as an expression of individuality and of culture. Movement, rhythm, power of expression, and communication will be cultivated through studio experiences with flamenco dance techniques as well as through films, selected readings, and trips to see live performance.

## FreeStyle

**Maia Claire Garrison**

*Open—Year*

Taking inspiration from both old school and new school hip-hop, this class merges the two. High energy and playful, the course will encourage students to use their bodies in ways that involve many different stylistic techniques.

## Improvisation—Beginning and Improvisation A and B

**Emily Devine, Kathy Westwater, Susan Rethorst, Donna Uchizono**

*Open—Year*

Merge your mind and body in the moment through dance improvisation. This invaluable creative mode will help you recognize, embody, and develop sensations and ideas in motion. Internal and external perceptions will be honed while looking at movement from many points of view as an individual or in partnership with others. Beginning Improvisation is required for all students new to the Dance program. This class is an entry into the creative trajectory that later leads to composition and dance making. Improvisation A and B are recommended for students who have already taken beginning improvisation and want to explore this form further.

## Labanotation/Repertory

**Rose Anne Thom**

*Open—Year*

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

**Jane Cox, Josh Epstein**

*Open—Year*

The art of illuminating dance is the subject of this component. We will examine the theoretical and

practical aspects of designing lights for dance. Students will create original lighting designs for Dance program concerts.

*Preference will be given to graduate students and seniors.*

## Modern and Postmodern Practice

**Emily Devine, Mercedes Mañago-Alexander, Keith S. Sabado**

*Open—Year*

For students new to the study of dance, the fundamental class will develop skills basic to all movement studies, i.e., dynamic alignment through coordination and integration of the neuro/skeletal/muscular system, strength, balance, and basic spatial and rhythmic awareness. For the beginning student, emphasis will be on the continued development of basic skills, energy use, strength, and control. Introduction of stylistic forms and their development will begin at this level. Intermediate and advanced students will study more complex movement patterns, explore movement problems, and concentrate on the demands of performance. At all levels attention will be given to sharpening each student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

## Music for Dancers

**William Catanzaro**

*Open—Year*

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments.

*Students may enter in the second semester with permission of the instructor only.*

## Performance Project: Fall 2008

**Deganit Shemy, Donna Uchizono**

*Open—Fall*

Donna Uchizono is the artistic director/choreographer of Donna Uchizono Company, a New York-based company, established in 1990. Known for her "wit, spicy movement, and rich invention," Ms. Uchizono will share her creative process with the students of Sarah Lawrence College and create a dance. Ms. Uchizono normally creates a movement vocabulary specific to the

individual piece and will do this in tandem with the students. As characteristic of her work, the dance will utilize a concept as a metaphor for guiding its kinetic direction, creating an atmosphere imbued with layered fragility, bold gestures, and emotional sublimity with each work.

## Senior Seminar

**Sara Rudner**

*Year*

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## Social Conscience in Modern Dance

**Rose Anne Thom**

*Open—Spring*

From its very beginnings in the solo dances of Isadora Duncan in the early part of the twentieth century, to the provocative landscapes created by John Jasperse in this decade, modern dance has reflected its social and political environments. Each generation absorbs the influences of its time resulting in altered aesthetics and changing bodies. While we trace the development of the art through the century, we will focus on eras when heightened artistic expression in dance parallels political and social turmoil: the depression of the 1930's, the civil rights and anti-war activities of the 1960's, the feminist movement of the 1970's, the AIDS crisis of the 1980's and 1990's, and global warming today. Live and videotaped performances—as well as important documentaries—will supplement historical, biographical, and critical readings.

*This class is a full seminar and not part of a Dance Third. Dance experience is not a prerequisite.*

## Teaching Conference

**Rose Anne Thom**

*Advanced—Year*

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Yearlong course; students may enter in the second semester with permission of the instructor only.*

## T'ai Chi Ch'uan

*Open—Year*

T'ai Chi Ch'uan is a Chinese-based system for health, stress reduction, meditation in movement, and nonaggressive self-defense. It is offered through the Dance department as the movement art it truly is, helping the body to balance and integrate from the movement center. Learning and practicing the deceptively simple movement vocabulary of T'ai Chi affords the opportunity to recognize, explore, and refine one's sense of consciousness, self-awareness, and intrinsic energy. This beginner's course teaches the basic sequence of moves so that students can practice them on their own. Particular attention will be paid to the applicability and practicality of T'ai Chi Ch'uan.

## Viola Farber Artist-in-Residence: Spring 2009

**Susan Rethorst**

*Spring*

## Yoga

**Patti Bradshaw**

*Open—Year*

These courses offer students the opportunity to study the ancient art of Yoga. Classes emphasize the union of spirit, mind, and body through practices that include breathing techniques, vocalizations, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## 2009-2010

## African Dance

*Year*

In this class, students will explore the fundamental aesthetic of African dance. There will be an emphasis on rhythm, as we work to internalize the intricacies of African polyrhythm. Students will spend time exploring the cultural meaning and importance of grounding, strength, and stability, which are important to African dance. Learning African dance exposes students to a better understanding what dance means in African culture. This class builds personal awareness, as it transcends cultural boundaries. Class will be accompanied by live drumming.

## Anatomy in Action

**Peggy Gould**

*Open—Year*

How is it possible for humans to move in the multitude of ways that we do? Come and learn to develop your X-

ray vision of the human body in motion, in a course that combines movement practice, drawing, and lecture with problem solving. In this course, movement is the basis for exploration of our profoundly adaptable anatomy. In addition to making drawings as we study the entire musculoskeletal system, we will learn Irene Dowd's "Spirals™," a comprehensive warm-up/cool-down designed to mobilize all joints and muscles to their fullest range of motion. Insights gained in this course can provide tremendous inspiration in the creative process. Yearlong course; students may enter in the second semester with permission of the instructor only.

*Introductory-level course.*

## Anatomy Seminar

**Peggy Gould**

*Advanced—Year*

This is an opportunity for advanced students who have completed Anatomy / Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences. Yearlong course; students may enter in the second semester with permission of the instructor only.

## Ballet

**Barbara Forbes**

*Year*

At all levels, ballet studies will guide students in creative and expressive freedom by enhancing the qualities of ease, grace, musicality, and symmetry that define the form. To this end, we will explore alignment with an emphasis in anatomical principles and enlist the appropriate neuromuscular effort needed to dance with optimal integration of every aspect of the individual body, mind, and spirit.

## Bharatanatyam: Classical South Indian Dance

*Spring*

This course will introduce students to the history and technique of this classical dance form. We will focus on the basic posture and steps, the percussive use of the feet, hand gestures, and the relationship of dance, music, and narrative. Throughout the semester, we will have opportunities to reflect on the differences and similarities that we note in relation to our experience with the practice of Western dance forms.

*Open to theatre and music students with permission of the appropriate faculty.*

## Body/Space/Technology

**Tony Schultz**

*Year*

This class will be run as a laboratory, mixing dance and computing. Students will experiment with designing interactive multimedia systems using Max/MSP/Jitter. These dance machines will provide new compositional approaches and forms for generating and disseminating dance. They can also serve as dynamic environments for digitally mediated live performances. Class readings will help place the work within a broader cultural context. No programming experience is required.

## Composition A, B, and C

**Emily Devine, Dan Hurlin, Kathy Westwater**

Movement is the birthright of every human being. These components explore its expressive and communicative possibilities by introducing different strategies for making dances. Problems posed run the gamut from conceptually driven dance/theatre to structured movement improvisations. These approaches vary depending on faculty. Learn to mold kinetic vocabularies of your own choice and incorporate sound, objects, visual elements, and text to contextualize and identify your vision. Students will be asked to create and perform studies, direct one another, and share and discuss ideas and solutions with peers. Students are not required to make finished products, but involve themselves in the joy of creation.

*Beginning Improvisation is either a prerequisite or should be taken at the same time.*

## Contact Improvisation

**Kathy Westwater**

*Year*

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960's out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common "center" will provide a basis for further exploration. Yearlong course; students may enter in the second semester with permission of the instructor only.

*With permission of instructor.*

## Dance Fundamentals

**Merceditas Mañago-Alexander**

**Year**

Introduction to basic principles of contemporary and ballet practices. The fundamentals class will develop skills basic to all movement studies such as dynamic alignment through coordination and integration of the neuro/skeletal/muscular system, strength, balance, and basic spatial and rhythmic awareness.

## Dance History

**Rose Anne Thom**

**Open—Year**

A course in the history of performance in the United States from the early twentieth century to the present as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception. For all students beginning the Dance program.

## Dance Making

**William Catanzaro, Dan Hurlin, Sara Rudner, John A. Yannelli**

**Year**

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible the music for these projects, whether new or extant, will be performed live in concert. Students are encouraged to take Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

**,  
Year**

A weekly gathering of all Dance Thirds to share their work and that of invited guests who teach, perform, and inform. Topics have included dance injuries, dance therapy, contact improvisation, kinesthetic awareness, nutrition, Indian classical dance, and presentations by young New York City choreographers. Yearlong course; students may enter in the second semester with permission of the instructor only.

## Dance Training Conference

**Peggy Gould**

**Year**

Students will meet at least once per semester with the instructor to address individual dance training issues. We will examine these issues by discussing progress, specific challenges, and short-term and long-term goals. In addition, we will develop practical strategies to achieve those goals by means of supplemental strength, flexibility, kinesthetic awareness, and coordination exercises. This course is required for all students taking a Dance Third. It is designed to support the work being done in movement practice classes and departmental performance projects.

## Feldenkrais: Awareness through Movement®

**Barbara Forbes**

**Year**

Moshe Feldenkrais believed that “rigidity, mental or physical, is contrary to the laws of life.” His system of somatic education develops awareness, flexibility, and coordination as students are verbally guided through precisely structured movement explorations. The lessons are done lying on the floor, sitting or standing, and they gradually increase in range and complexity. Students are required to bring very fine attention to their experience in order to develop their capacity for spontaneous effortless action. Self-generated learning will release habitual patterns, offer new option, and enhance the integrated activity of the entire nervous system.

## First-Year Studies in Dance

**Sara Rudner**

**FYS**

First-Year Studies in Dance consists of a full Dance Third with 12 to 15 hours of in-class time, including a daily physical practice class at an appropriate level. Students will have an additional weekly forum to develop analytical skills, both oral and written. In practice classes, attention will be given to training the body to move with energy and precision, awareness of space and time, building strength and control, and understanding functional anatomy. In improvisation classes, we will explore somatic intelligence and imagination through the natural movement abilities of each student; vocabulary and awareness will be expanded through group and individual problem solving. In dance history, students will explore the history of concert dance in the United States from the early 20th century to the present. All of these components are designed to encourage individual investigation and community. This course is appropriate both for students with extensive experience in dance and for those with little or no experience who are eager to begin.

## FreeStyle

**Maia Claire Garrison**

*Year*

This class fuses African and contemporary dance with a mixed bag of popular street dances. High energy and playful, students will be encouraged to use their bodies in ways that involve many different stylistic techniques. FreeStyle is a fun-filled, athletic workout, incorporating easy-to-grasp rhythmic routines and full movement phrases of varying dynamics. Musical selections include Afrobeats, pop-chart classics, dance hall, old-school favorites, and house.

## Improvisation – Beginning and Improvisation A, B, and C

**Emily Devine, Sara Rudner, Ishmael Houston-Jones, Kathy Westwater**

Merge your mind and body in the moment through dance improvisation. This invaluable creative mode will help you recognize, embody, and develop sensations and ideas in motion. Internal and external perceptions will be honed while looking at movement from many points of view as an individual or in partnership with others. Beginning Improvisation is required for all students new to the Dance program. This class is an entry into the creative trajectory that later leads to composition and dance making. Improvisation A, B, and C are recommended for students who have already taken beginning improvisation and want to explore this form further.

## Labanotation/Repertory

**Rose Anne Thom**

*Year*

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

**, Beverly Emmons**

*Year*

The art of illuminating dance is the subject of this component. We will examine the theoretical and practical aspects of designing lights for dance. Students will create original lighting designs for Dance program concerts.

*Preference will be given to graduate students and seniors.*

## Modern and Post-Modern Practice

**Emily Devine, Merceditas Mañago-Alexander, Peter Kyle**

*Year*

In these classes, emphasis will be on the continued development of basic skills, energy use, strength, and control. Intermediate and advanced students will study more complex movement patterns, investigate somatic use, and concentrate on the demands of performance. At all levels, attention will be given to sharpening each student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

## Music for Dancers

**William Catanzaro**

*Year*

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments. Yearlong course; Students may enter in the second semester with permission of the instructor only.

## Performance Project: Fall, 2009

*Fall*

This project, the reconstruction of the Lucinda Childs (SLC '62) masterpiece "Radial Courses," is supported by the National Endowment for the Arts, American Masterpieces: Dance College Component, and the Viola Farber Artist-in-Residence program. "Radial Courses," created in 1976, deals primarily with the abstractions of space, time, and repetition and reveals its magic through rigorous structure and performance.

## Performance Project: Spring, 2010

**Deganit Shemy**

*Spring*

We will investigate community as an architectonic structure created and influenced by strong individuals. Reflecting the spirit of the times, Ms. Shemy is interested in the tension between identity loss and the need for group support. She would like to build and rebuild structures and change them by different forces—sometimes by simply moving the air, pushing, pulling, or by common actions such as touching,

spinning, grabbing, folding, or by gentle means such as a look. Specific themes and structures will arise from the movement developed during the project.

## RumbaTap

**Max Pollak**

*Fall*

This class offers students different ways to access their inner rhythm machine and to explore the most immediate and natural physical outlets for the music in their mind. Improvisation will be part of this process. Although some tap technique will be covered and incorporated, the class focuses on body percussion/rhythmic coordination and a general understanding of the earth-shattering power of Afro-Cuban culture, music, and dance.

## Senior Seminar

**Sara Rudner**

*Year*

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## Teaching Conference

**Emily Devine, Rose Anne Thom**

*Advanced—Year*

An inquiry into the ways in which dance might be taught in various settings and under various conditions. Detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools. Yearlong course; students may enter in the second semester with permission of the instructor only.

*For advanced and graduate students.*

## Yoga

**Patti Bradshaw**

*Year*

Classes emphasize the union of spirit, mind, and body through practices that include breathing techniques, vocalizations, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility, and helps dancers interweave technique and artistry.

# 2010-2011

## African Dance

*Open—Year*

In this class, students will explore the fundamental aesthetic of African dance. There will be an emphasis on work to internalize the intricacies of African polyrhythm. Students will spend time exploring the cultural meaning and importance of grounding, strength, and stability, which are essential to the form. Learning African dance exposes students to the meaning of dance in African culture. This class also builds personal awareness as it transcends cultural boundaries. Class will be accompanied by live drumming.

*Students may enter this yearlong course in the second semester with permission of the instructor.*

## Anatomy in Action

**Peggy Gould**

*Open—Year*

How is it possible for humans to move in the multitude of ways that we do? Come and learn to develop your X-ray vision of the human body in motion in a course that combines movement practice, drawing, lecture, and problem solving. In this course, movement is the basis for exploration of our profoundly adaptable anatomy. In addition to making drawings as we study the entire musculoskeletal system, we will learn Irene Dowd's "Spirals™," a comprehensive warm-up/cool-down designed to mobilize all joints and muscles to their fullest range of motion. Insights gained in this course can provide tremendous inspiration in the creative process.

*Introductory-level course. Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Anatomy Seminar

**Peggy Gould**

*Advanced—Year*

This is an opportunity for advanced students who have completed Anatomy/Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow for further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

*Advanced. Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Ballet

**Barbara Forbes**

*Open—Year*

At all levels, ballet studies will guide students in creative and expressive freedom by enhancing the qualities of ease, grace, musicality, and symmetry that define the form. To this end, we will explore alignment with an emphasis in anatomical principles and enlist the appropriate neuromuscular effort needed to dance with optimal integration of every aspect of the individual body, mind, and spirit.

*Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Belly Dance

**Sarah Hassan**

*Open—Fall*

This course will examine the basic movements of Raqs Sharqi, otherwise known as Middle Eastern belly dance. We will blend traditional steps with elements of tribal fusion that take inspiration from flamenco and from African and North Indian classical dance. Emphasis will be on proper alignment, coiling, muscle isolation, and gaining strength in the core and arms. Particular attention will be paid to combining “cabaret”-style belly dance technique with slow, sinuous movements set to a variety of musical traditions from Balkan Beat Box to Egyptian folk. Yoga postures will be used for ease of transition between movements and to demonstrate the use of the carriage in belly dance. Cultural context will be addressed in class, and short readings will be suggested but not required.

## Composition A, B, and C

**Dan Hurlin, Sara Rudner, Kathy Westwater**

*Open—Year*

Movement is the birthright of every human being. These components explore its expressive and communicative possibilities by introducing different strategies for making dances. Problems posed run the gamut from conceptually driven dance/theatre to structured movement improvisations. These approaches vary depending on faculty. Learn to mold kinetic vocabularies of your own choice and incorporate sound, objects, visual elements, and text to contextualize and identify your vision. Students will be asked to create and perform studies, direct one another, and share and discuss ideas and solutions with peers. Students are not required to make finished products but to involve themselves in the joy of creation.

*Beginning Improvisation is either a prerequisite or should be taken at the same time.*

## Contact Improvisation

**Kathy Westwater**

*Open—Year*

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960s out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risk-taking. Contemporary partnering skills such as taking and giving weight and finding a common “center” will provide a basis for further exploration.

*Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Dance Fundamentals

**Merceditas Mañago-Alexander**

*Open—Year*

An introduction to basic principles of contemporary and ballet practices, this fundamentals class will develop skills basic to all movement studies such as dynamic alignment through coordination and integration of the neuro/skeletal/muscular system, strength, balance, and basic spatial and rhythmic awareness.

*Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Dance History

**Rose Anne Thom**

*Open—Year*

This is a course in the history of performance in the United States from the early 20th century to the present, as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

*For all students beginning the Dance program. Open to any interested student.*

## Dance Making

**William Catanzaro, Dan Hurlin, Sara Rudner, John A. Yannelli**

*Open—Year*

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible, the music for these projects, whether new or extant, will be

performed live in concert. Dance Making students are encouraged to enroll in Lighting Design and Stagecraft for Dance.

*Prerequisites: Dance Composition, Music for Dancers, and permission of the instructor.*

## Dance Meeting

### *Open—Year*

A weekly gathering of all Dance Thirds, in which we share ongoing student interests and invite guests to teach, perform, and inform. Topics have included dance injuries, dance therapy, kinesthetic awareness, nutrition, world dance forms, and presentations by New York City choreographers.

*Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Dance Training Conference

### *Peggy Gould*

#### *Open—Year*

Students will meet at least once per semester with the instructor to address individual dance training issues. We will examine these issues by discussing progress, specific challenges, and short-term and long-term goals. In addition, we will develop practical strategies to achieve those goals by means of supplemental strength, flexibility, kinesthetic awareness, and coordination exercises. This course is required for all students taking a Dance Third. It is designed to support the work being done in movement practice classes, concerts, and performance projects.

## Feldenkrais: Awareness Through Movement®

### *Barbara Forbes*

#### *Open—Year*

Moshe Feldenkrais believed that “rigidity, mental or physical, is contrary to the laws of life.” His system of somatic education develops awareness, flexibility, and coordination as students are verbally guided through precisely structured movement explorations. The lessons are done lying on the floor, sitting, or standing, and they gradually increase in range and complexity. Students are required to bring their full attention to their experience in order to develop their capacity for spontaneous, effortless action. Self-generated learning will release habitual patterns, offer new options, and enhance the integrated activity of the entire nervous system.

## First-Year Studies in Dance

### *Rose Anne Thom*

#### *FYS*

The Dance Program encourages first-year students to study aspects of dance in an integrated and vital curriculum of technical movement practices, improvisation, and dance history. In technical practice, attention will be given to sharpening the student's awareness of space and time, use of energy, articulation of form through sensation, and understanding of functional anatomy. Improvisation classes are based on the natural movement ability of the students. Vocabulary, strength, and awareness will be expanded through informal group and individual problem solving. In dance history, students will be introduced to the history of concert dance in the United States from the early 20th century to the present. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to work on developing critical skills in observing dance and articulating these in oral and written expression. Emphasis is placed on developing the skills necessary for independent research and study.

## Improvisation—Beginning and Improvisation A, B, C, and D

### *Emily Devine, Kathy Westwater, David Neumann, Ishmael Houston-Jones*

Merge your mind and body in the moment through dance improvisation. This invaluable creative mode will help you recognize, embody, and develop sensations and ideas in motion. Internal and external perceptions will be honed while looking at movement from many points of view as an individual or in partnership with others. Beginning Improvisation is required for all students new to the Dance program. This class is an entry into the creative trajectory that later leads to composition and dance making. Improvisation A, B, C, and D are recommended for students who have already taken beginning improvisation and want to explore this form further.

## Labanotation/Repertory

### *Rose Anne Thom*

#### *Open—Year*

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

**Beverly Emmons**

*Advanced—Year*

The art of illuminating dance is the subject of this component. We will examine the theoretical and practical aspects of designing lights for dance. Students will create original lighting designs for Dance program concerts.

*Preference will be given to seniors and graduate students.*

## Modern and Post-Modern Practice

**Emily Devine, Merceditas Mañago-Alexander, Peter Kyle, Irène Hultman**  
*Open—Year*

In these classes, emphasis will be on the continued development of basic skills, energy use, strength, and control. Intermediate and advanced students will study more complex movement patterns, investigate somatic use, and concentrate on the demands of performance. At all levels, attention will be given to sharpening each student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

## Movement for the Urban Village: Dances of the African Diaspora

**Shalewa Mackall**

*Open—Year*

In this class students explore what has been called "the democratic equality of body parts" in dances from the African diaspora, as we survey the techniques, traditions, rhythms, and transformations of social and spiritual dances from all corners and all eras of the African diaspora—from the savannas of the Ancient Mali Empire and the bembes of Santiago, Cuba, to underground dance clubs and the contemporary concert stage.

## Music for Dancers

**William Catanzaro**

*Open—Year*

The objective of this course is to provide dance students with the tools to better understand relationships between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the

opportunity to play percussion instruments.

*Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Performance Project: Fall 2010

**Megan Boyd, Luca Kito**

*Open—Fall*

Dance and Digital Media Project 2010

This class will explore improvisation and choreography as basic material for composing in video format. Each day will be dedicated to dancing in the studio, shooting dancing with lighting and green screen, and research about editing dance on video compositionally. Participants should wear/bring white dance tops, dark dance pants, any portable video camera (optional), and a personal laptop computer (optional). This project will culminate in a final performance/presentation at Sarah Lawrence College.

## Performance Project: Spring 2011

**Jennifer Way Rawe, Tom Rawe**

*Open—Spring*

Twyla Tharp's "The One Hundreds"

Twyla Tharp's "The One Hundreds" is, in her words, "...an exercise in aesthetic and physical deterioration." This dance is a series of 100 11-second movement phrases performed in three sections. In the first section, two skilled dancers, in unison, perform 100 movement phrases separated by four seconds of stillness (approximately 25 minutes); in the second section, five dancers perform 20 phrases each without pause (approximately five minutes); and in the third section, 100 people perform one phrase each (11 seconds). The movements are based on activities that anyone, including untrained dancers, could do—such as skip, hop, shiver, and shake—and are performed in silence. As the time diminishes, so does the rigor and definition of the dancing. And at the climactic display of 100 soloists, the phrases become mere shadows of themselves

## RumbaTap

**Max Pollak**

*Open—Spring*

This class offers students different ways to access their inner rhythm machine and to explore the most immediate and natural physical outlets for the music in their mind. Improvisation will be part of this process. Although some tap technique will be covered and incorporated, the class focuses on body percussion/rhythmic coordination and a general understanding of the earth-shattering power of Afro-Cuban culture, music, and dance.

## Senior Seminar

**Sara Rudner**

*Advanced—Year*

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## Teaching Conference

**Rose Anne Thom**

*Advanced—Year*

An inquiry into the ways in which dance might be taught in various settings and under various conditions, detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

*For advanced and graduate students. Students may enter this yearlong course in the second semester only with permission of the instructor.*

## Yoga

**Patti Bradshaw**

*Open—Year*

This course offers students the opportunity to study the ancient art of Yoga. Classes emphasize the union of spirit, mind, and body through practices that include breathing techniques, vocalizations, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

## 2011-2012

## African Dance

*Spring*

In this class, students will explore the fundamental aesthetic of African dance. There will be an emphasis on work to internalize the intricacies of African polyrhythm. Students will spend time exploring the cultural meaning and importance of grounding, strength, and stability, which are essential to the form. Learning African dance exposes students to the meaning of dance in African culture. This class also builds personal awareness, as it transcends cultural boundaries. Classes will be accompanied by live drumming.

## Anatomy in Action

**Peggy Gould**

*Year*

How is it possible for humans to move in the multitude of ways that we do? Learn to develop your X-ray vision of the human being in motion in a course that combines movement practice, drawing, lecture, and problem solving. In this course, movement is the vehicle for exploration of our profoundly adaptable anatomy. In addition to making drawings as we study the entire musculoskeletal system, we will learn Irene Dowd's "Spirals™," a comprehensive warm-up/cool-down for dancing that coordinates all joints and muscles through their fullest range of motion. Insights gained in this course can provide tremendous inspiration in the creative process.

## Anatomy Seminar

**Peggy Gould**

*Year*

This is an opportunity for advanced students who have completed Anatomy/Kinesiology to pursue their study of anatomy in greater depth. Each student will develop a specific project that will allow further exploration of functional anatomy. We will meet as a group on alternate weeks to discuss questions and share experiences.

## Ballet

**Barbara Forbes**

*Year*

At all levels, ballet studies will guide students in creative and expressive freedom by enhancing the qualities of ease, grace, musicality, and symmetry that define the form. To this end, we will explore alignment with an emphasis on anatomical principles and enlist the appropriate neuromuscular effort needed to dance with optimal integration of every aspect of the individual body, mind, and spirit.

## Belly Dance

**Sarah Hassan**

*Fall*

This course will examine the basic movements of Raqs Sharqi, otherwise known as Middle Eastern belly dance. We will blend traditional steps with elements of Tribal Fusion that take inspiration from flamenco, African, and North Indian classical dance. Emphasis will be on proper alignment, coiling, muscle isolation, and gaining strength in the core and arms. Particular attention will be paid to combining cabaret-style belly dance technique with slow, sinuous movements set to a variety of musical traditions from Balkan beatbox to Egyptian folk. Yoga postures will be used for ease of transition between movements and to demonstrate the use of the

carriage in belly dance. Cultural context will be addressed in class, and short readings will be suggested but not required.

## Composition A, B, and C

**Emily Devine, Dan Hurlin, Sara Rudner**

Movement is the birthright of every human being.

These components explore its expressive and communicative possibilities by introducing different strategies for making dances. Problems posed run the gamut from conceptually driven dance/theatre to structured movement improvisations. These approaches vary depending on faculty. Learn to mold kinetic vocabularies of your own choice and incorporate sound, objects, visual elements, and text to contextualize and identify your vision. Students will be asked to create and perform studies, direct one another, and share and discuss ideas and solutions with peers. Students are not required to make finished products but to involve themselves in the joy of creation.

## Contact Improvisation

**Kathy Westwater**

**Year**

This course will examine the underlying principles of an improvisatory form predicated on two or more bodies coming into physical contact. Contact Improvisation, which emerged in the 1960s out of the Judson Experimental Dance Theater, combines aspects of social and theatrical dance, bodywork, gymnastics, and martial arts. We will explore movement practices that enhance our sensory awareness, with an emphasis on action and physical risktaking. Contemporary partnering skills, such as taking and giving weight and finding a common "center," will provide a basis for further exploration.

## Dance Fundamentals

**Merceditas Mañago-Alexander**

**Year**

This class is an introduction to the basic principles of contemporary and ballet practices. The fundamentals class will develop skills basic to all movement studies, such as dynamic alignment through coordination and integration of the neuro/skeletal/muscular system, strength, balance, and basic spatial and rhythmic awareness.

## Dance History

**Rose Anne Thom**

**Year**

This is a course in the history of performance in the United States from the early 20th century to the present, as exemplified by the dancers, choreographers, and teachers who brought about notable changes in the art. The relationship of dance to the larger cultural

environment will be discussed, with emphasis placed on the dance of our time. This course is designed to help the student relate his or her own work to the development of the art and to encourage creative critical perception.

## Dance Making

**Sara Rudner, Dan Hurlin, John A.**

**Yannelli, William Catanzaro**

**Year**

Individual choreographic projects will be designed and directed by students with special interest and experience in dance composition. Students and faculty will meet weekly to view works-in-progress and to discuss relevant artistic and practical problems. Whenever possible, the music for these projects, whether new or extant, will be performed live in concert. Dance Making students are encouraged to enroll in Lighting Design and Stagecraft for Dance.

## Dance Meeting

**Year**

This is a monthly gathering of all Dance Thirds in which we share ongoing student interests and invite guests to teach, perform, and inform. Topics have included dance injuries, dance therapy, kinesthetic awareness, nutrition, world dance forms, and presentations by New York City choreographers.

## Dance Training Conference

**Liz Rodgers**

**Year**

Students taking a Dance Third will confer with the instructor at least once per semester to address individual dance training issues. Overall progress, specific challenges, and short- and long-term goals may be addressed here. If applicable, students will learn supplemental exercises to be done independently, addressing factors such as strength, flexibility, kinesthetic awareness, and movement coordination. Dance Training Conference is required for all students taking a Dance Third. It is offered to support the work being done in movement practice classes, rehearsals, and performance projects.

## Feldenkrais: Awareness Through Movement®

**Barbara Forbes**

**Year**

Moshe Feldenkrais believed that "rigidity, mental or physical, is contrary to the laws of life." His system of somatic education develops awareness, flexibility, and coordination as students are verbally guided through precisely structured movement explorations. The lessons are done lying on the floor, sitting, or standing; and they

gradually increase in range and complexity. Students are required to bring their full attention to their experience in order to develop their capacity for spontaneous, effortless action. Self-generated learning will release habitual patterns, offer new options, and enhance the integrated activity of the entire nervous system.

## First-Year Studies in Dance

### **Peggy Gould** FYS

The Dance program encourages first-year students to study aspects of dance in an integrated and vital curriculum of technical movement practices, improvisation, and dance history. In technical practice, attention will be given to sharpening the student's awareness of space and time, use of energy, articulation of form through sensation, and understanding of functional anatomy. Improvisation classes provide students of all experience levels with opportunities to explore and generate movement from a variety of specific viewpoints. Vocabulary, strength, and awareness will be expanded through group and individual problem solving. In dance history, students will be introduced to the history of concert dance in the United States from the early 20th century to the present. The First-Year Studies Third differs from the regular Dance Third in that students have an additional weekly forum in which to consider and develop critical perspectives on dance as an art form through reading, writing, discussion, and movement studies, building skills in each of those areas throughout the year. Emphasis is placed on developing the skills necessary for effective communication, independent research, and study.

## Improvisation

### **Emily Devine, Peggy Gould, Kathy Westwater**

Merge your mind and body in the moment through dance improvisation. This invaluable creative mode will help you recognize, embody, and develop sensations and ideas in motion. Internal and external perceptions will be honed while looking at movement from many points of view—as an individual or in partnership with others. Beginning Improvisation is required for all students new to the Dance program. This class is an entry into the creative trajectory that later leads to composition and dance making. Improvisation A, B, C, and D are recommended for students who have already taken beginning improvisation and want to explore this form further.

## Improvisation: Embodied Awareness

### **Barbara Forbes** Year

In Awareness Through Movement® (ATM) lessons, we can learn how to sense subtle differences and let go of habits of inhibition and expectation. We will translate the particular quality of ATM into the possibility of a more flexible self-image, exploring our ability to practice mindful spontaneity. The process of examining our patterns of moving, thinking, sensing, and feeling will allow the creation of innovative movement designs, spatial configurations, and dynamics—ultimately facilitating more creative and effective action in life.

## Labanotation/Repertory

### **Rose Anne Thom** Year

This course will cover elementary and intermediate levels of Laban's system of movement notation. Students will concentrate on correct observation and analysis of movement, writing facility, and the ability to read and perform authentic historical dance forms. Reconstruction and performance of a notated work from the modern dance or ballet repertoire will be the culmination of the second semester's work.

## Lighting Design and Stagecraft for Dance

### **Beverly Emmons,** Year

The art of illuminating dance is the subject of this component. We will examine the theoretical and practical aspects of designing lights for dance. Students will create original lighting designs for Dance program concerts.

## Modern and Post-Modern Practice

### **Emily Devine, Peter Kyle, Gwen Welliver**

In these classes, emphasis will be on the continued development of basic skills, energy use, strength, and control. Intermediate and advanced students will study more complex movement patterns, investigate somatic use, and concentrate on the demands of performance. At all levels, attention will be given to sharpening each student's awareness of time and energy and to disciplining the body to move rhythmically, precisely, and in accordance with sound anatomical principles.

## Music for Dancers

### **William Catanzaro** Year

The objective of this course is to provide dance students with the tools to better understand relationships

between music and dance. Students will expand their knowledge of musical elements, terminology, and procedures and learn the basics of rhythmic notation. Students will also learn how to scan musical scores with various degrees of complexity and explore the diverse rhythmic styles that have developed in response to different geographical, social, and philosophical conditions. This course will provide students with the opportunity to play percussion instruments.

## **Performance Project**

**Patti Bradshaw**

*Fall*

Ms. Bradshaw will create a dance and visual-art event that is an ode to the mysterious and compelling nature of the natural world. It will be an imaging of the constant change that occurs in nature as everything under the sun comes into focus, evolves, and dissolves away. The working title of the project is "Songs of Despair, Songs of Bliss." Students will build and work with puppets, objects, and costumes, as well as movement. The creative process will include structured improvisatory explorations, flanked by intervals of meditative practices that explore the movement in stillness and the stillness in movement. Attention will be paid to bringing out the unique abilities of each participant and to creating a multilayered experience for the performers and for the audience.

## **Performance Project, Yvonne Rainer's "Trio A" and "Chair Pillow"**

**Pat Catterson**

*Spring*

Yvonne Rainer's classics of American postmodern dance, "Trio A" and "Chair Pillow," will be taught by Pat Catterson and performed at Dia Beacon in May 2012. "Trio A" (1966) is an uninterrupted series of complex, challenging movements consisting of task-oriented actions. The dance emphasizes neutral

performance and features no interaction with the audience. The dancer never makes eye contact with his/her observers. "Chair Pillow" (1969) is an investigation of minimalist dance aesthetic using two props (a chair and a pillow).

## **Senior Seminar**

**Sara Rudner**

*Year*

This class is designed to support the creative and technical practices, as well as the practical concerns of students in their senior year. It will also serve as a forum for discussions of art practices in other media and the nature of the creative process. Choreographic projects will be presented and discussed in seminar and in conference.

## **Teaching Conference**

**Rose Anne Thom**

*Year*

An inquiry into the ways in which dance might be taught in various settings and under various conditions, detailed study of kinesthetic, verbal, and creative factors in teaching will be presented and analyzed in terms of teaching objectives. Students will be placed as practice teachers, under supervision, in dance classes on campus and in community schools.

## **Yoga**

**Patti Bradshaw**

*Year*

This course offers students the opportunity to study the ancient art of Yoga. Classes emphasize the union of spirit, mind, and body through practices that include breathing techniques, vocalizations, and postures (asanas). By offering clear principles of biomechanical alignment and balance, the practice develops integrated strength and flexibility and helps dancers interweave technique and artistry.

# Design Studies

## 2006-2007

Full descriptions of the courses may be found under the appropriate disciplines.

**Consuming Architecture: Economics, Identity, and Control in the Built Environment** (p. 43), Joseph C. Forte *Art History*

# Economics

## 2002-2003

### Development and Underdevelopment

**Jamee K. Moudud**

*Intermediate—Spring*

This course will present a composite picture of the problems of growth and development in the world's less-developed countries. At every stage we will address the issues from a variety of theoretical perspectives. We will deal first with the nature of economic underdevelopment. General problems with the measurement of poverty and inequality will be considered, and we will take into account various indicators that have been proposed by the United Nations. We also will deal with the question of environmental destruction and the implications for gender. In the second section we will deal with an historical and theoretical understanding of the causes and persistence of international economic inequalities. We will seek to answer a particular question: Is underdevelopment an "accident" of history, the result of policy "mistakes," or are there more structural causes behind it? Finally, we will deal with the question of economic growth and both neoliberal/free market and alternative macroeconomic and industrial policies. The focus of this section will be on foreign trade, the role of the state and multinational corporations, and the debates regarding the private sector vs. the public sector in the development process. Special emphasis will be placed on the IMF's structural adjustment policies. Intermediate.

### Economic Growth and Social Policy

**Jamee K. Moudud**

*Open—Fall*

In the United States as well as in other countries there has been a heated debate for several decades over the purpose and extent of the welfare state. Economists have entered this debate with differing views over the degree to which the government should intervene in the economy in order to provide a social safety net and improve macroeconomic performance. Until the late 1960s the general consensus was that some optimal combination of social justice and economic efficiency could be attained via Keynesian-type policies. The inspiration of this policy orientation was the Beveridge Report. However, the rise to dominance of free-market policies in the wake of the economic crises of the 1970s led to the opposite view. The mainstream view became that economic austerity is the key to long-run growth and prosperity. Subsequently, there has been an ongoing debate over the economic effects of the welfare state in

particular and government spending in general. Does government social spending reduce private investment spending, or does it facilitate economic growth? This course will examine these issues from a number of theoretical perspectives. We will review the economic rationale for the welfare state as articulated by both neoclassical and non-neoclassical economists. We will examine the standard neoclassical arguments regarding welfare cutbacks and contrast them with alternative approaches. Finally, we will apply these differing frameworks to specific policy debates, including the debates over crime and incarceration and ongoing welfare reform.

### Economic Issues in the Euroland

**David Jestaz**

*Intermediate—Spring*

The course will deal with the monetary unification and its consequences. We will detail the economic context in the past two decades. Three important issues will be treated: the European Exchange Rate mechanism (ERM) role, the Labor market institutional differences, and the stability of the monetary union. The ERM has gathered European countries together more or less successfully for twenty years. We will show to what extent it has influenced and designed both economic policies and the criteria that were necessary to become a member of the new currency. Labor markets are extremely different in Europe and there is a variety of social compacts. The course will offer a challenge to the conventional definition of labor market flexibility. The stability of the Union will be studied through the lens of American experience. Stability requires population flows inside the Union or fiscal federalism. Because these two elements are still missing, we will end the course by outlining reforms that are necessary to consolidate the system.

### Economics of Inequality

**Marilyn Power**

*Open—Fall*

Economic inequality can be defined as unequal access to income, wealth, and material well-being. In the past two decades the United States has experienced growing inequality of income and wealth. The rate of poverty has grown, as has affluence at the top. The richest five percent of American families currently appropriate more income than the bottom forty percent and own sixty percent of the society's wealth. Cuts in government-funded social programs have exacerbated the deterioration in material well-being among the poor. Economists differ in their analyses of the growing gap and in their understanding of inequality in general. Are differences in earnings, for example, a result of freely chosen investment in "human capital," or are they a reflection of inequities by race, class, and gender in the political-economic bargaining arena? What role has

globalization of production played in the widening income gap? Should public policy be geared to alleviating inequality, or is laissez-faire the appropriate approach? In this course we will look at the theoretical controversies within economics on the topic of inequality as well as at the public policy debates that emerge from these disagreements. The policy discussions will focus on the controversies over welfare reform, education, and immigration policy.

## First Year Studies: Economic Globalization: Claims and Controversies

**Jamee K. Moudud**

*FYS*

The conventional wisdom with regard to globalization is that free trade, international capital mobility, and free market policies are universally beneficial for all countries. On the other hand, the growing worldwide anti-globalization movement claims that it is precisely these policies, as well as other ones, which are responsible for deepening international inequalities. This course will investigate these controversies. Its aim is to foster understanding of the theoretical underpinnings as well as the economic, social, and political consequences of globalization policies. We will deal with a number of questions. For example, what are the assumptions of free trade theory, and what are the policies that follow from alternative approaches to foreign trade? What roles do financial flows and multinational corporations play in the world economy? What are the implications of foreign trade and global capital flows for uneven international development? We will also deal with policy attempts to roll back the welfare state in the advanced countries, the International Monetary Fund/ World Bank policies in the Third World, and the implications of globalization for gender inequality and environmental destruction. Last but not least, we will address the economic basis of some of the progressive and reactionary political forces that globalization may have unleashed. It is hoped that this comprehensive study of globalization will encourage students to explore economic policies from a variety of perspectives.

## Political Economics of the Environment

**Marilyn Power**

*Open—Fall*

Is it possible to provide economic well-being to the world's population without destroying the natural environment? Is sustainable development a possibility or a utopian dream? How do we determine how much pollution we are willing to live with? Why are toxic waste dumps overwhelmingly located in poor, frequently minority, communities? Whether through activities such

as farming, mining, and fishing, through manufacturing processes that discharge wastes, or through the construction of communities and roadways, human economic activity profoundly affects the environment. The growing and contentious field of environmental economics attempts to analyze the environmental impact of economic activity and to propose policies aimed at balancing economic and environmental concerns. There is considerable debate, with some theorists putting great faith in the market's ability to achieve good environmental outcomes, while others advocate much more direct intervention in defense of the environment, and some question the desirability of economic growth as a goal. Underlying these differences are political economic questions of distribution of power and resources among classes and groups within the United States and across the globe. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. The concepts will be developed through an examination of ongoing policy debates on issues such as air pollution and global warming, the decimation of the world's fish population, automobiles and the reliance on petrochemicals, and the possibility of sustainable development.

## The Economic History of the European Union

**David Jestaz**

*Open—Fall*

The European economic integration process emphasizes fundamental questions for contemporary world and may give insightful comparisons with the American economical and political unification. A glance at the history of the twentieth-century will present issues surrounding the unification process. We will study in detail the historical context of major European countries and highlight a variety of aspects: political, sociological, demographic, etc. We will focus then on how countries decided to unify, on which basis, and with which instruments. We will also explain the European institutional system and how it is related to each country's institutions. The course will give to students a very good understanding of the inter-relation between the economical process and the political issues. The semester will end with a brief presentation of the monetary unification process from the end of the seventies toward the advent of the single currency.

## Understanding Capitalism: A Radical Perspective

**Frank Roosevelt**

*Intermediate—Spring*

The first person to raise questions about the accounting practices of the Enron Corporation was a young

journalist on the staff of *Fortune* magazine. She told *The New York Times* that her ability to raise such questions had much to do with the particular kind of undergraduate education she had received. "When you come out of a liberal arts background," she said, "you want to know why something is the way it is." In the business of accounting, she went on, "There is no reason why. It's just based on rules. The numbers can lie. There is no fundamental truth underlying them." The purpose of this course is to encourage students to ask why. Why is capitalism expanding around the globe? How should we respond to the resulting pressures of globalization? Why is the pace of change, both in the economy and in our everyday lives, generally accelerating? Why has income distribution become more unequal, both within and among countries? Why does an economy grow, and why do recessions occur? Are we living in a "new economy" and, if we are, how is it different from the old one? Why is the number of mergers between large corporations, including media conglomerates, increasing—and what, if anything, can be done to restrain oligopolies from controlling more of our markets and restricting our access to diverse sources of information and opinion? This course will present the theoretical concepts and factual information a person needs in order to understand and participate in the economic policy debates of our times. We will trace the historical evolution of capitalism and explore alternative theoretical interpretations of it, focusing particularly on the ideas of Adam Smith, Karl Marx, and J. M. Keynes. Basic concepts normally covered in an introductory economics course will be explained and discussed using the textbook *Understanding Capitalism* by Samuel Bowles and Richard Edwards. Throughout the course we will attempt to apply the theories being studied to the events of the day, and students will be encouraged to focus their conference work on current issues. Documentary films will be used, and daily perusal of the print or online versions of *The New York Times* or *The Wall Street Journal* will be essential. This is an intermediate-level course, open to sophomores, juniors, and seniors who have previously taken at least one college-level course in the social sciences, philosophy, or history.

## 2003-2004

### First-Year Studies: Understanding Capitalism

**Frank Roosevelt**  
FYS

The first person to raise questions about the accounting practices of the Enron Corporation was a young journalist on the staff of *Fortune* magazine. She told *The New York Times* that her ability to raise such questions had much to do with the particular kind of undergraduate education she had received. "When you

come out of a liberal arts background," she said, "you want to know why something is the way it is." In the business of accounting, she went on, "there is no reason why. It's just based on rules. [The] numbers can lie. [T]here is no fundamental truth underlying [them]." The purpose of this course is to encourage students to ask why. Why is capitalism expanding around the globe? How should we respond to the resulting pressures of globalization? Why is the pace of change, both in the economy and in our everyday lives, generally accelerating? Why has income distribution become more unequal, both within and among countries? Why does an economy grow, and why do recessions occur? Are we living in a "new economy" and, if we are, how is it different from the old one? Why is the number of mergers between large corporations, including media conglomerates, increasing—and what, if anything, might be done to restrain oligopolies from controlling more of our markets and restricting our access to diverse sources of information and opinion? This course will present the theoretical concepts and factual information a person needs in order to understand and participate in the economic policy debates of our times. We will trace the historical evolution of capitalism and explore alternative theoretical interpretations of it, focusing particularly on the ideas of Adam Smith, Karl Marx, and J. M. Keynes. Basic concepts normally covered in an introductory economics course will be explained and discussed using two very different textbooks—a conventional one, *Economics USA* by Mansfield and Behraves, and a radical one, *Understanding Capitalism* by Bowles, Edwards, and Roosevelt. Throughout the course we will apply the theories we are studying to events of the day, and students will be encouraged to focus their conference work on current issues. Documentary films will be used, and daily perusal of the print or online versions of *The New York Times* or *The Wall Street Journal* will be essential.

### Introduction to Economic Theory and Policy

**Jamee K. Moudud**  
Open—Year

This is a course about controversies. As a social science, economics is a field that consists of several different schools of thought—each of which has its own particular way of analyzing the market economy. This course has two goals. First, we examine the theoretical underpinnings of the major schools of economic thought, their empirical/historical predictions, and their relationship to current and past policy issues. Second, we will use our knowledge of the basics of economic theory to study contemporary domestic and international issues. Topics will include the study of firms and market competition, labor markets and unemployment, inflation, growth, business cycles, the recurrence of economic crises, the effects of government

spending, and international competition. The theoretical frameworks developed in the course will be used to answer the following questions: What are the nature and consequences of the Bush tax cut proposals? What have been the trends in wages and inequality in the United States? What are the debates regarding campaign finance reform in the United States, and what are the implications for the way political campaigns are financed? How are we to understand the stock market boom of the late 1990's and its collapse? What was the basis of the Enron debacle and the related corporate scandals? What were the economic bases and political foundations of East Asian industrialization? How are we to understand the ongoing controversies regarding globalization, especially the role of multinational corporations in the global economy? What is the nature of global arms policies, and what are the implications of the arms trade for economic development, human rights, and democratization? What is the nature of global poverty?

## Macroeconomic Theory and Policy

**Marilyn Power**

*Intermediate—Spring*

Macroeconomics is the study of the economy in the aggregate and addresses questions such as the causes of economic growth and recession, the relationship between unemployment and inflation, the effects of changes in the money supply on the real economy, and the effects of government spending on the private economy. Attempts to address these questions have resulted in a great deal of theoretical controversy, and this controversy is reflected in disagreements over government policy. This course will present the basic models of macroeconomics, examine the views of differing macroeconomic theories (e.g., Keynesian, monetarist, rational expectations, post-Keynesian, neo-Marxist), and review recent macroeconomic policy practice and debates.

## Money and Finance: Manias, Panics, and Crashes

**Jamee K. Moudud**

*Intermediate—Fall*

This course is about money, debt, and banking in the domestic and global economies. A variety of different theoretical perspectives will be used to study the way money enters the economy, the nature of bank credit, the relationship between finance and business cycles, and global financial flows. One key element of the course will be to understand the nature of business cycles and how both "loan pushing" and the shortage of bank credit can generate huge swings in economic activity. The course will begin with a discussion of the different ways of studying money in the history of economic thought. In this context we will study the

approaches of the Currency and Banking schools, Marx's and Keynes's analyses, and modern monetarist and post-Keynesian approaches. We will then move on to various models of banking and finance and the relationship between investment, savings, and finance. We will study the operations of central banks and how they attempt to regulate aggregate economic activity. Questions we will explore include the following: What is the history of the international monetary system? What is the history of financial crises in the United States? How have global debt crises arisen? What are the roles of the International Monetary Fund, the World Bank, and the World Trade Organization? Theory and policy will be compared and contrasted in an historical context. The implications of the European Monetary Union and the Euro, with its transition to a major currency area, will be considered. The course will end with a discussion of international financial flows and a study of the East Asian financial crisis of the late 1990's.

## Political Economics of the Environment

**Marilyn Power**

*Open—Year*

Is it possible to provide economic well-being to the world's population without destroying the natural environment? Is sustainable development a possibility or a utopian dream? How do we determine how much pollution we are willing to live with? Why are toxic waste dumps overwhelmingly located in poor, frequently minority, communities? Whether through activities such as farming, mining, and fishing; through manufacturing processes that discharge wastes; or through the construction of communities and roadways, human economic activity profoundly affects the environment. The growing and contentious field of environmental economics attempts to analyze the environmental impact of economic activity and to propose policies aimed at balancing economic and environmental concerns. There is considerable debate, with some theorists putting great faith in the market's ability to achieve good environmental outcomes, while others advocate much more direct intervention in defense of the environment, and some question the desirability of economic growth as a goal. Underlying these differences are political economic questions of distribution of power and resources among classes and groups within the United States and across the globe. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. The concepts will be developed through an examination of ongoing policy debates on issues such as air pollution and global warming, the decimation of the world's fish population, automobiles and the reliance on petrochemicals, and the possibility of sustainable development.

## Politics and Economics in America: Markets, Democracy, and the State

*1 Franklin, 1 Resnik*

*Open—Year*

The interaction of politics and economics is one of the main factors that define a society. The power of that interaction and its evolutionary and revolutionary potential affects every aspect of society, from the structures of government to such social structures as the family, religion, law, and education. It helps to explain, for example, how rapid industrialization transformed the United States from a basically agricultural country, which feared central government, into a society with a strong central government and an ever-expanding federal bureaucracy. In this course we will explore the ways in which economics and politics interact to shape a society. We will focus particularly on the United States, looking at such topics as: the state, the market, class, and community (the four major organizing principles of the modern era) but we will also bring in examples from other countries. We will look at both the failures and successes of these processes in the hope that we can understand more fully both the intertwining of politics and economics that defines us and the impact of that phenomenon on our society. Open to any interested student.

## Smith, Marx, and Keynes

*Marilyn Power*

*Intermediate—Fall*

John Maynard Keynes wrote, "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist. Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back." Since capitalism emerged as the dominant economic system in Europe and North America in the eighteenth century, theorists and policymakers have sought to understand the logic of this new way of organizing production and distribution. What determined the price of goods? The wages of labor? The profits to owners of capital? Would capitalism grow unceasingly, suffer from cycles, or would it inevitably decline into stagnation or collapse? Should the government actively regulate the economy, or should it play a minimal role and leave markets to determine outcomes without intervention? Should trade with other countries be regulated or free? What was the responsibility of the government with respect to the poor? Should they be assisted? Controlled? In the vigorous debates over these issues, continuing into the present, Adam Smith, Karl Marx, and John Maynard Keynes are frequently invoked as economic policy. A

careful reading of these authors, however, shows that they were far more complex thinkers than the simplified versions of their ideas commonly circulated. This course will focus on the debates about value, distribution, economic dynamics, and the role of government through a careful reading of Smith, Marx, and Keynes in the original, followed by an examination of modern interpretations of their ideas.

## The State, Prisons, and Welfare

*Jamee K. Moudud*

*Open—Spring*

This course will have as its foundation a discussion of rival perspectives on the nature of the state. That is, we will seek to investigate the following question: Is the state in a democratic political order neutral so that it acts in the interests of all citizens, or is it institutionally and structurally regulated by the interests of the dominant social classes? This central issue will then be used to study two types of activities carried out by the state. We will first deal with the dramatic increase in incarceration rates in the United States, and the rise of what has come to be known as the "prison industrial complex," and seek to examine both conservative and radical explanations of this type of state policy. We will then proceed to a study of the welfare state. In the United States as well as other countries, there has been a heated debate for several decades over the purpose and extent of the welfare state. Economists have entered this debate with differing views over the degree to which the government should intervene in the economy in order to provide a social safety net and improve macroeconomic performance. We will take on these issues by considering a number of different theoretical and political perspectives. The goal of this course is to ensure that students understand the analytical content and economic basis of every policy perspective and also be exposed to some of the sociology/public policy/political science literature on the state and these two types of social policies.

## 2004-2005

## Economic Theories of Justice and Well-Being

*Marilyn Power*

*Intermediate—Year*

How should we define economic well-being? On what basis should we say the economy is doing well, or poorly? What aspects of the economy should be our collective responsibility, and what should be left up to private choices? How do we decide if an economic policy is just? What is a fair wage? An acceptable level of unemployment? What responsibility do we have to alleviate the economic suffering of our fellow citizens? Of other members of the world community? How should

we address inequality by race, ethnicity, or gender? Questions such as these have historically been hotly debated both in economy theory and in public policy—and the debates will continue into the future. This course will critically examine the underlying bases of the debates in differing schools of economic thoughts and their application in specific policy debates. We will read theoretical arguments from classical economists and modern schools of economic thought including neoclassical, post-Keynesian, ecological, feminist, and political economists. Policy issues will include pollution controls and global warming, IMF conditionalities and third world debt, tax justice, wages and working hours, affirmative action, welfare reform, education reform, and immigration policy.

*Open to students with some background in economics or related social sciences.*

## First-Year Studies: Current Economic Issues

**Marilyn Power**  
FYS

Economic questions often seem abstract and distant, yet we are affected on a daily basis by economic forces. Where and how we work, our level of poverty or wealth, and the quality of our environment are all affected by the workings of the economy. Hard-fought political battles revolve around such economic issues as taxation and government spending, the regulation of international trade, the control of pollution, and the proper direction for welfare reform. This course will focus on a series of specific topics including the economics of poverty and discrimination, the economics of education, the causes of inflation and unemployment, globalization and economic development, and the economics of the environment. Student interests will help determine other topics. Emphasis will be on reading contrasting arguments on each issue. The goal is to provide a basic introduction to economic theory while developing the conceptual tools and factual information needed to participate in the critical economic and political debates of our day.

## Global Inequality, Underdevelopment, and the State

**Jamee K. Moudud**  
*Open—Spring*

Primarily because of street protests against corporate globalization and campaigns that have raised awareness about global inequalities and the power of transnational corporations, there is growing public debate about the effects of globalization. The debate essentially rages between those, on the one hand, who argue that free trade and transnational corporations will tend to reduce international inequalities and, on the other hand, those who argue that these factors cause the inequalities.

Further, the debate is also about the extent and scope of state involvement. That is, should there be more or less government involvement in lowering international inequalities and domestic poverty? Having these controversies as the backdrop, this course will deal with specific issues such as the rise of capitalism, the role of the state in the industrialization process, the effects of multinational corporations, the links between globalization and the welfare state, International Monetary Fund/ World Bank policies, third world debt crises, gender inequality, and environmental destruction.

## Introduction to Economic Theory and Policy

**Jamee K. Moudud**  
*Lecture, Open—Year*

This is a course about controversies. As a social science, economics is a field that consists of several different schools of thought each of which has its own particular way of analyzing the market economy. This course has two goals. First, we examine the theoretical underpinnings of the major schools of economic thought, their empirical/historical predictions, and their relationship to current and past policy issues. Second, we will use our knowledge of the basics of economic theory to study contemporary domestic and international issues. Topics will include the study of firms and market competition, labor markets and unemployment, inflation, growth, business cycles, the recurrence of economic crises, the effects of government spending, and international competition. The theoretical frameworks developed in the course will be used to answer the following questions: What are the consequences of the Bush tax cuts? How are we to understand the problems of racial and gender discrimination within the context of capitalism? What have been the trends in wages and inequality in the United States? What are the debates regarding campaign finance reform in the United States, and what are the implications for the way political campaigns are financed? How are we to understand the stock market boom of the late 1990's and its collapse? What was the basis of the Enron debacle and the related corporate scandals? What were the economic bases and political foundations of East Asian industrialization? How are we to understand the ongoing controversies regarding globalization, especially the role of multinational corporations in the global economy? What is the nature of global arms policies, and what are the implications of the arms trade for economic development, human rights, and democratization? What is the nature of global poverty?

## Markets and Hierarchies: Economic Systems in History and Theory

Frank Roosevelt

*Advanced—Year*

Today, most of the nations that were formerly described as "socialist" are, in one way or another, involved in a transition to capitalism. As a result the entire world economy is being transformed. In this course we will review the origins and development of capitalism and examine the rise and demise of Soviet-style "socialism." To begin this work, we will study the theories as well as the histories of different types of economic systems (e.g., Adam Smith, Karl Marx, J. M. Keynes, feudalism, capitalism, socialism). We will look at countries still governed by communist regimes (e.g., China, Cuba, Vietnam, North Korea) and then consider the experiences of nations that were once governed by communist regimes but are now in transition to capitalism (e.g., Poland, Hungary, the Czech Republic, and Slovenia as well as the numerous other states that were previously included in the Soviet empire). We will give substantial attention to the variety of advanced capitalist economic systems (e.g., those of the United States, Japan, France, Germany, and Sweden) in which most of the world's more affluent people live, and we will also evaluate the chances for success of the alternative paths to economic development of the countries in which a majority of the world's poorest people live (e.g., India, Iran, and Mexico as well as the aforementioned countries still governed by communist regimes). A central concern will be the long ideological and political conflict over the appropriate role of markets as a way of allocating economic resources and organizing social relationships; this will lead to consideration of arguments for and against nontraditional forms of socialism such as "market socialism." The context for all our studies will of course be the global capitalist economy. Indeed, one of the questions to be considered is can any alternative to capitalism be established—or sustained—as long as capitalist globalization continues to spread without effective opposition? For conference work, students will focus on the history and present status of the economy of a particular country, not necessarily one of the ones mentioned in this course description.

*This is an intermediate-level course; some prior study in history, public policy, or a social science is required.*

## 2005-2006

### Economics: Mainstream and Radical Perspectives

Frank Roosevelt

*Open—Year*

Why is capitalism expanding around the world? How should we respond to the pressures of globalization?

Why does the pace of change, in our everyday lives as well as in the economy, seem to be accelerating? What causes an economy to grow or to slide into a recession? Why is the distribution of income and wealth becoming more unequal, both within and among nations? In particular, why does the gap between the average compensation of the top 100 American CEOs and the average U.S. production worker's wage continues to grow? Are we living in a "new economy" and, if we are, how is it different from the old one? What explains the proliferation of business mergers and acquisitions—especially those involving media conglomerates—and what, if anything, can be done to stop large firms from increasing their domination of our markets? How can we, as citizens, gain greater access to diverse sources of information and opinion when fewer and fewer corporations own and control more and more of our media outlets? This course will present the theoretical concepts and factual information a person needs in order to understand and participate in today's economic policy debates. We will trace the historical evolution of capitalism and examine various theories put forward to explain its workings, focusing in particular on the ideas of Adam Smith, Karl Marx, and J. M. Keynes. Basic economic concepts will be elucidated using two competing but complementary textbooks—a mainstream one, *Basic Economics* by Matrianna and Hailstones, and a radical one, *Understanding Capitalism* by Bowles, Edwards, and Roosevelt. Throughout the course we will apply theoretical concepts to contemporary developments in the economy, and students will be encouraged to focus their conference work on current issues. Documentary films will be screened, and daily reading of either *The New York Times* or *The Wall Street Journal* will be essential.

### First-Year Studies: Unemployment, Inequality, and Poverty

Jamee K. Moudud

FYS

This course will deal with some of the central problems of our times: unemployment, inequality, and poverty. Throughout the course of this year, we will be analyzing both the domestic and international dimensions of these issues. A central goal of this course will be to understand how the problems confronting destitute and economically marginalized social groups are analyzed in different intellectual traditions in economics. Another goal of the course is to introduce students to rival theoretical traditions in economics and their different approaches to the study of unemployment and income distribution. We will ask, for example, whether the wages a worker earns are determined by his or her productivity or through some process of social conflict. Is unemployment a matter of choice or is it determined by larger macroeconomic processes? Why do some people say that inequality is "bad" while others reject

this viewpoint? Can or should the government do anything to deal with problems of unemployment, inequality, and poverty? How is economic inequality addressed in different theoretical traditions? How did the economic crisis of the 1970's give rise to the dominance of New Right ideology in the decades after Reagan and Thatcher were elected, and what were the implications for social policy and the welfare state?

## History of Economic Thought

**Marilyn Power**

*Intermediate—Year*

As industrial capitalism emerged as the dominant economic system in Europe and North America in the eighteenth century, theorists sought to understand the logic of this new way of organizing production and distribution. What determined the price of goods? The wages of labor? The profits to owners of capital? They theorized about the dynamics of the system: What caused the economy to grow? Would it grow unceasingly? Cyclically? Or would capitalism inevitably decline into stagnation or collapse at some point? Theorists were also concerned with the role of government policy in this new capitalist system. Should the government actively regulate the economy, or should it play a minimal role and leave markets to determine outcomes without intervention? Should trade with other countries be regulated or free? What was the responsibility of the government with respect to the poor? Should they be assisted? Controlled? These questions were vigorously debated by political economists from the onset of capitalism, and they continue to be the focus of disagreements among political economists and economists to this day. This course will examine the development of economic theory through a focus on these debates about value, distribution, economic dynamics, and the role of government. The emphasis will be on reading authors in the original, including Adam Smith, David Ricardo, Karl Marx, Alfred Marshall, John Maynard Keynes, Joan Robinson, and Milton Friedman.

*Intermediate. This course is open to students with background in economics, political theory, or related studies.*

## Money, Banking, and Finance: Between Stability and Instability

**Jamee K. Moudud**

*Intermediate—Fall*

This course is about money, debt, and banking in the domestic and global economies. A variety of different theoretical perspectives will be used to study the way money enters the economy, the nature of bank credit, the relationship between finance and business cycles, and global financial flows. One key element of the course will be to understand the nature of business cycles and how both "loan pushing" and the shortage of

bank credit can generate huge swings in economic activity. The course will begin with a discussion of the different ways of studying money in the history of economic thought. In this context we will study the approaches of the Currency and Banking Schools, Marx's and Keynes's analyses, and modern monetarist and post-Keynesian approaches. We will then move on to various models of banking and finance and the relationship between investment, savings, and finance. We will study the operations of central banks and how they attempt to regulate aggregate economic activity. Questions we will explore include the following: What is the history of the international monetary system? What is the history of financial crises in the United States? How have global debt crises arisen? What are the roles of the International Monetary Fund, the World Bank, and the World Trade Organization? Theory and policy will be compared and contrasted in a historical context. The implications of the European Monetary Union and the Euro, with its transition to a major currency area, will be considered. The course will end with a discussion of international financial flows and a study of the East Asian financial crisis of the late 1990's.

*This is an intermediate course requiring some background in economics and/or social science.*

## Political Economics of the Environment

**Marilyn Power**

*Open—Year*

Is it possible to provide economic well-being to the world's population without destroying the natural environment? Is sustainable development a possibility or a utopian dream? How do we determine how much pollution we are willing to live with? Why are toxic waste dumps overwhelmingly located in poor, frequently minority, communities? Whether through activities such as farming, mining, and fishing, through manufacturing processes that discharge wastes, or through the construction of communities and roadways, human economic activity profoundly affects the environment. The growing and contentious field of environmental economics attempts to analyze the environmental impact of economic activity and to propose policies aimed at balancing economic and environmental concerns. There is considerable debate, with some theorists putting great faith in the market's ability to achieve good environmental outcomes, while others advocate much more direct intervention in defense of the environment, and some question the desirability of economic growth as a goal. Underlying these differences are political economic questions of distribution of power and resources among classes and groups within the United States and across the globe. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their

disagreements and on the policy implications of these views. The concepts will be developed through an examination of ongoing policy debates on issues such as air pollution and global warming, the decimation of the world's fish population, automobiles and the reliance on petrochemicals, and the possibility of sustainable development.

## The State, Prisons, and Welfare

**Jamee K. Moudud**

*Open—Spring*

This course will have as its foundation a discussion of rival perspectives on the nature of the state. That is, we will seek to investigate the following question: is the state in a democratic political order neutral so that it acts in the interests of all citizens, or is it institutionally and structurally regulated by the interests of the dominant social classes? This central issue will then be used to study two types of activities carried out by the state. We will first deal with the dramatic increase in incarceration rates in the United States, and the rise of what has come to be known as the “prison industrial complex” and seek to examine both conservative and radical explanations of this type of state policy. We will then proceed to a study of the welfare state. In the United States as well as other countries, there has been a heated debate for several decades over the purpose and extent of the welfare state. Economists have entered this debate with differing views over the degree to which the government should intervene in the economy in order to provide a social safety net and improve macroeconomic performance. We will take on these issues by considering a number of different theoretical and political perspectives. The goal of this course is to ensure that students understand the analytical content and economic basis of every policy perspective and also be exposed to some of the sociology/public policy/political science literature on the state and these two types of social policies.

## 2006-2007

### Finance, Debt, and Instability

**Jamee K. Moudud**

*Intermediate—Spring*

Since the Reagan/Thatcher era of the early 1980's, the conventional wisdom is the doctrine of monetarism and the policy that financial globalization is absolutely central for the development of the global economy. Capital account liberalization is at the core of the International Monetary Fund's (IMF) structural adjustment policies. These policy proposals came into prominence on the heels of the global economic crisis that started in the late 1960's/early 1970's and the Third World Debt Crisis of the 1980's. We will critically analyze the monetarist doctrine by first studying the

nature of money and debt from both the monetarist and alternative approaches. The goal of this part of the course will be to critically understand monetarist policies regarding the possibility and desirability of central bank control over the money supply in order to maintain price stability and keep the balance of payments in equilibrium. These policies are at the core of the IMF's policies. We will also study rival theoretical analyses of business cycles and seek to situate all of these debates in the context of the history of economic thought on monetary issues. The second part of the course will be an analysis of specific financial crises such as the Third World Debt Crisis and the East Asian Crisis of 1997. The aim of this study is to understand whether these crises occurred due to “inappropriate” central bank and state policies, as the IMF claims, or whether they were due to the free-market policies themselves. In this section, we will also discuss some of the social impacts of financial liberalization. Finally, the third part of the course will focus on the policy responses of debt crises as well as their effects. Here, we will focus on alternative policy proposals.

*This is an intermediate course requiring some background in economics and/or social science.*

### First-Year Studies in Economics: Mainstream and Radical Perspectives

**Frank Roosevelt**

*FYS*

Why is capitalism expanding around the world? How should we respond to the pressures of globalization? Why does the pace of change, in our everyday lives as well as in the economy, seem to be accelerating? What causes an economy to grow or to slide into a recession? Why is the distribution of income and wealth becoming more unequal, both within and among nations? In particular, why does the gap between the average compensation of the top 100 American CEOs and the average U.S. production worker's wage continue to expand? Are we living in a “new economy” and, if we are, how is it different from the old one? What explains the proliferation of business mergers and acquisitions—especially those involving media conglomerates—and what, if anything, can be done to stop large firms from increasing their domination of our markets? How can we as citizens gain greater access to diverse sources of information and opinion when fewer and fewer corporations own and control more and more of our media outlets? This course will present the theoretical concepts and factual information a person needs to understand and participate in today's economic policy debates. We will trace the historical evolution of capitalism and examine various theories offered in the past to explain its workings, focusing in particular on the ideas of Adam Smith, Karl Marx, and John Maynard

Keynes. Contemporary economic concepts will be explained using two competing but complementary textbooks—a mainstream one, *Basic Economics* by Matrianna and Hailstones, and a radical one, *Understanding Capitalism* by Bowles, Edwards, and Roosevelt. Throughout the course, we will apply theoretical concepts to contemporary developments in the economy, and students will be encouraged to focus their conference work on current issues. Documentary films will be screened, and daily reading of either *The New York Times* or *The Wall Street Journal* will be essential.

## Global Inequalities, Underdevelopment, and the Role of the State

**Jamee K. Moudud**  
*Lecture, Open—Year*

Primarily because of street protests against corporate globalization and campaigns that have raised awareness about global inequalities and the power of transnational corporations, there is growing public debate about the effects of globalization especially on less developed countries (LDCs). The debate essentially rages between, on the one hand, those who argue that free trade and transnational corporations will tend to reduce international inequalities and, on the other hand, those who argue that these are the factors that cause the inequalities and marginalize the LDCs. Further, the debate is also about the extent and scope of state involvement. We will pose the following questions and seek to engage the controversies that they have engendered. What are the historical roots of international uneven development? Should there be more or less government involvement in lowering international inequalities and domestic poverty? Should the state in LDCs be involved in the process of industrialization, or should this be left to the free market? What was the historical experience of the developed countries with regard to the role of the state and industrialization? What are the social consequences of globalization? After dealing with core theoretical controversies in economic theory, this yearlong lecture will introduce students to some of the most important contemporary debates.

*Open to any interested student.*

## Introduction to Economic Theory and Policy

**Marilyn Power**  
*Open—Year*

Economic theory attempts to explain urgent economic questions such as the causes of growth and depression, unemployment, inflation, poverty, and discrimination; and economic policy attempts to achieve desired

outcomes. Yet there is considerable controversy among theorists over the answers to economic questions and widespread dissatisfaction with the policy outcomes. This course will seek the basis for the controversy by examining the development of economic theory and the application of the theory in policy practice. The approach will emphasize the differing views offered by contending schools of economic thought and make the connection between theoretical assumptions and policy applications. Readings will include both theoretical and concrete policy-oriented writings. Topics will include the role of the Federal Reserve Bank, the effectiveness of public investment, the effects of globalization on the U.S. economy, the effects of mergers and concentration on the behavior of U.S. firms, and the use of government intervention to combat discrimination and poverty.

*Open to any interested student.*

## Macroeconomic Theory and Policy

**Marilyn Power**  
*Intermediate—Fall*

Macroeconomics is the study of the economy in the aggregate and addresses questions such as the causes of economic growth and recession, the relationship between unemployment and inflation, the effects of changes in the money supply on the real economy, and the effects of government spending on the private economy. Attempts to address these questions have resulted in a great deal of theoretical controversy, and this controversy is reflected in disagreements over government policy. This course will present the basic models of macroeconomics, examine the views of differing macroeconomic theories (e.g., Keynesian, monetarist, rational expectations, post-Keynesian, neo-Marxist), and review recent macroeconomic policy practice and debates.

*Intermediate. Prerequisite: A previous course in economic theory.*

## Political Economics of the Environment: Sustainable Development

**Marilyn Power**  
*Open—Spring*

The seventh of the UN Millennium Development Goals reads "Ensure environmental sustainability." Indeed, on the surface, sustainable development is a goal everyone could agree with—who would be for unsustainable development? But in fact, there is no consensus on the meaning of the term: some definitions emphasize the importance of preserving natural capital for future generations, while others aggregate all forms of capital

together, arguing that our only obligation to the future is access to an equivalent standard of living. A related dispute is over what the relationship is between environmental sustainability and human well-being—as well as how the relationship may differ by gender, class, and other factors. This course will examine these differing views of sustainable development both in theory and through the examination of specific development projects. Economists approach environmental questions through three differing theoretical schools: environmental economics, ecological economics, and political economics. These schools use differing techniques to value the environment, offer different understandings of what would be good environmental and economic outcomes, and advocate different policies to achieve sustainability. Underlying these differences are political economic questions of distribution of power and resources both within specific countries and globally. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. Topics will include the policies of the World Bank, sustainable agriculture, the controversial issue of resource privatization, and cases of specific commodities such as gold and cotton that illuminate the problems and complexities of sustainable development.

*Open to any interested student.*

## The Political Economy of the State: The Welfare State and Prisons

**Jamee K. Moudud**

*Open—Fall*

This course will have as its foundation a discussion of rival perspectives on the nature of the state. That is, we will seek to investigate the following question: is the state in a democratic political order neutral so that it acts in the interests of all citizens, or is it institutionally and structurally regulated by the interests of the dominant social classes? This central question will then be used to study two types of state activities that have achieved some degree of prominence in the last 70 years. We will first study the welfare state. In the United States as well as other countries, there has been a heated debate for several decades over the purpose and extent of the welfare state. Economists have entered this debate with differing views over the degree to which the government should intervene in the economy in order to provide a social safety net and improve macroeconomic performance. We will analyze these issues by considering a number of different theoretical and political perspectives. We will then proceed to deal with the dramatic increase in incarceration rates in the United States, and the rise of what has come to be known as the “prison industrial complex” and seek to examine both conservative and radical explanations of

this type of state policy. It is envisaged that students will develop a rigorous theoretical understanding of the variations in these two types of social policies and be able to relate these variations to the long waves of economic activity. The goal of this course is to ensure that students understand the analytical content and economic basis of every policy perspective and also be exposed to some of the sociology/public policy/political science literature on the state and these two types of social policies.

*Open to any interested student.*

## 2007-2008

### Current Debates in Marxian and Post-Keynesian Economics

**Jamee K. Moudud**

*Advanced—Spring*

This course deals with advanced topics in Marxian economics and, where relevant, compares Marxian perspectives with post-Keynesian/Institutionalist approaches. Where relevant, we will also discuss neoclassical theory. We will begin with the notion of surplus value and extend it to a general discussion of Marx's distinction between production and nonproduction activities, a distinction that will be used to analyze the impact of state policies on long-run growth. We will then proceed to an analysis of technological change and use it to study industrial competition, the recurrence of generalized economic crises, and the persistence of unemployment. Marx's theory of competition will be used to study two issues. First we will use it to study wage differentials on the basis of race and gender faced by workers with similar skill levels. Second, it will be used to discuss rent in agriculture, an issue that will lead to the analysis of oil crises. The final part of the course will deal with current debates among heterodox economists regarding the capacity utilization rate in the long run and the nature of the “long run” itself. In this context, we will revisit the issue of the role of the state and long-run growth by discussing current post-Keynesian proposals regarding full employment policies by the state. Readings will be primarily from Marx's later writings on economic theory, notably *Capital: Volume I*, selected sections from *Capital: Volumes II and III*, and the *Theories of Surplus Value*, as well as from secondary literature in the Marxian, post-Keynesian, and Institutionalist traditions.

*This is an advanced course designed for students who are interested in theoretical analysis. It requires a background in economics.*

## First-Year Studies: Political Economics of the Environment

**Marilyn Power**  
**FYS**

Is it possible to provide economic well-being to the world's population without destroying the natural environment? Is sustainable development a possibility or a utopian dream? How do we determine how much pollution we are willing to live with? Why are toxic waste dumps overwhelmingly located in poor, frequently minority, communities? Whether through activities such as farming, mining, and fishing; through manufacturing processes that discharge wastes; or through the construction of communities and roadways, human economic activity profoundly affects the environment. The growing and contentious field of environmental economics attempts to analyze the environmental impact of economic activity and to propose policies aimed at balancing economic and environmental concerns. There is considerable debate, with some theorists putting great faith in the market's ability to achieve good environmental outcomes, while others advocate much more direct intervention in defense of the environment, and some question the desirability of economic growth as a goal. Underlying these differences are political economic questions of distribution of power and resources among classes and groups within the United States and across the globe. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. The concepts will be developed through an examination of ongoing policy debates on issues such as air pollution and global warming, the decimation of the world's fish population, automobiles and the reliance on petrochemicals, and the possibility of sustainable development.

## History of Economic Thought

**Marilyn Power**  
**Intermediate—Year**

As industrial capitalism emerged as the dominant economic system in Europe and North America in the eighteenth century, theorists sought to understand the logic of this new way of organizing production and distribution. What determined the price of goods? The wages of labor? The profits to owners of capital? They theorized about the dynamics of the system: What caused the economy to grow? Would it grow unceasingly? Cyclically? Or would capitalism inevitably decline into stagnation or collapse at some point? Theorists were also concerned with the role of government policy in this new capitalist system. Should the government actively regulate the economy, or should it play a minimal role and leave markets to determine outcomes without intervention? Should trade with other countries be regulated or free? What was the

responsibility of the government with respect to the poor? Should they be assisted? Controlled? These questions were vigorously debated by political economists from the onset of capitalism, and they continue to be the focus of disagreements among political economists and economists to this day. This course will examine the development of economic theory through a focus on these debates about value, distribution, economic dynamics, and the role of government. The emphasis will be on reading authors in the original, including Adam Smith, David Ricardo, Karl Marx, Alfred Marshall, John Maynard Keynes, Joan Robinson, and Milton Friedman.

*This course is open to students with background in economics, political theory, or related studies.*

## The Economics of the Welfare State

**Jamee K. Moudud**  
**Open—Fall**

This course will have as its foundation a discussion of rival perspectives on the nature of the state. That is, we will seek to investigate the following question: is the state in a democratic political order neutral so that it acts in the interests of all citizens, or is it institutionally and structurally regulated by the interests of the dominant social classes? This central question will then be used to study trends in the welfare state since the New Deal. In the United States as well as other countries, there has been a heated debate for several decades over the purpose and extent of the welfare state. Economists have entered this debate with differing views over the degree to which the government should intervene in the economy in order to provide a social safety net and improve macroeconomic performance. We will analyze these issues by considering a number of different theoretical and political perspectives. An important period that we will study is the economic crisis period of the late 1960's and 1970's that was the context in which the New Right became intellectually and political influential. Finally, toward the end of the course, we will discuss the relationship between unemployment, poverty, and crime. It is envisaged that students will develop a rigorous understanding of the theoretical bases of the variations in welfare state policies and be able to relate these variations to the long waves of economic activity. The goal of this course is to ensure that students understand the analytical content and economic basis of every policy perspective and also be exposed to some of the sociology/public policy/political science literature on state policies.

## The Political Economy of Development and Underdevelopment

**Jamee K. Moudud**

*Lecture, Open—Year*

Since the early 1980's, laissez-faire has become the conventional wisdom. Mainstream economists explain the socioeconomic marginalization of large sections of the world's population by claiming that poor countries have failed to implement "appropriate" policies. These "appropriate" policies include free trade, free capital mobility, labor market flexibility, and a reduced role for the state with regard to industrial and social policies. In recent years the neoliberal socioeconomic vision has been challenged politically and intellectually, as is readily seen by the large-scale rejection of such policies across much of Latin America. This course will introduce students to the current debates regarding global laissez-faire. Our focus will be on the forces that shape global inequalities. It will be argued that ultimately proposals regarding more or less state intervention need to be grounded in an understanding of the process of market competition itself and the behavior of capitalist firms. Thus a crucial feature of the course will be a theoretical and empirical investigation of what one might call the microeconomic foundations of state policies. Some of the questions we will pose are as follows: What are the historical roots of international uneven development? Should there be more or less government involvement in lowering international inequalities and domestic poverty? Should the state in developing countries be involved in the process of industrialization, or should this be left to the free market? Under what conditions would private firms reject or accept state intervention? What was the historical experience of the developed countries with regard to the role of the state and industrialization? What are the social consequences of globalization? After dealing with core theoretical controversies in economic theory, this yearlong lecture will introduce students to the concrete development experiences of several countries in both the developing and developed worlds.

## Understanding Capitalism: Mainstream and Radical Perspectives

**Frank Roosevelt**

*Year*

Why is capitalism expanding around the world? How should we respond to the pressures of globalization? Why does the pace of change, in our everyday lives as well as in the economy, seem to be accelerating? What causes an economy to grow or to slide into a recession? Why is the distribution of income and wealth becoming more unequal, both within and among nations? In particular, why does the gap between the average

compensation of the top 100 American CEOs and the average U.S. production worker's wage continue to expand? Are we living in a "new economy" and, if we are, how is it different from the old one? What explains the proliferation of business mergers and acquisitions—especially those involving media conglomerates—and what, if anything, can be done to stop large firms from increasing their domination of our markets? How can we, as citizens, gain greater access to diverse sources of information and opinion when fewer and fewer corporations own and control more and more of our media outlets? This course will present the theoretical concepts and factual information a person needs in order to understand and participate in today's economic policy debates. We will trace the historical evolution of capitalism and examine various theories offered in the past to explain its workings, focusing in particular on the ideas of Adam Smith, Karl Marx, and John Maynard Keynes. Contemporary economic concepts will be explained using two competing but complementary textbooks—a mainstream one, *Economics for Dummies* by Sean Masaki Flynn (its title notwithstanding, this is a rigorous, high-quality book), and a radical one, *Understanding Capitalism* by Bowles, Edwards, and Roosevelt. Throughout the course, we will apply theoretical concepts to contemporary developments in the economy, and students will be encouraged to focus their conference work on current issues. Documentary films will be screened, and daily reading of either *The New York Times* or *The Wall Street Journal* will be essential.

*Open to sophomores, juniors, and seniors.*

## 2008-2009

### Current Debates in Marxian and Post-Keynesian Economics

**Jamee K. Moudud**

*Advanced—Fall*

This course deals with advanced topics in Marxian economics and, where relevant, compares Marxian perspectives with post-Keynesian/Institutionalist approaches. Where relevant, we will also discuss neoclassical theory. We will begin with the notion of surplus value and extend it to a general discussion of Marx's distinction between production and nonproduction activities, a distinction that will be used to analyze the impact of state policies on long-run growth. We will then proceed to an analysis of technological change and use it to study industrial competition, the recurrence of generalized economic crises, and the persistence of unemployment. Marx's theory of competition will be used to study two issues. First we will use it to study wage differentials on the basis of race and gender faced by workers with similar skill levels. Second, it will be used to discuss rent in

agriculture, an issue that will lead to the analysis of oil crises. The final part of the course will deal with current debates among heterodox economists regarding the capacity utilization rate in the long run and the nature of the “long run” itself. In this context, we will revisit the issue of the role of the state and long-run growth by discussing current post-Keynesian proposals regarding full employment policies by the state. Readings will be primarily from Marx’s later writings on economic theory, notably, *Capital: Volume I*, selected sections from *Capital: Volume III*, as well as from the secondary literature in the Marxian, post- Keynesian, and Institutionalist traditions.

*This is an advanced course designed for students who are interested in theoretical analysis. It requires a background in economics.*

## Economic Systems in History and Theory

**Frank Roosevelt**  
*Intermediate—Year*

Today, most of the nations that were once “socialist” or “communist” are, in one way or another, either capitalist or in transition to capitalism. As a result, the world economy has been—and continues to be—transformed. In this course, we will review the origins of capitalism and study its development in different parts of the world. We will also examine the rise and demise of Soviet-style “socialism.” To carry out this work, we will study the theories and histories of various economic models (Adam Smith, Karl Marx, J. M. Keynes, feudalism, capitalism, socialism). We will look at countries still governed by communist regimes (e.g., China, Cuba, Vietnam, North Korea) as well as postcommunist societies (e.g., Poland, Hungary, the Czech Republic, and other states that were once pieces of the Soviet empire). We will devote considerable attention to the advanced capitalist countries (e.g., the U.S., Japan, France, Germany, and Sweden) in which most of the world’s rich people live, noting the significant differences in their institutional structures and policies, and we will also evaluate the chances for success of the paths to development being pursued in poorer nations in Africa, Asia, and the Americas. A central concern will be the never-ending ideological and political conflicts over the appropriate roles for markets and governments in organizing social relationships and allocating economic resources. This will lead to consideration of the arguments in favor of new forms of socialism, such as “market socialism.” The context for all of our studies will of course be the global capitalist economy: we must ask whether any alternative to capitalism can be successfully established and sustained while capitalist globalization continues to spread without effective opposition. For conference work, students will be expected to focus on the history and

present economic circumstances of particular countries (other than the U.S.). This is an intermediate-level course, so students will need to have had some prior study in history, public policy, or social science.

*Sophomores and above. Background in history and/or social studies is required.*

## Introduction to Economic Theory and Policy

**Kim Christensen**  
*Open—Year*

Economics has such a profound impact on all of our lives—from where we live and go to school, to what we do for a living, to how we dress and how we entertain ourselves. Economics is also crucially intertwined with the social and political issues that we care about, from global warming to military policies, from poverty around the globe to discrimination by race and gender at home. This yearlong course gives students the background they need to understand and to analyze current economic problems. It introduces a variety of perspectives on economics, including neoclassical, Keynesian, Marxian, and feminist, and encourages students to apply these contrasting perspectives to current economic issues. The course begins with a brief history of our capitalist economic system, with an emphasis on the roles played by slavery and by women’s unpaid labor. We then discuss the Industrial Revolution, which provided historical context for the rise of the market-based “neoclassical perspective” on economics. We explore and critique several centrally important concepts in this perspective, including price/profit-based resource allocation, efficiency and opportunity cost, supply and demand, and market equilibrium. Next, we examine the Great Depression (the context for the Keynesian revolution) and explore Keynes’s insights into the instability of the financial system, insights that are particularly relevant today. We contrast this “disequilibrium” Keynesian perspective with the market-based Keynesian perspective found in most textbooks and examine the strengths and weaknesses of each. We then develop the Marxian political economy perspective, including the historical context for the development of this paradigm, and the origins and dynamics of class societies. We examine the labor market from a Marxian perspective, one that emphasizes labor control, labor relations, and the impact of political power on market phenomena. We briefly discuss a feminist perspective on economics and examine how feminist insights can expand and enrich our economic analyses. Finally, we use the theoretical insights of the various paradigms we have examined to explore two sets of current economic issues—globalization/the international economy and economic inequality by race, gender, and sexual orientation within the United States.

## Macroeconomic Theory and Policy

**Marilyn Power**

*Intermediate—Spring*

Macroeconomics is the study of the economy in the aggregate and addresses questions such as the causes of economic growth and recession, the relationship between unemployment and inflation, the effects of changes in the money supply on the real economy, and the effects of government spending on the private economy. Attempts to address these questions have resulted in a great deal of theoretical controversy, and this controversy is reflected in disagreements over government policy. This course will present the basic models of macroeconomics, examine the views of differing macroeconomic theories (e.g., Keynesian, monetarist, rational expectations, post-Keynesian, neo-Marxist), and review recent macroeconomic policy practice and debates.

*Prerequisite: a previous course in economic theory.*

## Political Economics of the Environment: Sustainable Development

**Marilyn Power**

*Open—Spring*

The seventh of the United Nations Millennium Development Goals reads “Ensure environmental sustainability.” Indeed, on the surface, sustainable development is a goal everyone could agree with—who would be for unsustainable development? But in fact, there is no consensus on the meaning of the term: some definitions emphasize the importance of preserving natural capital for future generations, while others aggregate all forms of capital together, arguing that our only obligation to the future is access to an equivalent standard of living. A related dispute is over what the relationship is between environmental sustainability and human well-being—as well as how the relationship may differ by gender, class, and other factors. This course will examine these differing views of sustainable development both in theory and through the examination of specific development projects. Economists approach environmental questions through three differing theoretical schools: environmental economics, ecological economics, and political economics. These schools use differing techniques to value the environment, offer different understandings of what would be good environmental and economic outcomes, and advocate different policies to achieve sustainability. Underlying these differences are political economic questions of distribution of power and resources both within specific countries and globally. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. Topics will include the policies of the

World Bank, sustainable agriculture, the controversial issue of resource privatization, and cases of specific commodities such as gold and cotton that illuminate the problems and complexities of sustainable development.

## Political Economy of Women

**Kim Christensen**

*Lecture, Open—Fall*

What determines the status of women in different societies and communities? What role is played by women’s labor (inside and outside of the home)? By cultural norms regarding sexuality and reproduction? By religious traditions? After some brief theoretical grounding, this course will address these questions by examining the economic, political, social, and cultural histories of women in the various racial/ethnic groups that make up America. We begin by exploring the fascinating role of women in Iroquois Confederation in the days before white colonization. We discuss the factors that gave Iroquois women political and social power and examine how white colonization undermined their standing. We then contrast Iroquois women’s status with that of white colonist women in Puritan Massachusetts and examine the economic, religious, and other factors that led to the Salem witchcraft trials of 1692. Next, we examine the position of African American women under slavery, including labor roles and forced reproduction. We then explore the development of competitive capitalism in the north and the “cult of true womanhood” in the rising middle class. We then move south again, examining the economic and political changes that accompanied the Civil War and Reconstruction and examine the complex relationships between African American and white women in the abolitionist and women’s rights movements. Next, we examine how the Mexican-American War created a landless agricultural labor force and the attempts to culturally assimilate Chicana women via “Americanization” programs. Then we focus on the conditions that encouraged Asian women’s immigration and on their economic and social positions once here. After that, we examine the union movement and the important but sometimes contradictory role organized labor has played in the lives of women of various races. We look at the impact of U.S. colonial policies on Puerto Rican migration, economic status, and reproduction. We examine the economic/political convulsions of the twentieth century—from the trusts of the early 1900’s to WWII—and chart their impact on women’s paid and unpaid labor and on the status of LGBTs. And finally, we examine the economic and political upheavals of the 1960’s that led to the “second wave” of the women’s movement and set the stage for women’s current economic, political, and social roles.

## The Political Economy of the State: The Welfare State and Prisons

**Jamee K. Moudud**

*Open—Fall*

This course will have as its foundation a discussion of rival perspectives on the nature of the state. That is, we will seek to investigate the following question: is the state in a democratic political order neutral so that it acts in the interests of all citizens, or is it institutionally and structurally regulated by the interests of the dominant social classes? This central question will then be used to study two types of state activities that have achieved some degree of prominence in the last seventy years. We will first study the welfare state. In the United States as well as other countries, there has been a heated debate for several decades over the purpose and extent of the welfare state. Economists have entered this debate with differing views over the degree to which the government should intervene in the economy in order to provide a social safety net and improve macroeconomic performance. We will analyze these issues by considering a number of different theoretical and political perspectives. We will then proceed to deal with the dramatic increase in incarceration rates in the United States and the rise of what has come to be known as the “prison industrial complex” and seek to examine both conservative and radical explanations of this type of state policy. It is envisaged that students will develop a rigorous theoretical understanding of the variations in these two types of social policies and be able to relate these variations to the long waves of economic activity. The goal of this course is to ensure that students understand the analytical content and economic basis of every policy perspective and also be exposed to some of the sociology/public policy/political science literature on the state and these two types of social policies.

## 2009-2010

### Growth, Distribution, and Fiscal Policy: Current Debates in Political Economy, Part 1

**Jamee K. Moudud**

*Intermediate—Fall*

This course is the first of a two-part, yearlong class in which we will study the controversies regarding the theoretical foundations of concrete problems, including policy issues. We will begin with a discussion of the labor theory of value (LTV) and the notion of surplus value in classical/Marxian political economy and then extend it to the distinction between production vs. non-production activities in Marx. The distinction between these two types of economic activities will be used to analyze the effects of fiscal policies on long-run growth in different theoretical schools (Marxian, the broad

Keynesian, and the neoclassical traditions). The study of long-run growth is directly connected to the analyses of competition and the optimal rate of capacity utilization chosen by firms. These microeconomic foundations to the analysis of growth will constitute the second major section of the course, in which we will study business behavior from a variety of theoretical perspectives (Smith, Marx, Schumpeter, the Austrian School, Harrod, Andrews, Kalecki, Sraffa, and neoclassical theory). The final part of the course will deal with the so-called Capital Controversy and rival theories of income distribution: LTV-based class conflict theories (Marx), non-LTV-based class conflict theories (neo-Ricardian and Post Keynesian economics), and marginal productivity theory (neoclassical economics).

*Requires a background in economics and/or a strong background in related social science fields. Some of the material in this course overlaps with “Current Debates in Marxian and Post Keynesian Economics” taught in previous years.*

## History of Economic Thought

**Marilyn Power**

*Intermediate—Year*

As industrial capitalism emerged as the dominant economic system in Europe and North America in the 18th century, theorists sought to understand the logic of this new way of organizing production and distribution. What determined the price of goods? The wages of labor? The profits to owners of capital? They theorized about the dynamics of the system. What caused the economy to grow? Would it grow unceasingly? Cyclically? Or would capitalism inevitably decline into stagnation or collapse at some point? Theorists were also concerned with the role of government policy in this new capitalist system. Should the government actively regulate the economy, or should it play a minimal role and leave markets to determine outcomes without intervention? Should trade with other countries be regulated or free? What was the responsibility of the government with respect to the poor? Should they be assisted? Controlled? These questions were vigorously debated by political economists from the onset of capitalism and, to this day, continue to be the focus of disagreements among economists and political economists. This course will examine the development of economic theory through a focus on these debates about value, distribution, economic dynamics, and the role of government. The emphasis will be on reading authors in the original, including Adam Smith, David Ricardo, Karl Marx, Alfred Marshall, John Maynard Keynes, Joan Robinson, and Milton Friedman.

*Open to students with background in economics, political theory, or related studies.*

## International Inequalities, Economic Development, and the Role of the State

**Jamee K. Moudud**

*Lecture, Open—Year*

Since the early 1980's, laissez-faire has become the conventional wisdom. Mainstream economists explain the socioeconomic marginalization of large sections of the world's population by claiming that poor countries have failed to implement "appropriate" policies that include free trade, free capital mobility, labor market flexibility, and a reduced role for the state with regard to industrial and social policies. In recent years, the neo-liberal socioeconomic vision has been challenged politically and intellectually, as is readily seen by the large-scale rejection of such policies across much of Latin America. As we confront the worst world economic crisis since the Great Depression, the question that many economists are asking is: What is to be done? This course will introduce students to the current debates regarding global laissez-faire. Our focus will be on the forces that shape global inequalities. It will be argued that, ultimately, proposals regarding more or less state intervention need to be grounded in an understanding of the process of market competition itself and the behavior of capitalist firms. Thus, a crucial feature of the course will be a theoretical and empirical investigation of what one might call the microeconomic foundations of state policies. Some of the questions we will pose are: What are the historical roots of international uneven development? Should there be more or less government involvement in lowering international inequalities and domestic poverty? Should the state in developing countries be involved in the process of industrialization, or should this be left to the free market? Under what conditions would private firms reject or accept state intervention? What was the historical experience of the developed countries with regard to the role of the state and industrialization? What are the social consequences of globalization? After dealing with core theoretical controversies in economic theory, this yearlong lecture will introduce students to the concrete development experiences of several countries in both the developing and the developed worlds.

## Money, Financial Crises, and Monetary Policy: Current Debates in Political Economy, Part 2

**Jamee K. Moudud**

*Intermediate—Spring*

In this seminar, we will analyze the nature of money and finance from a variety of theoretical perspectives—primarily the Marxian, post-Keynesian, and neoclassical-monetarist frameworks. The theoretical discussions will be related to the current global financial

crisis. Since the Reagan/Thatcher era of the early 1980s, the conventional wisdom is the doctrine of *monetarism* and the policy that financial globalization is absolutely central for the development of the global economy. Capital account liberalization is at the core of the International Monetary Fund's (IMF) structural adjustment policies. These policy proposals came into prominence on the heels of the global economic crisis that started in the late 1960s/early 1970s and the Third World Debt Crisis of the 1980s. We will critically analyze the monetarist doctrine by first studying the nature of money and debt from both the monetarist and alternative approaches. The goal of this part of the course is to analyze monetarist policies regarding the supposed ability of central banks to control the money supply in order to maintain price stability and keep the balance of payments in equilibrium. These policies are at the core of the IMF's policies. We will also study rival theoretical analyses of business cycles and seek to situate all of these debates in the context of the history of economic thought on monetary issues. The second part of the course will be an analysis of specific financial crises such as the Third World Debt Crisis of the 1970s and 1980s and the current world financial crisis. The aim of this study is to understand whether these crises occurred due to "inappropriate" central bank and state policies, as the IMF claims, or whether they were due to the free-market policies themselves. In this section, we will also discuss some of the social impacts of financial liberalization. Finally, the third part of the course will focus on the policy responses of debt crises, as well as their effects. Here, we will focus on alternative policy proposals; in particular monetary policies.

*Requires a background in economics and/or a strong background in related social science fields. Students need not have taken Part 1 of the course sequence in order to take Part 2.*

## Political Economics of the Environment

**Marilyn Power**

*Open—Year*

Is it possible to provide economic well-being to the world's population without destroying the natural environment? Is sustainable development a possibility or a utopian dream? How do we determine how much pollution we are willing to live with? Why are toxic waste dumps overwhelmingly located in poor, frequently minority, communities? Whether through activities such as farming, mining, and fishing, or through manufacturing processes that discharge wastes, or through the construction of communities and roadways, human economic activity profoundly affects the environment. The growing and contentious field of environmental economics attempts to analyze the environmental impact of economic activity and to

propose policies aimed at balancing economic and environmental concerns. There is considerable debate, with some theorists putting great faith in the market's ability to achieve good environmental outcomes; others advocate much more direct intervention in defense of the environment, and some question the desirability of economic growth as a goal. Underlying these differences are political economic questions of distribution of power and resources among classes and groups within the United States and across the globe. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. The concepts will be developed through an examination of ongoing policy debates on issues such as air pollution and global warming, the decimation of the world's fish population, automobiles and the reliance on petrochemicals, and the possibility of sustainable development.

## Understanding Capitalism: Mainstream and Radical Perspectives

**Frank Roosevelt**  
*Open—Year*

How does capitalism work (or not work)? What is the condition of the global economy today and how is it changing? Are we living in a "new economy" and, if we are, how is it different from the old one? What causes an economy to grow or to slide into a recession? When a recession occurs, what factors determine its depth and duration? Can government action help to bring about and speed up a recovery—and, if it can, what are the most effective policies to be pursued? This course presents the theoretical concepts and factual information needed to understand and participate in contemporary debates about the economy. We will trace the historical evolution of capitalism and examine various theories that have been offered to explain its workings—focusing, in particular on the ideas of Adam Smith, Karl Marx, and John Maynard Keynes, as well as those of contemporary economists following in their footsteps. The main work of the course will be to present alternative perspectives and evaluate their usefulness. To do this work, we will use two quite different textbooks—a mainstream one, *Economics for Dummies* by Sean Masaki Flynn, and a radical one, *Understanding Capitalism* by Samuel Bowles, Richard Edwards, and Frank Roosevelt. Throughout the course, we will apply the theoretical concepts being studied to events actually happening in "the real world." To this end, students will be encouraged to focus their conference work on current issues. Documentary films will be screened, and regular reading of either *The New York Times* or *The Wall Street Journal*—or both—will be essential.

## 2010-2011

### Economic Systems in History and Theory

**Frank Roosevelt**  
*Intermediate—Year*

Today, most of the nations that were once "socialist" or "communist" are, in one way or another, either capitalist or in transition to capitalism. As a result, the world economy has been-and continues to be-transformed. In this course, we will review the origins of capitalism and study its development in different parts of the world. We will also examine the rise and demise of Soviet-style and other types of socialism. To carry out this work, we will study the theories and histories of various economic models (Adam Smith, Karl Marx, J.M. Keynes, feudalism, capitalism, and socialism). We will look at countries still governed by communist regimes (e.g., China, Cuba, Vietnam, and North Korea), as well as post-communist societies (e.g., Poland, Hungary, the Czech Republic, and other states that were once part of the Soviet empire). We will devote considerable attention to advanced capitalist countries (e.g., the United States, Japan, France, Germany, and Sweden) in which most of the world's rich people live, noting the significant differences in their institutional structures and policies; and we will also evaluate the chances for success of various paths to development being pursued in poorer nations in Africa, Asia, and the Americas. A central concern will be the never-ending ideological and political conflicts over the appropriate roles for markets and governments in organizing social relationships and allocating economic resources. This will lead to consideration of the arguments in favor of new forms of socialism such as "market socialism." The context for all of our studies will, of course, be the global capitalist economy. We must ask whether any alternative to capitalism can be established and sustained while capitalist globalization continues to spread without effective opposition. For conference work, students will choose a particular country (other than the United States) on which to do research. Students will have to have had prior study in the social sciences, history, or public policy.

*Intermediate. Open to sophomores and above.*

### First Year Studies: Global Inequalities, Economic Development, and the Role of the State

**Jamee K. Moudud**  
*FYS*

Since the early 1980s, laissez-faire has become the conventional wisdom. Mainstream economists explain the socioeconomic marginalization of large sections of

the world's population by claiming that poor countries have failed to implement "appropriate" policies, including free trade, free capital mobility, labor market flexibility, and a reduced role for the State with regard to industrial and social policies. In recent years, the neo-liberal socioeconomic vision has been challenged politically and intellectually, as is readily seen by the large-scale rejection of such policies across much of Latin America. As we confront the worst world economic crisis since the Great Depression, the question that many economists are asking is this: What is to be done? This course is designed for students who are interested in exploring economic policy issues from both theoretical and historical perspectives. Our focus will be on the forces that shape inequalities between nations and firms. It will be argued that, ultimately, proposals regarding more or less State intervention need to be grounded in an understanding of the process of market competition itself and the behavior of capitalist firms. Thus, a crucial feature of the course will be a theoretical and empirical investigation into what one might call the microeconomic foundations of State policies. Some of the questions we will pose are as follows: What are the historical roots of international uneven development? Should there be more or less government involvement in lowering international inequalities and domestic poverty? Should the State in both industrialized and developing countries be involved in the process of economic development, or should this be left to the free market? Under what conditions would private firms reject or accept State intervention? What was the historical experience of the developed countries with regard to the relationship between State policies and market forces? What are the social consequences of globalization? After dealing with core debates in microeconomics, macroeconomics, and economic history, this class will introduce students to the concrete development experiences of several countries in both the developing and the developed worlds.

## Introduction to Economic Theory and Policy

**Marilyn Power**

*Lecture, Open—Year*

Economic theory attempts to explain urgent economic questions, such as the causes of growth and depression, unemployment, inflation, poverty, and discrimination; economic policy attempts to achieve desired outcomes. Yet, there is considerable controversy among theorists over the answers to economic questions and widespread dissatisfaction with the policy outcomes. This course will seek the basis for the controversy by examining the development of economic theory and the application of the theory in policy practice. The approach will emphasize the differing views offered by contending schools of economic thought and make the connection between theoretical assumptions and policy

applications. Readings will include both theoretical and concrete policy-oriented writings. Topics will include the role of the Federal Reserve Bank, the effectiveness of public investment, the effects of globalization on the U.S. economy, the effects of mergers and concentration on the behavior of U.S. firms, and the use of government intervention to combat discrimination and poverty.

## Macroeconomic Theory and Policy

**Marilyn Power**

*Intermediate—Fall*

Macroeconomics is the study of the economy in the aggregate and addresses questions such as the causes of economic growth and recession, the relationship between unemployment and inflation, the effects of changes in the money supply on the real economy, and the effects of government spending on the private economy. Attempts to address these questions have resulted in a great deal of theoretical controversy, which is reflected in disagreements over government policy. This course will present the basic models of macroeconomics, examine the views of differing macroeconomic theories (e.g., Keynesian, monetarist, rational expectations, Post Keynesian, neo-Marxist), and review recent macroeconomic policy practice and debates.

*Intermediate. Prerequisite: a previous course in economic theory.*

## Political Economics of the Environment: Sustainable Development

**Marilyn Power**

*Open—Spring*

The seventh of the United Nations Millennium Development Goals reads: "Ensure environmental sustainability." Indeed, on the surface, sustainable development is a goal everyone could agree with—who would be for unsustainable development? In fact, there is no consensus on the meaning of the term. Some definitions emphasize the importance of preserving natural capital for future generations, while others aggregate all forms of capital together—arguing that our only obligation to the future is access to an equivalent standard of living. A related dispute is over the relationship between environmental sustainability and human wellbeing, as well as how the relationship may differ by gender, class, and other factors. This course will examine these differing views of sustainable development both in theory and through the examination of specific development projects. Economists approach environmental questions through three differing theoretical schools: environmental economics, ecological economics, and political

economics. These schools use differing techniques to value the environment, offer different understandings of what would be good environmental and economic outcomes, and advocate different policies to achieve sustainability. Underlying these differences are political economic questions of distribution of power and resources both globally and within specific countries. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. Topics will include the policies of the World Bank, sustainable agriculture, the controversial issue of resource privatization, and cases of specific commodities such as gold and cotton that illuminate the problems and complexities of sustainable development.

*Open to any interested student.*

## The Political Economy of the Welfare State and Prisons

**Jamee K. Moudud**

*Open—Fall*

This course will have as its foundation a discussion of rival perspectives on the nature of the State; that is, we will seek to investigate the following question: Is the State in a democratic political order neutral so that it acts in the interests of all citizens, or is it institutionally and structurally regulated by the interests of the dominant social classes? This central question will then be used to study two types of State activities that have achieved some degree of prominence in the last 70 years. We will first study the welfare state. In the United States, as well as in other countries, there has been a heated debate for several decades over the purpose and extent of the welfare state. Economists have entered this debate with differing views over the degree to which the government should intervene in the economy in order to provide a social safety net and improve macroeconomic performance. In addition to theoretical debates regarding the nature of the capitalist State and the welfare state, in this part of the course we will also investigate the Obama administration's jobs and public investment programs and compare these to those put in place during the Great Depression of the 1930s. Additionally, we will analyze the current debates regarding the Obama administration's health care policies. We will then proceed to examine the dramatic increase in incarceration rates in the United States, the rise of what has come to be known as the "prison industrial complex," and investigate the political economy of this type of State policy. It is envisaged that students will develop a rigorous theoretical understanding of the variations in these two types of social policies and be able to relate them to the different stages of capitalist history. The goal of this course is to ensure that students understand the analytical content and economic basis of every policy perspective and also

be exposed to some of the sociology/public policy/political science literature on the State and these two types of social policies.

*Open to any interested student.*

## Topics in Marxian and Post Keynesian Economics

**Jamee K. Moudud**

*Intermediate—Spring*

This course deals with advanced topics in Marxian economics and, where relevant, compares Marxian perspectives with Post-Keynesian and Institutionalist approaches. Where relevant, we will also discuss neoclassical theory. We will begin with the notion of surplus value and extend it to a general discussion of Marx's distinction between production and nonproduction activities, a distinction that will be used to analyze the impact of State policies on long-run growth. We will then proceed to an analysis of technological change and use it to study industrial competition, the recurrence of generalized economic crises, and the persistence of unemployment. Marx's theory of competition will be used to study two issues. First we will use it to study wage differentials on the basis of race and gender faced by workers with similar skill levels. Second, it will be used to discuss rent in agriculture, an issue that will lead to the analysis of oil crises. The final part of the course will deal with current debates among heterodox economists regarding the capacity utilization rate in the long run and the nature of the "long run" itself. In this context, we will revisit the issue of the role of the State and long-run growth by discussing current Post Keynesian proposals regarding full employment policies by the State. Readings will be from sections of the three volumes of Marx's *Capital*, Keynes's *General Theory*, and from the contemporary literature in the Marxian, Post Keynesian, and Institutionalist traditions. *This course is designed for students who are interested in theoretical analysis and their practical implications.*

*Intermediate. Background in economics or social science required.*

## 2011-2012

### First-Year Studies: Political Economics of the Environment

**Marilyn Power**

*FYS*

Is it possible to provide economic well-being to the world's population without destroying the natural environment? Is sustainable development a possibility or a utopian dream? How do we determine how much pollution we are willing to live with? Why are toxic

waste dumps overwhelmingly located in poor, frequently minority, communities? Whether through activities such as farming, mining, and fishing, through manufacturing processes that discharge wastes, or through the construction of communities and roadways, human economic activity profoundly affects the environment. The growing and contentious field of environmental economics attempts to analyze the environmental impact of economic activity and to propose policies aimed at balancing economic and environmental concerns. There is considerable debate, with some theorists putting great faith in the market's ability to achieve good environmental outcomes, others advocating much more direct intervention in defense of the environment, and some questioning the desirability of economic growth as a goal. Underlying these differences are political economic questions of distribution of power and resources among classes and groups within the United States and across the globe. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of those views. The concepts will be developed through an examination of ongoing policy debates on issues such as air pollution and global warming, the decimation of the world's fish population, automobiles and the reliance on petrochemicals, and the possibility of sustainable development.

## Introduction to Economic Theory and Policy

**Kim Christensen**

*Open—Year*

Economics has a profound impact on all of our lives—from where we live and go to school to what we do for a living to how we dress to how we entertain ourselves. Economics is also crucially intertwined with the social and political issues—such as global warming, poverty, and discrimination—that we care about. This yearlong course introduces a variety of approaches to economics, including neoclassical, Keynesian, behavioralist, Marxian, and feminist, and encourages students to apply these contrasting perspectives to current economic problems. The course begins with a brief history of our capitalist economic system, emphasizing the roles played by slavery and by women's unpaid labor. We then discuss the Industrial Revolution, which provides historical context for the rise of the market-based “neoclassical perspective.” We explore and critique several centrally important concepts in this approach, including price/profit-based resource allocation, efficiency and opportunity cost, supply and demand, and market equilibrium. Next, we examine the Great Depression (the context for the Keynesian Revolution) and explore Keynes' insights into the instability of the financial system. We contrast the “disequilibrium” Keynesian perspective of Minsky and

Leijonhufvud with the market-based Keynesian perspective found in standard economics textbooks and examine the strengths and weaknesses of each. We briefly examine the emerging behavioralist perspective, one that combines insights from psychology and economics, to determine to what extent this micro-based perspective provides a foundation for Keynes' macroeconomic insights. We then explore the Marxian/political economy perspective, including the historical context for the development of this paradigm and the origins and dynamics of class societies. We examine the labor market from a Marxian perspective, emphasizing labor control, labor relations, and the impact of political power on market phenomena. We then discuss the feminist perspective on economics and examine how feminist insights can expand and enrich our economic analyses. Finally, using the insights gained from the various approaches, we analyze the recent financial crisis and the Great Recession, with a particular emphasis on public policy.

## Money and Financial Crises: Theory, History, and Policy

**Jamee K. Moudud**

*Intermediate—Fall*

In this seminar, we will analyze the nature of money and finance from a variety of theoretical perspectives—primarily the Marxian, post-Keynesian, and neoclassical frameworks. The theoretical discussions will be related to the current and previous financial crises. Since the Reagan/Thatcher era of the early 1980s, the conventional wisdom is the doctrine of *monetarism* and the policy of *laissez faire* financial globalization, which is based on the theory of rational expectations and the efficient markets hypothesis. These policy proposals came into prominence on the heels of the global economic crisis that started in the late 1960s/early 1970s and the Third World Debt Crisis of the 1980s. We will critically analyze the monetarist doctrine by first studying the nature of money and debt from both the monetarist and alternative approaches. The goal of this part of the course is to analyze monetarist policies regarding the supposed ability of central banks to control the money supply so as to maintain the economy at its full-employment level of output. These policies are at the core of the so-called Washington Consensus (IMF and US Treasury Department) policies. With a *laissez faire* policy in place, according to this perspective, the economic system will not exhibit endogenous financial instability. This approach will be contrasted with rival ones in which radical uncertainty prevails and financial instability is endogenous and recurrent, while the central bank cannot control the money supply. We will study alternative theoretical analyses of business cycles and seek to situate all of these debates in the context of the history of economic thought on monetary issues. The second part of the course will be an analysis of the

current financial crisis and situate it in a historical context. This part of the course will introduce students to the relatively new literature on monetary stocks and flows and their implications for the accumulation of debt. Finally, the third part of the course will focus on the policy responses of debt crises, as well as their effects. Here, we will focus on alternative policy proposals; in particular, monetary and fiscal policies.

## Smith, Marx, and Keynes

**Marilyn Power**

*Intermediate—Fall*

John Maynard Keynes wrote, “The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist. Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back.” Since capitalism emerged as the dominant economic system in Europe and North America in the 18th century, theorists and policymakers have sought to understand the logic of this new way of organizing production and distribution. What determined the price of goods? The wages of labor? The profits to owners of capital? Would capitalism grow unceasingly, suffer from cycles, or inevitably decline into stagnation or collapse? Should the government actively regulate the economy, or should it play a minimal role and leave markets to determine outcomes without intervention? Should trade with other countries be regulated or free? What was the responsibility of the government with respect to the poor? Should they be assisted? Controlled? In the vigorous debates over these issues, continuing into the present, Adam Smith, Karl Marx, and John Maynard Keynes are frequently invoked as economic policy. A careful reading of these authors, however, shows that they were far more complex thinkers than the simplified versions of their ideas commonly circulated. This course will focus on the debates about value, distribution, economic dynamics, and the role of government through a careful reading of Smith, Marx, and Keynes in the original, followed by an examination of modern interpretations of their ideas.

## Social Metrics: Introduction to Statistical Measurement and Structural Analysis in the Social Sciences

**Jamee K. Moudud**

*Lecture, Open—Spring*

This course is designed for all students interested in the social sciences who wish to understand the methodology and techniques involved in the estimation of structural

relationships between variables. It is designed for students who wish, both at Sarah Lawrence College and beyond, to be able to carry out empirical work in their particular field. After taking this course, students will be able to analyze questions such as the following: What effects do race, gender, and educational attainment have in the determination of wages? How does the female literacy rate affect the child mortality rate? How can one model the effect of economic growth on carbon dioxide emissions? What is the relationship among sociopolitical instability, inequality, and economic growth? How do geographic location and state spending affect average public-school teacher salaries? How do socioeconomic factors determine the crime rate in the United States? How can one model the US defense budget? In this class, we will study the application of statistical methods and techniques in order to: a) understand, analyze, and interpret a wide range of social phenomena such as those mentioned above, b) test hypotheses/theories regarding the possible links between variables, and c) make predictions about prospective changes in the economy. Social metrics is fundamentally a *regression-based* correlation methodology used to measure the overall strength, direction, and statistical significance between a “dependent” variable—the variable whose movement or change is to be explained—and one or more “independent” variables that will explain the movement or change in the dependent variable. Social metrics will require a detailed understanding of the mechanics, advantages, and limitations of the “classical” linear regression model. Thus, the first part of the course will cover the theoretical and applied statistical principles that underlie Ordinary Least Squares (OLS) regression techniques. This part will cover the assumptions needed to obtain the Best Linear Unbiased Estimates of a regression equation, also known as the “BLUE” conditions. Particular emphasis will be placed on the assumptions regarding the distribution of a model’s error term and other BLUE conditions. We will also cover hypothesis testing, sample selection, and the critical role of the  $t$ - and  $F$ -statistic in determining the statistical significance of a social metric model and its associated slope or “ $b$ ” parameters. The second part of the course will address the three main problems associated with the violation of a particular BLUE assumption: multicollinearity, autocorrelation, and heteroscedasticity. We will learn how to identify, address, and remedy each of these problems. In addition, we will take a similar approach to understanding and correcting model specification errors. The third part of the course will focus on the analysis of historical time-series models and the study of long-run trend relationships between variables.

## Sustainable Development

**Marilyn Power**

*Open—Spring*

The seventh of the United Nations Millennium Development Goals reads: “Ensure environmental sustainability.” Indeed, on the surface, sustainable development is a goal about which everyone could agree. Who would be for unsustainable development? In fact, there is no consensus on the meaning of the term. Some definitions emphasize the importance of preserving natural capital for future generations, while others aggregate all forms of capital together—arguing that our only obligation to the future is access to an equivalent standard of living. A related dispute is over the relationship between environmental sustainability and human well-being, as well as how the relationship may differ by gender, class, and other factors. This course will examine these differing views of sustainable development, both in theory and through the examination of specific development projects. Economists approach environmental questions through three differing theoretical schools: environmental economics, ecological economics, and political economics. These schools use differing techniques to value the environment, offer different understandings of what would be good environmental and economic outcomes, and advocate different policies to achieve sustainability. Underlying these differences are political economic questions of the distribution of power and resources, both globally and within specific countries. This course will explore the range of views, with an emphasis on understanding the assumptions underlying their disagreements and on the policy implications of these views. Topics will include the policies of the World Bank, sustainable agriculture, the controversial issue of resource privatization, and cases of specific commodities such as gold and cotton that illuminate the problems and complexities of sustainable development.

## The Political Economy of Global and Local Inequality: The Welfare State, Developmental State, and Poverty

**Jamee K. Moudud**

*Intermediate—Year*

In the last few decades, there has been a dramatic increase in inequality at both the national and the

international levels. While there is increasing acceptance of the importance of monitoring inequality (e.g., by the World Bank, UN Development Programme), there is far more disagreement about national and global inequality trends, what the fundamental determinants of inequality are, how inequality should be measured, what causes shifts in inequality, what impact it will have upon domestic and global politics and economic relations, and what policy responses are appropriate. This interdisciplinary course will consider a wide range of theoretical analyses to address these questions. At the international level, since states are embedded in an increasingly interwoven market system, we will discuss the issue of persistent market inequalities by analyzing different theories of market competition and their implications for international trade. This analysis of international competition will allow us to study the constraints within which individual states operate in order to promote domestic socioeconomic development policies. In the fall semester, the theoretical debates and their implications will be discussed; in the spring, we will analyze the concrete development experiences of a number of countries in order to consider the interactions between development, democracy, and economic inequality. In both semesters, we will discuss the relationship between the welfare state and the developmental state and how they have shaped the links between and among development, inequality, and poverty. Issues of taxation and industrial policies will be combined with analyses of state capacity building and the ways in which domestic and international power structures shape a state's ability to bring about socioeconomic development. This seminar is designed for students who are interested in studying concrete problems in development along with the analytical/theoretical factors that underpin them. It requires no prior background in economics but does require some background in the social sciences.

A full description of the course may be found under the appropriate discipline.

# Environmental Studies

## 2002-2003

### First-Year Studies: Cultures of Nature: Environmental Representations and Their Consequences

Charles Zerner  
FYS

Environmental imagery is part of the fabric of daily life and communication on the Web and in television, newspapers, and advertisements. Images of Ebola viruses, genetically modified salmon, or landscapes of environmental devastation in Africa can be found in the subway, in Benetton ads, on the front pages of The New York Times. Representations of nature and the environment are not restricted, however, to popular media and texts; they also form the terrain for scientific contestation, debate about environmental ethics, and "high" policy formulation. We will explore how stories, metaphors, images, and maps of nature are constructed, disseminated, and received differently by particular audiences and in specific areas of environmental controversy. In Asia, Latin America, Africa, and America, we will explore how issues and debates in tropical conservation and development are fashioned by the World Bank "experts" and contested by scholars and nongovernmental activists. We will examine how the American southwestern landscape is imagined, mapped, and described in the reports of the nuclear industry, the literatures of Native American activists, and the essays of conservationists. How do particular representations of "nature" become historically important and widespread? When did the Grand Canyon become grand? How are environmental representations linked to policy, publicity, and persuasion? How are issues in environment, health, and disease imagined during different historical periods? What implications do these imaginings have for public policy, including immigration and civil rights? How are representations of food, embodied in television and mass media advertising, linked to the politics of food supply and the American diet? We will use a variety of sources, including mass media, environmental ethnographies and histories, conservation organization reports, and the Internet. Conference work may engage representations from a broad spectrum of issues.

### The Political Ecology of Southeast Asia: Water Temples, Opium, and Agent Orange

Charles Zerner  
*Intermediate—Spring*

From a European perspective, Southeast Asia has long been viewed as a source of exotic commodities: cloves, pearls, teak, sea cucumber, and edible birds' nests, emanating from islands "below the wind." In the nineteenth and early twentieth centuries, Southeast Asia was the site of forced cultivation schemes and resource extraction on massive plantations. More recently the region's forests and seas have become objects of a global environmental gaze as biological treasures, repositories of marine and terrestrial biological diversity. Indigenous peoples' advocates have framed an agenda linking environmental management and social justice. This course engages the environmental issues of Southeast Asia through the lenses of political ecology, cultural anthropology, and history. We focus on the politics of resource extraction and management and the intersection of local, national, and global economies and desires. Using a variety of case studies, we explore connections between forest-dwelling and maritime communities, their environments, peoples, and global trade in precolonial times. In nineteenth-century Java and Sumatra we study the ways in which colonial regimes extracted wild and cultivated resources including rubber, teak, coffee, and opium, under conditions of forced labor. Contemporary political and cultural scenes of environmental distress complete this journey: commercial timber extraction and nongovernmental struggles for the recognition of community land rights in Indonesia during the Suharto dictatorship; destruction of reefs and community health through cyanide fishing in Sulawesi; "wildcat" gold mining with mercury in Indonesian Borneo; connections between Khmer Rouge and ruby extraction in Cambodia; efforts of "green monks" of Thailand to safeguard community forests; and the use of defoliants during the American war in Vietnam.

Full descriptions of the courses may be found under the appropriate disciplines.

## 2003-2004

### Making Threats: Biofears and the Social Production of Environmental Anxieties

Charles Zerner

Open—Spring

September 11, 2001, marks the moment at which fear and anxiety became normalized as disturbing and important aspects of everyday life in the twenty-first century. Narratives of environmental threat reinforce and amplify these themes: color-coded terror alerts issued by the Homeland Security Office; media accounts of the travels of deadly viruses and bacteria; fears of lethal germs' potential release into air, water, or food supplies and of teeming third-world populations overrunning the United States; images of exotic invasive species destroying native ecologies; and heightened concerns about a new policy domain, environmental security. A panoply of environmental threats, on scales from global to microscopic, has taken root in all aspects of life, including our images, metaphors, and basic perceptions of everyday risk. This course examines the production of environmental anxieties in several domains, including nuclear fears and fantasies, the recent history of biological weapons and their use by state and nonstate actors, imaginings of the "immigrant menace," alien species "invasions," risks of traveling pathogens, and a variety of recent environmental security concerns including water scarcity, overpopulation, and desertification. We examine environmental threats as empirical possibilities and as social and cultural *productions* or *spectacles* with consequences for policy, perception, and practice in civil society. We focus on the fashioning of risk through the manipulation of metaphor, analogy, narrative, and rhetoric, analyzing works of fiction, film, and scientific and public policy literatures. How are specific environmental phantasms produced in ways that haunt, mobilize, or disturb the popular imagination? What are their implications and consequences? Which environmental problems are excluded from popular imaginings of environmental menace? We conclude by investigating connections between environmental threat narratives and increasing militarism, profiling, surveillance, and repression of fundamental freedoms of assembly, travel, speech, and association. By engaging David Cole's *Terrorism and the Constitution*, George Orwell's 1984, Stephen Schulhofer's *The Enemy Within*, and Ulrich Beck's *The Risk Society*, this course embarks on an exploration of possible links between the production of environmental anxieties and the erosion of civil liberties in the United States in the early twenty-first century.

### Reclaiming the Commons: Property, Politics, and the Public Good

Charles Zerner

Intermediate—Year

Perhaps few issues are more contentious in the environmental arena than those surrounding struggles over rights to private as well as common property resources. Debates over the "commons" implicate ideas of citizenship, community, the public good, and justice. Controversies over public space and community gardens, genetic recombinant research and rights to the genome, North-South disputes over rights to biodiversity in the geographic South, as well as debates over intellectual property rights, form only a small portion of the hotly contested terrain of property rights and the commons. This course is an introduction to ideas and cultures of property (private, public, and collective), debates over the commons, and the environmental and social consequences of different property regimes. We examine classical Western accounts of the origin and purposes of property in texts by Locke, Rousseau, and Grotius; moving to ideas of the commons, the commoners, and resistance to enclosure as narrated in E. P. Thompson's *Whigs and Hunters*; as well as contemporary seizures of the commons, as seen in David Bollier's *Silent Theft*. Garrett Hardin's dire, influential *Tragedy of the Commons* is analyzed, followed by three decades of recent research on common property placing Hardin's dark forecasts and assumptions into question. Debates about property and the public good are examined in cases and domains including the seizure of public urban open space in New York City; abandoned "no-man's" waterways and marshes in *The Meadowlands*; and Theodore Steinberg's accounts of the environmental consequences of private ownership of air and water in *Slide Mountain, or the Folly of Owning Nature*. Contemporary disputes over property are investigated: rights to airspace and airwaves, seeds, land, and seas; claims on DNA, body organs, and body parts; ideas of cultural and artistic property including Native American artifacts and sites, public radio and the monopolization of the airwaves as chronicled in David Barsamian's *The Decline and Fall of Public Broadcasting* and Matthew Lasar's *Pacifica Radio*; and the "production of scarcity" through the privatization and commoditization of water in Vandana Shiva's *Water Wars*. What are cultures of property? How are property claims to territory and to nature made through distinctive cultural performances, poems, and legal discourse in Southeast Asia? Alternatives to monopolization and privatization are explored, providing pragmatic examples and possibilities for visions of community-based governance of the commons.

## Scales of Environmental Justice: Sites, Networks, and Histories of Resistance

Charles Zerner

Open—Fall

This course is an introduction to a variety of ideas, practices, and ways of understanding forms of environmental justice. Although the phrase “environmental justice” is a relatively recent addition to the lexicon of advocacy and academia, forms of environmental injustice are legion, possessing complicated genealogies implicating violence; unequal access to fundamental necessities of life including water, land, seeds, food and fodder; failures to recognize the entitlements of peasant fishers and farmers (the “theft of the commons”); reduced circulation of public goods; and unequal distribution of the burdens of industrial life including toxic residues and the “externalities” of the chemo-industrial complex. Forms of environmental justice possess historically varied and spatially distinctive embodiments and genealogies, provoking comparisons across space, culture, and time. This course follows an itinerary through a series of geographically and thematically distinctive cases in South and Southeast Asia, Africa, and the Americas, traversing the social production of famine in India and China in Mike Davis’s *Late Victorian Holocausts*; the denial of rights to forests and seas in Southeast Asia chronicled in *Culture and the Question of Rights*; coercive, militarized conservation in Cambodia and the Congo; development debacles and ideologies; and cases of environmental violence including chemical “accidents” in India (the Bhopal Gas Disaster), the toxic legacy of Russia’s nuclear weapons sites, and petrol-violence in Nigeria and Ecuador. The history of slavery, violence, and global capitalist rubber extraction in the Belgian Congo is investigated through Hochschild’s *King Leopold’s Ghost*. Productive cases of nongovernmental activism and resistance, incorporating networks, imageries, and institutions at local, national, and trans-national scales, are explored in accounts of Brazilian rubber tappers’ mobilizations for land rights and the mobilization of Indian “untouchables,” metropolitan intellectuals, and “global greens” to stop the construction of the Narmada Dam.

Full descriptions of the courses may be found under the appropriate disciplines.

## 2004-2005

### Environment, Media, and Mobilizations

Charles Zerner

Open—Year

The “environment” is a terrain charged with a penumbra of possible meanings. When do particular environmental issues become significant and to whom? How are these issues produced, framed, and aimed at certain kinds of audiences? How is the production of nature, as a visual spectacle, linked to public belief in the importance (or unimportance) of particular environmental issues and problems? Public perceptions of key environmental issues are linked to the ways environmental terrain is configured, mapped, and mediated. What relationships do these “productions” have to with environmental policies? This course will examine the historical production of “the environment” and environmental issues through a series of cases linked with theoretical readings. We investigate the ways governmental policies, private sector public relations campaigns, as well as the campaigns of nongovernmental organizations have imagined, produced, and prioritized particular visions of “nature,” as well as certain kinds of environmental problems. We examine the production techniques used by a variety of actors working the stagecraft of “visibility” and “invisibility” in staging and performing environmental problems. We ask, for example: What conjunction of historical, cultural, and political formations led to the public explosion of interest in the fate of the tropical rainforest during the 1970’s and 1980’s? How are we to

explain the astonishing global public receptivity to rainforest movements and the slow demise of these concerns during the 1990's? How did the tobacco industry frame the benefits and risks of smoking? How did public "information specialists" for chemical firms account for the risks associated with the production of products containing polyvinyl chloride? In the early 1960's, how did Rachel Carson fashion an image of the natural world and the industrial environment? Why did Carson's prose and research on chemical-industrial threats provoke such intense and widespread reactions in the public, governmental, and private sectors? What kind of counterimagery and strategies did the chemical-industrial complex deploy against Carson's life-work? What images of the atom and "nuclear nature" were produced by the Atomic Energy Commission to make nuclear mining, testing, weapons production, and storage seem natural? How did models of biosphere reserves developed in Europe and North America shape the fate of tigers and peasant women in India and Bangladesh? What forms of environmental description and issue framing were deployed by labor organizers and environmentalists to capture world public attention on the plight of rubber tappers in the Brazilian rainforest? How are contemporary environmental campaigns staged, framed, and performed?

## Environmentalism and Justice: Sites, Histories, and Networks

**Charles Zerner**

*Open—Fall*

This course is an introduction to ideas, practices, and ways of understanding environmental justice. What are the relationships between concerns for the natural environment and struggles for social justice? Although the phrase "environmental justice" is a relatively recent addition to the lexicon of advocacy and academia, forms of environmental justice are legion, possessing complicated genealogies implicating violence, unequal access to fundamental necessities of life, failures to recognize the entitlements of peasant fishers and farmers (the "theft of the commons"), reduced circulation of public goods, and unequal distribution of the burdens of industrial life. Forms of environmental justice possess historically varied and spatially distinctive embodiments and genealogies, provoking comparisons across space, culture, and time. This course follows an itinerary through a series of geographically and thematically distinctive cases in the Americas, Africa, as well as Asia, including struggles for nontoxic neighborhoods and open space in Boston and New York City; the discovery and subsequent denial of toxic landscapes and materials in our houses, aquifers, and food supply; the social production of famine in India and China; the denial of rights to forests and seas in Southeast Asia; coercive, militarized conservation in Cambodia and the Congo; development debacles and ideologies; cases of

environmental violence including chemical "accidents" in India (the Bhopal Gas Disaster); the toxic legacy of Russia's nuclear weapons sites and American nuclear violence in the Pacific and continental United States; petro-violence in Nigeria and Ecuador; and the risks and possibilities of genetic engineering and concerns for food security. We examine productive examples of nongovernmental activism, incorporating networks and institutions at local, national, and trans-national scales. Emerging conceptions of environmental justice, as well as forms of resistance and mobilization strategies in cities and rural contexts, are engaged. Internships in New York City and the greater metropolitan area may be possible.

## Performance and Political Ecology in South and Southeast Asia: Environmentalisms from India to Irian Jaya

**Charles Zerner**

*Intermediate—Spring*

South Asia is the site of remarkable environmental management institutions and techniques. Ancient Sri Lankan irrigation works, Indian "water temples," and botanical knowledge have become part of the world's agricultural, engineering, architectural, and medicinal common heritage. In recent decades, a panoply of distinctive environmental movements and forms of protest including "seed satyagrahas," modeled on Gandhian resistance to British rule, have become influential on regional, national, and global environmental stage. Southeast Asia, from a European perspective, has long been viewed as a source of exotic commodities: cloves, pearls, teak, sea cucumber, and edible birds' nests, emanating from islands "below the wind." In the nineteenth and early twentieth centuries, Southeast Asia was the site of forced cultivation schemes and resource extraction on massive plantations. More recently the region's forests and seas have become objects of a global environmental gaze as biological treasures, repositories of marine and terrestrial biological diversity. Indigenous peoples' advocates have framed an agenda linking environmental management and social justice. This course engages cultural, political, and performative dimensions of environmental issues and movements in South and Southeast Asia, focusing on developments in the late twentieth century. In Indonesia and India, what forms of community-based environmental management have been developed? How have these practices and institutions fared in the late twentieth century, during an era of intensive extraction of raw resources, land use changes, and industrialism? How have South and Southeast Asian environmental movements incorporated and built on existing cultural templates for protest and resistance, including ritual performances? We examine the history of Balinese irrigation systems and water ritual, following their fate

during the intervention of the World Bank during the "Green Revolution." In South Asia, we examine indigenous alliances with international environmental groups opposing massive dams and dislocation, as well as middle class "green activism" and its effect on poor urban communities. Contemporary political and cultural scenes of environmental distress punctuate this journey: commercial timber extraction and nongovernmental struggles for the recognition of community land rights in Indonesia during the Suharto dictatorship; "wildcat" gold mining with mercury in Indonesian Borneo; ritual performances of "green monks" of Thailand to safeguard community forests. We conclude this journey by examining the use of Agent Orange and other defoliants during the American war in Vietnam and recent efforts at transnational environmental justice: a class action suit against the Dow Chemical Corporation on behalf of Vietnamese victims of "ecocide."  
*Open to sophomores, juniors, and seniors.*

## 2005-2006

### Cultures of Nature: Environmental Representations and Their Consequences

**Charles Zerner**

*Open—Year*

Environmental imagery is part of the fabric of daily life and communication on the Web and in television, in newspapers and advertisements. Images of Ebola viruses, genetically modified salmon, or landscapes of environmental devastation in Africa can be found in the subway, in Benetton ads, on the front pages of *The New York Times*. Representations of nature are not restricted, however, to popular media and texts; they also form the terrain for scientific contestation, debates about environmental ethics, and "high" policy formulation. We will explore how stories, images, and maps of nature are constructed, disseminated, and received differently by particular audiences and in specific areas of environmental controversy. Through

explorations of environmental issues and debates, we will examine how versions of nature and human relationships to it are constructed through sound, performance, text, and map. We will examine, for example, how the American southwestern landscape is imagined, mapped, and described in the reports of the nuclear industry, the literatures of Native American activists, and the essays of nonnative conservationists. The role of specific cultural memories and the poetics of place will be explored through environmental ethnographies of forest-dwelling and fishing communities in the Philippines and Indonesia. At what point do particular representations of "nature" become historically important and widespread? At what point did the Grand Canyon become grand? Why are viruses and insects figures of terror? We will use a variety of sources of environmental imagery including environmental ethnographies and histories, conservation organization reports, and the Web. Conference work may engage imagery from a variety of sources.

### Green Visions and Toxic Landscapes: Community-Based Approaches to Environmental Management

**Charles Zerner**

*Open—Fall*

This course explores the history and excitement of recent community-based attempts at effective and socially equitable environmental management, illuminating the ironies, risks, and opportunities in community-based efforts to live within and manage landscapes that are permeated with danger and toxicity, as well possibilities of redemption and regeneration. In the last two decades, programs for decentralization of environmental authority from governments to "local communities" in the form of community-based natural resource management have become fashionable in many sectors of environmental policy, including forestry, fisheries, and food supply. What is the history of ideas concerning community, property, and rights to landscapes and resources? Which communities are being specified or valued, by whom, and for what range of purposes? In an era of globalization, what do ideas of locality and community mean? Students will be encouraged to focus on an issue/environmental problem of concern and to investigate the variety of ways in which ideas of community are deployed in attempts to fashion change in environmental governance, practices, and subjectivities. Community-based natural resource management and recovery projects in contemporary America, including the formation of Salmon Nation, a new bioregional focus for community-based management and regeneration of Pacific Salmon stocks in the Pacific Northwest, are examined. In Southern California, the efforts of Los Angeles communities to

make visible, viable, and pleasurable the almost completely hidden, built-over remains of the Los Angeles River are examined. Community-supported agricultural initiatives in New York State as well as community-designed gardens, including the work of the Green Guerrillas, are explored. Experiments in “scale-jumping,” moving from local management to eco-regional planning, are critically examined, including technologies of mapping and surveillance. National nuclear “nature reserves,” urban parks on former toxic industrial sites, as well as gated communities, or “privatopias,” are part of this material and imaginative itinerary in which irony and unexpected consequences play a role. Critical engagement with cases, on the one hand, and with changing normative ideas of governance, nature, power, and practice, on the other hand, are encouraged. Field trips are possible.

## Making Threats: Biofears and the Social Production of Environmental Anxieties

**Charles Zerner**  
*Open—Spring*

September 11, 2001, marks the moment at which fear and anxiety became normalized as disturbing and important aspects of everyday life in the twenty-first century. Narratives of environmental threat reinforce and amplify these themes: color-coded terror alerts issued by the Homeland Security Office; media accounts of the travels of deadly viruses and bacteria; fears of lethal germs' potential release into air, water, or food supplies and of teeming third world populations overrunning the United States; images of exotic invasive species destroying native ecologies; and heightened concerns about a new policy domain, environmental security. A panoply of environmental threats, on scales from global to microscopic, has taken root in all aspects of life, including our images, metaphors, and basic perceptions of everyday risk. This course examines the production of environmental anxieties in several domains, including nuclear fears and fantasies; the recent history of biological weapons and their use by state and nonstate actors; imaginings of the “immigrant menace,” alien species “invasions”; risks of traveling pathogens; and a variety of recent environmental security concerns including water scarcity, overpopulation, and desertification. We examine environmental threats as empirical possibilities and as social and cultural productions or spectacles with consequences for policy, perception, and practice in civil society. We focus on the fashioning of risk through the manipulation of metaphor, analogy, narrative, and rhetoric, analyzing works of fiction, film, and scientific and public policy literatures. What is the relation between environmental fears and historical context? How are specific environmental phantasms produced in ways that haunt, mobilize, or disturb the popular

imagination? What are their implications and consequences? Which environmental problems are excluded from popular imaginings of environmental menace? Questions of biosecurity, strategies of vigilance, and anticipation of the future will be considered.

Full descriptions of the courses may be found under the appropriate disciplines.

## 2006-2007

### First-Year Studies: Cultures of Nature: Environmental Representations and Their Consequences

Charles Zerner  
 FYS

Environmental imagery is part of the fabric of daily life and communication on the Web and in television, newspapers, and advertisements. Images of Ebola viruses, genetically modified salmon, or landscapes of environmental devastation in Africa can be found in the subway, in Benetton ads, and on the front pages of *The New York Times*. Representations of nature and the environment are not restricted, however, to popular media and texts; they also form the terrain for scientific contestation, debate about environmental ethics, and “high” policy formulation. We will explore how stories, metaphors, images, and maps of nature are constructed, disseminated, and received differently by particular audiences and in specific areas of environmental controversy. In Asia, Latin America, Africa, and America, we will explore how issues and debates in tropical conservation and development are fashioned by the World Bank “experts” and contested by scholars and nongovernmental activists. We will examine how the American Southwestern landscape is imagined, mapped, and described in the reports of the nuclear industry, the literatures of Native American activists, and the essays of conservationists. How do particular representations of “nature” become historically important and widespread? When did the Grand Canyon become grand? How are environmental representations linked to policy, publicity, and persuasion? How are issues in environment, health, and disease imagined during different historical periods? What implications do these imaginings have for public policy, including immigration and civil rights? How are representations of food, embodied in television and mass media advertising, linked to the politics of food supply and the American diet? We will use a variety of sources, including mass media, environmental ethnographies and histories, conservation organization reports, and the Internet. Conference work may engage representations from a broad spectrum of issues.

### Making Property: Seeds, Cells, and Territorial Sovereignty

Charles Zerner  
 Advanced—Spring

How is property made? How, out of the buzzing, blooming confusion of the natural world—a world of foxes, forests, streams, and cells—is property fashioned? This course begins with an exploration of classic Western accounts of the origin of property. How is the wild made into property? How are whales made into owned things? How are portions of the genome claimed and successfully defended in courts of law as the intellectual property of particular corporations? What conceptions of ownership and property permit owners of dwellings to claim “air rights” to the “heavens”? What arguments are launched, by differently positioned parties, in claiming property rights to seeds and plant varieties? Who gains and who loses as specific forms of property—property rights regimes—are invented, claimed, and defended? The second movement of this course investigates struggles between indigenous communities in Asia, the United States, and the Canadian arctic, on the one hand, and governments, on the other hand, over land and territory. How are national and cultural claims to territory forged and fiercely defended by Palestinian peoples and Israeli citizens? How are archaeological evidence and excavation strategies used to fashion territorial claims? The mediation of property claims through production of maps, documents, songs, and ritual performances are modalities through which claims to ownership and sovereignty are performed. The third and final trajectory of this course addresses questions of privatization. We reflect on the consequences, in America, of a recent turn toward privatization of the public sphere and public space—whether in cyberspace, in shopping malls, or on the urban waterfront. The struggles of local groups to reclaim the water and riverfront landscapes for public use, for example, are examined through the example of Los Angeles. What kinds of property belong in the public domain, and which groups voice resistance to proliferating privatization? How are classic ideas of the commons and common property being reinvigorated to recuperate our commonwealth?

*Advanced.*

### Strategies of Visibility: Embodiment, Performance, and Memory in Environmental Design and Politics

Charles Zerner  
 Intermediate—Spring

In Germany, landscape architects design public parks in which toxic chemicals, the residues of decades of industrial production, remain buried on the site and

strangely colored flowers spring up, responding to the chemical contaminants in the soil. In rural Pennsylvania, designers work to revitalize the scarred, polluted terrain of mining landscapes. Across Europe, a natural science illustrator follows the track of the Chernobyl nuclear cloud, drawing deviations in the antennae, legs, chromatic patterns, and bodies of leafhoppers. Her work is an attempt to alert the public and the scientific community to the “mutant ecologies” we now inhabit and that inhabit us. In New York City, a political group identifies and exposes governmental and private sector surveillance sites. In the American Southwest, downwind from a nuclear reactor, a pack of robotic dogs is released to “sniff out” radiologically contaminated zones. How is the invisible made visible—rendered accessible to the senses and amenable to political action? This course is an exploration of the techniques, strategies, and effects of the politics of visibility in a variety of sites. We examine the strategies used by environmental and human rights groups render visible that which is “invisible” or hidden. How, for example, do nongovernmental environmental organizations seek to publicize threats including radiological hazards or the presence of toxics? We look at these strategies and tactics in a number of media, including maps, biological illustrations, film/video, Internet sites, photographs, architectural plans, performances, as well as narrative techniques. This course draws on theory and cases in environmental design and environmental politics, performance studies, media studies, and human rights.

## 2007-2008

### Disturbed Terrain: Environmental Design in the Twenty-First Century

**Charles Zerner**

*Open—Fall*

This course investigates emerging technologies, philosophies, and practices of environmental design and management in the early twenty-first century, from the level of regional landscapes to the level of cells. What are the values, visions, and assumptions that animate contemporary developments in environmental design? What forms of technological know-how and knowledge production practices enable these developments? What ethical, aesthetic, and political implications might these shifts in the making of environments and organisms entail? The course begins with an introduction to debates on the nature of nature in conservation debates during the late 1990's. We then turn to examine contemporary developments in environmental design in several domains including landscape architecture; cyborg technology; simulation, mediation, and virtual environments; and agriculture and biotechnology/biowarfare. We examine the work of bioartists and engineers, landscape architects, genetic engineers working for private industry and the government, as well as the work of environmental collaboratories including the Critical Art Ensemble, Rhizome, and the New Media Caucus. Developments in contemporary environmental design, including fashion (dresses that self-illuminate in the presence of contaminants), environmental monitoring technologies, at scales ranging from the width of blood vessels to entire planets, form part of this itinerary. Attitudes toward pollution are undergoing sea changes as landscape designers remediate toxic sites using natural processes and time-scales. On a micro level, molecular biologists and nanoengineers are creating emergent forms of tissues and organisms. On the battlefield, the nature of war is rapidly changing. Monarch butterflies, funded by the Department of Defense, are being redesigned as cyber creatures, capable of flying to “hot zones” and conveying information to human screeners a half-world away from the actual battle scene. Organisms and organismic processes are being enlisted and drafted into

military service. What does it mean to be human in this disturbed terrain? What might it mean to be a citizen in this changing state of nature?

## Science, Politics, and Environmental Problems

**Karen Hoffman**

*Open—Year*

When we look into any of the host of environmental problems in the world today, we quickly come upon science and politics. Often we find ourselves in contact with an assumption that scientific evidence, free of political interests, leads to policy. At the same time, we are frequently faced with the contradictory belief that environmental policymaking is entirely political, with barely a pretense of a scientific base. As we shall see in this course, usually science and politics are inseparably stuck together in debates about environmental problems (and otherwise).

This year-long course begins with a discussion of how science and politics are produced together, even while they often appear to be binary opposites. We then examine the environmental policy-making process, giving attention to how scientific evidence is used as a resource in policy making, and how judgment is also used as a resource in policy making, even as it is sometimes obscured. We will also study the requirement in U.S. environmental law of public review, which involves the input of citizens – from the grassroots to the corporate – directly to administrative agencies and indirectly, via lawsuits and the courts. Along the way we will look at the origins of the idea of science-based policy in the Progressive Era. We will also examine the historical roots of public participation in the corporate response to decision making in administrative agencies.

We will then zero in on some case studies of the environmental laws of the 1970s, focusing on the preference in their letter for taking precaution rather than risk, and the preference in their implementation for risk-taking. Here we will learn about risk assessment, a policy-making technique that held and may still hold great promise, and its cousin cost-benefit analysis, which undermined the former in the neoliberal climate of the last three and a half decades. We will also give some attention to how burdens of proof have been established, and the “bad science” movement.

From the examination of the policy-making process, we will have seen how expertise is a very important a resource in influencing environmental policy. And we will take a look at expertise – its historical and social production, its political economy – asking the questions, How do people get to be experts? Why are some groups frequently represented among experts, and other groups not? What about the expertise of laypersons? We will discover that although expertise is a crucial resource for

figuring out what should be done, the organization of expertise in our society conflicts with the value we place on democracy. We'll end the course by reading about some visions of how the organization of expertise and environmental policy-making could be more democratic.

## Social Studies of Environmental Advocacy

**Karen Hoffman**

*Open—Year*

## Strategies of Visibility: Arts of Environmental Resistance

**Charles Zerner**

*Intermediate—Fall*

In Germany, landscape architects design public parks in which toxic chemicals, the residues of decades of industrial production, remain buried on the site and strangely colored flowers spring up, responding to the chemical contaminants in the soil. In rural Pennsylvania, designers work to revitalize the scarred, polluted terrain of mining landscapes. Across Europe, a natural science illustrator follows the track of the Chernobyl nuclear cloud, drawing deviations in the antennae, legs, chromatic patterns, and bodies of leafhoppers. Her work is an attempt to alert the public and the scientific community to the “mutant ecologies” we now inhabit and that inhabit us. In New York City, a political group identifies and exposes governmental and private sector surveillance sites. In the American Southwest, downwind from a nuclear reactor, a pack of robotic dogs is released to “sniff out” radiologically contaminated zones. How is the invisible made visible—rendered accessible to the senses and amenable to political action? This course is an exploration of the techniques, strategies, and effects of the politics of visibility in a variety of sites. We examine the strategies used by environmental and human rights groups to render visible that which is “invisible” or hidden. How, for example, do nongovernmental environmental organizations seek to publicize threats including radiological hazards or the presence of toxics? We look at these strategies and tactics in a number of media, including maps, biological illustrations, film/video, Internet sites, photographs, architectural plans, performances, as well as narrative techniques. This course draws on theory and cases in environmental design and environmental politics, performance studies, media studies, and human rights.

## 2008-2009

### **Dominance by Design: Technology, Environment, and War in an Age of Empire**

**Charles Zerner**

*Advanced—Spring*

This course examines the ways in which ideas and practices of waging war, from World War II through the “War on Terror” in Iraq, Afghanistan, and the “homeland,” are linked to emerging forms and networks of mediation, technological development, and the environment. What is the idea of “full-spectrum dominance,” and how has this fantasy become normalized in war games on the screen and in military planning? How have specific organisms provided sources for military weapons development? How have military technologies and installations affected environmental

ecosystem functioning and human health at “home” and abroad? What is “America’s robot army,” and what implications may it have for the ways in which future wars will be fought and contested? What is biomimesis, and how is the intersection of engineering and biological sciences affecting the ways in which contemporary conflicts are fought and future conflicts are imagined? What intersections exist between emerging scientific knowledges, science fictions, and the ways in which war is imagined, planned, experienced, and conducted? What are “feral cities,” and how does this conception of urban life articulate with future plans for war? Scholarly books and articles, works of nonfiction and fiction, film, and Web sites will form the basis of this itinerary. Among the works studied are Der Derian’s *Virtuous War: Mapping the Military-Industrial-Media-Entertainment Network*; Graham’s *Cities, War, and Terrorism: Toward an Urban Geopolitics*; documents produced by the Project for the New American Century, a nongovernmental policy organization affiliated with the American Enterprise Institute; and Michael Adas’s *Dominance by Design: Technological Imperatives and America’s Civilizing Mission*.

### **New Nature: Environmental Design in the Twenty-First Century**

**Charles Zerner**

*Open—Year*

This course investigates emerging technologies, philosophies, and practices of environmental design and management in the early twenty-first century, from the level of regional landscapes to the level of cells. What are the values, visions, and assumptions that animate contemporary developments in environmental design? What forms of technological know-how and knowledge production practices enable these developments? What ethical, aesthetic, or political implications might these shifts in the making of environments, organs, and organisms entail? How might we begin to make informed judgments about emerging form(s) of nature, environmental design, and humanity? The course begins with an introduction to debates on the nature of nature and machines, in America, in the eighteenth century, grounding discussion through examining changing ideas of environment, ecosystems, and equilibriums. Post-World War II ideologies of design, command, and control of the environment, including nuclear power and developments in chemistry, are examined. We then turn to debates on nature, communities, and conservation from the 1970’s through the late 1990’s, from the era of “the green planet” and “rain-forest conservation.” Preoccupations with biowarfare, genetic engineering, and human enhancement in the post-September 11 era are key topics. We examine contemporary developments in environmental design in several domains including landscape architecture; cyborg technology; simulation, mediation, and virtual

environments; and biotechnology/biowarfare. The work of bioartists and engineers, genetic engineers working for private industry and the government, as well as the work of environmental networks including the Critical Art Ensemble, Rhizome, and the New Media Caucus form part of this itinerary. Attitudes toward pollution are undergoing sea changes as landscape designers remediate toxic sites using natural processes and timescales. Industrial designers and environmental chemists are reconceptualizing the basis for resource extraction, processing, and manufacturing. On a micro level, molecular biologists and nanoengineers are creating emergent forms of tissues and organisms, for purposes of medicine as well as waging war. On the battlefield, the nature of war is rapidly changing. Robotic armies under “human control” may be the armed forces of the future. Organisms and biochemical processes are being enlisted and drafted into military as well as medical service. At the same time, landscape architecture is being reconceptualized as the discipline charged with responsibility for “imagining and saving the earth.” A marvelous diversity of efforts at innovative sustainable uses of energy, water, and industrial design will be examined through texts, Web sites, films, and speakers from the ES/STS Colloquium Series. Where possible, field trips within the New York City/New York State area will be arranged. In New York City, for example, community gardens, rooftop agriculture and botanical gardens, waste treatment, and innovative urban installations may be visited. What will constitute our planetary home in a world of emerging, new nature(s)? What forms of energy, water, and toxic management are being imagined, designed, and implemented? How are engineers, artists, architects, and agronomists, as well as writers of science fiction and film, contributing to the formation of new nature and human relationships to the environment, in the twenty-first century?

Full descriptions of the courses may be found under the appropriate disciplines.

## 2009-2010

### Picturing Nature: Poetics and Politics of Environmental Imagery

**Charles Zerner**

*Open—Spring*

From prehistoric bestiaries painted on the walls of caves in Southern France to the pixilated fantasies of Japanese manga and anime artists creating images of toxic forests and spores threatening to colonize a post-apocalyptic landscape, environmental imagining and image making are fundamental human capacities and activities. These acts of imagination constitute nature and situate humanity in relation to a significant world. Among the topics investigated: the creation of the Euro-American pastoral landscape; landscape aesthetics and the creation of African nature parks; the cave paintings of Chauvet and Lascaux; the erotic fishing imagery of Indonesian fisherfolk and pearl divers; the films of Hayao Miyazaki and Walt Disney. Painting, YouTube videos, GPS/GIS technologies, animation, film, and environmental installations are among the media and modalities considered. How are environmental images to be interpreted? What intentions animate the production of specific environmental images? How do we look at nature, and how are ways of looking and seeing made? How are models, metaphors, map making and scientific “looking” at the world linked? How are meanings of environmental sites made and unmade over the course of history? What links exist between historical contexts and the production of environmental imagery? When do specific images—of the sperm and the egg, the ocean, the tropical rainforest, or toxic apocalypse—appear? What forms do they take and why? Who is producing these images? Toward which publics or audiences are they directed? In what ways are pictures and picturing linked to environmental policy?

## Strategies of Visibility: Arts of Environmental Resistance and Creativity

Charles Zerner

Open—Year

Many of the lethal compounds produced by contemporary industry and government-sponsored facilities are not accessible to the senses. Human beings are not biologically equipped to sense the hazards of radioactivity; nor do they perceive, under normal circumstances and levels of contamination, the presence of chemical compounds or radioactive materials that are significant causes of disease, debility, and mortality in human and nonhuman populations. A key problem and challenge for artists, local residents, writers, scientists, and public policy experts, as well as for local, regional and non-governmental environmental advocacy organizations, is how to render “visible”—or accessible to our senses—the nature and immanence of these toxic and radiological threats. How are individuals and organizations creating and deploying “strategies of visibility” and “tactics of sensibility”—techniques of translation and mediation that engage human capacities to perceive and respond to sensory stimuli—in order to create more fully informed, alert, and engaged publics? How do strategies of visibility create possibilities for awareness and empathy? What possibilities are there for developing strategies of visibility that engage the affections and perceptions of citizens in a world of proliferating threats and images of threat? The aesthetic project is investigated as a tactical and strategic attempt in fashioning sensibilities, making and mobilizing publics, and equipping citizens to respond to environmental issues.

## The Question of the Commons

Charles Zerner

Intermediate—Fall

Perhaps few issues are more contentious in the environmental arena than those surrounding struggles over rights to private, as well as common property, resources. Debates over the “commons” implicate ideas of citizenship, community, the public good, and justice. Controversies over public space and community gardens, genetic recombinant research and rights to the genome, North-South disputes over rights to biodiversity in the geographic South, as well as debates over intellectual property rights, form only a small portion of the hotly contested terrain of property rights and the commons. This course is an introduction to ideas and cultures of property (private, public, and collective), debates over the commons, and the environmental and social consequences of different property regimes. Contemporary disputes over property are investigated: rights to airspace and airwaves, seeds, land, and seas; claims on DNA, body organs and body

parts. Ideas of cultural and artistic property, including Native American artifacts and sites, public radio and the monopolization of the airwaves, are analyzed, as is the “production of scarcity” in water and food. What are cultures of property? How are property claims to territory and to nature made through distinctive cultural performances, discourses, and images deployed by the World Bank, USAID, and non-governmental organizations representing indigenous people, as well as indigenous communities “speaking for themselves”? Alternatives to monopolization and privatization are explored, providing pragmatic examples and possibilities for visions of community-based governance of the commons.

## 2010-2011

## First-Year Studies: Cultures of Nature: Environmental Representations and Their Consequences

Charles Zerner

FYS

Environmental imagery is part of the fabric of daily life and communication on the Web, on television, and in newspapers and advertisements. Images of Ebola viruses, genetically modified salmon, or landscapes of environmental devastation in Africa can be found in the subway, in Benetton ads, and on the front pages of *The New York Times*. Representations of nature and the environment are not restricted, however, to popular media and texts; they also form the terrain for scientific contestation, debate about environmental ethics, and "high" policy formulation. We will explore how stories, metaphors, images, and maps of nature are constructed, disseminated, and received differently by particular audiences and in specific areas of environmental

controversy. In Asia, Latin America, Africa, and North America, we will explore how issues and debates in tropical conservation and development are fashioned by the World Bank "experts" and contested by scholars and nongovernmental activists. We will examine how the American Southwestern landscape is imagined, mapped, and described in the reports of the nuclear industry, the literatures of Native American activists, and the essays of conservationists. How do particular representations of "nature" become historically important and widespread? When did the Grand Canyon become grand? How are environmental representations linked to policy, publicity, and persuasion? How are issues in environment, health, and disease imagined during different historical periods? What implications do these imaginings have for public policy, including immigration and civil rights? How are representations of food, embodied in television and mass media advertising, linked to the politics of food supply and the American diet? We will use a variety of sources, including mass media, environmental ethnographies and histories, conservation organization reports, and the Internet. Conference work may engage representations from a broad spectrum of issues.

## Hunger and Excess: Histories, Politics, and Cultures of Food

**Persis Charles, Charles Zerner**

*Intermediate—Spring*

Beliefs about food, food making and food consumption are practices that have historically indexed, identified, and mapped the contours of self, community, and nation. This course analyzes food issues through the lenses of culture and history. Histories of particular foods, including sugar and potatoes, coffee, and chocolate, are examined in order to reveal their crucial roles in social change, identity, class formation and conflict, nationalism, and the promotion of slavery. How were potatoes, famine, and the enforcement of free-trade ideology linked in 19<sup>th</sup> century Anglo-Irish relations? How have episodic food riots, greeting perceived shortages and injustices in distribution, led to the constitution of new forms of sociability? What accounts for the birth of the restaurants? How has the coming of the recipe book affected gender roles and domesticity? And how has the arrival of abundance brought changes to the human body, ideas, and ideals of normality? The course explores relationships between ideas of "nature" and the "natural" and ideas of natural diets, "locavorisms," the "wild," the raw, and the cooked. Through the lens of cultural studies and cultural anthropology, food production and consumption is revealed as a symbolic medium whose "travels" across continents, as well as into individual digestive systems, illuminate and map topographies of class, tastes, the forbidden, and the erotic. Food as a symbolic substance moves through fashion, contemporary art, and nutrition.

How, for example, is the natural body imagined and modeled in the 21<sup>st</sup> century? Is it taboo to eat chocolate after yoga? What do the rules of kosher do? And how do food taboos in the natural food movement resonate with the rules of kosher in the Old Testament?

*Open to sophomores and above.*

## Investigating the Environment: The Indian Point Project

**Marek Fuchs**

*Open—Fall*

Long-form investigative journalism saved the environment in the 20<sup>th</sup> century by exposing the malfeasance, carelessness, and push for profit that led to smoggy cities, burning rivers, and chemically laden food and land. What will it save us from in the 21<sup>st</sup> century? That remains to be seen and may well be a function of the quality of long-form investigative journalism—a form of nonfiction writing imperiled in the modern age, as media outlets retract and cut research budgets and manpower. Enter the Indian Point Project. This class will focus on a single, collective investigative journalism project about Indian Point, the hulking local nuclear plant that stands as the focus of environmental, political, economic, and national security concern. Working together, and through media ranging from the written word to video, students will pull out all known and hidden threads of the Indian Point story in order to put the plant—and all it represents about the future—into proper perspective.

*Open to any interested student.*

## Picturing Nature: Poetics and Politics of Environmental Imagery

**Charles Zerner**

*Advanced—Fall*

From prehistoric bestiaries painted on the walls of caves in Southern France to the pixilated fantasies of Japanese manga and anime artists creating images of toxic forests and spores threatening to colonize a post-apocalyptic landscape, environmental imagining and image-making are fundamental human capacities and activities. These acts of imagination constitute nature and situate humanity in relation to a significant world. Among the topics investigated: the creation of the Euro-American pastoral landscape; landscape aesthetics and the creation of African nature parks; the cave paintings of Chauvet and Lascaux; the erotic fishing imagery of Indonesian fisherfolk and pearl divers; the films of Hayao Miyazaki and Walt Disney. Painting, YouTube videos, GPS/GIS technologies, animation, film, and environmental installations are among the media and modalities considered. How are environmental images to be interpreted? What intentions animate the production of specific environmental images? How do we look at

nature, and how are ways of looking and seeing made? How are models, metaphors, mapmaking and scientific "looking" at the world linked? How are meanings of environmental sites made and unmade over the course of history? What links exist between historical contexts and the production of environmental imagery? When do specific images—of the sperm and the egg, the ocean, the tropical rainforest, or toxic apocalypse—appear? What forms do they take and why? Who is producing these images? Toward which publics or audiences are they directed? In what ways are pictures and picturing linked to environmental policy?

## 2011-2012

### Hunger and Excess: Histories, Politics, and Cultures of Food

**Charles Zerner, Persis Charles**  
*Open—Spring*

Beliefs about food, foodmaking, and food consumption are practices that have historically indexed, identified, and mapped the contours of self, community, and nation. This course analyzes food issues through the lenses of culture and history. Histories of particular foods, including sugar, potatoes, coffee, and chocolate, are examined in order to reveal their crucial roles in social change, identity, class formation and conflict, nationalism, and the promotion of slavery. How were potatoes, famine, and the enforcement of free-trade ideology linked in 19th-century Anglo-Irish relations? How have episodic food riots, greeting perceived shortages and injustices in distribution, led to the constitution of new forms of sociability? What accounts for the birth of restaurants? How has the coming of the recipe book affected gender roles and domesticity? And how has the arrival of abundance brought changes to the human body, ideas, and ideals of normality? The course explores relationships between ideas of "nature" and the "natural" and ideas of natural diets, "locavorisms," the "wild," the raw, and the cooked. Through the lens of cultural studies and cultural anthropology, food production and consumption are revealed as a symbolic medium whose "travels" across continents, as well as into individual digestive systems, illuminate and map topographies of class, tastes, the forbidden, and the erotic. Food as a symbolic substance moves through fashion, contemporary art, and nutrition. How, for example, is the natural body imagined and modeled in the 21st century? Is it taboo to eat chocolate after yoga? What do the rules of kosher do? And how do food taboos in the natural food movement resonate with the rules of kosher in the Old Testament?

## New Nature: Environmental Design in the 21st Century

**Charles Zerner**

*Intermediate, Sophomore and above—Year*

This course investigates emerging technologies, philosophies, and practices of environmental design and management in the early 21st century from the level of regional landscapes to the level of cells. What are the values, visions, and assumptions that animate contemporary developments in environmental design? What forms of technological know-how and knowledge production practices enable these developments? What ethical, aesthetic, or political implications might these shifts in the making of environments, organs, and organisms entail? How might we begin to make informed judgments about emerging form(s) of nature, environmental design, and humanity? The course begins with an introduction to debates on the nature of nature and machines in America in the 18th century, grounding discussion through examining changing ideas of environment, ecosystems, and equilibriums. Post-World War II ideologies of design, command, and control of the environment, including nuclear power and developments in chemistry, are examined. We then turn to debates on nature, communities, and conservation from the 1970s through the late 1990s, from the era of “the green planet” and “rain-forest conservation.” Preoccupations with biowarfare, genetic engineering, and human enhancement in the post-September 11 era are key topics. We examine contemporary developments in environmental design in several domains, including landscape architecture; cyborg technology; simulation, mediation, and virtual environments; and biotechnology/biowarfare. The work of bioartists and engineers, genetic engineers working for private industry and the government, as well as the work of environmental networks—including the Critical Art Ensemble, Rhizome, and the New Media Caucus—form part of this itinerary. Attitudes toward pollution are undergoing sea changes as landscape designers remediate toxic sites using natural processes and timescales. Industrial designers and environmental chemists are reconceptualizing the basis for resource extraction, processing, and manufacturing. On a micro level, molecular biologists and nanoengineers are creating emergent forms of tissues and organisms for purposes of medicine, as well as for waging war. On the battlefield, the nature of war is rapidly changing. Robotic armies under “human control” may be the armed forces of the future. Organisms and biochemical processes are being enlisted and drafted into military, as well as medical, service. At the same time, landscape architecture is being reconceptualized as the discipline charged with responsibility for “imagining and saving the earth.” A marvelous diversity of efforts at innovative sustainable uses of energy, water, and industrial design will be examined through texts, Web sites, films, and

speakers from the ES/STS Colloquium Series. Where possible, field trips within the New York City/New York State area will be arranged. In New York City, for example, community gardens, rooftop agriculture and botanical gardens, waste treatment, and innovative urban installations may be visited. What will constitute our planetary home in a world of emerging, new nature(s)? What forms of energy, water, and toxic management are being imagined, designed, and implemented? How are engineers, artists, architects, and agronomists, as well as writers of science fiction and film, contributing to the formation of new nature and human relationships to the environment in the 21st century?

## Questions of the Commons: Interrogating Property

**Charles Zerner**

*Open—Fall*

Perhaps few issues are more contentious in the environmental arena than those surrounding struggles over rights to private, as well as common, property resources. What is property, and how is it made? Who makes property? How are property rights performed, publicized, and enforced? What is a commons, and what is common property? Debates over the “commons” implicate ideas of citizenship, community, the public good, justice, and governance. Controversies over public space and community gardens, genetic recombinant research and rights to the genome, North-South disputes over rights to biodiversity in the geographic South, as well as debates over property in the Middle East, form some of the hotly contested terrain of property rights and the commons, use and ownership. Property rights on a variety of scales, from the biomolecular to whole organs and organisms, from individual trees to whole ecosystems, are examined in varied geographic, biological, cultural, and historical contexts. This course is an introduction to ideas and cultures of property (private, public, and collective); debates, claims, and arguments over the commons; and the environmental and social consequences of different property regimes.

# Film History

## 2002-2003

### Chinese Cinemas Past and Present

*Augusta Palmer*

*Open—Year*

American interest in Chinese cinema has increased dramatically with the international success of films like Ang Lee's *Crouching Tiger, Hidden Dragon*, but the rich aesthetic and cultural history of Chinese cinemas has been left largely unexplored. This course will examine the cinemas of Hong Kong, Taiwan, and the People's Republic of China in the context of the immense political and cultural transformations that have shaped China over the past century. In the first semester, we will examine the history of Chinese cinemas, including the Shanghai golden age of the 1930s and the separation of Chinese cinema into three distinct industries in the 1950s. The second half of the course will focus on contemporary Chinese cinemas, including the films of the Hong Kong New Wave, the New Taiwan Cinema, and the P.R.C.'s Fifth and Sixth Generation filmmakers. Filmmakers to be studied include Fei Mu, Xie Jin, Zhang Yimou, Hou Hsiao-Hsien, and Tsui Hark. Throughout the course, readings and lectures will allow students to explore cinematic representations of nationalism, cultural identity, and gender in the context of greater China's literary, cultural, and political history.

### French Cinema Since 1945

*Malcolm Turvey*

*Intermediate—Fall*

Postwar French film culture is often viewed as the birthplace of cinephilia. Intellectuals, artists, and much of the public in general consumed films voraciously and debated their significance within the context of larger trends in French intellectual life, such as Marxism, existentialism, phenomenology, and later structuralism, psychoanalysis, the "nouveau roman," and poststructuralism. The prewar cine-club movement was revived and grew to 200 clubs and approximately 100,000 members by 1954. Cinema was taught at universities for the first time. And important film publications were started — *La Revue du Cinema* (1946), *Cahiers du cinema* (1951), and *Positif* (1952) — in which theoretical debates about the nature and functions of cinema could take place, debates that had a direct impact on filmmaking. While there are precedents for nearly all of this in the 1920s, the vitality of postwar French film culture helped to give rise to one of the richest national cinemas in the history of film. This course will examine in depth the various achievements of French filmmakers since 1945 — the

so-called Tradition of Quality that emerged during and after the Occupation, the return of older exiled filmmakers after the war, French film noir, the New Wave, the "Left Bank" group, political modernism of the 1960s, feminist modernism and the new Tradition of Quality of the 1970s, and the "cinema du look" of the 1980s. We will examine the political, cultural, and economic conditions that gave rise to these achievements, as well as the most important debates in French film theory and criticism of the period. Filmmakers to be studied include Henri-Georges Clouzot, Jean Renoir, Max Ophuls, Robert Bresson, Jacques Tati, Jean-Pierre Melville, Francois Truffaut, Jean-Luc Godard, Alain Resnais, Agnes Varda, Jacques Demy, Chris Marker, Jean Rouch, Chantal Akerman, Bertrand Blier, Jean-Jacques Beineix, and Leos Carax. Restricted to students who have taken an introductory film aesthetics class.

### Introduction to Film Interpretation

*Malcolm Turvey*

*Lecture, Open—Spring*

Like any artistic medium, cinema possesses its own unique formal and stylistic features that shape the meaning of any film, features that other media, such as painting and literature, do not possess. Anyone who wishes to interpret films competently must first be able to identify these unique features and the way they function — even a sophisticated knowledge of other media will not suffice to be a skilled interpreter of film. This introductory course in film aesthetics is designed to equip students with the basic concepts for analyzing film form and style, thereby enabling students to become competent film interpreters. Throughout, emphasis will be placed on the ways film form and style shape the meaning of a film. Filmmakers to be studied include Orson Welles, Vsevolod Pudovkin, Jean Renoir, Kenji Mizoguchi, Jacques Tati, Robert Bresson, Martin Scorsese, Vittorio de Sica, Ingmar Bergman, Wong Kar-wai, Alfred Hitchcock, and David Lynch. We will also examine the film genre of comedy.

### Soviet Literature and Film of the 1920s and 1930s

*Melissa Frazier, Malcolm Turvey*

*Intermediate—Spring*

The Communist revolution of 1917 gave rise to a creative explosion in all aspects of Russian art, as the avant-garde sought to create new types of art for the new society. While the movement cut across all media, this course will focus on two in particular: the already well-established tradition of Russian literature and the still relatively new enterprise of Russian film. The relations between Soviet literature and film are indeed very close, as writers and filmmakers such as Shklovsky, Pudovkin, Zamiatin, Vertov, Babel, and Eisenstein knew each

other's work and sometimes even experimented in both forms. Literature and film of the period also share common concerns of both content and form, concerns that will be illuminated by the juxtaposition of the two media. The topics that we will explore in the course include theories of de-familiarization and of montage, utopian images of the machine and of a futuristic world, issues of gender, and finally the transformation of the avant-garde art of the 20s to the Socialist realism of the 30s.

## The Art of Film

**Gilberto Perez**

*Lecture, Open—Fall*

This course aims to give students an overview of world cinema in the hundred years of its history. We will cover various aspects of cinema: the Hollywood film, the European and Japa-nese film, films from the Third World, avant-garde films, and documentary films. We will look into important movements: American silent comedy, German Expressionism, Soviet montage, French Surrealism and Realism, the American avant-garde, Italian Neorealism, and the French "New Wave." We will begin at the beginning, with the films of the inventors of film — Edison and the Lumière brothers — and with the early period of the "cinema of attractions" in which films, like the circus, were not particularly interested in telling stories. The making of film into a storytelling medium — the forging of a language of camera and performance for enactment of dramatic stories on the screen — will centrally concern us. We will examine several of the major achievements of the mainstream cinema of storytelling. We will also examine significant alternatives to the mainstream. We will devote attention to theory, which concerns itself with the properties and effects of the medium; we will consider different theories of film and their relation to the practice of filmmakers. We will consider films in relation to the culture and society that produced them.

## The Rhetoric of Film

**Gilberto Perez**

*Advanced—Fall*

In an era that mistrusts certainties and embraces differences, rhetoric — the study of argument and persuasion — is much called for. Rhetoric is always relative rather than absolute; it is not, as is sometimes thought, the opposite of truth, but it regards truth as open to question and considers different paths that can be taken to the truth, always keeping in mind the concrete social situations in which those paths are taken. In this course we will study the means, the forms, and the effects of rhetoric in the art of film. We will look at films of different provenances and persuasions, some more obviously rhetorical, more clearly aiming to have an impact on us, others working on us more subtly or indirectly. We will examine the different ways in

which films address us and engage us, move us and orient us, the different transactions that films propose with their audiences. Rhetoric could be said to stand between poetics and reception studies. Whereas poetics looks at the work and its construction and the study of reception looks at the audience and its response, rhetoric looks at the way construction elicits response, the way the work works on the audience. Rhetoric provides a meeting place for aesthetic and social concerns, the pursuit of theory and the examination of practice, scrutiny of the work, and attention to historical circumstance. This course presupposes on the part of the student a fairly considerable critical and theoretical sophistication, if not in the study of film then in the study of literature and art.

## 2003-2004

### American Avant-Garde and Documentary Film Since 1945

**Malcolm Turvey**

*Open—Spring*

Since World War II, an enormously rich, vibrant tradition of avant-garde filmmaking has existed in the United States. During the same period, innovative documentary filmmakers have experimented with the documentary form in exciting ways, creating new types of documentary film. This course will examine these considerable achievements in depth. We will look at how avant-garde filmmakers in the 1950's updated prewar avant-garde genres, such as the abstract film and the "psychodrama" associated with Surrealism, and how they pioneered new genres, such as the lyrical film and compilation film; the influence of artists such as John Cage and artistic movements such as Fluxus, Pop, Minimalism, and Conceptual art on avant-garde filmmaking in the 1960's; the so-called Structural film of the late 1960's and 1970's and the re-engagement with narrative at the end of the 1970's; and the pluralism that has existed since. At the same, we will be examining how postwar documentarians began using lighter, more mobile equipment and abandoning scripts and traditional ways of organizing documentary material in order to capture unpredictable events spontaneously and to allow documentary subjects to "speak for themselves"; how this development, often known as "direct cinema," itself came to be questioned by documentarians using reflexive techniques and fiction to interrogate the "objectivity" of documentary in the 1960's and 1970's; and how "synthetic" documentaries combining a variety of formal principles, such as spontaneous recording and staged reenactments, have emerged in the last few decades. We will also consider the economic and institutional contexts within which American avant-garde and documentary filmmakers have operated and their relation to social and political trends, such as the

counterculture. This class will meet twice a week; in addition, there will be two separate, mandatory screenings per week.

## Cinema and Society

**Gilberto Perez**

*Lecture—Year*

All art is social—it is made for an audience, presented to a public—and a popular art such as the movies is perhaps more social than most. In this course we will deal with the art of film in its nexus with society and in connection with social, cultural, and political issues. We will certainly not neglect the art of film—this is not a course in sociology, cultural studies, or political science—but we will consider the art in relation to the society in which it was made and to which it speaks. We will begin at the beginning of the movies, a century ago, and we will cover a wide range of films from different periods and countries and of different motivations and persuasions, reaching forward to the present time. We will be concerned both with socially conscious and political partisan films and with films raising social and political issues less explicitly, maybe even unconsciously, but no less significantly. We will examine not just the content but also the form of films, the techniques of expression, the conventions of representation, the modes of transaction with the audience—and the ways in which these carry social and political implications.

## Film Theory

**Malcolm Turvey**

*Intermediate—Year*

What is cinema? Is it a mass entertainment medium or an art? And if it is an art, how is it different to other artistic mediums to which it bears a resemblance, such as theatre and literature? Is it a tool of enlightenment that reveals reality as it really is or a tool of deception offering merely an “illusion” of reality? How does it affect viewers, cognitively and emotionally? Can it change society for the better, or does it merely reproduce relations of power, relations of class, race, gender, and sexual orientation? These, and many other fascinating questions, have been debated widely by film theorists—many of them also filmmakers—almost since cinema’s inception in the 1890’s. Due to cinema’s enormous popularity in the twentieth century, they have also attracted the attention of intellectuals more generally, such as Rudolf Arnheim, Walter Benjamin, Theodor Adorno, Roland Barthes, and Gilles Deleuze. Film theory has, moreover, tended to be an interdisciplinary affair, drawing on the latest developments in psychology, anthropology, sociology, linguistics, the natural sciences, and philosophy. This course will survey the rich history of film theory in depth. Beginning with the psychologist Hugo Munsterberg’s 1916 *The Photoplay*, the first work to systematically draw on contemporary psychology to

answer questions about the cinema, we will examine the debates about cinema’s nature and functions that emerged in the 1920’s; the widespread, utopian belief in its potential to change both human beings and society for the better prevalent before World War II; the countervailing view, often held by Marxists, that the cinema is a tool of domination and control; the turn since World War II to theoretical paradigms such as linguistics, psychoanalysis, and cognitivism to answer questions about the cinema; feminist and postcolonial interventions into film theory in the 1970’s and 1980’s; and the wholesale critique of film theory undertaken by theorists and philosophers trained in Anglo-American analytical philosophy since the 1990’s. We will end by asking whether theory is a logically appropriate methodology for answering questions about humanistic phenomena such as the cinema. The only prerequisite for this course is a commitment to analytical thinking, in-depth reading, and rational debate.

## First-Year Studies: History of Film

**Gilberto Perez**

*FYS*

This course is an introduction to the history of the art of film from its beginnings at the turn of the twentieth century to the present time. Form and meaning in the film medium, the techniques of film and their expressive uses and effects, will be the object of study. A wide range of films will be covered—older and more recent, mainstream and alternative, films from countries all over the world. The transaction between films and their audiences—the ways in which a movie moves us, how it engages and orients its viewers, how it affects us and influences us—will be a central concern. Films will be considered in relation to the culture and society in which they were made. Special attention will be paid to the work of several major filmmakers. Students who feel disinclined to watch silent films, avant-garde films, films in black and white, or foreign films should not enroll in this course.

## Hollywood and “Independent” Cinema Since 1960

**Malcolm Turvey**

*Open—Fall*

The American film industry has undergone many fascinating aesthetic, economic, technological, and social changes since the end of Hollywood’s “classical” era in the 1950’s, one of the most important being the emergence of different types of “independent” cinema. This course will examine these changes in depth. We will look at the various innovations introduced into film form and style by creative filmmakers and the numerous attempts to establish a “personal,” “art” cinema both inside and outside the major Hollywood studios; the tendency toward “updating” and “paying homage” to

classical Hollywood genres and directors that arose in the 1970's; and the rise of previously minor genres, such as horror, science fiction, and B movie action serials. We will consider the various transformations that have occurred in the economic structure of the industry, such as the emergence of the "blockbuster" since the late 1970's; the impact of new technologies, from new lenses and cameras and multitrack Dolby stereo sound to TV, video, cable, and satellite; how the steady relaxation of censorship since the 1960's has given rise to much more explicit sex, violence, and politics in both studio and "independent" films; and the targeting of specific audiences, such as youth, African-Americans, and more recently Asian-Americans, Spanish-Americans, and gays and lesbians. Two central questions will be asked throughout: To what extent has American cinema really changed since the classical era? And to what extent is "independent" cinema truly independent of the major Hollywood studios? We will end by speculating about the impact of new digital production and exhibition technologies. This class will meet twice a week; in addition, there will be two separate, mandatory screenings per week.

## 2004-2005

### Classical Hollywood Comedy

*Malcolm Turvey*

*Intermediate—Spring*

In this course, although some consideration will be given to pre- and postclassical comedy, our primary focus will be on the two great comic traditions of Hollywood's classical period (1920-1960): the comedian tradition (Keaton, Chaplin, Harold Lloyd, Laurel and Hardy, the Marx Brothers, Mae West, Bob Hope, Jerry Lewis) and the romantic comedy tradition (*Old Wives for New*, *The Lady Eve*, *Monkey Business*, *Pillow Talk*). We will pay equal attention to the creative innovations of each individual comedian, film, and/or filmmaker, and the genre's general aesthetic norms and patterns. We will examine the way economic (the studio system), technological (the coming of sound), and cultural (changing attitudes toward marriage and divorce) forces have shaped the genre. We will also address some of the larger philosophical and social questions it raises, such as what is humor? Can film comedy be subversive, helping to change society? Finally, we will consider the question of whether there is such a thing as "postclassical" comedy. This class meets once per week. In addition, there will be two separate, mandatory screenings per week.

### First-Year Studies: The Aesthetics and History of Film

*Malcolm Turvey*

*FYS*

This class is designed to introduce students to the study of film aesthetics and history. In the first semester, we will examine the basic aesthetic features of film: its stylistic techniques, such as editing, cinematography, and sound, as well as its various narrative and nonnarrative forms. Anyone who wishes to study film must first be able to identify these aesthetic features and the variety of ways they function. Filmmakers to be studied include Vsevolod Pudovkin, Jean Renoir, Orson Welles, Alfred Hitchcock, Jacques Tati, Vittorio de Sica, Ingmar Bergman, Jean-Luc Godard, Martin Scorsese, and David Lynch. We will also examine the film genre of comedy. In the second semester, we will turn our attention to film history, using as our example the American film industry since the 1950's. We will look at the various innovations introduced into film form and style by individual filmmakers, as well as larger aesthetic trends, such as the emergence of an American "art" cinema toward the end of the 1960's. We will consider the transformations that have occurred in the economic structure of the industry, such as the rise of "independent" production in the 1950's; the impact on cinema of new technologies, such as TV, video, cable, and satellite; and the influence of larger social changes in American society, such as the "sexual revolution" of the 1960's. We will end by speculating about the impact of new digital production and exhibition technologies. This class will meet twice a week; in addition, there will be two separate, mandatory screenings per week.

### Rhetoric of Film

*Gilberto Perez*

*Advanced—Year*

How movies move us, the different ways in which they engage us and affect us, the impact and influence they have on us, will be the subject of study. Rhetoric is the art of persuasion, the endeavor to influence others, and in this course we will look into the various means of persuasion employed in films with the aim of influencing the spectator's response. We will examine the forms and techniques of the film medium with an emphasis on their effect on the spectator. Special attention will be paid to tropes and figures of film rhetoric, classical tropes—metaphor, synecdoche, metonymy, irony—as well as specifically cinematic figures of arrangement like the close-up, the reverse angle, cross-cutting, and camera movement. Identification will be a central concern. We will examine how identification is always partial—both in the sense of incomplete and in the sense of biased—and how our identification with characters usually enters into a larger rhetorical play of identification by which, for example, a character represents a group or becomes

associated with a cause or an idea. This course will focus on the transaction between movies and their audiences and will attend to the concrete social situation in which that transaction takes place. We will study the workings of persuasion in a variety of films from different times and places, in different genres and styles, and with different designs on the spectator.

*This is an advanced course. Previous study of film is expected. Permission of the instructor is required.*

## The American Horror Film

**Malcolm Turvey**

*Intermediate—Fall*

Frankenstein; Dracula; The Thing from Another World; Psycho; Night of the Living Dead; Rosemary's Baby; The Exorcist; Carrie; Halloween; Alien; The Silence of the Lambs; Scream—these are just some of the influential films we will be watching in order to study the ways in which American horror films and their monsters have been designed to make their audiences feel horrified. We will pay equal attention to the creative innovations of each individual film and/or filmmaker, and the genre's general aesthetic patterns and norms. We will examine whether the genre reflects, if not promotes, the fears and prejudices of American society. And we will address some of the larger philosophical questions raised by the genre: what, precisely, is horror? Why do we enjoy watching films that make us feel ostensibly undesirable emotions such as fear and disgust, emotions which, in our ordinary lives, we tend to avoid? This class meets once per week. In addition, there will be two separate, mandatory screenings per week.

## The Art of Film

**Gilberto Perez**

*Lecture, Open—Year*

This course aims to give students an overview of world cinema in the hundred years of its history. We will cover various aspects of cinema: the Hollywood film, the European and Japanese film, films from the third world, avant-garde films, and documentary films. We will look into important movements: American silent comedy, German Expressionism, Soviet montage, French Surrealism and Realism, the American avant-garde, Italian Neo-Realism, and the French "New Wave." We will begin at the beginning, with the films of the inventors of film—Edison and the Lumiere brothers—and with the early period of the "cinema of attractions" in which films, like the circus, were not particularly interested in telling stories. The making of film into a storytelling medium—the forging of a language of camera and performance for enactment of dramatic stories on the screen—will centrally concern us. We will examine several of the major achievements of the mainstream cinema of storytelling. We will also examine significant alternatives to the mainstream. We

will devote attention to theory, which concerns itself with the properties and effects of the medium; we will consider different theories of film and their relation to the practice of filmmakers. We will consider films in relation to the culture and society that produced them.

## 2005-2006

### Experimental Film Until 1945

**Malcolm Turvey**

*Intermediate—Fall*

For the first time in the 1920's, cinema came to be widely accepted as an artistic medium. The result was an outpouring of creativity. Filmmakers and artists in the United States, France, Germany, and the Soviet Union experimented with film in a number of exciting ways, often producing theory and criticism in tandem with their cinematic experiments. Artists working primarily in other media, such as Fernand Léger and Marcel Duchamp, as well as filmmakers belonging to cross-media avant-garde movements, such as Dada and Surrealism, made some of the most enduring avant-garde films of all time. Meanwhile, narrative filmmakers created a variety of innovative alternatives to the classical Hollywood form and style that was adopted internationally in the 1920's, including German Expressionism, French Impressionism, and Soviet montage. Finally, documentary filmmakers experimented with novel forms of documentary, including the city film and Surrealist ethnography. This course will examine in depth all of these considerable achievements and pay attention to the historical conditions that gave rise to them. We will also read about the theories and ideas behind them.

*Intermediate. Open to any student who has taken a film history or art history course.*

### Hitchcock and Godard

**Malcolm Turvey**

*Intermediate—Spring*

Alfred Hitchcock and Jean-Luc Godard are, arguably, the most influential filmmakers in the history of cinema. This course will examine their work in depth, with the first half of the semester devoted to Hitchcock, the second to Godard. We will trace the continuities and changes—both stylistic and thematic—in their films by starting at the beginning of each filmmaker's oeuvre and working forward, watching at least two films per week. We will examine the variety of historical forces—aesthetic, economic, technological, cultural, and political—shaping their work, as well as read the writings of, and interviews with, each filmmaker, and a variety of criticism. We will end by considering their influence on cinema.

*Intermediate. Open to any student who has taken a film history course.*

## Introduction to the Aesthetics and History of Film

**Malcolm Turvey**  
*Lecture, Open—Year*

This class is designed to introduce students to the study of film aesthetics and history. In the first semester, we will examine the basic aesthetic features of film: its stylistic techniques, such as editing, cinematography, and sound, as well as its various narrative and nonnarrative forms. Anyone who wishes to study film, or be a competent film interpreter, must first be able to identify these aesthetic features and the variety of ways they function. In the second semester, we will turn our attention to film history, using French cinema as our example. Beginning in the 1910's, we will examine how French filmmakers created alternatives to mainstream narrative cinema, defined the "essence" of film art, dealt with the coming of sound in the late 1920's, and responded to the rise of the Popular Front in the 1930's and the German occupation and Vichy government during WWII. We will consider the so-called Tradition of Quality that emerged during and after the occupation; French film noir; the New Wave; the "Left Bank" group; political modernism of the late 1960's; feminist film of the 1970's; and the "cinema du look," heritage film, and "new realism" of the 1980's and 1990's. At all times we will pay careful attention to the historical conditions that gave rise to these trends, as well as the most important debates in French film theory and criticism. There will be two separate screenings per week in addition to two lectures and a biweekly group conference, attendance at all of which is mandatory.

## Melodrama in the Movies

**Gilberto Perez**  
*Intermediate—Fall*

What's the difference between tragedy and melodrama? When asked this question, a distinguished Sarah Lawrence teacher once replied: "If you don't like it, it's melodrama." No doubt because it is popular art—while tragedy is high art—melodrama has often been regarded as inferior. Melodrama began after the French Revolution, and it could be described as the tragedy of the people—or, perhaps more accurately, as the tragedy of the middle class, private rather than public tragedy—while traditional tragedy was about the high and mighty, the death of kings. In the popular art of the movies, melodrama has been a major genre from the silent era to the present time. Like tragedy, melodrama stirs our emotions, and the prejudice against melodrama is largely a prejudice against emotion. And it is largely a male prejudice, belonging to men who think that tears are a sign of weakness and dismiss melodrama as a

tearjerker for women. Feminist film scholars have devoted considerable attention to melodrama, and in this course we will look into their work. But melodrama does not appeal to women alone. A study of melodrama is an inquiry into what moves us and how and why it moves us, men and women alike. Sometimes melodrama is said to be simplistic and sentimental, to divide virtue too neatly from vice, the good guys we cheer from the bad guys we hate. But we will see that melodrama, like tragedy, is capable of nuance and moral complexity as well as strong sentiment. In this course we will examine the various forms of movie melodrama, the different ways in which sad stories have been told on the screen.

## Rhetoric of Film

**Gilberto Perez**  
*Advanced—Year*

How movies move us, the different ways in which they engage us and affect us, the impact and influence they have on us, will be the subject of study. Rhetoric is the art of persuasion, the endeavor to influence others, and in this course we will look into the various means of persuasion employed in films with the aim of influencing the spectator's response. We will examine the forms and techniques of the film medium with an emphasis on their effect on the spectator. Special attention will be paid to tropes and figures of film rhetoric, classical tropes—metaphor, synecdoche, metonymy, irony—as well as specifically cinematic figures of arrangement like the close-up, the reverse angle, cross-cutting, and camera movement. Identification will be a central concern. We will examine how identification is always partial—both in the sense of incomplete and in the sense of biased—and how our identification with characters usually enters into a larger rhetorical play of identification by which, for example, a character represents a group or becomes associated with a cause or an idea. This course will focus on the transaction between movies and their audiences and will attend to the concrete social situation in which that transaction takes place. We will study the workings of persuasion in a variety of films from different times and places, in different genres and styles, and with different designs on the spectator.

*This is an advanced course. Previous study of film is expected. Permission of the instructor is required.*

## 2006-2007

### African and Middle Eastern Cinema

**Rahul Hamid**  
*Open—Spring*

This course covers the enormously rich history of African and Middle Eastern cinema since the 1960's. We will examine various concerns addressed by a wide

variety of filmmakers from these regions, such as colonialism, postcolonialism, the precolonial past, Arab self-criticism, modernism and realism, the oral tradition, the politics of land, and religion. We will also read key theoretical and historical texts, such as Frantz Fanon's *The Wretched of the Earth* and Edward Said's *Culture and Imperialism*, which will help us to better understand these concerns. However, throughout the course, emphasis will be placed on the considerable artistic achievements of African and Middle Eastern filmmakers, achievements that are often overlooked in favor of their sociopolitical themes and arguments.

*Open to any interested student.*

## Art of Film

**Gilberto Perez**

*Lecture—Year*

This course aims to give students an overview of world cinema in the hundred years of its history. We will cover various aspects of cinema: the Hollywood film, the European and Japanese film, films from the third world, avant-garde films, and documentary films. We will look into important movements: American Silent Comedy, German Expressionism, Soviet Montage, French Surrealism and Realism, the American Avant-Garde, Italian Neorealism, and the French "New Wave." We will begin at the beginning, with the films of the inventors of film—Edison and the Lumière brothers—and with the early period of the "cinema of attractions" in which films, like the circus, were not particularly interested in telling stories. The making of film into a storytelling medium—the forging of a language of camera and performance for enactment of dramatic stories on the screen—will centrally concern us. We will examine several of the major achievements of the mainstream cinema of storytelling. We will also examine significant alternatives to the mainstream. We will devote attention to theory, which concerns itself with the properties and effects of the medium, and we will consider different theories of film and their relation to the practice of filmmakers. We will also consider films in relation to the culture and society that produced them.

*Open to any interested student.*

## Contemporary Theory and Philosophy of Film

**Malcolm Turvey**

*Intermediate—Spring*

From the 1960's through the 1980's, film theorizing was dominated by a heady brew of structuralism, post-structuralism, psychoanalysis, Marxism, and continental philosophy, a paradigm that came to be known as Marxist-psychoanalytic-semiology. In the 1980's, a new generation of film theorists emerged, informed by

Anglo-American analytical philosophy and cognitivist psychology. Schooled in conceptual analysis and theory building, these theorists revealed most of the Marxist-psychoanalytic-semiotic paradigm that had preceded them to be a mixture of politically correct dogma and fashionable nonsense. They then set about constructing new theories of film. This class will survey the theoretical achievements of this new generation of film theorists. Each week, we will examine recent theories of a different phenomenon: the nature of film as a medium, fiction, documentary, narrative, emotional response, identification, interpretation, and ideology, to name but a few. We will also look at the film theory of Gilles Deleuze, the one new film theory informed by continental philosophy to have emerged in recent years. We will end by asking whether theory is a logically appropriate methodology for answering questions about humanistic phenomena such as the cinema. Students interested in taking this class should note that they will learn little about the history of the cinema, and they will be watching films only when they pertain to the theories the students read. Students should therefore already be broadly familiar with the history of the cinema, and, ideally, have read some film theory before. They should also be committed to analytical thinking, in-depth reading, and rational debate.

*Intermediate. Open to sophomores and above.*

## First-Year Studies: History of Film

**Gilberto Perez**

*FYS*

This course is an introduction to the history of the art of film from its beginnings at the turn of the twentieth century to the present time. Form and meaning in the film medium, the techniques of film and their expressive uses and effects, will be the object of study. A wide range of films will be covered, older and more recent, mainstream and alternative, films from countries all over the world. The transaction between films and their audiences—the ways in which a movie moves us, how it engages and orients its viewers, how it affects us and influences us—will be a central concern. Films will be considered in relation to the culture and society in which they were made. Special attention will be paid to the work of several major filmmakers. Students disinclined to watch silent films, avant-garde films, films in black and white, or foreign films should not enroll in this course.

## Iranian Cinema

**Jason Mohaghegh**

*Open—Fall*

This course covers the history of Iranian cinema, including its recent rise to the forefront of world cinema. We will devote equal attention to the considerable achievements of specific films and

filmmakers and the larger trends they exemplify, such as transformation, resistance, disenchantment, the unreal, time/space, and desire. We will also examine the innovative techniques, images, and concepts introduced by Iranian filmmakers into world cinema and their role in the creation of a Third Cinema. Ultimately, the course seeks to look beyond simply the Iranian context in search of a more expansive account of its place within global debates over the future of world cinema.

*Open to any interested student.*

## **2007-2008**

### **Cinema and Society**

**Gilberto Perez**

*Lecture, Open—Year*

All art is social—it is made for an audience, presented to a public—and a popular art such as the movies is perhaps more social than most. In this course, we will deal with the art of film in its nexus with society and in connection with social, cultural, and political issues. We will certainly not neglect the art of film—this is not a course in sociology, cultural studies, or political science—but we will consider the art in relation to the society in which it was made and to which it speaks. We will begin at the beginning of the movies, a century ago, and we will cover a wide range of films from different periods and countries and of different motivations and persuasions, reaching forward to the present time. We will be concerned both with socially conscious and political partisan films and with films raising social and political issues less explicitly, maybe even unconsciously, but no less significantly. We will examine not just the content but also the form of films, the techniques of expression, the conventions of representation, the modes of transaction with the audience—and the ways in which these carry social and political implications.

### **Editing and the Long Take**

**Malcolm Turvey**

Until the 1960's, historians of film tended to group filmmakers into two opposing stylistic paradigms: those who rely primarily on editing and those who eschew editing in favor of the long take. Although filmmakers today are happier to use and combine both techniques, these paradigms still survive (compare, for example, Oliver Stone with Gus Van Sant). This course will closely examine the wide variety of creative ways filmmakers have used these two basic techniques throughout the history of the cinema, focusing on editing in the first semester and the long take in the second. We will study those who have made original contributions to the art of editing and the long take, as well as those who exemplify broad stylistic trends, both American and international, mainstream and avant-

garde. We will also read the theories behind their use and the work of historians of film style who have charted their diverse manifestations. We will end by examining the impact that digital technologies are having on these techniques. We will meet once a week; in addition, there will be two separate, mandatory screenings per week.

*Open to juniors and above who have taken at least one course in film.*

## **First-Year Studies: The Aesthetics and History of Film**

**Malcolm Turvey**

This course is designed to introduce students to the art of film and its rich history. In the first semester, we will examine film's basic aesthetic features: its stylistic techniques, such as editing, cinematography, and sound, as well as its narrative and nonnarrative forms. Anyone who wishes to study film must first be able to identify these aesthetic features and the variety of ways they function. In the second semester, we will turn our attention to film history, looking at the major films, filmmakers, and film movements from the birth of cinema until the present day. The course will heighten students' aesthetic appreciation of any film by enabling them to notice and evaluate the creative choices made by filmmakers of all varieties. We will meet twice a week; in addition, there will be two separate, mandatory screenings per week.

### **The Documentary Image**

**Gilberto Perez**

The photographic image has a distinctive documentary quality. It is an image made of light directly received by the camera from things in the world. "From a real body, which was there, proceed radiations which ultimately touch me, who am here," as Roland Barthes put it in his book on photography. With regard to the movies, a medium of animated photographs, Robert Warshow held that "what the camera reproduces has almost always on the most literal level the appearance of reality." But most movies are fictional, staged for the camera, and even documentaries are often to some extent staged or in any case arranged to produce a meaning and have an effect on us. What we watch on the screen is not what we would experience in real life. Cinema is artifice rather than reality. And yet in various ways the artifice of cinema relies on that appearance of reality, that documentary quality peculiar to the camera's picture of things. Both documentaries and fiction films tend to blur the boundary between fiction and documentary. In this course, we will study the documentary film, its history and achievements, the work of such notable practitioners as Louis Lumière, Dziga Vertov, Robert Flaherty, Luis Buñuel, Leni Riefenstahl, Humphrey Jennings, Richard Leacock, D. A. Pennebaker,

Michelangelo Antonioni, Alain Resnais, Chris Marker, Jean Rouch, Claude Lanzmann, Jean-Luc Godard, Werner Herzog, Abbas Kiarostami, Errol Morris, Ross McElwee, Michael Moore, and Spike Lee, among others. We will also look into a number of fiction films that significantly incorporate elements of documentary.

## 2008-2009

### History of Experimental Film

#### Malcolm Turvey

For the first time in the 1920's, film came to be widely accepted as an artistic medium. The result was an outpouring of creativity. Filmmakers and artists in the United States, France, Germany, and the Soviet Union experimented with film in a number of exciting ways, often producing theory and criticism in tandem with their cinematic experiments. Artists working primarily in other media, such as Fernand Léger and Marcel Duchamp, as well as filmmakers belonging to cross-media avant-garde movements, such as Dada and Surrealism, made some of the most enduring avant-garde films of all time. Meanwhile, documentary filmmakers experimented with novel forms of documentary, including the city film and Surrealist ethnography. In the first semester, we will examine in depth all of these considerable achievements. In the second, we will turn our attention to experimental film in the United States following World War II, observing how filmmakers updated prewar experimental genres such as the abstract film and the "psychodrama" associated with Surrealism, and how they pioneered new genres in the 1950's, such as the lyrical film. We will then turn our attention to the so-called Structural film of the late 1960's/1970's and the reengagement with narrative at the end of the 1970's, and the pluralism that has existed in experimental film since. Throughout, we will pay attention to the historical conditions that gave rise to these experiments and will read the theories behind them. This class will meet once a week; in addition, there will be two separate, mandatory screenings per week.

*Open to juniors and above.*

### Melodrama in the Movies

#### Gilberto Perez

What is the difference between tragedy and melodrama? "If you don't like it, it's melodrama," a Sarah Lawrence professor once quipped. In this course, we will attempt to overcome the prejudice against melodrama. It is a prejudice against emotion, against tears, though tragedy also stirs our emotions and elicits our tears. It is a snobbish prejudice against popular art, though Greek and Elizabethan tragedies were popular in their time. It is a male prejudice against a genre often disparaged as a

tearjerker for women, though men are equally susceptible to sentiment. Feminist film scholars have devoted much attention to melodrama. Our study of melodrama in the movies will be an inquiry into what moves us and the ways in which it moves us, men and women alike. Melodrama is commonly deemed too simple and sentimental, a genre that too easily draws the line between virtue and vice, between the good guys and the bad guys. But we will see that melodrama, like tragedy, is capable of nuance and moral complexity as well as strong emotion. Tragedy was traditionally about the high and mighty, the fall of kings; melodrama deals with the misfortunes of ordinary people, who traditionally were the province of comedy. And if, like tragedy, melodrama tells sad stories, it often enough, like comedy, arrives at happy endings. We will consider melodrama in relation not only to tragedy but also to comedy. It is a modern genre that emerged after the French Revolution and flourished in the theatre and novel of the nineteenth century. It has been a major genre in the cinema from the silent era until today, a staple of Hollywood old and new and abundant elsewhere in the world. Like any other genre, it has produced many lesser works but also its share of superior achievements. We will look at melodramas from different periods and countries and by several notable filmmakers. We will examine the nature of the genre and explore its various manifestations, their form and meaning, their transaction with the audience, their aesthetic appeal, and their social significance.

### Reflexivity in the Movies

#### Gilberto Perez

The dictionary defines "reflexive" as "directed or turned back on itself." A movie is reflexive when it calls attention to itself as a movie, when it makes its own artifice manifest to the audience. This does not necessarily entail an exclusive preoccupation with film itself, only an acknowledgment of the means and the medium being employed, bringing on an awareness that it is a movie we are watching, a representation rather than a reality. Such artistic self-consciousness is characteristic of modernism, postmodernism, the avant-garde, and in this course we will study the work of several filmmakers who can be seen to exemplify these tendencies (Dziga Vertov, Luis Buñuel, Jean-Luc Godard, Ernie Gehr, Andrei Tarkovsky, Abbas Kiarostami, and Hou Hsiao-hsien, to name a few). It is a mistake, however, to assume that reflexivity is always subversive in the avant-garde manner, always a break with convention and a challenge to reigning assumptions. Other kinds of art besides the modernistic or experimental draw attention to artifice. Comedy, for example, has had since antiquity a tradition of declaring its contrivance, making the audience smilingly aware that in real life things would not happen in this way. And a popular artist like Alfred Hitchcock regularly

shows his hand, lets the audience know that he is behind the images we are watching on the screen (“for me, the cinema is not a slice of life,” he once said, “but a slice of cake”). Reflexivity even enters into the popular Americana of that Christmas classic, Frank Capra’s *It’s a Wonderful Life*, which begins in heaven with an angel being briefed on the hero’s life in the form of a movie within the movie—there is even a freeze-frame at one point—and which comes to a happy ending manifestly contrived beyond the bounds of plausibility. Along with modernism and the avant-garde, we will consider various other ways in which reflexivity informs our experience of films. In this connection, we will examine the work of such filmmakers as Jean Renoir, Kenji Mizoguchi, John Ford, Preston Sturges, Douglas Sirk, Federico Fellini, and Pedro Almodóvar.

## The Aesthetics and History of Film

### Malcolm Turvey

This course is designed to introduce students to the art of film and its rich history. In the first semester, we will examine film’s basic aesthetic features: its stylistic techniques, such as editing, cinematography, and sound, as well as its narrative and nonnarrative forms. Anyone who wishes to study film must first be able to identify these aesthetic features and the variety of ways they shape our experience of films. In the second semester, we will turn our attention to film history, looking at the major films, filmmakers, and film movements from the birth of cinema until the present day. The course will heighten students’ aesthetic appreciation of any film by enabling them to notice and evaluate the creative choices made by filmmakers of all varieties. We will meet twice a week; in addition, there will be two separate, mandatory screenings per week.

## 2009-2010

### Film Theory

#### Malcolm Turvey

A film theory can be defined as any explanatory generalization about the nature or functions of cinema. Film raises a number of fascinating theoretical questions, which people began attempting to answer soon after the cinema emerged in the 1890s. Although a number of answers have been proposed to these questions, there is little consensus about them, and they continue to be vigorously debated to this day. The first questions asked by film theorists were prompted by the novelty of cinema: What makes film an art? Is it different from the other arts? And how does it represent the world—by creating an illusion of reality, by providing a window through which to look at reality, or by offering a likeness of reality? Once the cinema’s major fictional and non-fictional forms solidified in the 1910s and 1920s, film theorists also began asking questions such as: What is

the difference between fiction and nonfiction film? How is it possible for viewers to feel emotions toward fiction? How do films tell stories, and why do viewers identify with certain characters in a story rather than others? As the cinema became a mass entertainment medium enjoyed by millions around the world, theorists also became interested in sociological questions about the ways in which film shapes our beliefs and values and how it relates to society. In this class, we will survey the most influential answers to these questions. Students will be expected not only to master the film theories we read but to engage in film theorizing themselves, debating the relative merits of competing film theories and forming their own opinions as to which are the most successful. Students interested in taking this class should note that, because it is about theory, they will learn little about the history of the cinema in the course, and films will be screened only when they pertain to the theories we read. Above all else, students should be committed to analytical thinking, in-depth reading, and rational debate.

*Sophomores and above.*

## First-year Studies: The Movies and Their Viewers

### Gilberto Perez

How movies move us, the different ways in which they engage us and affect us, and the impact and influence they have on us will be the subject of study. We will cover the history of film and look at a number of important movies from the silent era to the present. We will study the forms and techniques and the properties and possibilities of film as a medium of representation and expression. Our focus will be on the art of film—this course is not a sociological study of the audience—but we will consider the art in relation to the society in which it was made and to which it speaks. We will pay special attention to the transaction between the film and the spectator, which is to say the rhetoric of film. Rhetoric is not just what we currently call spin: It is what we always use, whether words or gestures or images, when we want to persuade or influence others and when we want to have an effect on them. We will study the various means that films use to persuade or influence or affect the spectator. We will consider a variety of films from different countries and periods, in different genres and styles, with different intentions and persuasions—movies ranging from Chaplin and Hitchcock to Buñuel and Godard, from romantic comedies to Italian neo-realism, film noir to documentaries, and experimental films from *The Battleship Potemkin* to *The Battle of Algiers*, from *My Darling Clementine* to *Memories of Underdevelopment*, from *Pather Panchali* to *Pulp Fiction*, from Dreyer, Mizoguchi, and Jean Renoir to Tarkovsky, Almodóvar,

and Kiarostami. Students who feel disinclined to watch silent films, avant-garde films, films in black and white, or foreign films should not enroll in this course.

## French Cinema

### *Malcolm Turvey*

France is home to one of the richest, most influential national cinemas in film history. In the first semester, this course will examine how French filmmakers helped pioneer the major genres of early cinema in the 1890s, contributed to the development of narrative film in the 1900s and 1910s, and then created alternatives to mainstream cinema in the 1920s. We will see how they dealt with the coming of sound in the late 1920s and responded to the rise of the Popular Front in the 1930s and the German occupation and Vichy government during World War II. In the second semester, we will consider the so-called “Tradition of Quality” that emerged during and after the occupation, French film noir of the 1950s, the New Wave and the “Left Bank” group of the 1960s, political modernism and feminist film of the 1970s, and the “cinema du look” and the “new realism” of the 1980s and 1990s. At all times, we will pay careful attention to the historical conditions that gave rise to these trends, as well as the most important debates in French film theory and criticism. There will be two separate, mandatory screenings per week.

## The Art of Film

### *Gilberto Perez*

This course aims to give students an overview of world cinema in the hundred years of its history. We will cover various aspects of cinema: the Hollywood film, the European and Japanese film, films from the Third World, avant-garde films, and documentary films. We will look into important movements: American silent comedy, German expressionism, Soviet montage, French surrealism and realism, the American avant-garde, Italian neorealism, and the French “New Wave.” We will begin at the beginning, with the films of the inventors of film—Edison and the Lumière brothers—and with the early period of the “cinema of attractions” in which films, like the circus, were not particularly interested in telling stories. The making of film into a storytelling medium—the forging of a language of camera and performance for enactment of dramatic stories on the screen—will centrally concern us. We will examine several of the major achievements of the mainstream cinema of storytelling. We will also examine significant alternatives to the mainstream. We will devote attention to theory, which concerns itself with the properties and effects of the medium. We will consider different theories of film and their relation to the practice of filmmakers. We will consider films in relation to the culture and society that produced them.

## 2010-2011

## First Year Studies: The History of Film Art

### *Malcolm Turvey*

#### *FYS*

This class will introduce students to the art of film through a detailed examination of its rich and varied history. We will begin with the emergence of the technologies for making and exhibiting films around 1894 and the major genres of early cinema (1895-1904), most of which were non-narrative. We will then turn our attention to the development of “classical” narrative film in the United States in the 1900s and 1910s; the creation of alternatives to classical cinematic storytelling in the 1920s in France, Germany, the Soviet Union, and elsewhere; the rise of documentary and experimental film; and the coming of sound in the late 1920s. We will see how European filmmakers on both the Left and Right responded to the increasing political turmoil in the lead-up to World War II in the 1930s, while filmmakers in Japan created popular traditions of filmmaking. We will consider the impact of World War II on film history; the emergence of Italian Neo-Realism and “modernist” art cinema in the late 1940s and 1950s; the New Waves of the late 1950s; and political modernist, post-colonial, feminist, and other radical forms of filmmaking that arose in response to the political crises of the 1960s. Finally, we will survey world cinema since the 1970s, focusing on the changes that have occurred in mainstream Hollywood filmmaking and the contributions to film art of filmmakers in Hong Kong and other non-Western countries.

## The Aesthetics and History of Film

### *Malcolm Turvey*

#### *Lecture, Open—Year*

This class will introduce students to the art of film and its history. In the first semester, we will examine film’s basic aesthetic features: its stylistic techniques such as editing, cinematography, and sound, as well as its narrative and non-narrative forms. We will also consider aesthetic concepts relevant to film art such as genre and auteur. In the second semester, we will turn our attention to film history, looking at major films, filmmakers, and film movements from the birth of cinema until the present day. We will study a wide range of films from the United States, Europe, Asia, and Africa that exemplify the cinema’s myriad forms and styles: mainstream and avant-garde, fiction and nonfiction, narrative and non-narrative, black-and-white and color, silent and sound. The class is designed to heighten students’ aesthetic appreciation of the art of film by enabling them to notice, understand, and

evaluate the creative choices made by a wide variety of filmmakers. Please note: There will be two separate, mandatory screenings per week.

*Open to any interested student.*

## The Documentary Image

**Gilberto Perez**

*Open—Year*

The photographic image has a distinctive documentary quality. It is an image made of light directly received by the camera from things in the world. "From a real body, which was there, proceed radiations which ultimately touch me, who am here," as Roland Barthes put it in his book on photography. With regard to the movies, a medium of animated photographs, Robert Warshow said, "What the camera reproduces has almost always on the most literal level the appearance of reality." But most movies are fictional, staged for the camera; and even documentaries are often to some extent staged or, in any case, arranged to construct a meaning and have an effect on us. What we watch on the screen is not what we would experience in real life. Cinema is artifice rather than reality. And yet, in various ways, the artifice of cinema relies on that appearance of reality, that documentary quality peculiar to the camera's picture of things. A love scene in an idyllic natural setting or a car chase through actual city streets is a fiction lent conviction by documentary. No clear-cut line can be drawn between documentary and fiction in films. In this course, we will study documentaries, as well as fiction films bordering on documentary. We will begin at the beginning, with the vignettes of everyday life made by the Lumière brothers; and we will go on to consider different approaches to documentary and its uncertain boundary with fiction down to the present day. We will cover a wide range of work in a rich field that includes Robert Flaherty, Dziga Vertov, Leni Riefenstahl, the British documentary movement, Buñuel, Rossellini, Antonioni, Rosi, Resnais, Godard, *Straub* and *Huillet*, Chris Marker, the French and American branches of cinema vérité, Patricio Guzmán, Marcel Ophuls, Claude Lanzmann, Werner Herzog, Errol Morris, Ernie Gehr, Spike Lee, Ross McElwee, Michael Moore, Abbas Kiarostami, Zhang Ke Jia, Pedro Costa, and other notable filmmakers.

*Open to any interested student.*

## The Double

**Gilberto Perez**

*Intermediate—Year*

Characters in fiction are often doubles of each other, as in the strange case of Dr. Jekyll and Mr. Hyde. In this course we will examine various forms of the double in films from the silent era to the present day. We will begin with *The Student of Prague*, a German movie from

1913 that tells the story of a student haunted by his mirror image after he sells it to a mysterious stranger; and we will read Otto Rank's classic psychoanalytic study, *The Double*, which focuses on this film. Like Jekyll and Hyde, or Dorian Gray and his picture, the student of Prague and his reflection are an example of the Gothic double, the uncanny doppelganger in the Romantic tradition. We will also consider several other examples in works by such filmmakers as Hitchcock, Fritz Lang, Maya Deren, Kurosawa, Antonioni, Werner Herzog, and David Lynch. But there is an older, comic tradition of doubling that has to do with social identity, the outer rather than the inner self. And we will also consider the comic double in works by such filmmakers as Chaplin, Lubitsch, Ozu, Preston Sturges, Woody Allen, and Almodóvar. Besides the comic and the Gothic, there are other kinds of doubling: the gangster father and the son turned gangster in *The Godfather*, the figures of East and West in John Ford's westerns, the dreamlike other selves in Buñuel's surrealist films, the director impersonator in Kiarostami's *Close-Up*, the husband looking for his wife and the wife looking for her husband in Zhang Ke Jia's *Still Life*, the portraits of the artist in works by such filmmakers as Cocteau, Mizoguchi, Fellini, and Tarkovsky. Any characters set in comparison with one another may be viewed as doubles, and characters may be doubles not only of each other but also of the spectator. When we identify with a character, he or she becomes, in a sense, our double—and of the implied author behind the work. We will look into figures of the author and of the spectator among other variants of the double in a medium whose images and sounds are themselves doublings—animated duplicates of life.

*Intermediate.*

A full description of the course may be found under the appropriate discipline.

**The Cold War in History and Film (p. 352),** Jefferson Adams *History*

## 2011-2012

### Cinema and Society

**Gilberto Perez**

*Lecture, Open—Year*

All art is social—it is made for an audience, presented to a public—and a popular art such as the movies is perhaps more social than most. In this course, we will deal with the art of film in its nexus with society and in connection with social, cultural, and political issues. We will certainly not neglect the *art* of film—this is not a course in sociology, cultural studies, or political science—but we will consider the art in relation to the society in which it was made and to which it speaks. We will begin at the beginning of cinema at the turn of the

20th century and cover a wide range of movies from Hollywood and around the world—Europe, Asia, Africa, the Middle East, Latin America—up to the present time. This course will offer the student a comprehensive social history of the movies. We will be concerned both with socially conscious and politically engaged films and with films raising social issues less explicitly, maybe even unconsciously, but no less significantly. Melodramas and documentaries, comedies and crime films, national epics and portrayals of everyday life, works of searching realism and fantasies that represent dreams or fears, accounts of the past and allegories of the future, the grand and the subtle, the mainstream and the alternative—these are all within the scope of this course. We will examine not only the content but also the form of films, the techniques of expression, the conventions of representation, the modes of transaction with the audience—and the ways in which these carry social implications.

## Rhetoric of Film

**Gilberto Perez**  
*Intermediate—Year*

How movies move us, the different ways in which they engage and affect us, will be the subject of study. Rhetoric is the art of persuasion, the endeavor to influence others, the sway of attitude and belief, orientation and viewpoint. In this course, we will look into the various means of persuasion—emotional or logical, personal or social, and usually a combination of things—employed in the cinema from the silent era to the present day. We will focus on the transaction between movies and their audiences. We will inquire into where a movie is coming from, what position it takes and would have us share, what designs it has on us, and how it shapes our response. Much of our discussion will be devoted to the forms and techniques of film art but with emphasis on their effect on the spectator. Realism is often treated as a matter of content, but we will consider how it is also a matter of rhetoric: A shaky camera in the manner of a newsreel, for example, gives us the sense of being right there in the midst of things and serves to achieve what Roland Barthes called the “reality effect.” We will pay special attention to tropes and figures of film rhetoric, classical tropes (metaphor, synecdoche, metonymy, irony) and, specifically, cinematic figures such as the close-up, the reverse angle, cross-cutting, or camera movement. Identification will be a central concern. We will examine the way identification is always partial—partial both in the sense of incomplete and in the sense of biased—and how our identification with characters enters into a larger and often complex rhetorical play of identification. To give a simple example: In a love scene set by a river with trees in flower and birds singing, we identify with the lovers while they are identified with nature—and nature in our

culture is generally identified with good things. But Carl Dreyer’s *Day of Wrath* takes place in 17th-century Denmark, a milieu in which religion was strict, witches were burned, and nature was identified with paganism and the devil; so young lovers by a river would not be seen in a positive light, and we are torn—this is part of the film’s rhetoric and its moral complexity—between our identifications and beliefs and those of another culture. In this course, we will study the workings of persuasion in a variety of films of different provenances and styles and with different motivations and intentions.

## Television Criticism and Analysis

**Frank Tomasulo**

*Lecture, Open—Spring*

This class will involve a close examination of important television shows and genres, as well as an in-depth investigation of the significant scholarly literature on the medium. Television will be studied through the lens of those classical and contemporary paradigms that have illuminated other art forms: realism, formalism, structuralism, semiotics, psychoanalysis, Marxism, feminism, deconstructionism, postmodernism, cultural studies, cognitive science, and phenomenology. Emphasis will be on selected televisual “texts” (shows) that represent various theoretical approaches to television as an art form, entertainment vehicle, information platform, cultural force, and industry. Relevant network and cable TV shows and episodes will be screened, analyzed, and critiqued in the context of their theoretical implications.

## Television History and Criticism

**Frank Tomasulo**

*Lecture, Open—Fall*

This course is an examination of the television medium as an art form, sociocultural text, and industry. Emphasis will be on the development of formal/aesthetic elements, genres (sitcom, soap opera, talk show, drama, news, reality programming, etc.), themes, narrative patterns, and characters, as well as the depiction of gender, race, and class on network and cable channels. Relevant TV shows and episodes will be screened, analyzed, and discussed in the context of their historical and theoretical significance. The required textbooks are: *Television: Critical Methods and Applications*, 3rd edition, by Jeremy G. Butler, and *Television: The Critical View*, 7th edition, by Horace Newcomb.

A full description of the course may be found under the appropriate discipline.

**The Cold War In History and Film** (p. 360), Jefferson Adams *History*

# French

## 2002-2003

### Beginning French

**Ali Nematollahy**

*Open—Year*

This course is for students with no previous knowledge of French. It is an introduction to the French language and is designed to teach students to understand, speak, read, and write in French. It will give students a solid grounding in grammar; prepare them to narrate recent events in past, present, and near future tenses; introduce them to reading through short pieces of prose and poetry; and enable them to write brief essays in French.

### French for Advanced Beginners

**Sarah Juliette Sasson**

*Intermediate—Year*

This course is designed for students who have had some solid preparation in French but who still need to work with the basic grammar of the language. We will thoroughly review the fundamentals of French grammar. We will read in the genres of modern drama, poetry, and fiction. We will also get acquainted with contemporary French culture through advertisement, cartoons, and satirical TV shows. Requirements include short written assignments, oral presentations, and strong class participation.

### French Literature and Culture: Le Fait-Divers

**Lise-Segolene Schreier, Richard Dickinson**

*Intermediate—Year*

Peculiar, absurd, horrible, unfathomable: here are a few of the characteristics of the French fait-divers, an untranslatable word referring to any noteworthy event situated beyond the realm of the ordinary, the acceptable, the classifiable. Whether the fait-divers refers to a horrendous crime, a five-legged creature, a serendipitous event, or a circus-like exploit, it has fascinated and inspired many French writers from Proust to Genet. We will take novels, short stories, newspaper articles, posters, pulp fiction covers, songs, plays, and films dealing with the fait-divers as a point of departure for discussions and an in-depth review of French grammar. Students are expected to write short papers in French and to read excerpts from original sources. Readings will include Proust, Rivière, Landru, Genet, Paulhan, Jouhandeau, Mauriac, Gide, Giono, Le Clézio, Koltès.

### Introduction to Literature: Autobiographie et Mémoire

**Lise-Segolene Schreier, Richard Dickinson**  
*Intermediate—Year*

Autobiography as a genre and a practice is a relatively modern endeavor. It involves making public intensely personal traumas and triumphs and using intimacy as the center of an artistic project. In this class, we will explore the tension between sincerity and creativity, between "objective" representations of the self and respect for literary canons, and between memory and fiction. Readings will include nineteenth- and twentieth-century French poetry, memoirs, travel journals, letters, and diaries. We shall also discuss a number of autobiographical documentary films. Close study of the texts will serve as a point of departure to review French grammar and develop reading, writing, and communicative skills. Reflecting the theme of autobiography, students will be expected to keep a diary (fictional or not) in French, as well as to write short papers on issues related to our topic. Readings will include Rousseau, Hugo, Nerval, Rimbaud, Proust, Sartre, de Beauvoir, Duras, Sarraute, Perec. Films will include works by Raymond Depardon, Frédéric Mitterrand, Agnès Varda.

### The Literature of Paris

**Ali Nematollahy**

*Intermediate—Year*

This course examines the rise of the "myth" of Paris in literature, and its role in shaping the novel as well as poetry from the Revolution to the twentieth century. Our method of study will be twofold: on the one hand, we will focus on the history of Paris, of the built environment, and the structures of everyday life in the city. On the other hand, we will also cover major literary works, spanning various genres, which we shall examine not merely in terms of their thematic representation of the capital, but also in the ways in which they reflect and refract, in their formal and structural aspects, the successive transformations of Paris. Baudelaire claimed, for example, that his explorations of Paris had led him to develop and use the prose poem, a form that is "musical, without rhythm and without rhyme, supple enough and rugged enough to adapt itself to the lyrical impulses of the soul, the undulations of reverie, the jibes of conscience," and best reflects the shock of living in large cities. The themes examined include the history of bohemia, the urban history of Parisian revolutions (1789, 1830, 1848, and 1871), and the reconstruction of Paris by Haussman. We will cover the works of Mercier, Balzac, Baudelaire, Nerval, Rimbaud, Zola, and Breton, among other writers. This course will be taught entirely in French.

## The Novel

**Sarah Juliette Sasson**

*Advanced—Year*

The nineteenth century is considered the century of the novel. This course explores the development of this seminal genre from its roots to its contemporary manifestations. Our journey through the intricate world of the modern novel takes us from the eighteenth-century epistolary romance and philosophical fiction to nineteenth-century epic novels and realist narratives to twentieth-century experiments in fictional form, including surrealist writings, Oulipo constructions, and the "New Novel." Authors include Voltaire, Rousseau, Balzac, Zola, Hugo, Flaubert, Stendhal, Breton, Beauvoir, Perec, and Robbe-Grillet.

## 2003-2004

### Beginning French Advanced Beginning French

**Richard Dickinson**

*Open—Year*

The goal of both of these courses is to give students a solid and usable understanding of all of French grammar. After a sound preparation in phonetics we will follow the development of the French verbal system, using everything that is learned in oral exercises that resemble conversation and in regular writing assignments. As well as a practical mastery of spoken and written French, students should acquire clear ideas of what a language is and the various disciplines that are necessary to learn a foreign language. We will read as much as students' progress permits, poems and short texts, ending the year with a story, a play, or a novel.

*The beginning course is open to students who have had no French or so little or so long ago that they need to begin again.*

*The advanced beginning course is open to students who have had some French, but need to work on the fundamentals of the language. Their previous preparation will allow us to move fairly fast in class and will allow more time for reading.*

### Francophone Voices: "Un-French" Narratives

**Angela Moger**

*Intermediate—Spring*

This course aims to conduct a modest survey of recent works of fiction written in French by writers whose native country is not France. We will concentrate particularly on novels and stories issuing from Africa, the Antilles, and Canada, hoping to discern both topics that might have commonality (e.g., colonialism is a shared condition of several of these traditions) and motifs/approaches that illuminate the implicit underlying dialogue with the literature of France from

which they differ, and in some cases, dissent.

Furthermore, in its departures from narrative conventions practiced in France, francophone literature may permit the isolation of the formal gestures that have emerged to reflect alternate realities. For example, in cultures where individualism is less valorized than collectivity, what becomes of categories such as subjectivity and voice; and in existences not predicated on hope, gain, and ultimate resolution, how does the writer deal with matters like sequence and outcome? Thus, we will interrogate the effects of a different form of experience on the traditional paradigms and modalities of narrative and probe to what extent such features can be identified as counterhegemonic discourses. Readings will include works by Anne Hébert and Antonine Maillet (Canada), Simon Schwarz-Bart (Guadeloupe), Assia Djébar (Algeria), Myriam Warner-Vieyra (Guadeloupe/Sénégal), and Tahar Ben Jelloun (Morocco).

### French Literature: Classicism and Subversion

**Eric Leveau**

*Advanced—Year*

Associated with notions of clarity, elegance, and symmetry, French classicism was at its origin a literary and artistic movement based on the admiration and imitation of the ancients. More recently, however, classicism has become associated with the broader ideas of artistic excellence and reverence for the past. Artists and writers in many periods have thus perceived and opposed classicism as an instrument of power held by dominant cultural and political groups. This class will study some of these "battlegrounds" in French literary and cultural history. We will ask why, during certain periods, looking to the past seemed to represent the only means of progress in the arts, and how this reliance on tradition has at the same time been challenged and subverted by various artists and writers, notably those such as women who were deprived of—and therefore free from—the dominant cultural and literary background. Writers studied will include Marie de France, Labé, Ronsard, Montaigne, Corneille, Molière, Sévigné, Graffigny, Diderot, Flaubert, Baudelaire, Rimbaud, Proust, Gide, Duras, Sarraute.

### From Text to Screen: French Culture in Literature and Film

**Sarah Juliette Sasson**

*Intermediate—Year*

This course will reinforce basic structures of the French language through reading, writing, and oral discussions and class presentations. The course will be oriented around the dialectic between literary texts and their cinematic adaptations. We will read entire texts as well as excerpts and study various films that have been made

of them with an eye toward discerning social and cultural elements, which informed their interpretation. We will be particularly concerned with the meaning behind modern cinematic re-readings of classical texts.

## The Garment, the Letter, and the Substitute: Emblems of Writing, Mirrors of Reading

**Angela Moger**  
*Intermediate—Fall*

The garment, the letter, and the substitute are relatively constant and central elements of plot in prominent nineteenth-century French fiction. Interesting possibilities for a general theory of narrative might emerge from teasing out the strands of these recurring motifs in works by Mérimée, George Sand, Balzac, and Villiers, among others. One question provoked by such an inquiry is whether a thematic preoccupation with clothing is a means of foregrounding another “textile,” the text itself. Then, if cloth can be read as a metaphor for text, the frequent incidence of letters might indicate a similarly self-referential dynamic since every story is, indeed, a message written by the author and addressed to the reader—and potentially suffering the same vagaries of misdirection and misapprehension chronicled in many intriguing tales. The proliferation of substitutes, doubles, and imposters, furthermore, enhances a sense of the reflexivity of these narratives. This insistence on surrogacy seems both a figuration of the reader’s activity—the proverbial “identification” alleged as experience of the text—and alternatively, of the writer’s—the story as a fantasy of vicarious experience. Consideration of antique origins and examples of these motifs will keep us honest in our modernist theoretical hypothesizing. This course will also involve a limited review of verbs and principles of usage.

## The Human Condition: From Corneille to Duras

**Sarah Juliette Sasson**  
*Intermediate—Year*

For centuries, authors have used historical as well as personal narratives to express various notions of the human condition. We will take this concept as a common denominator to explore how literature has addressed this most fundamental, yet evolutionary, of questions. Some of the texts we will study include Corneille’s *Le Cid*, Flaubert’s “Un Coeur simple,” Maupassant’s *Pierre et Jean*, Duras’s *La Douleur* as well as novellas by Sartre and poems by Rimbaud and Baudelaire. Films will also be a component of the class material. Grammatical, written, and oral skills will be practiced throughout the year.

## 2004-2005

### Beginning French

**Mark Cohen**  
*Open—Year*

The goal of this course is to give students a solid and usable understanding of all of French grammar. After a sound preparation in phonetics, we will follow the development of the French verbal system, using everything that is learned in oral exercises that resemble conversation and in regular writing assignments. As well as a practical mastery of spoken and written French, students should acquire clear ideas of what a language is and the various disciplines that are necessary to learn a foreign language. We will read as much as students’ progress permits, poems and short texts, ending the year with a story, a play, or a novel.

### French Culture and Letters

**Mark Cohen**  
*Intermediate—Year*

France was the dominant cultural power in Europe for almost two hundred years, creating many of our modern institutions of refined living, thought, and politics. Yet the most civilized culture in Europe with its sumptuous cafes, cuisine, and conversation also created the most radical revolutionary regimes of the long nineteenth century, beginning with the Jacobins in 1793, the first Red Republic in European history, and ending with the Paris Commune of 1871, when a workers’ government governed Paris for six months before being liquidated by the French army. We will be examining texts (prose and poetry) that illustrate the passage from the pleasures of Society to Utopian violence in the works of Diderot, Rousseau, Robespierre, St-Just, Stendhal, Baudelaire, Balzac, and Rimbaud as well as accompanying documents (newspapers, speeches, pamphlets). There will also be continuous reviews of grammar and pronunciation based on the set texts.

*Intermediate II.*

### French Fiction: Postrevolutionary Poetics

**Angela Moger**  
*Advanced—Year*

In the France of the nineteenth century, there were almost as many credos concerning the nature and function of literature as there were changes of government. In this course we will examine some of the prominent works of narrative art produced in the course of the century to probe the question of the relationship between the two issues, the idea of literature and the idea of the state. Accordingly we will examine fictional expressions of Romanticism, Realism, Naturalism, and Symbolism, stopping to consider some secondary

impulses sheltered by these primary categories, such as Decadence and Dandyism. In our inquiry into these disparate forms of postrevolutionary poetics, we will also consult theoretical writings that illuminate the preoccupations underlying these works and the ideological stances that ground them. Thus novels and stories by Constant, Balzac, Flaubert, Zola, Huysmans, Barbey D'Aur  ville, and Laforgue will be supplemented (after a detour through Rousseau for a grasp of the shift of sensibility out of which Romanticism grew) by critical commentary from Auerbach and Henry James to Todorov, Jameson, and D. A. Miller, and statements from voices "indigenous" to these phenomena—Baudelaire's "Eloge du maquillage" and Barbey's *Du Dandysme et de Georges Brummel* merit scrutiny. Throughout we will test Luc  ks's notion—inherited from Lenin—that literature functions to make sense of periods of profound social transition ("sign becomes an arena of the class struggle"), just as we will interrogate the thematizing of the predicament of fiction and its problematic relation to reality, as harbinger of the Modernism to come.

## French for Advanced Beginners

**Richard Dickinson**

*Intermediate—Year*

This course is designed for students who have had some solid preparation in French but who still need to work with the basic grammar of the language. We will use what the student knows to review thoroughly and rapidly the phonetics and the verbal structure of French. By the end of the year, we will have covered all the essential points of French grammar. From the beginning we will read, starting slowly with plays by Anouilh, Beckett, Ionesco, Cocteau, and Genet. We also will look at paintings by the most important painters of the seventeenth, eighteenth, and nineteenth centuries. Students will be expected to write short weekly papers on the plays and paintings and sometimes on their personal experiences or their work in other courses. Once written, these papers will be corrected and rewritten, and each student will keep a notebook of the vocabulary and idioms needed in order to express what he or she wants to say. The course will be conducted entirely in French, and a great deal of time will be spent in assuring that the student can manipulate the French verbal system in direct and indirect discourse and in questions.

*Advanced Beginning.*

## French Genders: Conflict and Dialogue

**Eric Leveau**

*Intermediate—Year*

In this course we will systematically review the basics of French grammar and language while continuing to

explore their complexities. We will organize our work on language around the question of gender in French literature and society, using selections of French literary works from the seventeenth century to the present. Excerpts from plays and dialogues in particular will give us examples of dynamic exchanges from which to elaborate linguistic activities and start discussions in the classroom. Literary material will lead to an array of written and oral exercises that will strengthen linguistic skills while providing opportunities to explore the question of gender identities and power struggle in French culture, past and present. In addition we will undertake a guided reading of a major French prose text over each semester.

*Intermediate II.*

## French Lyrical and Dramatic Poetry

**Richard Dickinson**

*Intermediate—Year*

The class reading for this course will be poems and plays, which can be said to be some of the most carefully written texts in French. We will start with Baudelaire and go forward in the French poetic tradition to Mallarm  , Rimbaud, Apollinaire, and Breton; and backward to the major poets of the Renaissance, Sc  ve, du Bellay, Ronsard, and Louis Lab  ; and to the fifteenth-century poets Charles d'Orl  ans and Villon. We will read at least three plays whose language needs the same concentrated attention given to poetry, *En Attendant Godot*, *Les Bonnes*, and *Pl  dre*. Great attention will be given to the language of these poets and playwrights, and to how it is used to aesthetic and philosophical ends. Essentially this is a course in close reading of what are sometimes called masterworks. There will also be a language component of the course, and students will be expected to do regular grammar exercises and write and rewrite many short papers—as many exercises and papers as are needed to assure correct, competent use of written French. Some portion of the class, as much as an hour of the four class hours, will be devoted to the study of the language. The conference work will be in prose and at a different, faster pace of reading from that of the class. The course is open to students with the beginning of a sound reading and spoken knowledge of French, who have read some prose, and are ready to read *Madame Bovary*. That novel will be the first conference work of any student who has not read it, and a class in November will be devoted to students' presentations of stylistic analyses of paragraphs from the novel.

*Intermediate III.*

## 2005–2006

### Beginning French

**Mark Cohen**

*Open—Year*

This course will give you a solid grounding in French conversation and grammar. Using the French in Action program, students follow a simple story presenting everyday topics through short films, readings, and exercises. The films will be watched in the library. Class time will be devoted to enhancing listening comprehension of the film reinforced through question-and-answer sessions and accompanying workbook. The second half of each class will be conversational, building on the structures and vocabulary already learned and extending the situations from the story and related topics to our own ideas and experiences. Students will write dialogues and vignettes together and pre-sent them in class. There will be biweekly grammar tests and regular written homework. Conference work will be in groups and includes review, joint presentations, and more advanced readings. Class outings to French events in New York will also be featured.

### French for Advanced Beginners

**Richard Dickinson**

*Intermediate—Year*

This course is designed for students who have had some solid preparation in French but who still need to work with the basic grammar of the language. We will use what the student knows to review thoroughly and rapidly the phonetics and the verbal structure of French. By the end of the year, we will have covered all the essential points of French grammar. From the beginning we will read, starting slowly with plays by Anouilh, Beckett, Ionesco, Cocteau, and Genet. We also will look at paintings by the most important painters of the seventeenth, eighteenth, and nineteenth centuries. Students will be expected to write short weekly papers on the plays and paintings and sometimes on their personal experiences or their work in other courses. Once written, these papers will be corrected and rewritten, and each student will keep a notebook of the vocabulary and idioms needed in order to express what he or she wants to say. The course will be conducted entirely in French, and a great deal of time will be spent in assuring that the student can manipulate the French verbal system in direct and indirect discourse and in questions.

*Advanced beginning.*

### French Identities

**Eric Leveau**

*Intermediate—Year*

In this course we will systematically study the nuances of French grammar and acquire the tools to develop a complex discourse in French. We will explore how the notion of French identity has taken shape over the centuries, and how it has been challenged in recent times. Topics will include questions of colonialism, nation, immigration, religion, and secularism, but we will also try to follow the developments of “l’esprit français” from Cartesianism to French cuisine. We will study a selection of French literary masterpieces from the Middle Ages to the twentieth century, but also explore cultural, historical, and political contemporary controversies through a variety of material (films, media, music, franco-phone resources in New York City). Through a variety of written and oral contributions, students will work on acquiring the tools they need to express complex and nuanced analyses in French.

*Intermediate II.*

### French Lyrical Poetry

**Richard Dickinson**

*Advanced—Year*

We will study in depth the three French poets who left the greatest impression on modern French literature. *Les Fleurs du Mal* and the prose poems of *Le Spleen de Paris* were of immeasurable importance for the poets who came after Baudelaire. We will study many poems from the two collections and then will try to see how Stéphane Mallarmé and Arthur Rimbaud continued Baudelaire’s explorations. The work of these poets makes the second half of the nineteenth century in France one of the extraordinary moments in the development of Western poetry. We will also study four poets of the Renaissance, DuBellay, Ronsard, Scève, and Louise Labé, and two dramatists of the seventeenth century, Corneille and Racine. Knowledge of these poets and dramatists is essential in the study of Baudelaire’s immense prosodic and imaginal accomplishment, which became a foundation and a means of liberation for the poetic invention of Mallarmé and Rimbaud. Conference work for the course will follow the old idea of a contract, the terms of which are the reading of *Madame Bovary*, *La Princesse de Clèves*, *Manon Lescault*, and *Moderato Cantabile*. These novels, from four different centuries, can be studied as the student wills—as monuments of style or of feminism, or as historical documents—and the student can choose any additional novels or stories to complement what she or he learns from the four required texts.

## From Text to Action

**Eric Leveau**

*Intermediate—Year*

In this course we will systematically review the basics of French grammar and language while continuing to explore their complexities. We will organize our work on language around the relationship between text and action, exploring how a text can be turned into a performance. We will study multiple examples of plays as well as novels adapted to the screen and poems. Excerpts from plays and dialogues in particular will give us examples of dynamic exchanges from which to elaborate linguistic activities in the classroom and start discussions. Literary material will lead to an array of written and oral exercises that will strengthen linguistic skills while providing opportunities to discover French literature and culture. In addition, we will undertake a guided reading of a major French prose text over each semester.

*Intermediate I.*

## Writing Women: Boundary Crossings

**Angela Moger**

*Intermediate—Year*

In the first semester we will explore a broad spectrum of female writing in the twentieth century, drawing our objects of study from different genres and different countries. Examination of poems, short stories, essays, memoirs, and novels produced outside of France, Belgium, and Switzerland by francophone women in Egypt, Algeria, Canada, and the Caribbean will permit appreciation of the diversity of views among contemporary women on the issues of interpersonal relationships, political power, the function of writing, and the formation of identity in a polyphonic and pluralistic world. In the second semester we will focus exclusively on novels, especially, if not exclusively, on first-person narratives, by women from a full range of francophone cultures to explore the potential link between marginalized voices and generic border crossings. That is, it is interesting to note the recurrent phenomenon whereby the first-person synthesis of narrator and protagonist in female writing seems coincident with genre disturbance. Combining as they do memoir, prose poem, novel, and philosophical essay, many such works resist classification and thus offer subversive versions of the world and the place of writing in constituting it. Readings will include, among others, the destabilizing fictional creations of Miriama Bâ (Senegal), Marie Chauvet (Haiti), Andrée Chédid (Egypt/France), Simone Schwarz-Bart (Guadeloupe), and Anne Hébert (Canada). Students may take either or both semesters of the course.

*Intermediate III.*

## 2006-2007

### Advanced French

**Mark Cohen**

*Advanced—Spring*

French literature has regularly produced a series of masterpieces in les formes brèves, short forms like the aphorism, fragment, and notebook. At once highly philosophical, meant to disseminate timeless truths, yet highly literary, relying on wit, irony, and speed, they often defined a different kind of philosophical thought from the Cartesian norm, less dependent on analysis or logic and more on subtle observation, verbal brilliance, and suggestiveness. Above all they examine social behavior, religious belief, artistic creativity, and erotic obsession without dogma or prejudice, using a highly flexible, endlessly proliferating type of language that is always surprising and evokes the reader's immediate response. We will look at three classical texts: La Rochefoucauld's *Maxims*, Pascal's *Pensées*, and La Bruyère's *Caractères*; one Romantic: Joseph Joubert's *Cahiers*; and one modern: Roland Barthes's *Fragments d'un discours amoureux*. In tandem with the primary texts, we will also be reading some important critics who have sought to define the genre.

*Advanced.*

### Beginning French

**Max Kramer**

*Open—Year*

The purpose of this class is to provide an opportunity for students to acquire the basic skills of listening, speaking, reading and writing elementary French. By making students able to communicate in French it will potentially open to them the cultural wealth of the francophone world. The course will involve the thorough study of all grammatical aspects of French through group work activities, interactive oral drills, in-class writing practice, mini-quizzes and tests. Regular written homework from the exercise book will be assigned as well as various short response essays. The use of the Voilà textbook will be complemented by an array of teaching materials drawn from the Parle-moi un peu ! gap activities book and other sources. In addition, we will watch French films and go on class outings to French events in and around New York City. The weekly group conferences will be spent in conversation and in discussion of specific grammatical issues. Students will be required to attend weekly conversation classes with the French assistant and are also encouraged to attend the weekly French lunch table. *Voilà / Parle-moi un peu !*

*Beginning.*

## Beginning French, Advanced Beginning French

**Richard Dickinson**

*Intermediate, Open—Year*

The goal of both of these courses is to give students a solid and usable understanding of all of French grammar. After a sound preparation in phonetics, we will follow the development of the French verbal system, using everything that is learned in oral exercises that resembles conversation and in regular writing assignments. As well as a practical mastery of spoken and written French, students should acquire clear ideas of what a language is and the various disciplines that are necessary to learn a foreign language. We will read as much as students' progress permits, poems and short texts, ending the year with a story, play, or novel. The beginning course is open to students who have had no French or so little or so long ago that they need to begin again. The advanced beginning course is open to students who have had some French but need to work on the fundamentals of the language. Their previous preparation will allow us to move fairly fast in class and will allow more time for reading.

## Female Logos in French and Francophone Literature

**Angela Moger**

*Intermediate—Spring*

A motif that enjoys considerable prestige in Western literature is that of the silent woman. In Shakespeare, Ben Jonson, and Molière, among others, absence of speech in woman is treated as a virtue and, further, as a sign of purity. Indeed, as exemplified by *The Taming of the Shrew*, this topos is affirmed in its negative expression as well: women who accede to language are depicted as unfeminine and even grotesque. In view of this traditional valorization of the mute woman, it is interesting to examine the literary representation of the "prise de parole" in writing by women, both plots concerning female mutism and its undoing, and those dramatizing the act of writing ("la venue à l'écriture," as French feminists have termed it). In this course, we will interrogate the foregrounding of woman's "language acquisition" and of the practice of writing as plot elements in French and Francophone writers from a range of cultures and time periods. To belabor this last point, perhaps more subversive than the celebration of female appropriation of logos is the plot's insistence on its display in the form of a protagonist who writes. Short novels by Charrière, Sand, Duras, Mariama Bâ, and Simone Schwarz-Bart, among others, will permit us to probe the implications of this preoccupation for its political and formal consequences; that is, the implicit polemic is rendered even more compelling when it is viewed through the prism of the resistance, in all of these texts, to resolution and closure.

*Intermediate III.*

## Flaubert's Protégé

**Angela Moger**

In spite of his marked distaste for Maupassant's worldview, Henry James terms his stories "a collection of masterpieces." Tolstoy's praise is more elaborate: "Maupassant is a man whose vision has penetrated the silent depths of human life, and from that vantage ground interprets the struggle of humanity." Claiming that "Maupassant is not always properly understood," Conrad observes that he is "merciless and yet gentle with his mankind" and "looks with . . . profound pity on their troubles, deception, and misery." What is universally conceded is Maupassant's importance in the development of the short story. Thus, the editor of a recent collection asserts: "Along with the Russian writer Anton Chekhov, Maupassant is credited with technical advances that moved the short story toward an austerity that has marked it ever since. These two writers influenced nearly everyone who has written short fiction after them." This course will attempt to survey the range of Maupassant's contribution to the short form and will explore the theory of narrative art implicit to his practice of fiction. A painter of life in all its aspects, by turn satiric, playful, grotesque, or elegiac, he apprenticed himself to Flaubert for seven years and produced, in a single decade, more than 300 stories notable for their extraordinary concentration and distillation. Working under what Baudelaire calls "les bénéfices éternels de la contrainte," Maupassant's strokes are swift, spare, and deliberate as he telegraphs the blight and fragmentation occasioned by the Franco-Prussian War and the moral vacuity and consumerism of the Third Republic; or lights up from within a fragile moment of universal truth, his stories flaring "like matches struck unexpectedly in the dark," as Woolf describes the modern novel's epiphanic unfolding.

*Intermediate. Open to sophomores and above.*

## French Intermediate I

**Mark Cohen**

*Intermediate—Year*

Using essays, newspaper articles, and films, we will be looking at recent French history and culture, beginning with the Second World War and going up to the affaire du foulard (the Veil Question). Grammar and writing exercises will be integrated with class materials. There will be regular quizzes and short essays connected with class materials. Conference will use chapters from the textbook *French in Action* according to the student's level, building up basic vocabulary and syntactic structures. Conference projects might include further chapters of *French in Action*, reading a short novella or film, studying an author or filmmaker (Camus, Sartre, Fanon, de Beauvoir, Truffaut, Godard), or treating a

topic (the French Resistance, colonialism, politics, education, French popular music). Students will be developing their spoken and written mastery of the language by learning about modern life in France today. Class trips to the Alliance Française will include drama, music, and the Café Philosophique.

*Intermediate I.*

## **Sexual Politics in French Literature**

**Max Kramer**

*Intermediate—Year*

In this course, we look at the question of sexual politics in French literature starting with the classical age. We will explore the conceptions of sexuality, romantic love, and public morality in combination with the notions of sin, crime, and corruption and the different ways they were accounted for in French culture throughout the centuries. We will read a selection of canonical French literary texts (by authors such as Molière, Diderot, Laclos, Flaubert, Genet, and others) from the seventeenth to the twentieth century. We will also examine other media such as periodicals, music, or film to discuss social controversies revolving around sexuality that highlight a specifically French way of dealing with these matters. Along with this literary and cultural study, we will review the more complex aspects of the French language, and students will acquire the necessary linguistic means for successfully undertaking academic work in French.

*Intermediate II.*

## **2007-2008**

### **Beginning French**

**Habiba Boumlik**

*Year*

This course will introduce students to basic phonetics and fundamental grammar, even as students are introduced to the culture of France and the Francophone world. We will listen to songs and audio texts and watch the video accompanying the textbook. Students will be given ample opportunity to improve all four skills: reading, writing, listening, and speaking. Reading selections illustrating grammar structures will be reinforced with exercises in order to improve oral and written communicative skills and develop cultural awareness. We will also be reading Alexandre Dumas's *La Reine Margot* and *Les Trois Mousquetaires*, both accessible texts for beginners that challenge their ability to integrate grammar and vocabulary without overwhelming them. Students are required to attend a weekly group meeting and also meet twice a month with a French tutor.

*Beginning*

### **Beginning French**

**Max Kramer**

*Year*

The purpose of this course is to provide an opportunity for students to acquire the basic skills of listening, speaking, reading, and writing elementary French. It will aim at making students ready to communicate in the French language and immerse them in the cultural wealth of the Francophone world. The course will involve the thorough study of all grammatical aspects of French through group work activities, interactive oral drills, in-class writing practice, mini-quizzes, and tests. Regular written homework from the exercise book will be assigned as well as various short response essays. The use of the *Voilà!* textbook will be complemented by an array of teaching materials drawn from the book *Parle-moi un peu! Information Gap Activities for Beginning French Classes* and other sources. In addition, we will watch French films and go on class outings to French events in and around New York City. The weekly group conferences will be spent in conversation and in discussion of specific grammatical issues. Students will be required to attend weekly conversation classes with the French assistant and are also encouraged to attend the weekly French lunch table.

*Beginning.*

### **France and the Orient**

**Max Kramer**

*Intermediate—Year*

This course will examine how French literature constructed an imaginative Orient and its inhabitants and how, conversely, writers from some of the real locales subsumed by the term "Orient" have portrayed their own societies and culture in relation to France or Europe. The main focus will be on the "mission civilisatrice," or the imperialistic assumptions underlying Western attitudes toward the East, including their racial, cultural, and sexual dimension. We will read a selection of canonical French and Francophone literary texts (by Molière, Montesquieu, Nerval, Flaubert, Camus, Memmi, Djébar, and others) from the seventeenth to the twentieth century, and occasionally they will be supplemented by essayistic writing and film. Along with this literary and cultural study, we will review the more complex aspects of the French language and students will acquire the necessary linguistic means for successfully undertaking academic work in French.

*Intermediate II.*

## French for Advanced Beginners

**Richard Dickinson**

*Year*

This course is designed for students who have had some solid preparation in French but who still need to work with the basic grammar of the language. We will use what the student knows to review thoroughly and rapidly the phonetics and the verbal structure of French. By the end of the year, we will have covered all the essential points of French grammar. From the beginning we will read, starting slowly with plays by Anouilh, Beckett, Ionesco, Cocteau, and Genet. We also will look at paintings by the most important painters of the seventeenth, eighteenth, and nineteenth centuries. Students will be expected to write short weekly papers on the plays and paintings and sometimes on their personal experiences or their work in other courses. Once written, these papers will be corrected and rewritten, and each student will keep a notebook of the vocabulary and idioms needed in order to express what he or she wants to say. The course will be conducted entirely in French, and a great deal of time will be spent in assuring that the student can manipulate the French verbal system in direct and indirect discourse and in questions.

*Advanced beginning.*

## French Theatre and Poetry

**Richard Dickinson**

*Year*

This course will be unequally divided into two parts. The Monday class will be devoted to poetry, and we will read poems of many of the most important French poets, from many different centuries including the Middle Ages. Because of their linguistic and conceptual difficulty, we will read the poems very closely, with as much attention as possible to their complexity. The longer Wednesday class will be devoted to theatre, and we will read two plays by Corneille, Racine, Molière, and Beckett and also plays of Genet, Giraudoux, Ionesco, and Anouilh. We will approach these plays as theatre, and students will have the choice of being actors—performing seriously parts of the plays—or directors and critics—choosing essential passages and interpreting them for the actors and the spectator. Grammatical exercises will be done every week to stabilize and refine the student's understanding and the use of French. There will be regular writing assignments for the conference and one long paper per semester.

*Intermediate III.*

## Genre Bending in Women's Writing

**Angela Moger**

*Advanced—Spring*

"Literature is the place where congealed practices and ideas are disturbed," said Cornel West. And indeed, as Toni Morrison and Pynchon, as well as Rushdie and Perec have shown, transgressive forms erupt periodically, undermining coherency and the consensus and decorum it posits. In this course, we will examine French and Francophone works by women in order to explore the potential link between marginalized voices and generic border crossings—women have been, after all, as much the excluded "other" as those considered "subaltern" in terms of race or religion or sexual orientation. We will focus especially, if not exclusively, on first-person narratives, given the recurrent phenomenon whereby the first-person synthesis of narrator and protagonist seems coincident with genre disturbance. Combining as they do memoir, prose poem, novel, and philosophical essay, many such works resist classification and thus offer "subversive" versions of the world and the place of writing in constituting an alternative universe. Among the authors to be integrated from this perspective are Isabelle de Charrière, Assia Djebar, Marie Chauvet, Mariama Bâ, Anne Hébert, and Luce Irigaray—writers whose genre stretching/splicing problematizes and eludes the dominant discourse's "strategies of containment," as Foucault puts it.

## Intermediate French

**Habiba Boumlik**

*Intermediate—Year*

The course will provide a review of complex grammatical structures while fostering enrichment via cultural and literary readings. The practice of the four essential skills (reading, writing, speaking, and listening) will be complemented with increased familiarity with French and Francophone cultures. As speakers and writers, students will sharpen their written and verbal skills by listening to authentic materials (CDs and DVDs accompanying the textbook, videos, movies, songs, etc.) and engaging in conversations in French in order to expand their fluency. They will also be listening and interacting with guest speakers from the French community in the New York area, an invaluable source of direct access to language and culture. The course will introduce students to literary texts: Camus's *L'Étranger*, Ben Jelloun's *La Nuit Sacrée*, and Sartre's *Les Jeux Sont Faits*. In addition, we will read texts of cultural and sociological interest. Requirements include writing compositions on a regular basis, class presentations, and bimonthly meetings with a French tutor. Individual conferences may cover a wide range of topics and texts, subject to approval of the instructor. Conducted entirely in French.

## Mislaid but Not Forgotten

**Angela Moger**

*Advanced—Fall*

Like an old album lost in the back of a drawer that shows the beginnings of things, lying under a pile in the capacious storehouse of French literature is Proust's early work *Les plaisirs et les jours*, muted embryonic—but lovely. Then, whereas everyone reads *La Princesse de Clèves*, too few know Mme. de La Fayette's exquisite story *La Comtesse de Tende*; similarly, the novels of Colette and Duras are enthusiastically consumed, although both have written remarkable short stories—Colette's arguably much more intelligently conceived and deftly crafted than her longer narratives. One hears much about the theoretical writings of Irigaray, but little about her astonishing prose poem *Et l'une ne bouge pas sans l'autre*. Constant's masterpiece *Adolphe*, a work that doesn't make it into *Mimesis* but would have richly repaid Auerbach's scrutiny, has become almost invisible; and a little jewel of primitive art, Marguerite Audoux's *Marie Claire* is all but unknown. These and other works suffering from unjust neglect will be the focus of our inquiry in this course, which could be conceived of as a search for buried treasure.

## 2008-2009

### Advanced Beginning French: Paris as a Book

**Eric Leveau**

*Year*

In this course, we will review and actively practice the fundamental elements of French grammar and vocabulary, using texts, films, and dynamic role play in the classroom. The fast pace of the course will allow us to reach a good level of French by the end of the first semester such that students can express themselves in both written and oral French. We will approach the city of Paris both as a book waiting to be read and as a geographical space shaped by books. We will try to establish bridges between space, text, and time in order to discover a city, but also to explore issues shaping French culture past and present. We will discuss such themes as "scenes of revolution" with works by Mercier, Hugo, Flaubert; "Paris and modernity" with Baudelaire, Rimbaud, Maupassant; and "from the *ville-musée* to the burning suburbs" with novels by new female writers Faïza Guène and Calixthe Beyala.

*Advanced beginning.*

## Advanced French: The Literature of Laughter in Early Modern France

**Eric Leveau**

*Advanced—Year*

If writers are always trying to provoke a reaction in their readers, then laughter is a particularly interesting case because it is a clear and explicit response, a powerful proof of a work's impact and hence a confirmation of its validity. But what are the implications of laughter for society, reality, truth, and even God? These issues were crucial to literary debates in early modern France, providing the occasion for writers and theorists to reflect on the fundamental role of the writer and the status of literature itself. In this course, we will explore these questions by reading major French literary works of the early modern period, expanding our reflections to major principles of Western literature and to the implications of the act of writing in today's world. Given the importance of comedy in the period, we will focus primarily on theatre, but we will also read works of other genres and make connections with other literatures of the period.

*Open to any interested student pending placement test and interview with the instructor.*

## Beginning French

**Max Kramer**

*Open—Year*

The purpose of this course is to provide an opportunity for students to acquire the basic skills of listening, speaking, reading, and writing elementary French. It will aim at making students ready to communicate in the French language and immerse them in the cultural wealth of the Francophone world. The course will involve the thorough study of all grammatical aspects of French through group work activities, interactive oral drills, in-class writing practice, mini quizzes, and tests. Regular written homework from the exercise book will be assigned as well as various short response essays. The use of the *Voilà* textbook will be complemented by an array of teaching materials drawn from the *Parle-moi un peu!* gap activities book and other sources. In addition, we will watch French films and go on class outings to French events in and around New York City. The weekly group conferences will be spent in conversation and in discussion of specific grammatical issues. Students will be required to attend weekly conversation classes with the French *assistant(e)* and are also encouraged to attend the weekly French lunch table.

*Beginning. Section 2*

## Beginning French: Defining French Culture from Within and Without

**Karen S. Santos da Silva**

*Open—Year*

In this course, students will acquire basic competence in oral and written expression, as well as reading and listening comprehension, by learning to read and discuss primary texts of increasing difficulty. These texts will be chosen in function of the thematic progression of the course, whose goal is to attempt to understand what is meant by “French culture.” In the first part of the course, we will study aspects of French culture from within the hexagon: children’s literature, food and national identity, republicanism, postwar literature and cinema, etc. In the second part of the course, we will analyze France’s national identity through its relationship to its others, focusing specifically on some of France’s ideological stances after World War II. We will look at postcolonialism and immigration, anti-Americanism, France and Europeanization, etc. The readings will be distributed in class; students will also have to purchase the textbook *Débuts*.

*Beginning. Section 1*

## Intermediate French I: Before We Met: Fictions of Origins and Reflections on Socialization in Eighteenth-Century French Literature

**Karen S. Santos da Silva**

*Open—Year*

This course will provide a thorough review of the basic concepts of French grammar and is designed to strengthen and deepen students’ mastery of grammatical structures. Students will also learn to begin to use linguistic concepts as tools for textual analysis. Our readings and discussion will focus on human nature and the theme of the “presocial” in eighteenth-century literature. The thinkers of the Enlightenment, eager to understand the human soul, as well as the origins of society and its evils, were fond of imagining humans in a presocial state before their entrance into (French) society, and to imagine these humans’ first contact with others, with love, with sexuality, with language, etc. Many writers used fiction as an experimental space to strip humans of the influence of sociability. We will see that their, at the time, subversive way of exploring morality and ethics can be useful today to think through contemporary issues at the intersection of politics and identity. We will read texts (and excerpts) that best incarnate this obsession with recreating the processes of socialization, including Pierre de Marivaux’s *La Dispute* (1744), Françoise de Graffigny’s *Lettres d’une Péruvienne* (1747), and Voltaire’s *Candide* (1759).

*Open to any interested student pending placement test and interview with the instructor.*

## Intermediate French I: The Strange and the Foreign in French and Francophone short (auto)-fiction

**Karen S. Santos da Silva**

*Intermediate—Year*

This course will offer a systematic review of French grammar and is designed to strengthen and deepen students’ mastery of grammatical structures and vocabulary. Students will also learn to begin to use linguistic concepts as tools for developing both their creative expression and their analytic writing. The focus of this course will be the ways in which authors project themselves and/or mankind in an alternative universe as a means of escapism, of exploring their fear and their potentialities, of stimulating their creative inspiration, of critiquing their own social environment, etc. We will be reading an array of francophone texts, mainly from the 19th and 20th centuries. The first semester will be dedicated to la littérature fantastique, which refers to a vast array of texts that encompasses science fiction, fantasy, horror, and mystery, with authors such as Prosper Mérimée, Charles Nodier, Marcel Aymé, etc. The second semester will explore exoticism and travel literature (novels and journals) by authors such as Honoré de Balzac, Eugène Delacroix, Blaise Cendrars, Saint-Exupéry, Aimé Césaire, or Danny Laferrière. In the second semester, students will be required to create their own reading lists for their conference projects.

*Intermediate. Admission by placement test or completion of Beginning French. Course conducted in French.*

## Intermediate French II: “Being Maghrebi: Morocco Through French and Moroccan Eyes”

**Habiba Boumlik**

*Open—Year*

This introductory course to the populations and cultures of Morocco will have literary and anthropological components, both stressing the interaction of religion, culture, and society in this North African country. Drawing on French ethnographies (Lacoste-Dujardin, Tillon, Bourdieu, Grandguillaume, etc.) on this area and on French literary works by native Moroccans, the course will explore, in the first part, various forms of cultural, religious, ethnic, and linguistic diversity among Moroccans as well as national identity formation and representation. The second part of the course will be dedicated to examining the changing dynamics of Moroccan diaspora in France and will allow students the opportunity to take a close look at Islam in and out of France in rural and urban spaces. Through lectures, readings, discussions, screenings, writing assignments,

and class presentations, students will have the opportunity to improve their reading and writing skills in French as well as becoming familiar with the basic social regularities and cultural forms of Morocco. We will approach this goal by using an array of literary works reflecting the variety of discourses, the complexities of otherness (female, Berber, Jewish, Arab, and Beur authors). A selection of readings will include Rajae Benchemsi, *La controverse des temps*; Mohammed Khaïr-Eddine, *Une odeur de mantèque*; Edmond Amran El Maleh, *Parcours immobile*; Tahar Ben Jelloun, *Les yeux baissés*; Driss Chraïbi, *Vu, lu, entendu*; and Paul Smaïl, *Ali le magnifique*. The course will be fully conducted in French.

*Intermediate II. Open to any interested student pending placement test and interview with the instructor.*

## Intermediate French III: Around Symbolism (Poetry and Fiction)

**Max Kramer**

*Open—Year*

This course will focus on the symbolist movement in French literature by contrasting it with other literary movements that were closely associated with it chronologically and thematically, such as the Parnassians and the decadent movement. In addition, we will deal with the literary schools that are usually viewed as directly opposed to symbolism, i.e., realism and naturalism. We will read canonical texts by poets such as Baudelaire, Mallarmé, Rimbaud, Valéry, and Verlaine and by novelists such as Balzac, Flaubert, Maupassant, and Zola. We will also read a small number of critical essays and watch film versions of some of the novels that we read. Students interested in other fields (e.g., history or art history) could do conference readings on subjects related to this period. This course will be conducted entirely in French, and along with its literary and cultural content we will review the more complex aspects of the French language. Students will acquire the necessary linguistic means to undertake successfully academic work in French. *Intermediate III.*

*Open to any interested student pending placement test and interview with the instructor.*

## 2009-2010

### Beginning French: Defining French Culture from Within and from Without

**Karen S. Santos da Silva**

*Open—Year*

An introduction to French using the multimedia “Débuts” system (textbook/two-part workbook/full-length movie “Le Chemin du retour”). In this course,

students will acquire basic competence in oral and written expression, as well as reading and listening comprehension, through conversation, grammar drills, and conference readings of increasing difficulty. Primary texts (music, video, and literature) will be chosen as a function of the thematic progression of the course, whose goal is to attempt to understand what is meant by “French culture.” Class time will be dedicated to the acquisition of a solid grammatical basis. Conferences in the first part of the course focus on aspects of French culture from within the hexagon: children’s literature, food and national identity, republicanism, post-war literature and cinema, etc. In the second part of the course, we will look at France’s national identity through its relationship to others, focusing specifically on some of France’s ideological stances after World War II, post-colonialism and immigration, anti-Americanism, France and Europeanization, etc.

*Course conducted in French.*

### Beginning French: Dire, Lire, Écrire

**Jeffrey Leichman**

*Open—Year*

An introduction to French using the multimedia “Débuts” system (textbook/two-part workbook/full-length movie “Le Chemin du retour”). This class will introduce students to the essentials of writing, speaking, and understanding the French language as it used today throughout the world. The principal instruction text integrates a narrative film in French with the grammar lessons, giving students important access to the spoken language from the beginning of their instruction. Additional materials may include contemporary popular music, cinema, and children’s literature. Group conferences will provide further opportunities for conversation and in-depth grammar review. Additionally, a weekly meeting with a French language assistant(e) is required, and attendance at the weekly French lunch table and French film screenings are both highly encouraged.

*Course conducted in French.*

### Intermediate French I: French Identities from Jeanne d’Arc to Zidane

**Eric Leveau**

*Intermediate—Year*

This course will offer a systematic review of French grammar and is designed to strengthen and deepen students’ mastery of grammatical structures and vocabulary. Students will also begin to use linguistic concepts as tools for developing their analytic writing. More than other countries, France’s identity was shaped

by centuries of what is now perceived by the French as a historically coherent past. It is not surprising, then, that the 15th-century figure of Jeanne d'Arc is today the symbol of the extreme right wing party of Le Pen, which has gained a significant influence in France in the last 30 years. This phenomenon can be seen, in part, as a reaction to the changing face of France's society, exemplified by the French "Black-Blanc-Beur" soccer team that Zidane led to victory in the World Soccer Cup in 1998. In this course, we will explore the complexities of today's French identity or, rather, identities, following the most contemporary controversies that have shaken French society in the past 20 years while, at the same time, exploring historical influences and cultural paradigms at play in these "débats franco-français." Thus, in addition to newspapers, online resources, recent movies, and songs, we will also study masterpieces of the past in literature and in the arts. Topics discussed will include, among others, school and laicism; "cuisine" and tradition; immigration, integration and urban ghettos; French love; individuals as citizens, etc. Authors studied will include Marie de France, Montaigne, Racine, Voltaire, Hugo, Flaubert, Proust, Colette, Duras, Césaire, Chamoiseau, and Bouraoui.

*Admission by placement test or completion of Beginning French. Course conducted in French.*

## **Intermediate French I: The Strange and the Foreign in French and Francophone Short (Auto)-Fiction**

**Karen S. Santos da Silva**

*Intermediate—Year*

This course will offer a systematic review of French grammar and is designed to strengthen and deepen students' mastery of grammatical structures and vocabulary. Students will also learn to begin to use linguistic concepts as tools for developing both their creative expression and their analytic writing. The focus of this course will be the ways in which authors project themselves and/or mankind in an alternative universe as a means of escapism, of exploring their fear and their potentialities, of stimulating their creative inspiration, of critiquing their own social environment, etc. We will be reading an array of francophone texts, mainly from the 19th and 20th centuries. The first semester will be dedicated to la littérature fantastique, which refers to a vast array of texts that encompasses science fiction, fantasy, horror, and mystery, with authors such as Prosper Mérimée, Charles Nodier, Marcel Aymé, etc. The second semester will explore exoticism and travel literature (novels and journals) by authors such as Honoré de Balzac, Eugène Delacroix, Blaise Cendrars, Saint-Exupéry, Aimé Césaire, or Danny Laferrière. In the second semester, students will be required to create their own reading lists for their conference projects.

*Admission by placement test or completion of Beginning French. Course conducted in French.*

## **Intermediate French II: Théâtres**

**Jeffrey Leichman**

*Intermediate—Year*

Theatre has long enjoyed a special prominence in the French literary and cultural tradition, a privileged public art whose drive to innovate has consistently placed it at the forefront of successive avant-gardes (classical, romantic, realist, absurdist, etc.) for over four centuries. This course will attempt to apprehend the interplay between tradition and rupture that has characterized French theatre from the 17th through the 20th centuries, both as a major literary form and as a temporally contingent art of performance. Rather than proceed in strict chronological order, we will examine how dramatic authors across the historical spectrum have approached perennial themes such as royal power, class consciousness, and romantic love, examining revolutions of theatrical style, theory, and practice in the context of French and European cultural history. Authors include Corneille, Racine, Molière, Marivaux, Musset, Jarry, Anouilh, Beckett, Césaire, Réza, and others. Conducted in French, with an emphasis on frequent participation in class discussions, a portion of the time will also be devoted to a review of advanced topics in French grammar. Conference projects may include performance aspects, with instructor approval.

*Admission by placement test or completion of Intermediate French I. Course conducted in French*

## **Just Balzac**

**Angela Moger**

*Advanced—Spring*

Despite a pious regard for *Père Goriot* and *Eugénie Grandet* and a poststructuralist obsession with *Sarrasine*, Balzac's works remain largely unknown—particularly his many novellas. In this course, we will investigate several of the most compelling of these shorter tales, attempting to probe the connection between Balzac's choice of the form and his ultimate preoccupations. Why did the consummate novelist turn frequently to the novella? Furthermore, we will try to uncover the narratological implications of Balzac's plots and methodology, as his fictions seem to engage, quite self-consciously, issues that are crucial to current inquiries into narrative. Thus, particular stories can be seen to offer not only a theory of gender and/or a theory of language but also a coherent and apparently deliberate set of reflections on matters ranging from the status of authorship and the "character" to the problem of "closure" and the problematic of Desire as metaphor for both money and narrative. Finally, if, as Michael Wood says, "The very possibility of a meaning ruins a certain form of freedom...yet stories carry the disease of meaning," we

will examine how the Balzacian tale immunizes itself. Readings include *Sarrasine*, *La Maison Nucingen*, *Adieu*, and *Albert Savarus*.

*Advanced intermediate students with permission of instructor.*

## Kissing and Telling: The Indiscretion Plot as Cultural History and Genre Theory in France

**Angela Moger**

*Advanced—Fall*

Writing in the late 12th century, Andreas Capellanus reports on the knight chastised for breaking a vow never to speak publicly of his mistress, even in praise. Although Marie, Countess of Champagne and chief judge of the "Court of Love," finds extenuating circumstances and recommends leniency, his crime is deemed serious. The litigation surrounding the knight's indiscretion, however, is quite public and negates the ostensible premium placed on discretion. We will examine the prominent survival of this motif in French novels and tales; i.e., foregrounding of interpolated tales, hearsay, misaddressed letters, confession as revenge, etc. In works of the most important writers of the French tradition (La Fayette, Laclos, Balzac, Stendhal, Proust), the tension sustained between the presumed sanctity of privacy and the impulse to publicity permits a historical context and a poetics of narrative to be delineated. Thus, in *La Princesse de Clèves* and *Les Liaisons Dangereuses*, the things which must be silenced and the motives and consequences of their disclosure are revealing of political and social conditions and conventions of the period. Furthermore, the thematic of story as criminal act has provocative implications for a theory of narrative; and the frequent election of a female protagonist as perpetrator of the transgressive speech act betrays a sexual/textual politics worthy of scrutiny.

*Advanced intermediate students with permission of instructor.*

## The Garment, the Letter, and the Substitute: Emblems of Writing, Mirrors of Reading

**Angela Moger**

*Intermediate—Spring*

In prominent nineteenth-century French fiction displaying most obviously themes of flirtation, romance and prostitution (the emergence of the prostitute as protagonist, a matter of social/political significance with respect to the larger culture), one encounters as well an insistence on the garment, the letter, and the substitute as central elements of plot.

Interesting possibilities for a general theory of narrative might emerge from teasing out the strands of these recurring motifs in short stories by Merimee, George Sand, Balzac, and Villiers, among others. One question provoked by such an inquiry is whether a thematic preoccupied with clothing is a means of foregrounding another "textile", the text itself.

Then, if cloth can be read as a metaphor for text, the frequent incidence of letters might indicate a similarly self-referential dynamic since every story is, indeed, a message written by the author and addressed to the reader--and potentially suffering the same vagaries of misdirection and misapprehension chronicled in many intriguing tales. The proliferation of substitutes, doubles, and impostors, furthermore, enhances a sense of the reflexivity of these narratives. The insistence on surrogacy seems both a figuration of the reader's activity--the proverbial "identification" alleged as experience of fiction--and alternatively, of the writer's--the story as a fantasy of vicarious experience. Consideration of antique origins and examples of these motifs will keep us honest in our modernist theoretical hypothesizing. This course will also undertake, at regular intervals, a review of some cardinal points of French grammar.

## 2010-2011

### Beginning French: Dire, Lire, Écrire

**Jeffrey Leichman**

*Open—Year*

An introduction to French using the multimedia "Débuts" system (textbook/two-part workbook/full-length movie *Le Chemin du retour*), this class will introduce students to the essentials of writing, speaking, and understanding the French language as it used today throughout the world. The principal instructional text integrates a narrative film in French with the grammar lessons, giving students important access to the spoken language from the beginning of their instruction. Additional materials may include contemporary popular music, cinema, and children's literature. Group conferences will provide further opportunities for conversation and in-depth grammar review. Additionally, a weekly meeting with a French language assistant(e) is required; attendance at the weekly French lunch table and French film screenings are both highly encouraged.

*Open to any interested student. Course conducted in French.*

## Beginning French: Language and Culture

**Kirsten Ellicson**

*Open—Year*

An introduction to French using the multimedia “Débuts” system (textbook/two-part workbook/full-length movie, *Le Chemin du retour*), this class will allow students to develop an active command of the fundamentals of spoken and written French. In class and group conferences, emphasis will be placed on activities relating to students’ daily lives and to French and Francophone culture. The textbook integrates a French film with grammar study, exposing students to the spoken language from the very beginning of the course. Other materials may include French songs, cinema, newspaper articles, poems, and short stories. A weekly meeting with a French language *assistant(e)* is required, and attendance at the weekly French lunch table and French film screenings are both highly encouraged.

*Open to any interested student. Course conducted in French.*

## French Literature: Classicism and Subversion

**Eric Leveau**

*Advanced—Year*

Associated with notions of clarity, elegance, and symmetry, French classicism was, at its origin, a literary and artistic movement based on the admiration and imitation of the ancients. More recently, however, classicism has become associated with the broader ideas of artistic excellence and reverence for the past. Artists and writers in many periods have thus perceived and opposed classicism as an instrument of power held by dominant cultural and political groups. This class will study some of these “battlegrounds” in French literary and cultural history. We will ask why, during certain periods, looking to the past seemed to represent the only means of progress in the arts and how this reliance on tradition has, at the same time, been challenged and subverted by various artists and writers—notably those such as women, who were deprived of, and therefore free from, the dominant cultural and literary background. Writers studied will include Marie de France, Labé, Ronsard, Montaigne, Corneille, Molière, Sévigné, Graffigny, Diderot, Flaubert, Baudelaire, Rimbaud, Proust, Gide, Duras, and Sarraute.

*Advanced.*

## Intermediate French I

**Kirsten Ellicson**

*Intermediate—Year*

This course will offer a systematic review of French grammar and is designed to strengthen and deepen

students’ mastery of grammatical structures and vocabulary. Students will also begin to use linguistic concepts as tools for developing their writing. The course will take as its *point de départ* the literary representation of the figure of the artist (including the writer), who crystallizes tensions that define the 19th century and lay the foundations of literary modernity: inwardness vs. social engagement, collection vs. creation, the individual vs. the urban crowd, *le bohème* vs. *le bourgeois*, the female muse vs. the male artist, madness vs. sanity. As the year progresses, we will explore the evolution of this figure in the context of early 20th-century Paris, world capital of artistic and literary innovation. Authors, representing a variety of genres, will be drawn from among the following: Chateaubriand, De Staël, Balzac, Nerval, Gautier, Baudelaire, Goncourt, Huysmans, Zola, Rimbaud, Verlaine, Mallarmé, Colette, Apollinaire, Breton. Critical and theoretical perspectives, as well as the viewing of art and film, will enrich our discussions and analyses. A consideration of the role of the artist in French society today will complete the course.

*Intermediate I. Admission by placement test or completion of Beginning French. Course conducted in French.*

## Intermediate French I: French Identities From Jeanne d’Arc to Zidane

**Eric Leveau**

*Intermediate—Year*

This course will offer a systematic review of French grammar and is designed to strengthen and deepen students’ mastery of grammatical structures and vocabulary. Students will also begin to use linguistic concepts as tools for developing their analytic writing. More than other countries, France’s identity was shaped by centuries of what is now perceived by the French as a historically coherent past. It is not surprising then that the 15th-century figure of Jeanne d’Arc is today the symbol of the extreme right-wing party of Le Pen, which has gained a significant influence in France in the last 30 years. This phenomenon can be seen, in part, as a reaction to the changing face of France’s society as exemplified by the French “Black-Blanc-Beur” soccer team which Zidane led to victory in the 1998 World Cup competition. In this course, we will explore the complexities of today’s French identity or, rather, identities, following the most contemporary controversies that have shaken French society in the past 20 years while, at the same time, exploring historical influences and cultural paradigms at play in these “débats franco-français.” Thus, in addition to newspapers, online resources, recent movies, and songs, we will also study masterpieces of the past in literature and in the arts. Topics discussed will include, among others, school and laicism; “cuisine” and tradition;

immigration, integration and urban ghettos; French love; individuals as citizens, etc. Authors studied will include Marie de France, Montaigne, Racine, Voltaire, Hugo, Flaubert, Proust, Colette, Duras, Césaire, Chamoiseau, Bouraoui. For their conference project, students will read and analyze a French text of their choice.

*Intermediate I. Admission by placement test or completion of Beginning French. Course conducted in French.*

## Intermediate French II: Freedom and Its Double: Enlightenment and Shadows in the French 18th Century

**Jeffrey Leichman**

*Open—Year*

The French Enlightenment helped to lay the intellectual foundation for Western modernity, toppling the Old Regime's decaying monarchy and tired dogmas through the sheer audacity of its ideas. This class will read works by French authors from the *siècle des lumières* who, by relentlessly focusing the light of rational inquiry on the many fields of human thought and endeavor, helped to liberate Europe from centuries of restrictive political, social, moral, and esthetic traditions. The 18th century invented a new model of engaged public intellectuals, *philosophes* such as Voltaire, Diderot, and Rousseau who pursued knowledge as a means to break down the ancient prejudices and superstitions that had long impeded the progress of human freedom. But the stronger the light, the deeper the shadows: The same cultural ferment that created the Declaration of the Rights of Man coincided with the rise of a colonial empire founded on labor provided by the African slave trade. Just as the libertine tradition of d'Argens and Laclos culminates in the Sadean delirium, so the political critiques of Montesquieu and Sieyès prepare the way for Robespierre's terror. The French Enlightenment destroyed the society that gave birth to it by challenging its most fundamental assumptions, bequeathing to us an intellectual tradition of progress that continues to deny its own potentially dangerous doubles.

*Intermediate II. Admission by placement test or completion of Intermediate French I or higher.*

## Intermediate French III: Flaubert's Protégé: Guy de Maupassant-

**Angela Moger**

*Intermediate—Fall*

In spite of his marked distaste for Maupassant's worldview, Henry James terms his stories "a collection of masterpieces." Tolstoy's praise is more elaborate: "Maupassant is a man whose vision has penetrated the silent depths of human life and, from that vantage

ground, interprets the struggle of humanity." Claiming that "Maupassant is not always properly understood," Conrad observes that he is "merciless and yet gentle with his mankind" and "looks with . . . profound pity on their troubles, deception, and misery." What is universally conceded is Maupassant's importance in the development of the short story. Thus, the editor of a recent collection asserts: "Along with the Russian writer Anton Chekhov, Maupassant is credited with technical advances that moved the short story toward an austerity that has marked it ever since. These two writers influenced nearly everyone who has written short fiction after them." This course will attempt to survey the range of Maupassant's contribution to the short form and will explore the theory of narrative art implicit to his practice of fiction. A painter of life in all its aspects, by turn satiric, playful, grotesque, or elegiac, he apprenticed himself to Flaubert for seven years and produced, in a single decade, more than 300 stories notable for their extraordinary concentration and distillation. Working under what Baudelaire calls "les bénéfices éternels de la contrainte," Maupassant's strokes are swift, spare, and deliberate as he telegraphs the blight and fragmentation occasioned by the Franco-Prussian War and the moral vacuity and consumerism of the Third Republic; or lights up from within a fragile moment of universal truth, his stories flaring "like matches struck unexpectedly in the dark," as Woolf describes the modern novel's epiphanic unfolding.

*Intermediate III. Admission by placement test or completion of Intermediate French II.*

## Intermediate French III Francophone Voices: "Un-French" Narratives

**Angela Moger**

*Intermediate—Spring*

This course aims to conduct a modest survey of recent works of fiction written in French by writers whose native country is not France. We will concentrate particularly on novels and stories issuing from Africa, the Antilles, and Canada, hoping to discern topics that might have commonality (e.g., colonialism is a shared condition of several of these traditions), as well as motifs/approaches that illuminate the implicit underlying dialogue with the literature of France from which they differ and, in some cases, dissent. Furthermore, in its departures from narrative conventions practiced in France, francophone literature may permit the isolation of the formal gestures that have emerged to reflect alternate realities. For example, in cultures where individualism is less valorized than collectivity, what becomes of categories such as subjectivity and voice? And in existences not predicated on hope, gain, and ultimate resolution, how does the writer deal with matters such as sequence and outcome?

Thus, we will interrogate the effects of a different form of experience on the traditional paradigms and modalities of narrative and probe to what extent such features can be identified as counter-hegemonic discourses. Readings will include works by Anne Hébert and Antonine Maillet (Canada), Simon Schwarz-Bart (Guadeloupe), Assia Djébar (Algeria), Myriam Warner-Vieyra (Guadeloupe/Sénégal), and Tahar Ben Jelloun (Morocco).

*Intermediate III. Admission by placement test or completion of Intermediate French II.*

## The Garment, the Letter, and the Substitute: Emblems of Writing, Mirrors of Reading

**Angela Moger**

*Intermediate—Year*

In prominent 19th-century French fiction displaying most obviously themes of flirtation, romance, and prostitution (the emergence of the prostitute as protagonist, a matter of social/political significance with respect to the larger culture), one encounters, as well, an insistence on the garment, the letter, and the substitute as central elements of plot. Interesting possibilities for a general theory of narrative might emerge from teasing out the strands of these recurring motifs in short stories by Merimee, George Sand, Balzac, and Villiers, among others. One question provoked by such an inquiry is whether a thematic preoccupied with clothing is a means of foregrounding another "textile," the text itself. Then, if cloth can be read as a metaphor for a text, the frequent incidence of letters might indicate a similarly self-referential dynamic—since every story is, indeed, a message written by the author and addressed to the reader and potentially suffers the same vagaries of misdirection and misapprehension chronicled in many intriguing tales. Furthermore, the proliferation of substitutes, doubles, and impostors enhances a sense of the reflexivity of these narratives. The insistence on surrogacy seems both a figuration of the reader's activity—the proverbial "identification" alleged as experience of fiction—and, alternatively, of the writer's—the story as a fantasy of vicarious experience. Consideration of antique origins and examples of these motifs will keep us honest in our modernist theoretical hypothesizing. This course will also undertake, at regular intervals, a review of some cardinal points of French grammar.

*Intermediate III.*

## 2011-2012

### Advanced Beginning French: The Literary Prison

**Annelle Curulla**

*Open—Year*

This yearlong course has two objectives: to provide a comprehensive grammar review to students with some prior knowledge of French and to apply that grammatical knowledge in a literary study of the prison. Approaching the prison as a narrative setting, formal device, and culturally charged symbol, we will examine its connection to changing concepts of selfhood, innocence and guilt, the relationship between the individual and the state, and the process of literary creation itself. The course will unfold in two phases: The first semester offers a fast-paced, systematic review of the fundamentals of French language; short essays and presentations will allow students to study literary and historical prisons and prisoners in poetry, drama, fiction, and memoirs from 1450 to 1800. In the spring, students will refine their linguistic and literary knowledge through the study of longer texts from the 19th to the 21st century. Authors for the year may include Villon, Corneille, Voltaire, Roland, Balzac, Hugo, Camus, Djébar, Bon. Individual conferences will allow students to pursue their interests in aesthetic, political, or social dimensions of literary prisons and prisoners or in any other area of French and Francophone literatures and cultures. In addition to conferences, students will attend a weekly conversation session with a French language assistant. Students are also strongly encouraged to attend the weekly French lunch table, as well as French film screenings. Students who successfully complete this course and an intermediate-level course may be eligible to study in Paris with Sarah Lawrence College during their junior year.

### Advanced French: The Quill and the Dress: French Women Writers in Early Modern France

**Eric Leveau**

*Advanced—Fall*

This course will focus on all aspects of the strong influence that women exerted on literature and culture in France during the period from the Renaissance to the French Revolution. We'll study the historical and social implications of the phenomenon of the "salon," perceived as a space of freedom for women to redefine the literary landscape of their time. We'll look at how women writers challenged their male colleagues at the heart of their esthetic and ideological dominance but also how intellectually independent women were, in return, perceived by society. We'll focus on major subversive masterpieces written by women during the period, but we'll also explore the vast implications of the

idea of a feminine form of writing among male writers. In such a rich context of past debates and literary works, we'll also try to bring into our discussion the contribution of recent feminist theory in order to foster a dialogue across the centuries. Authors studied will notably include: Mlle de Scudery, Corneille, Molière, Mme. de Sévigné, Mme de Lafayette, Mme. de Graffigny, Diderot, Mme. du Chatelet, Rousseau, Mme. Roland, Beaumarchais.

## Beginning French

### Open—Year

An introduction to French using the multimedia “Débuts” system (textbook/two-part workbook/full-length movie, *Le Chemin du retour*), this class will allow students to develop an active command of the fundamentals of spoken and written French. In class and in group conferences, emphasis will be placed on activities relating to students' daily lives and to French and Francophone culture. The textbook integrates a French film with grammar study, exposing students to the spoken language from the very beginning of the course. Other materials may include French songs, cinema, newspaper articles, poems, and short stories. Group conferences replace individual conference meetings for this level, and a weekly conversation session with a French language assistant(e) is required. Attendance at the weekly French lunch table and French film screenings are both highly encouraged. Students who have successfully completed a beginning and an intermediate-level French course are eligible to study in Paris with Sarah Lawrence College during their junior year.

## Beginning French: Language and Culture

### Kirsten Ellicson, Liza Gabaston

#### Open—Year

An introduction to French, using the multimedia “Débuts” system (textbook/two-part workbook/full-length movie, *Le Chemin du retour*), this class will allow students to develop an active command of the fundamentals of spoken and written French. In class and group conferences, emphasis will be placed on activities relating to students' daily lives and to French and Francophone culture. The textbook integrates a French film with grammar study, exposing students to the spoken language from the very beginning of the course. Other materials may include French songs, cinema, newspaper articles, poems, and short stories. Group conferences replace individual conference meetings for this level, and a weekly conversation session with a French language assistant(e) is required. Attendance at the weekly French lunch table and French film screenings are both highly encouraged. Students who

successfully completed a beginning and an intermediate level French course are eligible to study in Paris with Sarah Lawrence College during their junior year.

## Intermediate French I: French Identities from Jeanne D'Arc to Zidane

### Eric Leveau

#### Intermediate—Year

This course will offer a systematic review of French grammar and is designed to strengthen and deepen students' mastery of grammatical structures and vocabulary. Students will also begin to use linguistic concepts as tools for developing their analytic writing. More than other countries, France's identity was shaped by centuries of what is now perceived by the French as a historically coherent past. It is not surprising, then, that the 15th-century figure of Jeanne d'Arc is today the symbol of the extreme right-wing party of Le Pen, which has gained a significant influence in France in the last 30 years. This phenomenon can be seen, in part, as a reaction to the changing face of France's society as exemplified by the French “Black-Blanc-Beur” soccer team, which Zidane led to victory in the 1998 World Cup. In this course, we will explore the complexities of today's French identity or, rather, identities, following the most contemporary controversies that have shaken French society in the past 20 years while, at the same time, exploring historical influences and cultural paradigms at play in these “débats franco-français.” Thus, in addition to newspapers, online resources, recent movies, and songs, we will also study masterpieces of the past in literature and in the arts. Topics discussed will include, among others, school and laicism; “cuisine” and tradition; immigration, integration and urban ghettos; French love; individuals as citizens, etc. Authors studied will include Marie de France, Montaigne, Racine, Voltaire, Hugo, Flaubert, Proust, Colette, Duras, Césaire, Chamoiseau, Bouraoui. The Intermediate I and II French courses are specially designed to help prepare students for studying in Paris with Sarah Lawrence College during their junior year.

## Intermediate French I: The Figure of the Artist in 19th- and 20th-Century France

### Kirsten Ellicson, Liza Gabaston

#### Intermediate—Year

This course will offer a systematic review of French grammar and is designed to strengthen and deepen students' mastery of grammatical structures and vocabulary. Students will develop their analytical and creative writing skills in French through essays and rewrites. The course will take as its thematic *point de départ* the literary representation of the figure of the artist (including the writer) in 19th- and 20th-century

French texts. Authors, writing in a variety of genres, will be drawn from among the following: Chateaubriand, De Staël, Balzac, Nerval, Gautier, Baudelaire, the Goncourts, Huysmans, Zola, Rimbaud, Verlaine, Mallarmé, Colette, Apollinaire, and Breton. Critical and theoretical perspectives, as well as the viewing of art and film, will enrich our discussions and analyses. Intermediate I and II French courses are specially designed to help prepare students for studying in Paris with Sarah Lawrence College during their junior year.

## **Intermediate French II: Masters, Slaves, and 'New Men': Francophone Writing Against Empire**

### ***Intermediate—Year***

This course aims to give students a basic tool kit for thinking and writing in French about the intellectual and cultural history of colonial domination and anticolonial resistance in the francophone Caribbean and Africa—primarily since the 19th century. We will explore the variety of ways that the participants in this history have imagined the dynamic relationship between the colonizer and the colonized and the degree to which the colonial imagination has been determined by the colonizer. Course materials and discussions will focus on how race, language, and religion have been used as instruments of both political oppression and anticolonial revolt. Readings will include texts by authors such as Victor Hugo, André Gide, Aimé Césaire, Maïssa Bey, and Assia Djebar; but we will also examine a range of cultural products relating to French colonialism, such as postcards, toys and games, comic books, and films. We will emphasize, through literary and cultural analysis, the formal and ideological aspects of the texts while improving lexical and grammatical skills. Special attention will be given to oral communication, participation, and written skills. Students will meet individually with the teacher to further discuss projects and assignments.

## **Just Balzac**

### ***Angela Moger***

#### ***Advanced, Intermediate—Fall***

Despite a pious regard for Père Goriot and Eugénie Grandet and a poststructuralist obsession with “Sarrasine,” Balzac’s works remain largely unknown, particularly his many novellas. In this course, we will investigate several of the most compelling of these shorter tales, attempting to probe the connection between Balzac’s choice of the form and his ultimate

preoccupations. Why did the consummate novelist turn frequently to the novella? Furthermore, we will try to uncover the narratological implications of Balzac’s plots and methodology, as his fictions seem to engage, quite self-consciously, issues crucial to current inquiries into narrative. Thus, particular stories can be seen to offer not only a theory of gender and/or a theory of language but also a coherent and apparently deliberate set of reflections on matters ranging from the status of authorship and the “character” to the problem of “closure” and the problematic of desire as metaphor for both money and narrative. Finally, if, as Michael Wood says, “The very possibility of a meaning ruins a certain form of freedom...yet stories carry the disease of meaning,” we will examine how the Balzacian tale immunizes itself. Readings include *Sarrasine*, *La Maison Nucingen*, *Adieu*, and *Albert Savarus*.

## **Love Stories From France**

### ***Angela Moger***

#### ***Intermediate—Spring***

Many of the world’s greatest love stories come from France, the culture that codified the notion of romantic love that still holds the Western world “in thrall.” But whereas the works of La Fayette, of Rousseau, of Stendhal, and of Proust are well-known and widely read, more modest (in their dimensions) contributions on the subject remain somewhat “under the radar.” This course will be devoted to the examination of a number of these lesser known works that also interrogate the nature of that compelling version of human attachment and similarly provoke, through their narrative strategies, awareness that the romantic passion plot often lends itself to being read as allegory of fiction. Thus, Balzac’s small and remarkable story, *La grande Brèche*, Mérimée’s *Le vase étrusque*, and Radiguet’s *Le Diable au corps* merit scrutiny, as do the more eccentric tales of the decadent writer Barbey D’Aurévilly (*Le plus bel amour de Don Juan*) and the novel written by the “primitive” artist Marguerite Audoux (*Marie Claire*). Conference work might include francophone writers whose works both extend and deviate from the tradition, such as the Moroccan Tahar Ben Jelloun and the Canadian Anne Hébert.

A full description of the course may be found under the appropriate discipline.

# Geography

## 2002-2003

### Introduction to Development Studies: The Political Ecology of Development

**Joshua Muldavin**

*Intermediate—Year*

In this yearlong seminar we will begin by examining competing paradigms and approaches to understanding "Development" and the "Third World." By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through an exploration of population, resource use, poverty, access to food, the environment, agricultural productivity, and different development strategies adopted by Third World nation states. We will then examine globalization and its relation to emergent international institutions and their policies, for example the WTO and World Bank. Our subsequent investigations of transnational corporations, the state, and civil society will provide the backdrop for the final focus of the class — emergence of regional coalitions for self-reliance, environmental and social justice, and sustainable development. Throughout the seminar, we will analyze development in practice through case studies drawn from Africa, Latin America, Asia, and the United States. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project beginning in the fall semester and completed in the spring. Project presentation will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible, you will be encouraged to do primary research over the winter and spring breaks.

Intermediate. Sophomores and above. Some experience in the social sciences desired but not required.

### The Geography of Contemporary China and Its Place in a Globalizing World Economy

**Joshua Muldavin**

*Open—Year*

In this yearlong seminar we will explore China's evolving place in greater Asia and the Pacific Rim through regional political-economic integration efforts and globalization processes. This will allow brief introductions of neighboring countries including Japan and the Koreans in East Asia; the Philippines, Vietnam, Indonesia, and other countries of Southeast Asia; India, Nepal, Pakistan, and other countries of South Asia; Russia, the former Soviet republics of Central Asia and

Afghanistan. In China, the primary focus of the course, we will explore the impact of the post-1978 reforms. From agrarian change and rural development, to urban and industrial transformations, to Hong Kong's return and China's emergence as a global superpower, we will analyze the complex intertwining of the environmental, political-economic, and socio-cultural aspects of these processes as we interpret the geography of contemporary China. We will begin with an overview of contemporary China, discussing the unique aspects of China's modern history, contemplating the changes and continuities that exist from one era to the next. Using a variety of theoretical perspectives, we will analyze a series of debates — environment/development conflicts, the moral economy debate, the role of the state, globalization and regional transformation issues, and the roots of the Tian'anmen student and social movement. Theoretical debates will revolve around the concepts and constructs of sustainable development, welfare of the peasantry and vulnerability, changing intra-household relations, modernization and socialist transition. We will follow this with analyses of popular culture, recent issues of Hong Kong's transition, and border region/minority conflicts. China borders many of the most volatile places in the contemporary world. Thus we will conclude with a discussion of security issues and geopolitics, the 16th Party Congress, and potential scenarios for China's future. Other trends in China's evolving path will also be examined as time permits. Throughout the seminar there will be openness to comparisons with other areas of the world within the context of the broader theoretical and thematic questions mentioned above. Weekly lectures, films, mass media, and selected readings will be used to inform debate and discussion. A two-part structured conference project will integrate closely with one of the diverse topics of the seminar. Open to any interested student. Some experience in the social sciences desired but not required.

## 2003-2004

### First-Year Studies: Introduction to Development Studies: The Political Ecology of Development

**Joshua Muldavin**

*FYS*

In this seminar we will begin by examining competing paradigms and approaches to understanding "development" and the "third world." By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through an exploration of population, resource use, poverty, access to food, the environment, agricultural productivity,

gender, and different development strategies adopted by third world nation-states. We will then examine globalization and its relation to emergent international institutions and their policies, for example, the WTO and World Bank. Our subsequent investigations of transnational corporations, the state, and civil society will provide the backdrop for the final focus of the class—emergence of regional coalitions for self-reliance, environmental and social justice, and sustainable development. Throughout the seminar, we will analyze development in practice through case studies drawn from Africa, Latin America, Asia, and the United States. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project beginning in the fall semester and completed in the spring. Project presentation will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible, you will be encouraged to do primary research over the winter and spring breaks.

## **The Geography of Contemporary China: From Revolution to Tian'anmen, from Socialism to Market Economy, from Tibet to Hong Kong**

**Joshua Muldavin**

*Open—Fall*

In this seminar we will explore the impact of the post-1978 reforms in China. From agrarian change and rural development to urban and industrial transformations to Hong Kong's return and China's emergence as a global superpower, we will analyze the complex intertwining of the environmental, political-economic, and sociocultural aspects of these processes as we interpret the geography of contemporary China. Weekly lectures, films, mass media, and selected readings will be used to inform debate and discussion. We will begin with an overview of contemporary China, discussing the unique aspects of China's modern history, contemplating the changes and continuities that exist from one era to the next. Using a variety of theoretical perspectives, we will analyze a series of debates—environment/ development conflicts, the moral economy debate, the role of the state, globalization and regional transformation issues, the roots of the Tian'anmen student and social movement, and most recently, China's handling of the SARS epidemic. Theoretical debates will revolve around the concepts and constructs of sustainable development, welfare of the peasantry and vulnerability, changing intra-household relations, modernization and socialist transition. We will follow this with analyses of popular culture, recent issues of Hong Kong's transition, and border region/minority conflicts. China borders many of the most volatile places in the contemporary world.

Thus we will conclude with a discussion of security issues and geopolitics, the 16th Party Congress, and potential scenarios for China's future. Other trends in China's evolving path will also be examined as time permits. Throughout the seminar there will be openness to comparisons with other areas of the world within the context of the broader theoretical and thematic questions mentioned above. A structured conference project will integrate closely with one of the diverse topics of the seminar.

## **2004-2005**

### **Food, Agriculture, Environment, and Development**

**Joshua Muldavin**

*Lecture, Open—Year*

Where does the food we eat come from? Why do some people have enough food to eat and others do not? Are there too many people for the world to feed? Who controls the world's food? What are the environmental impacts of our food production systems? How do answers to these questions differ by place, and how have they changed over time? This course will explore the following fundamental issue: the relationship between development and the environment focusing in particular on agriculture and the production of food. These questions often hinge on the contentious debate concerning population, natural resources, and the environment. Thus we will begin by critically assessing the fundamental ideological positions and philosophical paradigms of "modernization," as well as critical counterpoints, which lie at the heart of this debate. Within this context of competing sets of philosophical assumptions concerning the population-resource debate, we will investigate the concept of "poverty" and the making of the third world, access to food, hunger, grain production and food aid, agricultural productivity (The Green and Gene Revolutions), the role of transnational corporations (TNCs), the international division of labor, migration, globalization, and global commodity chains, and the different strategies adopted by nation-states to "develop" natural resources and agricultural production. Through an historical investigation of environmental change and the biogeography of plant domestication and dispersal, we will look at the creation of indigenous, subsistence, peasant, plantation, collective, and commercial forms of agriculture. We will analyze the physical environment and ecology that help shape but rarely determine the organization of resource use and agriculture. Rather, through the dialectical rise of various political-economic systems such as feudalism, slavery, mercantilism, colonialism, capitalism, and socialism, we will study how humans have transformed the world's environments. We will follow with studies of specific issues: technological change in food production; commercialization and industrialization of agriculture

and the decline of the family farm; food and public health, culture, and family; the role of markets and transnational corporations in transforming the environment; and the global environmental changes stemming from modern agriculture, dams, deforestation, grassland destruction, desertification, and biodiversity loss. Case studies of particular regions and issues will be drawn from Africa, Latin America, Asia, Europe, and the United States. The final part of the course examines the restructuring of the global economy and its relation to emergent international laws and institutions regulating trade, the environment, agriculture, resource extraction treaties, the changing role of the state, and competing conceptualizations of territoriality and control. We will end with discussions of emergent local, regional, and transnational coalitions for food self-reliance, alternative and community supported agriculture, community-based resource management systems, sustainable development, and grassroots movements for social and environmental justice. Films, multimedia materials, and a number of distinguished guest lectures will be interspersed throughout the course. One field trip is planned in each semester if funding permits. The Web board is an important part of the course. Regular postings of assignments will be made here, as well as follow-up commentaries. Group conferences will focus on in-depth analysis of certain course topics and will include debates and small group discussions.

## Introduction to Development Studies: The Political Ecology of Development

**Joshua Muldavin**

*Year*

In this yearlong seminar we will begin by examining competing paradigms and approaches to understanding "development" and the "third world." We will set the stage by answering the question: What did the world look like 500 years ago? The purpose of this part of the course is to acquaint us with and to analyze the historical origins and evolution of a world political-economy of which the "third world" is an intrinsic component. We will thus study the transition from feudalism to capitalism, the rise of merchant and finance capital, and the colonization of the world by European powers. We will analyze case studies of colonial "development" to understand the evolving meaning of this term. These case studies will help us assess the varied legacies of colonialism apparent in the emergence of new nations through the fitful and uneven process of decolonization that followed. The next part of the course will look at the United Nations and the role some of its associated institutions have played in the post-World War II global political-economy, one marked by persistent and intensifying socioeconomic inequalities as well as frequent outbreaks of political

violence across the globe. By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through a thematic exploration of population, resource use, poverty, access to food, the environment, agricultural productivity, and different development strategies adopted by third world nation-states. We will then examine globalization and its relation to emergent international institutions and their policies, for example, the IMF, World Bank, and WTO. Throughout the course our investigations of international institutions, transnational corporations, the role of the state, and civil society will provide the backdrop for the final focus of the class—the emergence of regional coalitions for self-reliance, environmental and social justice, and sustainable development. Our analysis of development in practice will draw upon case studies primarily from Africa, but also Asia, Latin America and the Caribbean, and the United States. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project beginning in the fall semester and completed in the spring. Project presentations will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible, you will be encouraged to do primary research over the winter and spring breaks. *Sophomore and above, some experience in the social sciences desired but not required.*

## 2005-2006

### Food, Agriculture, Environment, and Development

**Joshua Muldavin**

*Lecture, Open—Year*

Where does the food we eat come from? Why do some people have enough food to eat and others do not? Are there too many people for the world to feed? Who controls the world's food? What are the environmental impacts of our food production systems? How do answers to these questions differ by place, the person asking the question, and how have they changed over time? This course will explore the following fundamental issue: the relationship between development and the environment focusing in particular on agriculture and the production and consumption of food.

These questions often hinge on the contentious debate concerning population, natural resources, and the environment. Thus we will begin by critically assessing the fundamental ideological positions and philosophical paradigms of "modernization", as well as critical counterpoints, that lie at the heart of this debate. Within this context of competing sets of philosophical

assumptions concerning the population-resource debate, we will investigate the concept of 'poverty' and the making of the "Third World," access to food, hunger, grain production and food aid, agricultural productivity (The Green and Gene Revolutions), the role of transnational corporations (TNCs), the international division of labor, migration, globalization and global commodity chains, and the different strategies adopted by nation states to 'develop' natural resources and agricultural production. Through an historical investigation of environmental change and the biogeography of plant domestication and dispersal, we will look at the creation of indigenous, subsistence, peasant, plantation, collective, and commercial forms of agriculture. We will analyze the physical environment and ecology that help shape but rarely determine the organization of resource use and agriculture. Rather, through the dialectical rise of various political-economic systems such as feudalism, slavery, mercantilism, colonialism, capitalism, and socialism, we will study how humans have transformed the world's environments. We will follow with studies of specific issues: technological change in food production; commercialization and industrialization of agriculture and the decline of the family farm; food and public health, culture, and family; the role of markets and transnational corporations in transforming the environment; and the global environmental changes stemming from modern agriculture, dams, deforestation, grassland destruction, desertification and biodiversity loss. Case studies of particular regions and issues will be drawn from Africa, Latin America, Asia, Europe, and the United States. The final part of the course examines the restructuring of the global economy and its relation to emergent international laws and institutions regulating trade, the environment, agriculture, resource extraction treaties, the changing role of the state, and competing conceptualizations of territoriality and control. We will end with discussions of emergent local, regional, and transnational coalitions for food self-reliance, alternative and community supported agriculture, community based resource management systems, sustainable development, and grassroots movements for social and environmental justice.

Films, multimedia materials, and a number of distinguished guest lectures will be interspersed throughout the course. One fieldtrip is planned in each semester if funding permits. Please mark your calendars, as these trips are a course requirement. Attendance is also required at special guest lectures and film viewings in the Geography Lecture Series on occasional Monday evening from 5-7pm. The Webboard is an important part of the course. Regular postings of assignments will be made here, as well as follow-up commentaries. There will be in-class essays and two exams each semester.

Group conferences will focus on in depth analysis of certain course topics, and will include debates and small group discussions.

## **Introduction to Development Studies: The Political Ecology of Development**

**Joshua Muldavin**

*Intermediate—Year*

traditional papers to multimedia visual productions. Where possible, you will be encouraged to do primary research over the winter and spring breaks.

*Intermediate. Sophomores and above. Some experience in the social sciences desired but not required.*

## **2006-2007**

### **Gender and Development: Politics, Violence, and Livelihoods in South Asian and African Societies**

**Kathryn Tanner**

*Intermediate—Fall*

In this fall seminar, we will examine and discuss key issues of gender and development as they are relevant for rural and urban communities in African and South Asian countries. To what extent are gender politics used to include or exclude community members in the development process? How are gender associations used symbolically, and in what ways are these associations detrimental to gender equality? What limitations do community members face due to gender bias as they develop their livelihoods? To what extent is gender-based violence “learned” in schools and other institutional settings? What work is being done to improve gender equality in the development process? In Africa and South Asia, the geographical foci of the course, we will explore how gender has played a significant role in development, politics, violence, and livelihood strategies. We will begin with an overview of general themes and topics of gender and development, discussing issues of identity, misconception, and prejudice. We will discuss how the body is used metaphorically by societies and how this affects the roles of all individuals in various cultural contexts. We will explore specific case studies of gender politics, livelihoods, and violence in India, Sri Lanka, Nepal, Tanzania, Uganda, Mozambique, South Africa, the Gambia, and other African and South Asian countries. Complicated and sensitive issues such as HIV/AIDS, cultural initiation rights, and sexual violence will be discussed. This seminar will conclude with a hopeful look forward with an examination of work being conducted toward gender equality and analysis of projects using gendered approaches to the peace process. Weekly films, mass media, books, and selected readings will be used to inform debate and discussion. A structured conference project will integrate closely with one of the diverse topics of the seminar.

*Intermediate. Sophomore and above; some experience in the social sciences desired but not required.*

### **Global Value Chains: The Geographies of Our Daily Needs**

**Kathryn Tanner**

*Open—Spring*

In this seminar, we will examine and discuss key issues of globalization, consumerism, environmental justice, and global value chains. From day to day, we all use various commodities, such as coffee, fresh fruits and vegetables, chocolate, and gasoline. Perhaps we think about where these items on our daily shopping lists are made, but most often we do not. What are the global realities involved in the production and trade of the items we buy each day? How do the producers and traders along the value chain benefit from our consumerism? What are the social, political, and environmental costs? To what extent is the place of origin used, hidden, masked, manipulated, or marketed to sell an item? What roles do consumers play in global commodity chains? How are our preferences catered to through the strategies of marketing geographies of commodities? In this course, we will explore how global value chains shape the livelihoods of urban and rural communities across the globe. We will begin with an overview of general themes and topics of globalization, consumerism, environmental justice, and global value chains. We will discuss how the demands of one region of the world can guide the political economy of another. Through a careful analysis of relevant case studies, we will explore the costs and benefits of free trade and economic liberalization. We will also study the fair trade movement and the complex opportunities this movement has presented to global producers. This seminar will conclude with a hopeful look forward with an examination of work being conducted toward more equitable involvement of the world's producers in the global economy. Weekly films, mass media, books, and selected readings will be used to inform debate and discussion. A structured conference project will integrate closely with one of the diverse topics of the seminar.

*Open to any interested student.*

### **Introduction to Development Studies: The Political Ecology of Development**

**Kathryn Tanner**

*Intermediate—Year*

In this yearlong seminar, we will discuss and analyze competing paradigms and approaches to the concepts of development and the third world. We will begin by examining how the world functioned five hundred years ago, in order to understand how the forms of development since then have impacted the way we live and think. This first part of the course will acquaint us with (and allow an analysis of) the historical origins and evolution of an international political economy of

which the third world is an intrinsic component. We will thus study the transition from feudalism to capitalism, the rise of merchant and finance capital, and the colonization of the world by European powers. We will analyze case studies of colonial development to understand the evolving meaning of this term. In particular we will examine the Congo, South Africa, and India. These case studies will help us assess the varied legacies of colonialism apparent in the emergence of new nations through the fitful and uneven process of decolonization that followed. The next part of the course will look at the United Nations and the role some of its associated institutions have played in the post-World War II global political-economy, one marked by persistent and intensifying socioeconomic inequalities as well as frequent outbreaks of political violence across the globe. By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through a thematic exploration of population, resource use, poverty, access to food, the environment, agricultural productivity, and different development strategies adopted by third world nation-states. We will then examine globalization and its relation to emergent international institutions and their policies. We will analyze the work of the IMF, World Bank, and WTO through a variety of readings. Throughout the course, our investigations of international institutions, transnational corporations, the role of the state, and civil society will provide the backdrop for the final focus of the class—the emergence of regional coalitions for self-reliance, environmental and social justice, and sustainable development. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project beginning in the fall semester and completed in the spring. Project presentations will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible, students will be encouraged to do primary research over the winter and spring breaks.

*Intermediate. Sophomore and above; some experience in the social sciences desired but not required.*

## **2007-2008**

### **Gender and Development: Politics, Violence, and Livelihoods in South Asian and African Societies**

**Kathryn Tanner**

*Spring*

In this seminar, we will examine and discuss key issues of gender and development as they are relevant for rural and urban communities in African and South Asian countries. To what extent are gender politics used to

include or exclude community members in the development process? How are gender associations used symbolically, and in what ways are these associations detrimental to gender equality? What limitations do community members face due to gender bias as they develop their livelihoods? To what extent is gender-based violence “learned” in schools and other institutional settings? What work is being done to improve gender equality in the development process? In Africa and South Asia, the geographical foci of the course, we will explore how gender has played a significant role in development, politics, violence, and livelihood strategies. We will begin with an overview of general themes and topics of gender and development, discussing issues of identity, misconception, and prejudice. We will discuss how the body is used metaphorically by societies and how this affects the roles of all individuals in various cultural contexts. We will explore specific case studies of gender politics, livelihoods, and violence in India, Sri Lanka, Nepal, Tanzania, Uganda, Mozambique, South Africa, the Gambia, and other African and South Asian countries. Complicated and sensitive issues such as HIV/AIDS, cultural initiation rights, and sexual violence will be discussed. This seminar will conclude with a hopeful look forward with an examination of work being conducted toward gender equality and analysis of projects using gendered approaches to the peace process. Weekly films, mass media, books, and selected readings will be used to inform debate and discussion. A structured conference project will integrate closely with one of the diverse topics of the seminar.

*Sophomore and above. Some experience in the social sciences desired but not required.*

### **Global Geographies: From Colonization to the World Bank**

**Kathryn Tanner**

*Open—Year*

In this yearlong seminar, we will discuss and analyze competing paradigms and approaches to the concepts of “development” and the “third world.” We will begin by examining how the world functioned 500 years ago, in order to understand how the forms of development since then have impacted the way we live and think. This first part of the course will acquaint us with (and allow an analysis of) the historical origins and evolution of an international political economy of which the third world is an intrinsic component. We will thus study the transition from feudalism to capitalism, the rise of merchant and finance capital, and the colonization of the world by European powers. We will analyze case studies of colonial development to understand the evolving meaning of this term. In particular we will examine the Congo, South Africa, and India. These case studies will help us assess the varied legacies of

colonialism apparent in the emergence of new nations through the fitful and uneven process of decolonization that followed. The next part of the course will look at the United Nations and the role some of its associated institutions have played in the post-World War II global political economy, one marked by persistent and intensifying socioeconomic inequalities as well as frequent outbreaks of political violence across the globe. By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through a thematic exploration of population, resource use, poverty, access to food, the environment, agricultural productivity, and different development strategies adopted by third world nation-states. We will then examine globalization and its relation to emergent international institutions and their policies. We will analyze the work of the IMF, World Bank, and WTO through a variety of readings. Throughout the course, our investigations of international institutions, transnational corporations, the role of the state, and civil society will provide the backdrop for the final focus of the course—the emergence of regional coalitions for self-reliance, environmental and social justice, and sustainable development. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project beginning in the fall semester and completed in the spring. Project presentations will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible, students will be encouraged to do primary research over the winter and spring breaks.

## **Global Value Chains: The Geographies of Our Daily Needs**

**Kathryn Tanner**

*Open—Fall*

In this seminar, we will examine and discuss key issues of globalization, consumerism, environmental justice, and global value chains. From day-to-day, we all use various commodities, such as coffee, fresh fruits and vegetables, chocolate, and gasoline. Perhaps we think about where these items on our daily shopping lists are made, but most often we do not. What are the global realities involved in the production and trade of the items we buy each day? How do the producers and traders along the value chain benefit from our consumerism? What are the social, political, and environmental costs? To what extent is the place of origin used, hidden, masked, manipulated, or marketed to sell an item? What roles do consumers play in global commodity chains? How are our preferences catered to through the strategies of marketing geographies of commodities? In this course, we will explore how global value chains shape the livelihoods of urban and rural communities across the globe. We will begin with an overview of general themes

and topics of globalization, consumerism, environmental justice, and global value chains. We will discuss how the demands of one region of the world can guide the political economy of another. Through a careful analysis of relevant case studies, we will explore the costs and benefits of free trade and economic liberalization. We will also study the fair trade movement and the complex opportunities this movement has presented to global producers. This seminar will conclude with a hopeful look forward with an examination of work being conducted toward more equitable involvement of the world's producers in the global economy. Weekly films, mass media, books, and selected readings will be used to inform debate and discussion. A structured conference project will integrate closely with one of the diverse topics of the seminar.

## **2008-2009**

### **Food, Agriculture, Environment, and Development**

**Joshua Muldavin**

*Lecture, Open—Fall*

Where does the food we eat come from? Why do some people have enough food to eat and others do not? Are there too many people for the world to feed? Who controls the world's food? What are the environmental impacts of our food production systems? How do answers to these questions differ by place or the person asking the question? How have they changed over time? This course will explore the following fundamental issue: the relationship between development and the environment focusing in particular on agriculture and the production and consumption of food. The questions above often hinge on the contentious debate concerning population, natural resources, and the environment. Thus we will begin by critically assessing the fundamental ideological positions and philosophical paradigms of “modernization,” as well as critical counterpoints, which lie at the heart of this debate. Within this context of competing sets of philosophical assumptions concerning the population-resource debate, we will investigate the concept of “poverty” and the making of the “third world,” access to food, hunger, grain production and food aid, agricultural productivity (the Green and Gene Revolutions), the role of transnational corporations (TNCs), the international division of labor, migration, globalization and global commodity chains, and the different strategies adopted by nation-states to “develop” natural resources and agricultural production. Through a historical investigation of environmental change and the biogeography of plant domestication and dispersal, we will look at the creation of indigenous, subsistence, peasant, plantation, collective, and commercial forms of agriculture. We will analyze the physical environment and ecology that help shape but rarely determine the organization of resource use and agriculture. Rather,

through the dialectical rise of various political-economic systems such as feudalism, slavery, mercantilism, colonialism, capitalism, and socialism, we will study how humans have transformed the world's environments. We will follow with studies of specific issues: technological change in food production; commercialization and industrialization of agriculture and the decline of the family farm; food and public health, culture, and family; the role of markets and transnational corporations in transforming the environment; and the global environmental changes stemming from modern agriculture, dams, deforestation, grassland destruction, desertification, and biodiversity loss. Case studies of particular regions and issues will be drawn from Africa, Latin America, Asia, Europe, and the United States. The final part of the course examines the restructuring of the global economy and its relation to emergent international laws and institutions regulating trade, the environment, agriculture, resource extraction treaties, the changing role of the state, and competing conceptualizations of territoriality and control. We will end with discussions of emergent local, regional, and transnational coalitions for food self-reliance, alternative and community-supported agriculture, community-based resource management systems, sustainable development, and grassroots movements for social and environmental justice. Films, multimedia materials, and a number of distinguished guest lectures will be interspersed throughout the course. One field trip is possible if funding permits. Please mark your calendars when the dates are announced as attendance is expected. Attendance is also required at special guest lectures and film viewings in the Geography Lecture Series approximately once per month on Wednesday evening from 6-8 p.m. The Web board is an important part of the course. Regular postings of assignments will be made here, as well as follow-up commentaries. There will be in-class essays and two exams during the semester. Group conferences will focus on in-depth analysis of certain course topics and will include debates and small-group discussions. In addition, you will be required to prepare a poster project on a topic of your choice, related to the course, which will be presented at the end of the semester in group conference.

## **Gender and Development: Politics, Violence, and Livelihoods in South Asian and African Societies**

**Kathryn Tanner**  
*Intermediate—Spring*

In this spring seminar, we will examine and discuss key issues of gender and development as they are relevant for rural and urban communities in African and South Asian countries. To what extent are gender politics used to include or exclude community members in the development process? How are genders associations used symbolically, and in what ways are these associations

detrimental to gender equality? What limitations do community members face due to gender bias as they develop their livelihoods? To what extent is gender-based violence “learned” in schools and other institutional settings? What work is being done to improve gender equality in the development process? In Africa and South Asia, the geographical foci of the course, we will explore how gender has played a significant role in development, politics, violence, and livelihood strategies. We will begin with an overview of general themes and topics of gender and development, discussing issues of identity, misconception, and prejudice. We will discuss how the body is used metaphorically by societies and how this affects the roles of all individuals in various cultural contexts. We will explore specific case studies of gender politics, livelihoods, and violence in India, Sri Lanka, Nepal, Tanzania, Uganda, Mozambique, South Africa, the Gambia, and other African and South Asian countries. Complicated and sensitive issues such as HIV/AIDS, cultural initiation rights, and sexual violence will be discussed. This seminar will conclude with a hopeful look forward with an examination of work being conducted toward gender equality and analysis of projects using gendered approaches to the peace process. Weekly films, mass media, books, and selected readings will be used to inform debate and discussion. A structured conference project will integrate closely with one of the diverse topics of the seminar.

*Some social science experience preferred.*

## **Introduction to Development Studies: The Political Ecology of Development**

**Joshua Muldavin**  
*Intermediate—Fall*

In this seminar, we will begin by examining competing paradigms and approaches to understanding “development” and the “third world.” We will set the stage by answering the question, What did the world look like 500 years ago? The purpose of this part of the course is to acquaint us with and to analyze the historical origins and evolution of a world political-economy of which the third world is an intrinsic component. We will thus study the transition from feudalism to capitalism, the rise of merchant and finance capital, and the colonization of the world by European powers. We will analyze case studies of colonial “development” to understand the evolving meaning of this term. These case studies will help us assess the varied legacies of colonialism apparent in the emergence of new nations through the fitful and uneven process of decolonization that followed. The next part of the course will look at the United Nations and the role some of its associated institutions have played in the post-World War II global political-economy, one marked

by persistent and intensifying socioeconomic inequalities as well as frequent outbreaks of political violence across the globe. By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through a thematic exploration of population, resource use, poverty, access to food, the environment, agricultural productivity, and different development strategies adopted by third world nation-states. We will then examine globalization and its relation to emergent international institutions and their policies, for example the IMF, World Bank, and WTO. Throughout the course, our investigations of international institutions, transnational corporations, the role of the state, and civil society will provide the backdrop for the final focus of the class—the emergence of regional coalitions for self-reliance, environmental and social justice, and sustainable development. Our analysis of development in practice will draw on case studies primarily from Africa, but also Asia, Latin America and the Caribbean, and the United States. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project. Project presentations will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible and feasible, you will be encouraged to do primary research during fall study days.

*Intermediate: sophomore and above. Some experience in the social sciences desired but not required.*

## **The Geography of Water: Global Rivers and “Saving the Homeland”**

**Kathryn Tanner**

*Open—Spring*

How are water resources being managed globally and specifically in the Mississippi Delta, the Narmada Valley, the Hudson River Valley, and southwestern Madagascar? What are the main challenges concerning access, distribution, and allocation of freshwater resources within these areas? What are the driving forces that shape current and future demands for water? What are the solutions being developed by communities, policymakers, private sector, and environmental activists? What are water scientists and international donor organizations contributing? This open seminar focuses on the role of community activism in water resource management. This topic is of ever-increasing importance in the twenty-first century due to the privatization of water, unprecedented pollution levels, and sea level rise. Students will be given opportunities to learn research design and methodology, as well as conduct a fieldwork trip. Research may include interviews of (1) community leaders, (2) NGO employees, (3) residents, (4) entrepreneurs, (5)

government officials, and (6) legal scholars. This interview data will function as the basis for a proposed (and collective) written report. We will use the seminar structure as an opportunity to discuss and further the formalization and implementation of water strategies in the twenty-first century global context. Weekly films, mass media, books, and selected readings will be used to inform debate and discussion. A structured conference project will integrate closely with one of the diverse topics of the seminar.

## **2009-2010**

### **First-Year Studies: Introduction to Development Studies: The Political Ecology of Development**

**Joshua Muldavin**

*FYS*

We will begin this yearlong seminar by examining competing paradigms and approaches to understanding “Development” and the “Third World.” We will set the stage by answering the question: What did the world look like 500 years ago? The purpose of this part of the course is to acquaint us with and to analyze the historical origins and evolution of a world political-economy of which the “Third World” is an intrinsic component. We will thus study the transition from feudalism to capitalism, the rise of merchant and finance capital, and the colonization of the world by European powers. We will analyze case studies of colonial “development” to understand the evolving meaning of this term. These case studies will help us assess the varied legacies of colonialism apparent in the emergence of new nations through the fitful and uneven process of decolonization that followed. The next part of the course will look at the United Nations and the role some of its associated institutions have played in the post-World War II global political-economy, one marked by persistent and intensifying socioeconomic inequalities, as well as frequent outbreaks of political violence across the globe. By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through a thematic exploration of population, resource use, poverty, access to food, the environment, agricultural productivity, and different development strategies adopted by “Third World” nation states. We will then examine globalization and its relation to emergent international institutions and their policies; e.g., the IMF, World Bank, and WTO. Throughout the course, our investigations of international institutions, transnational corporations, the role of the state, and civil society will provide the backdrop for the final focus of the class—the emergence of regional coalitions for

self-reliance, environmental and social justice, and sustainable development. Our analysis of development in practice will draw upon case studies primarily from Africa, but also from Asia, Latin America and the Caribbean, and the United States. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project beginning in the fall semester and completed in the spring. Project presentations will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible and feasible, students will be encouraged to do primary research during fall study days and winter and spring breaks.

## Policy in Theory and Practice: Environment and Development

**Joshua Muldavin**

*Advanced—Year*

This yearlong seminar is about environmental policy. As such, it asks a number of questions: How and why does policy get made? Which information is heard and used, and which is not? What role does science play in environmental policy making? How are certain styles of development and development paradigms deployed? How is the policy process politicized? What happens to it after it is adopted as “policy”? We start with a historical review of development paradigms and how these shape environment-development discourses, revealing competing approaches to key contemporary issues such as climate change, biodiversity conservation, population, food security, poverty alleviation, energy, community-based natural resource management, environmental violence, and environmental justice. While largely focusing on the Global South, with reference to Asia, Latin America, and Africa, the seminar will also draw on examples from the Global North and policies driven by international institutions such as the World Bank, as well as dominant nation states. We then move to epistemology and theory building in the social and environmental sciences that influence environmental policy, examining diverse approaches from social theory and political ecology to policy studies, environmental economics, ecological modernization, and ecology. We will discuss power and the construction of environmental knowledge, followed by an examination of environmental policy in formation and implementation at international (e.g., international environmental agreements), national (e.g., ministries and state agencies), and local levels (e.g., environmentally-themed programs and projects). We will then explore varied approaches to policy analysis; i.e., the methodological means to assess and improve policies in practice. Finally, we will examine the contested potential for policy improvement and associated movements for increased participation and democratization of policy processes. There will be a number of sessions involving group presentations,

debate, and role-play on specific environment and development issues. Conference work will be closely integrated with the themes of the course, with a two-stage substantive research project focusing on an analysis and critique of an instance of policy of the student’s choice (usually grounded in texts but also involving fieldwork, if feasible). The intent will be to provide inputs for chosen policy actors—from social movements and NGOs to formal policy makers. As such, project presentations will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible, students will be encouraged to do primary research during fall study days and winter and spring breaks.

*Prior experience in the social sciences is highly recommended.*

## 2010-2011

### Food, Agriculture, Environment, and Development

**Joshua Muldavin**

*Intermediate—Fall*

Where does the food we eat come from? Why do some people have enough food to eat and others do not? Are there too many people for the world to feed? Who controls the world’s food? What are the environmental impacts of our food production systems? How do answers to these questions differ by place or the person asking the question? How have they changed over time? This course will explore the following fundamental issue: the relationship between development and the environment, focusing in particular on agriculture and the production and consumption of food. The questions above often hinge on the contentious debate concerning population, natural resources, and the environment. Thus, we will begin by critically assessing the fundamental ideological positions and philosophical paradigms of “modernization,” as well as critical counterpoints, that lie at the heart of this debate. Within this context of competing sets of philosophical assumptions concerning the population-resource debate, we will investigate the concept of “poverty” and the making of the “Third World”; access to food, hunger, grain production, and food aid; agricultural productivity (the green and gene revolutions); the role of transnational corporations (TNCs); the international division of labor, migration, globalization and global commodity chains; and the different strategies adopted by nation states to “develop” natural resources and agricultural production. Through a historical investigation of environmental change and the biogeography of plant domestication and dispersal, we will look at the creation of indigenous, subsistence, peasant, plantation, collective, and commercial forms of agriculture. We will analyze the physical environment and ecology that help shape but rarely determine the

organization of resource use and agriculture. Rather, through the dialectical rise of various political-economic systems such as feudalism, slavery, mercantilism, colonialism, capitalism, and socialism, we will study how humans have transformed the world's environments. We will follow with studies of specific issues: technological change in food production; commercialization and industrialization of agriculture and the decline of the family farm; food and public health, culture, and family; the role of markets and transnational corporations in transforming the environment; and the global environmental changes stemming from modern agriculture, dams, deforestation, grassland destruction, desertification and biodiversity loss. Case studies of particular regions and issues will be drawn from Africa, Latin America, Asia, Europe, and the United States. The final part of the course examines the restructuring of the global economy and its relation to emergent international laws and institutions regulating trade, the environment, agriculture, resource extraction treaties, the changing role of the state, and competing conceptualizations of territoriality and control. We will end with discussions of emergent local, regional, and transnational coalitions for food self-reliance, alternative and community-supported agriculture, community-based resource-management systems, sustainable development, and grassroots movements for social and environmental justice. Films, multimedia materials, and a number of distinguished guest lectures will be interspersed throughout the course. One farm field trip is possible, if funding permits; attendance is required. Attendance and participation is also required at special guest lectures and film viewings in the Geography Lecture Series approximately twice per month in the evening from 6-8 p.m. Regular postings of assignments, as well as follow-up commentaries, will be made on the Web board. There will be in-class essays, debates, and small-group discussions. Conferences will focus on in-depth analysis of course topics. Students will be required to prepare a poster project on a topic of their choice but related to the course, which will be presented at the end of the semester in a special session.

*Intermediate. Open to sophomores and above.*

## **Introduction to Development Studies: The Political Ecology of Development**

**Joshua Muldavin**

*Intermediate—Fall*

In this seminar, we will begin by examining competing paradigms and approaches to understanding “development” and the “Third World.” We will set the stage by answering the question: What did the world look like 500 years ago? The purpose of this part of the course is to acquaint us with and to analyze the historical origins and evolution of a world political

economy of which the “Third World” is an intrinsic component. We will thus study the transition from feudalism to capitalism, the rise of merchant and finance capital, and the colonization of the world by European powers. *Intermediate. Open to sophomores and above. Some experience in the social sciences is desired but not required.*

## **2011-2012**

### **Food, Agriculture, Environment, and Development**

**Joshua Muldavin**

*Intermediate, Sophomore and above—Fall*

Where does the food we eat come from? Why do some people have enough food to eat and others do not? Are there too many people for the world to feed? Who controls the world's food? Will global food prices

continue their recent rapid rise; and if so, what will be the consequences? What are the environmental impacts of our food production systems? How do answers to these questions differ by place or the person asking the question? How have they changed over time? This course will explore the following fundamental issue: the relationship between development and the environment, focusing in particular on agriculture and the production and consumption of food. The questions above often hinge on the contentious debate concerning population, natural resources, and the environment. Thus, we will begin by critically assessing the fundamental ideological positions and philosophical paradigms of "modernization," as well as the critical counterpoints that lie at the heart of this debate. Within this context of competing sets of philosophical assumptions concerning the population-resource debate, we will investigate the concept of "poverty" and the making of the "Third World," access to food, hunger, grain production and food aid, agricultural productivity (the green and gene revolutions), biofuels, the role of transnational corporations (TNCs), the international division of labor, migration, globalization and global commodity chains, and the different strategies adopted by nation-states to "develop" natural resources and agricultural production. Through a historical investigation of environmental change and the biogeography of plant domestication and dispersal, we will look at the creation of indigenous, subsistence, peasant, plantation, collective, and commercial forms of agriculture. We will analyze the physical environment and ecology that help shape but rarely determine the organization of resource use and agriculture. Rather, through the dialectical rise of various political-economic systems such as feudalism, slavery, mercantilism, colonialism, capitalism, and socialism, we will study how humans have transformed the world's environments. We will follow with studies of specific issues: technological change in food production; commercialization and industrialization of agriculture and the decline of the family farm; food and public health, culture, and family; land grabbing and food security; the role of markets and transnational corporations in transforming the environment; and the global environmental changes stemming from modern agriculture, dams, deforestation, grassland destruction, desertification, biodiversity loss, and the interrelationship with climate change. Case studies of particular regions and issues will be drawn from Africa, Latin America, Asia, Europe, and the United States. The final part of the course examines the restructuring of the global economy and its relation to emergent international laws and institutions regulating trade, the environment, agriculture, resource extraction treaties, the changing role of the state, and competing conceptualizations of territoriality and control. We will end with discussions of emergent local, regional, and transnational coalitions for food self-reliance, alternative and community-supported agriculture,

community-based resource-management systems, sustainable development, and grassroots movements for social and environmental justice. Films, multimedia materials, and distinguished guest lectures will be interspersed throughout the course. One farm field trip is possible, if funding permits. The seminar participants may also take a leading role in a campus-wide event on "food and agriculture," tentatively planned for the fall. Please mark your calendars when the dates are announced, as attendance for all of the above is required. Attendance and participation is also required at special guest lectures and film viewings in the Geography Lecture Series, held approximately twice per month in the evening from 6-8 pm. The Webboard is an important part of the course. Regular postings of assignments, as well as follow-up commentaries, will be made there. There will be in-class essays, debates, and small group discussions. Conferences will focus on in-depth analysis of course topics. You will be required to prepare a poster project on a topic of your choice, related to the course, which will be presented at the end of the semester in a special session.

## **Introduction to Development Studies: The Political Ecology of Development**

**Joshua Muldavin**

*Intermediate, Sophomore and above—Fall*

We will begin this seminar by examining competing paradigms and approaches to understanding "development" and the "Third World." We will set the stage by answering the question: What did the world look like 500 years ago? The purpose of this part of the course is to acquaint us with and to analyze the historical origins and evolution of a world political economy, of which the "Third World" is an intrinsic component. We will thus study the transition from feudalism to capitalism, the rise of merchant and finance capital, and the colonization of the world by European powers. We will analyze case studies of colonial "development" to understand the evolving meaning of this term. These case studies will help us assess the varied legacies of colonialism apparent in the emergence of new nations through the fitful and uneven process of decolonization that followed. In the next part of the course, we will look at the United Nations and the role some of its associated institutions have played in the post-World War II global political economy—one marked by persistent and intensifying socioeconomic inequalities, as well as frequent outbreaks of political violence across the globe. By examining the development institutions that have emerged and evolved since 1945, we will attempt to unravel the paradoxes of development in different eras. We will deconstruct the measures of development through a thematic exploration of population, resource use, poverty, access to food, the environment, agricultural

productivity, and different development strategies adopted by “Third World” nation-states. We will then examine globalization and its relation to emergent international institutions and their policies; for example, the IMF, World Bank, and WTO. We will then turn to contemporary development debates and controversies; for example, the widespread land grabbing (by sovereign wealth funds, China, hedge funds, etc.) that increasingly finds space in the headlines. Throughout the course, our investigations of international institutions, transnational corporations, the role of the state, and civil society will provide the backdrop for the final focus of the class—the emergence

of regional coalitions for self-reliance, environmental and social justice, and sustainable development. Our analysis of development in practice will draw upon case studies primarily from Africa but also from Asia, Latin America and the Caribbean, and the United States. Conference work will be closely integrated with the themes of the course with a two-stage substantive research project. Project presentations will incorporate a range of formats, from traditional papers to multimedia visual productions. Where possible and feasible, you will be encouraged to do primary research during fall study days.

# German

## 2002-2003

### An Introduction to German Thought and Literature

**Roland Dollinger, Nike Mizelle**

*Intermediate—Year*

This course stresses reading, speaking, writing, and a review of grammar. Its aim is to give students a fair degree of fluency in the language and introduce them to some aspects of German literature and culture. Readings will consist of a detective novel, fairy tales, poetry, and stories from the nineteenth and twentieth centuries; videotapes will be used to further comprehension. Regular conferences and weekly sessions with the language assistant will supplement the work of the class.

### German Classicism and Romanticism

**Roland Dollinger**

*Open—Spring*

In this course we will study some of the greatest works of German literature from the late eighteenth and early nineteenth centuries. Plays, poems, and novellas by Lessing, Goethe, Schiller, Kleist, Hölderlin, Tieck, E. T. A. Hoffmann, von Arnim, and Eichendorff will introduce students to the era of German Classicism and Romanticism. Students will have weekly group conferences and biweekly individual conferences to work on their written German.

### German For Beginners

**Roland Dollinger**

*Open—Year*

This course concentrates on the study of grammar, vocabulary, and pronunciation in order to secure the basic tools of the language; conversations, oral reports, and short compositions so that the student may assimilate the language and make it a living reality; and reading for comprehension and vocabulary (simple expository prose) and — after a while, it is hoped — for interest and pleasure as well (poetry, short stories, etc.). Weekly practice with the language assistant is an integral part of the course. Conferences will be spent in conversation and discussion of additional reading. Supplementary work with tapes and videos will provide additional opportunity for practice in grammar and pronunciation. The overall purpose is to give the student a thorough foundation in the German language.

## Postwar German Literature

**Roland Dollinger**

*Open—Fall*

In this seminar students will study the major developments of German literature and culture from 1945 to the present. We will begin with Günther Grass's recent novel *Mein Jahrhundert* that will introduce students to twentieth-century German history through fiction. We will then proceed chronologically and explore some important texts from the postwar period by Heinrich Böll, Max Frisch, Jurek Becker, Peter Schneider, Winfried Sebald, Barbara Honigmann, and others to deal with the question of how both East and West Germany dealt with its totalitarian past. The history book *The Course of German History* by Taylor will help us get a better understanding of postwar German history. Students will have weekly group conferences and biweekly individual conferences to work on their written German.

A full description of the course may be found under the appropriate discipline.

**The Modern German Novel** (p. 408), Roland Dollinger *German*

## 2003-2004

### An Introduction to German Thought and Literature

**Roland Dollinger**

*Intermediate—Year*

This course stresses reading, speaking, writing, and a review of grammar. Its aim is to give students a fair degree of fluency in the language and introduce them to some aspects of German literature and culture. Readings will consist of a detective novel, fairy tales, poetry, and stories from the nineteenth and twentieth centuries; videotapes will be used to further comprehension. Regular conferences and weekly sessions with the language assistant will supplement the work of the class.

### Beginning German

**Roland Dollinger**

*Open—Year*

This course concentrates on the study of grammar, vocabulary, and pronunciation in order to secure the basic tools of the language; conversations, oral reports, and short compositions so that the student may assimilate the language and make it a living reality; and reading for comprehension and vocabulary (simple expository prose) and—after a while, it is hoped—for interest and pleasure as well (poetry, short stories, etc.). Weekly practice with the language assistant is an integral part of the course. Conferences will be spent in conversation and discussion of additional reading.

Supplementary work with tapes and videos will provide additional opportunities for practice in grammar and pronunciation. The overall purpose is to give the student a thorough foundation in the German language.

## Twentieth-Century German Literature

**Roland Dollinger**

*Advanced—Year*

In this course we will explore the major developments of German literature and culture from the end of the nineteenth century to the present. In the fall semester we will analyze texts from the pre-World War I era to 1945 by such modern writers as Hauptmann, Thomas and Heinrich Mann, Schnitzler, Kafka, Kästner, and others. Classical films such as *The Cabinet of Dr. Caligari*, *Berlin—Symphony of a Big City*, and *The Blue Angel* will cast some light on the "Golden Twenties" of the Weimar Republic (1918-1933). During the spring semester we will study postwar German literature. As we read poems, plays, and prose fiction by writers such as Böll, Brecht, Celan, Dürrenmatt, Frisch, Heym, and others, we will analyze their texts within the political and cultural contexts of postwar Germany. Films such as *The Marriage of Maria Braun* and *Germany, Pale Mother* will help us understand Germany's postwar trauma, the legacy of National Socialism, the Stalinist dictatorship in East Germany, and other major historical phenomena. We will pay special attention to the question of how German intellectuals perceived the United States at certain moments in German history. Students will also be required to read a history book in English.

## 2004-2005

### An Introduction to German Thought and Literature

**Roland Dollinger, Nike Mizelle**

*Intermediate—Year*

This course stresses reading, speaking, writing, and a review of grammar. Its aim is to give students a fair degree of fluency in the language and introduce them to some aspects of German literature and culture. Readings will consist of a detective novel, fairy tales, poetry, and stories from the nineteenth and twentieth centuries; videotapes will be used to further comprehension. Regular conferences and weekly sessions with the language assistant will supplement the work of the class.

### Beginning German

**Nike Mizelle**

*Open—Year*

This course concentrates on the study of grammar, vocabulary, and pronunciation in order to secure the

basic tools of the language; conversations, oral reports, and short compositions so that the student may assimilate the language and make it a living reality; and reading for comprehension and vocabulary (simple expository prose) and—after a while, it is hoped—for interest and pleasure as well (poetry, short stories, etc.). Weekly practice with the language assistant is an integral part of the course. Conferences will be spent in conversation and discussion of additional reading. Supplementary work with tapes and videos will provide additional opportunities for practice in grammar and pronunciation. The overall purpose is to give the student a thorough foundation in the German language.

## Twentieth-Century German Literature

**Roland Dollinger**

*Advanced—Year*

In this course we will explore the major developments of German literature and culture from the end of the nineteenth century to the present. In the fall semester, we will analyze literary texts from the pre-World War I era by such writers as Hauptmann, Fontane, Th. Mann, and Arthur Schnitzler. The major focus of this course, however, will lie on the literary, cinematic, and artistic developments of the so-called "Golden Twenties" during the Weimar Republic (1918-1933). Texts by Brecht, Fleissner, Fallada, and others; films such as *Berlin, Symphony of a Metropolis*, *Joyless Street*, and *The Blue Angel*; and essays about various aspects of this first modern mass culture in Germany will help us understand this fascinating period that ended with Hitler's rise to power. During the second semester, we will study postwar German literature. As we read poems, plays, prose fiction, and essays by writers such as Böll, Celan, Max Frisch, Heym, Maron, Peter Schneider, and Maxim Biller, we will analyze their texts within the political and cultural contexts of postwar Germany. Special attention will be given to the problems of (1) the development of West and East German literature after 1945; (2) how both West and East German writers have depicted their ideologically opposed societies; (3) German reunification; (4) the development of a minority literature in Germany today. This seminar takes places in cooperation with the Theatre department: a performance of Max Frisch's play about anti-Semitism is planned for the spring semester of 2005.

## 2005-2006

### An Introduction to German Thought and Literature

**Roland Dollinger, Nike Mizelle**  
*Intermediate—Year*

This course stresses reading, speaking, writing, and a review of grammar. Its aim is to give students a fair degree of fluency in the language and introduce them to some aspects of German literature and culture. Readings will consist of a detective novel, fairy tales, poetry, and stories from the nineteenth and twentieth centuries; videotapes will be used to further comprehension. Regular conferences and weekly sessions with the language assistant will supplement the work of the class.

### Beginning German

We will also view some films that contribute to our understanding of German self-representation after 1945 and visit the Goethe Institute in New York.

*For advanced students of German.*

## 2007-2008

### An Introduction to German Thought and Literature

**Roland Dollinger, Nike Mizelle**

*Intermediate—Year*

This course stresses reading, speaking, writing, and a review of grammar. Its aim is to give students a fair degree of fluency in the language and introduce them to some aspects of German literature and culture. Readings will consist of a detective novel, fairy tales, poetry, and stories from the nineteenth and twentieth centuries; videotapes will be used to further comprehension. Regular conferences and weekly sessions with the language assistant will supplement the work of the class.

*Mr. Dollinger, first semester*

*Ms. Mizelle, second semester*

### Beginning German

**Roland Dollinger, Nike Mizelle**

*Year*

This course concentrates on the study of grammar, vocabulary, and pronunciation in order to secure the basic tools of the language; conversations, oral reports, and short compositions so that the student may assimilate the language and make it a living reality; and reading for comprehension and vocabulary (simple

expository prose) and—after a while, it is hoped—for interest and pleasure as well (poetry, short stories, etc.). Weekly practice with the language assistant is an integral part of the course. Conferences will be spent in conversation and discussion of additional reading. Supplementary work with tapes and videos will provide additional opportunities for practice in grammar and pronunciation. The overall purpose is to give the student a thorough foundation in the German language.

*Beginning.*

*Mr. Dollinger, first semester*

*Ms. Mizelle, second semester*

### Postwar German Drama

**Roland Dollinger**

*Advanced—Fall*

In this semester course, we will explore some of the most important plays written in Germany, Switzerland, and Austria after 1945. Our discussions will address the question of how playwrights have dealt with the representation of Germany's past and present, especially the catastrophe of the Third Reich and the Holocaust. Seminal plays by Borchert, Brecht, Dürrenmatt, Frisch, Bernhard, Kroetz, Peter Weiss, and Heiner Müller will help us understand Germany's postwar culture. This course consists of two sections. One seminar per week is dedicated to a discussion of these texts; in the second section, students will work on their German grammar and vocabulary and will also see some influential German films.

### The German Stage

**Susan Bernofsky**

*Advanced—Spring*

War, revolution, street riots, and terrorist acts—it's no coincidence that many of the most radically experimental works of German language theatre followed directly moments of national and international crisis. What does aesthetic revolution have to do with revolution on the streets? How can "die Bretter, die die Welt bedeuten" (Schiller) influence the course of events in the world itself? When is comedy an appropriate response to tragedy? What is the role of censorship? What does the "V-Effekt" (estrangement effect) mean to us today? These are the sorts of questions we will be addressing in this survey of major German, Swiss, and Austrian dramas of the last two hundred years, including comedies, tragedies, and tragicomedies by authors including Goethe, Schiller, Kleist, Büchner, Brecht, Max Frisch, Friedrich Dürrenmatt, Peter Handke, Thomas Bernhard, Heiner Müller, Elfriede Jelinek, Yoko Tawada, Jenny Erpenbeck, and Christoph Schlingensief, written in the aftermath of events ranging from the French Revolution to September 11.

## 2008-2009

### An Introduction to German Thought and Literature

**Roland Dollinger**

*Intermediate—Year*

This course stresses reading, speaking, writing, and a review of grammar. Its aim is to give students a fair degree of fluency in the language and introduce them to some aspects of German literature and culture. Readings will consist of a detective novel, fairy tales, poetry, and stories from the nineteenth and twentieth centuries; videotapes will be used to further comprehension. Regular conferences and weekly sessions with the language assistant will supplement the work of the class.

### Beginning German

*Open—Year*

This course concentrates on the study of grammar, vocabulary, and pronunciation in order to secure the basic tools of the language; conversations, oral reports, and short compositions so that the student may assimilate the language and make it a living reality; and reading for comprehension and vocabulary (simple expository prose) and—after a while, it is hoped—for interest and pleasure as well (poetry, short stories, etc.). Weekly practice with the language assistant is an integral part of the course. Conferences will be spent in conversation and discussion of additional reading. Supplementary work with tapes and videos will provide additional opportunities for practice in grammar and pronunciation. The overall purpose is to give the student a thorough foundation in the German language.

### Twentieth-Century German Literature

**Roland Dollinger**

*Advanced—Year*

In this course, we will explore the major developments of German literature and culture from the end of the nineteenth century to the present. In the fall semester, we will analyze literary texts from the pre-World War I era by such writers as Hauptmann, Thomas Mann, Kafka, and Schnitzler. The major focus of this course, however, will lie on the literary, cinematic, and artistic developments of the so-called “Golden Twenties” during the Weimar Republic (1918-1933). Texts by Brecht, Döblin, and Jünger; films such as *The Blue Angel*; and essays about various aspects of this first modern mass culture in Germany will help us understand this fascinating period that ended with Hitler’s rise to power. During the second semester, we will study postwar German literature. As we read poems, plays, prose fiction, and essays by writers such as Borchert, Böll,

Brecht, Celan, Dürrenmatt, Frisch, Weiss, and Schlink, we will analyze their texts within the political and cultural contexts of postwar Germany. Special attention will be given to the problems of (1) the development of West and East German literature after 1945; (2) how both West and East German writers have dealt with Germany’s Nazi past; and (3) German reunification. We will also view some films that contribute to our understanding of German self-representation after 1945 and perhaps visit Columbia University if there is a lecture pertaining to our class material.

## 2009-2010

### Advanced German: 20th-Century German Literature

**Roland Dollinger, Nike Mizelle**

*Advanced—Year*

The goal of this seminar is to make students familiar with the historical, political, and literary developments in Germany during the 20th century. In the fall semester, we will analyze literary texts from the World War I era, the Weimar Republic, and the time of Nazi Germany. We will study texts by major German writers such as Hauptmann, Thomas Mann, Kafka, Döblin, Irmgard Keun, and Bertolt Brecht. Films such as *The Cabinet of Dr. Caligari*, *Der blaue Engel*, and the Nazi propaganda film *Jud Süß* will help us better understand the so-called “Golden 20s” and give us an insight into the nature of anti-Semitism. In the spring term, we will focus on post-war German literature. As we read poems, plays, prose fiction, and essays by writers such as Anonyma, Borchert, Böll, Thomas Bernhard, Celan, Dürrenmatt, Max Frisch, Peter Weiss, Bernhard Schlink, Doris Dörrie, and others, we will give special attention to the problems of (1) social and cultural problems in Germany right after the war; (2) how German writers have dealt with National Socialism and the Holocaust; and (3) German reunification. We will also watch famous films such as *Deutschland bleiche Mutter* and *Das Leben der Anderen*. This course consists of three equally important components: Students will have one seminar with Mr. Dollinger, who will discuss the class materials in German; one seminar with Ms. Mizelle, who will work with students collectively on various grammar and vocabulary issues; and one bi-weekly individual conference with Mr. Dollinger.

*Conducted entirely in German. Students must demonstrate advanced language skills during registration in order to be permitted into this class.*

## Beginning German

**Roland Dollinger, Nike Mizelle**

*Open—Year*

This course concentrates on the study of grammar, vocabulary, and pronunciation in order to secure the basic tools of the German language. Through grammar exercises in class, dialogues, and short compositions, students will learn the fundamental skills to speak, read, and write in German. This class will meet four times every week: three times with Mr. Dollinger and once with Ms. Mizelle, who will also meet with students individually or in small groups every week for an extra conference. Course materials include the textbook *Neue Horizonte*, a workbook, and a *Graded German Reader* that will allow students to start reading in German after the first week. We will cover at least 12 chapters from the textbook—all of the basic grammar and vocabulary students will need to know in order to advance to the next level. The only requirement for this course is a strong commitment to doing homework consistently.

## Intermediate German

**Roland Dollinger, Nike Mizelle**

*Intermediate—Year*

This course stresses speaking, reading, writing, and a thorough review of German grammar. Its aim is to give students more fluency and prepare them for their junior year in Germany. Although Sarah Lawrence College does not have its own overseas program in German, students are encouraged to study in Germany through other excellent programs in Berlin or other German cities. Readings will consist of short stories, poems, and three novellas by the Austrian writer Stefan Zweig. In the spring semester, we will mainly use *Im Spiegel der Literatur*, a collection of short stories written by some of the most famous German writers such as Thomas Mann and Bertolt Brecht. A solid grammar review, based on the book *German Grammar in Review*, will help students improve their speaking and writing skills. Regular conferences and weekly sessions with Ms. Mizelle will supplement class work.

*Prerequisite: Beginning German at Sarah Lawrence College or another institution of higher learning or at least four semesters of German in high school.*

## 2010-2011

### Advanced German: 20th-Century German Literature

**Roland Dollinger**

*Advanced—Year*

The goal of this seminar is to make students familiar with the historical, political, and literary developments in Germany during the 20<sup>th</sup> century. In the fall semester, we will focus on Postwar German Literature. As we read

poems, plays, prose fiction, and essays by writers such as Anonyma, Borchert, Böll, Thomas Bernhard, Celan, Dürrenmatt, Max Frisch, Peter Weiss, Bernhard Schlink, Doris Dörrie, and others, we will give special attention to the problems of: (1) social and cultural problems in Germany right after the war; (2) how German writers have dealt with National Socialism and the Holocaust; and (3) German reunification. *Intermediate. Prerequisite: Beginning German at Sarah Lawrence College or another institution of higher learning or at least four semesters of German in high school.*

## 2011-2012

### Advanced German: Contemporary German Literature

**Roland Dollinger, Nike Mizelle**

*Advanced—Fall*

In the fall semester, we will read stories and novels written in Germany after 1989. Writers such as Daniel Kehlmann, Clemens Meyer, Bernhard Schlink, Judith Hermann, Monika Maron, W.G. Sebald, Maxim Biller, and others will introduce students to contemporary German culture. We will explore how German writers deal with the legacy of national socialism and the Holocaust, German reunification and the Stalinist past in the former East Germany, and a new “multicultural” Germany. Films and articles from the magazine *Der Spiegel* will enrich our discussions. This course consists of three equally important components: Students will have one seminar with Mr. Dollinger, who will discuss the class materials in German; one seminar with Ms. Mizelle, who will work with students collectively on various grammar and vocabulary issues; and one biweekly individual conference with Mr. Dollinger. Students must demonstrate advanced language skills during registration in order to be permitted into this class.

### Advanced German: German “Classics” From Goethe to Brecht

**Roland Dollinger, Nike Mizelle**

*Advanced—Spring*

In the spring semester, we will study some of the most famous works of German literature from the 18th to the 20th centuries, including Goethe's *Die Leiden des Jungen Werther*, Kleist's *Das Erdbeben von Chile*, Tieck's *Der Blonde Eckbert*, Eichendorff's *Das Marmorbild*, Storm's *Der Schimmelreiter*, Thomas Mann's *Der Kleine Herr Friedemann*, and Brecht's *Die Dreigroschenoper*. Students will also become familiar with the major developments in Germany history. This course consists of three equally important components: Students will have one seminar with Mr. Dollinger, who will discuss the class materials in German; one seminar with Ms. Mizelle, who will work with students collectively on various grammar and vocabulary issues; and one biweekly individual conference with Mr. Dollinger. Students must demonstrate advanced language skills during registration in order to be permitted into this class.

### Beginning German

**Roland Dollinger, Nike Mizelle**

*Open—Year*

This course concentrates on the study of grammar, vocabulary, and pronunciation in order to secure the basic tools of the German language. Through grammar exercises in class, dialogues, and short compositions, students will learn the fundamental skills to speak, read, and write in German. This class will meet three times (90 minutes) per week: twice with Mr. Dollinger and once with Ms. Mizelle, who will also meet with students individually or in small groups for an extra conference. Course materials include the textbook, *Neue Horizonte*, along with a workbook and a graded German reader that will allow students to start reading in German after the first week. We will cover at least 12 chapters from the textbook—all of the basic grammar and vocabulary that students will need to know in order to advance to the next level. There will be short written tests at the end of each chapter. Students will also learn basic facts about Germany today.

### Intermediate German

**Roland Dollinger**

*Intermediate—Year*

This course stresses speaking, reading, and writing German and a thorough review of German grammar. Its aim is to give students more fluency and to prepare them for a possible junior year in Germany. Readings in the fall will consist of fairy tales, short stories, poems, and three novellas by the Austrian writer Stefan Zweig. Students will give several oral presentations (on a fairy tale, on a German city, on a German artist or intellectual). In the spring semester, we will use *Im*

*Spiegel der Literatur*, a collection of short stories written by some of the most famous German writers such as Thomas Mann and Bertolt Brecht. A solid grammar review, based on the book *German Grammar in Review*,

will help students improve their speaking and writing skills. Regular conferences with Nike Mizelle will supplement class work.

# Greek (Ancient)

## 2002-2003

### Advanced Greek

*Samuel B. Seigle*

*Advanced—Year*

This course has two aims: to extend the student's ability to read classical Greek and to deepen the student's appreciation of the literary traditions of the Greeks. The authors to be read will be determined at the time of registration.

### Beginning Greek

*Samuel B. Seigle*

*Open—Year*

This course seeks to introduce the student to the reading of classical Greek literature as quickly as possible. The Attic dialect is primarily studied, since this dialect is used by Thucydides, Plato, the orators, and the dramatists in their dialogue scenes. In the second semester, selections will be read from Euripides' tragedy, *Bacchae*.

### Intermediate Greek

*Samuel B. Seigle*

*Intermediate—Year*

This course has two aims: to develop the student's ability to read Greek intelligently and fluently and to give the student a general understanding of Greek history and literature. The authors to be read will be determined at the time of registration.

## 2003-2004

### Advanced Greek

*Samuel B. Seigle*

*Advanced—Year*

This course has two aims: to extend the student's ability to read classical Greek and to deepen the student's appreciation of the literary traditions of the Greeks. The authors to be read will be determined at the time of registration.

### Beginning Greek

*Samuel B. Seigle*

*Open—Year*

This course seeks to introduce the student to the reading of classical Greek literature as quickly as possible. The Attic dialect is primarily studied, since this dialect is used by Thucydides, Plato, the orators, and the

dramatists in their dialogue scenes. In the second semester, selections will be read from Euripides' tragedy, *Bacchae*.

### Intermediate Greek

*Samuel B. Seigle*

*Intermediate—Year*

This course has two aims: to develop the student's ability to read Greek intelligently and fluently and to give the student a general understanding of Greek history and literature. The authors to be read will be determined at the time of registration.

## 2004-2005

### Advanced Greek

*Samuel B. Seigle*

*Advanced—Year*

This course has two aims: to extend the student's ability to read classical Greek and to deepen the student's appreciation of the literary traditions of the Greeks. The authors to be read will be determined at the time of registration.

### Beginning Greek

*Samuel B. Seigle*

*Open—Year*

This course seeks to introduce the student to the reading of classical Greek literature as quickly as possible. The Attic dialect is primarily studied, since this dialect is used by Thucydides, Plato, the orators, and the dramatists in their dialogue scenes. In the second semester, selections will be read from Euripides' tragedy, *Bacchae*.

### Intermediate Greek

*Samuel B. Seigle*

*Intermediate—Year*

This course has two aims: to develop the student's ability to read Greek intelligently and fluently and to give the student a general understanding of Greek history and literature. The authors to be read will be determined at the time of registration.

## 2005-2006

### Advanced Greek

*Emily Katz Anhalt*

*Advanced—Year*

This course will examine in depth the works of one classical Greek prose author and one poet. The course will emphasize close, accurate reading as well as appreciation for the works' historical, political, and

cultural contexts. Selected texts will be read in Greek. Additional texts will be read in translation. The authors to be read will be determined at the time of registration.

## Beginning Greek

**Samuel B. Seigle**

*Open—Year*

This course seeks to introduce the student to the reading of classical Greek literature as quickly as possible. The Attic dialect is primarily studied, since this dialect is used by Thucydides, Plato, the orators, and the dramatists in their dialogue scenes. In the second semester, selections will be read from Euripides' tragedy, *Bacchae*.

## Intermediate Greek

## 2006-2007

### Advanced Greek

**Samuel B. Seigle**

*Advanced—Year*

This course has two aims: to extend the student's ability to read classical Greek and to deepen the student's appreciation of the literary traditions of the Greeks. The authors to be read will be determined at the time of registration.

*Advanced. Prerequisite: permission of the instructor.*

## Beginning Greek

**Emily Katz Anhalt**

*Open—Year*

An intensive introduction to ancient Greek grammar, syntax, and vocabulary, with a view to reading the language as soon as possible. (By midsemester in the fall, students will be reading authentic excerpts of ancient Greek poetry and prose.) During the spring semester, while continuing to refine their reading skills, students will study one ancient Greek text in its entirety in translation and read portions of it in the original Greek.

*Beginning.*

## Intermediate Greek

**Samuel B. Seigle**

*Intermediate—Year*

This course has two aims: to develop the student's ability to read Greek intelligently and fluently and to give the student a general understanding of Greek history and literature. The authors to be read will be determined at the time of registration.

*Intermediate. Prerequisite: permission of the instructor.*

## 2007-2008

### Advanced Greek

**Samuel B. Seigle**

*Advanced—Year*

This course has two aims: to extend the student's ability to read classical Greek and to deepen the student's appreciation of the literary traditions of the Greeks. The authors to be read will be determined at the time of registration.

*Advanced. Prerequisite: permission of the instructor.*

## Beginning Greek

**Samuel B. Seigle**

*Year*

This course seeks to introduce the student to the reading of classical Greek literature as quickly as possible. *Intermediate. Prerequisite: permission of the instructor.*

## 2008-2009

### Advanced Greek

**Emily Katz Anhalt**

*Advanced—Year*

This course will be taught in conjunction with the Literature course, Telling Stories: The Greeks and the

History of History. Students will attend seminar meetings and, in addition, develop and refine their reading comprehension skills by reading texts in Greek in their conference work. Additional conference hours and grammar review may be included as necessary. Selections of Homer, Herodotus, and Thucydides will be read in Greek. The works will be read in their entirety in English. The epic poems of Homer, now nearly 3,000 years old, were the Greeks' earliest accounts of their history until Herodotus and Thucydides in the 5th century B.C.E. distinguished myth from history. What is the difference between myth and history? Who decides? What is the value and purpose of recording events? What is the role of the supernatural in human affairs? Is objective reporting of the past possible? The English word "history" derives from the Greek *historie*, which means "inquiry," and the idea of history in ancient Greece emerged from an oral tradition of epic poetry. The earliest surviving Greek poetry and prose reveal the origins of Western attitudes toward life, love, death, divinity, communal relations, foreigners, war, imperialism, and more. This course will examine storytelling techniques and moral sensibilities in the 8th-century B.C.E. epics of Homer (the *Iliad* and the *Odyssey*) and the 5th-century prose histories of Herodotus and Thucydides. The course will be taught in translation. At the discretion of the instructor, qualified students may enroll in the course as Intermediate or Advanced Greek and read selected texts in the original Greek for their conference work.

## 2009-2010

## Advanced Greek

**Samuel B. Seigle**

*Advanced—Year*

This course has two aims: to extend the student's ability to read classical Greek and to deepen the student's appreciation of the literary traditions of the Greeks. The authors to be read will be determined at the time of registration.

*With permission of instructor.*

## Beginning Greek

**Emily Katz Anhalt**

*Open—Year*

This course provides an intensive introduction to Ancient Greek grammar, syntax, and vocabulary, with the aim of reading the language as soon as possible. By mid-semester in the fall, students will be reading authentic excerpts of Ancient Greek poetry and prose. Students will also read and discuss several dialogues of Plato in English. During the spring semester, while continuing to refine their grammar and reading skills, students will read extended selections of Plato's *Apology* in the original Greek.

## Intermediate Greek

**Samuel B. Seigle**

*Intermediate—Year*

This course has two aims: to develop the student's ability to read Greek intelligently and fluently and to give the student a general understanding of Greek history and literature. The authors to be read will be determined at the time of registration.

*With permission of instructor.*

## 2010-2011

### Advanced Greek

**Emily Katz Anhalt**

*Advanced—Year*

This course will examine, in depth, the works of Sophocles in the fall and one classical Greek prose author in the spring (to be determined during the fall semester). In the fall, Intermediate Greek students will continue to review and refine their knowledge of Greek grammar and syntax while reading Sophocles' *Oedipus* and additional selections of Sophoclean tragedy in Greek. Students will read the remaining plays of Sophocles in English. The course will emphasize close, accurate decoding of Sophocles' exquisite poetry and, in the spring, the distinctive prose style of the selected author as we explore the relationship of these works to their historical, political, and cultural contexts.

*Advanced.*

### Beginning Greek

**Samuel B. Seigle**

## 2002-2003

### American Foreign Policy in the Middle East

*Fawaz Gerges*

*Open—Spring*

When the dust settled after World War II, the United States emerged not only as one of the two most powerful nations in the international system but also, by far, as one of the most respected great powers in the Middle East. America was mainly seen as a progressive island in a sea of European reaction. The dominant question then was, "why do they like us so much?" not "why do they hate us so much?" What went wrong in the second part of the 20th century? Why has the initial promising encounter between the United States and the world of Islam turned sour? What lies at the heart of the dramatic shift in American foreign policy and Arabs/Muslims' perceptions as well? To what extent has the United States inherited the colonial legacy of its European allies? Or to what extent has the United States become a scapegoat for most of ills that have befallen the world of Islam in the last 50 years? This seminar will examine the forces behind the rise of the United States to world power status and the critical consequences of WWII that impelled U.S. leaders to play a leading role in international politics. Throughout the seminar, we will consider the linkages between domestic politics and foreign policy, the role of ideology and political culture and the effects on American life of the U.S. rise to world power status. Open to all interested students.

### Arab Politics in the Age of Dictators

*Fawaz Gerges*

*Open—Year*

This yearlong seminar will examine the complex dynamics of Arab politics since the establishment of the contemporary Middle Eastern state in the early 1920s. Most of these states were born out of the rubble of World War I and the destruction of the great empires. Britain and France not only divided the vast territories of the Ottoman Empire between themselves but also drew the political map of the modern Middle East by reorganizing the old political structures along nation-states. This course will focus on the internal dynamics — socio-political, religious, and cultural forces — as well as on external forces, which have shaped life in the region. In other words, the seminar will not only assess the role of the West in forging the region's modern history but also the input of the indigenous forces, such as the interplay between secular nationalism and Islam. Special attention will be paid to the rise of European hegemony

after World War I and the response of social and religious groups to the cultural, economic, and political influence of the West. For example, why have some countries developed democratic institutions, while others have become increasingly dictatorial, espousing a form of secular authoritarianism, and yet others have sought to define their politics in terms of Islamic activism? What have been the causes and consequences of the five Arab-Israeli wars on political governance, economic development, and relations between state and society? What does explain the lack of political legitimacy and the absence of democracy in the Arab Middle East? What does explain the rise of military rule and the cult of personality? What lies at heart of the longevity and durability of Arab dictatorships? What are the repercussions and costs of political oppression? How does the existence of a vacuum of legitimate authority manifest itself? And what are the consequences of continuing Western meddling in the region's internal affairs? Can we understand the prolonged turmoil and upheaval in Arab politics in the twentieth century without delving deeper into the internal structure of Arab societies and Arab political culture as well?

### Art and the Sacred in Medieval Civilization

*Open—Spring*

In this interdisciplinary course we will ask why European religion and art took the forms they did in the High Middle Ages, and why those forms emerged and changed at particular places and moments in time. In particular, we will investigate why certain features of Roman Catholicism that are looked upon as quintessentially Catholic and that figure so prominently in today's crisis in the Church appeared not in the early years of the Church, but in the eleventh, twelfth, and thirteenth centuries: a celibate clergy, a college of cardinals that elects a monarch with virtually unlimited powers, local bishops rushing to Rome for guidance and submitting proposals to the Papal Curia for approval before they can be instituted, a tradition of clerical immunity from criminal prosecution by the state, separation of church and state. But presentist concerns are not the only focus of this course. We will also explore why the High Middle Ages can with justice be called one of Europe's most intellectually and spiritually and artistically creative ages. To this end we will examine the revival of speculative and rational thought in the age of Abelard and Heloise, the increasing acceptance of beliefs in the humanity of God, the inherent dignity of man and nature, and the accessibility of the universe to rational inquiry. We will examine changing attitudes toward the afterlife, the birth of purgatory and of indulgences, and why it was believed that the living could affect the fate of the dead. Of special interest will be popular religion as expressed in the cult of saints, pilgrimage to Santiago de Compostela,

the cult of the Virgin, Church attitudes toward Jews and dissenters, and the extraordinary story of the Crusades. A special feature of this course will be studying these topics in visual as well as written texts, especially in the architecture and decoration of Romanesque churches, as well as the birth at St. Denis and Chartres of the uniquely Western style that we call Gothic. In New York museums we will view works of medieval art that are among the world's most precious treasures. Conference work can focus on medieval questions or some from another time and place, including the contemporary world.

## **Diplomacy and Intelligence in Modern History**

**Jefferson Adams**

*Open—Year*

By what means have different historical states and empires acquired vital knowledge about one another? And how, over the centuries, have various techniques of negotiation evolved, leading either to reconciliation or to warfare? This course will begin its inquiry in the Italian Renaissance, which saw the birth of modern diplomacy, and then proceed to examine how balance of power and Realpolitik culminated in the remarkable state-system of the nineteenth century. The impact of totalitarianism in the twentieth century — as well as the struggles of the cold war — will also be carefully assessed. Finally, some key Eastern approaches to strategy and warfare will be explored to gain a better understanding of the nature of the non-Western world. Throughout the course, emphasis will be placed on the role of intelligence gathering and covert action and their influence on the course of events. Attention will also be given to the difficult problem of reconciling clandestine government operations with the ideals of an open democratic society. The class assignments will draw from a variety of sources — historical narrative, firsthand accounts, novels, and films.

## **Doctor Diviners and Traditional Healers: A History of Science and Medicine in Africa**

**Mary Dillard**

*Open—Fall*

When people think of major advances in science and medicine, they do not normally think of Africa. This class focuses on historical and cultural approaches to the study of science, technology, and medicine. A central goal of the class is to challenge the assumption that major advances in scientific thought have not come from Africa. In this class, students will learn to redefine the idea of science to include practices and belief systems that are found in Africa. The focus of class work will be on studying experimentation, archaeology, innovation, African scientists, religion, indigenous

philosophy, and healing. By studying various African societies including the Dogon of Mali, the Akan of Ghana/Ivory Coast, the Yoruba of Nigeria, and the Zulu of South Africa, students will examine the methods that these diverse societies have used to address scientific problems.

## **Ends of Empire: Britain in the Twentieth Century**

**Persis Charles**

*Open—Fall*

In the aftermath of two devastating world wars, Britain's position in the world has changed radically. An especially interesting change has been in the relations of the former imperial power to its old colonies. This course will focus on issues of race, class, and gender as Britain has become a multicultural society in the twentieth century. Ideas will be explored about the nature of "Britishness" in the new confrontations with the postcolonial cultures of India, Africa, the Caribbean, and Ireland. We will use films and novels as well as historical texts.

## **First-Year Studies: Ancient Texts, New Worlds: The Renaissance and the Expansion of Europe**

**Pauline Moffitt Watts**

*FYS*

Within a period of three years in the mid-fourteenth century, at least a third of the population of Europe perished, succumbing to a pestilence that came to be known as the Black Death. In the desolate decades that followed, Italian scholars and artists began to recover and study Greek, Roman, Hebrew, and Early Christian texts that had been lost or forgotten for centuries. Believing that the revitalization of their culture lay in this ancient wisdom literature, they began to describe their own age as its "renaissance." We will look at the different ways in which individual thinkers such as Petrarch, Ficino, and Pico Della Mirandola imagined and examined the past in order to make sense of the "historical solitude" of their present. The implosive and explosive energies released by their introduction of ancient Mediterranean literature, science, and philosophy into European courts, cities, and universities would have profound repercussions in the early modern period. Within a relatively brief time, longstanding medieval conceptions of political and religious order, and of the structure of the cosmos itself, collapsed. We will examine the curious mixes of medieval science and religion that drove Columbus to conceive of his "Enterprise of the Indies" leading to his discovery of what he called a "new heaven and new earth" in the Americas. We will reflect on how and why one man, Martin Luther, an Augustinian monk, could write three letters that would fundamentally challenge the most

powerful institution in Europe — the Roman Catholic Church. We will trace the dissolution of the medieval conception of the celestial world that culminated with Galileo's public defense of the "double truths" of science and scripture before the Roman Inquisition.

## First-Year Studies: Merchants, Queens, and Hunter Gatherers: An Introduction to the History of Africa

**Mary Dillard**  
FYS

This class introduces students to the rich and diverse history of the African Continent by focusing on four separate African civilizations: Ethiopia, Mali, Egypt, and Zimbabwe. Students will study these civilizations within a comparative framework, beginning from earliest times and ending at the colonial conquest of Africa. A major focus of the class will be on introducing students to the interdisciplinary methods that scholars use to reconstruct African history including oral history, archaeology, anthropology, art history, and historical linguistics. In addition to studying Africa through this "African civilizations" model, students will also be introduced to studying Africa through using a cultural linguistic model of African history that focuses on language families and the historical significance of cross-cultural interactions among Africans. Finally, we will critically evaluate the "Image of Africa" by investigating how the Continent has been portrayed through literature, film, art, and in the American popular media.

## First-Year Studies: The Two World Wars of the Twentieth Century: A History

**Fredric Smoler**  
FYS

This course will examine the First and Second World Wars, two vast and savage armed conflicts that shaped the twentieth century. We shall spend a year studying these two wars for two reasons: because these wars were among the decisive shaping forces of our civilization, and because war is intrinsically if horrifically fascinating, calling forth some of the best as well as much of the worst in human beings. The First World War, generally understood as the ghastly collision of the industrial revolution with a nationalist state system, ended with the destruction of three empires. It produced new and starkly violent regimes, pre-eminently Communist Russia, Nazi Germany, and Fascist Italy. The Second World War destroyed two of these polities and gave a long lease on life to the third of them. It inaugurated the cold war, which dominated world politics for most of the latter half of the century. It doomed the European imperialism that had formally subjected almost the whole of the non-European world over the preceding

centuries. And it produced the modern United States as the world's first hyperpower. These wars, which made our political and cultural world, and shattered its predecessor, are thus profoundly worth our understanding. The course will begin by describing the world destroyed by WWI, and then assess the causes, courses, and consequences of both world wars. We shall examine the experience of war for individuals, states, economies, and societies. These wars transformed everything they touched, and they touched everything; we shall look at them through the various optics of political history, economic history, military history, cultural history, and social history.

## Foundations of the Feminine

**Persis Charles**  
Fall

This course will focus on the eighteenth century and the French Revolution as crucial epochs in the emergence of modern ideas of gender. The philosophers and revolutionaries constructed an abstract concept of "man" and assumed its universal applicability, though it was largely based on their own location, customs, and desires. Their standard of the human being opened exciting vistas for many: individual property rights and citizenship, the career open to talent, the possibility of voting, and the chance to break from certain established community obligations. But this notion of the human was problematic for women and a variety of others: black slaves, free workers, peasants, "savages," to name just a few. The opposition between the universal and the particular, coupled with the late eighteenth-century upheaval in such institutions as monarchy, church, and aristocracy, helped create such movements as nationalism and individualism, whose reverberations can still be felt today in areas like identity politics. The course work will center on France and the Anglo-American world of the period. Readings will include the work of Montesquieu, Rousseau, Wollstonecraft, Mme. de Staël, C. L. R. James, Foucault, and others. Conference work, to give some examples, could be done on topics like the creation of the public sphere and the rise of domesticity, the political mobilization of women in revolutionary settings, or the concept of individual authorship and its implications for women writers.

## Gender, Family, and Society in the U.S., 1945 to the Present

**Lori E. Rotskoff**  
Open—Year

This course will focus on cultural ideals and social experiences of gender and the family in the United States from 1945 to the present. The first semester explores the impact of World War II and the cold war on American culture from 1945 to 1960, while the latter half investigates shifts in gender norms and familial

arrangements from the 1960s through the 1990s. We will explore photographs, novels, short stories, autobiographies, and other primary sources — but special emphasis will be placed on analyzing films in historical context. Specific topics for the fall term include roles of women and men during and after World War II; child-rearing and the stereotypical "Leave it to Beaver" family in the postwar era; the challenges facing black families in the 1940s and 50s; the social uses of family photography at home and abroad; the civil rights movement; unwed pregnancy and single motherhood. Topics for the spring term include the emergence of liberal feminism in the 1960s; radical feminism critiques of family life; the "divorce revolution" of the 1970s; interracial marriage; abortion and the politics of reproduction; the "superwoman" ideal in the 1980s; ethnicity and family rituals; the effects of violence on youth in the inner city. We will also discuss the gendered division of labor, men's roles in family life, and motherhood at the turn of the twenty-first century.

## Latin America: Century of Revolution

**Matilde Zimmermann**

*Intermediate—Fall*

Mexico 1910. Bolivia 1952. Cuba 1959. Chile 1970. Grenada 1979. Nicaragua 1979. And countless near-revolutions in twentieth-century Latin America. Why so many? What made some succeed and others fail? Why do movements that inspire such hope and sacrifice often end in disappointment? Is the era of revolution over? This course traces the development of national liberation movements, political revolutions, and other forms of resistance to social and economic inequality, from 1898 to the present. We will focus particularly on the Mexican, Cuban, and Nicaraguan revolutions, looking at the unique national histories and cultures that produced these social revolutions, as well as the international context in which they occurred. Special attention will be paid to the ways in which issues of ethnicity and gender affect participation in resistance movements. Readings are chosen to maximize the extent to which we are listening to Latin American voices, especially the speeches, manifestos, interviews, and testimonios of the rebels themselves, but also the portrayal of their struggles by novelists, filmmakers, and other artists.

## Leisure and Danger

**Persis Charles**

*Open—Spring*

In 19th century Europe and America, the growing concept of leisure had a role in shaping life as never before. We think of this as an age of the gospel of work, thrift and sobriety, but it also saw the increase of "free" time. There had always been persons of leisure, but now

a kind of democratization had begun which gave rise to anxious debate. What were the implications of holding out choices like consumption and pleasure-seeking to masses of people? Our central focus will be on the relationship between gender and leisure, but the course offers scope to look at a number of other areas. Class, gender and ethnicity all acted to differentiate people's access to leisure. The possibility that excess of leisure would intoxicate women or workers aroused upper-class fears that they would resort to crime, prostitution, revolt, dissipation or madness. Moralists felt a need to police spaces like shops, bars, theaters and even the domestic sphere. But these efforts met with resistance, overt and covert. Leisure, while widely viewed as desirable could sometimes be used as a policing mechanism, as in the case of educated women under enforced leisure who wanted to have careers, like Florence Nightengale or Charlotte Perkins Gilman. In order to study these sorts of conflict we will begin with some 18th century readings to set the terms of the debate about wealth, luxury and display. Then we will read fiction and non-fiction that illuminates areas like shopping, drinking, entertainment, self-cultivation and changing forms of subjectivity. Readings will include Nightengale's "Cassandra," Gilman's "The Yellow Wallpaper," George Gissing's "The Odd Women," "Madame Bovary," and "The House of Mirth." Our goal will be to analyze leisure in its broadest sense, one that will help us understand, for example, changes in such institutions as motherhood and sexuality at a time when birth control is becoming more and more available or breadwinning to men who may have enough money to stop working. Through analyzing such complex oppositions as need and desire, the necessary and the superfluous, lassitude and energy, we can gain fresh insight into an age when the very purpose of life was in question. Open to any interested student.

## Monks and Aztecs in Sixteenth-Century Mexico: Pictures, Gestures, Hieroglyphs

**Pauline Moffitt Watts**

*Open—Spring*

In a letter addressed to the Holy Roman Emperor Charles V from Mexico in 1532, the Franciscan monk Jacopo da Testera described the "wall" that separated the Aztecs (Nahuas) from himself and his confreres. It was a wall that could be penetrated only through the arduous task of learning indigenous languages. Without such fluency, Testera asserted, the door by which Europeans could pass through this wall would remain closed; the tongues of those who did not undertake this task would stay "locked in their mouths." Lacking polyglots, lacking any history of cross-cultural exchanges, how and what did monks and Nahuas communicate in the first decades of their contact with one another? Their halting, improvised, interrupted communications (and inadvertent

and sometimes deliberate miscommunications and excommunications) defy easy analysis. Most of what we know of precontact Nahua culture aside from the archaeological record was preserved by monks who were also in some fundamental sense trying to destroy it. On the other hand, we now recognize that the Nahuas were active agents in these cultural negotiations, negotiations in which the missionaries themselves were often missionized. So facile distinctions between "conqueror" and "conquered" rapidly dissolve. This course will explore the media that monks and Nahuas initially created together, media built out of ritual theatre, out of mixtures of images and gestures, and hieroglyphs, rather than the written or spoken word. It will study their short-lived, intense struggles to confront and absorb each others' gods and demons before the Nahuas succumbed to the ravages of imported diseases and the monks to the dictates of the New World Inquisition. Texts and images will be drawn from modern editions of sixteenth-century sources such as Bernardino de Sahagún's General History of the Things of New Spain and Bartolomé De Las Casas' Defense of the Indians.

## Profiles of Islamic Revolutionaries

*Fawaz Gerges*

*Open—Fall*

This seminar will examine the ideas and lives of the leading Islamic revolutionaries who have left their imprint on Muslim politics in the twentieth century and who have inspired the Muslim youth to use religion as an instrument to bring about radical change in state and society. These revolutionaries — Abdu, Sayyid Qutub, Mawdudi, Khomeini, and others — have supplied the ammunition and arguments for dissatisfied and alienated young men to rebel against the existing political and social order at home and its great powers patron. In this context, the Saudi dissident Osama bin Laden may be seen as just one of the most recent descendants of a deeply embedded tradition of political-religious rebellion. Several critical questions will be posited: What are the religious, intellectual, and historical roots of revolutionary Islamism? What fuels its passion and rage? What is the relative weight of religion in relation to other socio-political and economic variables? What is the role and impact of charisma in enabling certain individuals to reclaim and fertilize religion and revolution to establish Allah's kingdom on earth? Special attention will be given to certain powerful texts, which have served as holy writ for dedicated young soldiers as well as to their views and theories about the status of women, the nature of the state, human rights, and relations with the West broadly defined. Open to all (fall semester only). This course examines the complex socio-political, religious and cultural dynamics and external forces that have shaped life in the Middle East. The seminar assesses not only the role of the West in forging the region's modern history but also the input of

indigenous forces, such as secular nationalism and Islam. Particular emphasis is placed on the diverse societies and regime type of the major states — Egypt, Turkey, Iran, Israel, Syria, Iraq, and Saudi Arabia — in an effort to understand why some countries have succeeded in developing democratic forms of government, while others have become increasingly autocratic and dictatorial.

## Race, Class, and Gender in Latin American History

*Matilde Zimmermann*

*Open—Year*

The arrival of Europeans and Africans in the New World created new racial identities — including that of "Indian" — and new social classes, and it redefined relations between men and women. This course examines 500 years of conflict along the fault lines of race, class, and gender in the history of Latin America and the Caribbean. Why were colonial officials, landlords, and mineowners never completely successful in their attempts to order society on the basis of strict hierarchy and separate spheres? How did female and male slaves, peasants, peons, peddlers, and eventually wage workers respond to the growth of Atlantic capitalism? How does the historian weigh cultural continuity against cultural change in the context of massive human migration, both forced and voluntary? What role did women play in resistance and rebellion — from slave uprisings to millenarian movements to urban riots and revolutionary wars? We will use a variety of sources to look at the tangled and ever-changing web of racial, class, and gender identities (both imposed and self-created): political and social history, autobiography and biography, letters and manifestos, fiction and film. The course covers the period from the Conquest to today, with the spring semester focusing on the twentieth century.

## Religion and Art in the Making of Europe

*Lecture, Open—Fall*

"The past is not dead; in fact it is not even past." - William Faulkner -A corollary to Faulkner's paradox is that if we want to understand ourselves and our world we need to turn to history, and given the nature of the crises in the world today it is evident that we need to look beyond headlines and recent events into the deep past when two world religions took shape, that is to when Christianity and Islam spread through much of Europe, the Middle East and North Africa, Eurasia and South Asia. This course focuses on that axial period at the end of Antiquity and the beginning of the Middle Ages when three rival civilizations, each with religion at its core, supplanted the Roman Empire. These were the Latin Christian West, the Greek Christian, or Byzantine

East, and a Middle East and North Africa dominated by Arabs recently converted to Islam. In the West, which will be our focus, and much later in America too, religion became so interwoven with the fabric of people's lives that it has appeared to some in our computer age that "Christianity is the operating system of Western civilization." But what kind of Christianity was this and what did "conversion" variously mean to Roman emperors, barbarian tribal leaders, intellectuals, missionaries, and stylites in the Graeco-Roman world and in the lands of Goths, Franks, Celts, and Anglo-Saxons? How did these converts in turn reshape Christianity, and would the Jewish Palestinian founders of the religion recognize what had become of their faith as it gained converts throughout Europe and Byzantium? And why does a history course that highlights religious thought, religious behavior, and religious institutions also focus on art? One reason is that both the Western Europe that emerged out of the wreckage of the Roman Empire, as well as its rivals in Byzantium and in the Arab Middle East, each took, from its very inception, ideas about art and artistic expression as central to its self identity and to its understanding, or, more often, misunderstanding, of the others. Think of the differences in the architecture and decoration of sacred space between a Catholic basilica, a Byzantine (or Greek orthodox or Russian orthodox) church, and a mosque. Some of our sources are literary: selections from the Bible, Augustine's Confessions, newly minted Christian mythology found in the popular "biographies" of martyrs and desert ascetics, Beowulf and The Voyage of St. Brendan, writings of the Venerable Bede, debates on whether icons are actually idols and should be smashed. Many sources are visual: the Arch of Constantine; Old St. Peter's Basilica and Hagia Sophia; Byzantine mosaics and icons in Ravenna and St. Catherine's Monastery in the Sinai, unquestionably some of the rarest and finest in the world; illuminations in British gospel books linked to Lindisfarne and Kells that radically transformed the very idea of a book in Western Europe.

## Renaissance and Reformation England

### *Open—Year*

Sixteenth- and seventeenth-century England experienced radical shifts in intellectual life, some of the most profound religious upheavals in Western history, a transformation in government and society from medieval to modern, and the beginnings of overseas colonization. These developments continue to shape our lives. To men and women in England we owe many of our ideas and anxieties about religion and identity, most of the sources of our American ideals of a republic under law, and even our way of pursuing learning at a college like Sarah Lawrence. But what happened in Tudor and Stuart England cannot be separated from the European-

wide Renaissance and Reformation movements. To understand more sharply England's indebtedness to the continent and what made her roles distinctive we will ask comparative questions: How was the humanist movement that began in Italy adapted to an English setting by such figures as Erasmus and Thomas More? How did Luther's insights and personal heroism shape the Reformation on the continent and then in the England of Archbishops Wolsey and Cranmer, Queens Catherine of Aragon and Anne Boleyn, Lord Chancellors Thomas More and Thomas Cromwell, and of the master of them all, Henry VIII? Of special interest in our studies will be the question of why England took a different path from her European contemporaries in matters of religion and state. If the continent's representative bodies, the Estates General in France, the Cortes in Spain, the Diet in the Holy Roman Empire, were all losing effectiveness in an age of autocracy and king worship, why was the English Parliament the exception to the rule, eventually becoming the most widely imitated representative institution in the world? What role did religion play in this singularity? After a study of Elizabeth and her England we will conclude by examining how winds unleashed by the Renaissance and Reformation, as well as the tumultuous social changes of the age, eventually gathered such strength in the seventeenth century that a puritan revolution, centered in the House of Commons and its "New Model Army," swept away the House of Lords, the Anglican Church, King Charles I, and even the very institution of monarchy. Our sources will include period writers as well as present-day contributors to some of the liveliest debates in European history. A heavy reading and writing course, though for diversion and critical appraisal we will view some justly celebrated films. In conference students might wish to go more deeply into Renaissance or Reformation questions or choose some from another time and place, for instance whether the crisis in the Catholic Church today means we are on the edge of a new Reformation.

## Sexuality and Masculinity in Modern Europe

### *Deborah Hertz*

### *Open—Fall*

For several decades historians have been adding female experiences and female accomplishments to our picture of the past. In this course we survey this new history and go beyond it to gain deeper perspective of the milestone events in Europe between the French Revolution and World War Two. We explore how gender analysis helps us understand social and national movements, family structures, ethnic prejudice, revolutions, and the rise of fascism. We read diaries, letters, novels, biographies, pamphlets, and works of history to move between individual experience and structural change. Topics covered include Enlightenment debates, duels,

prostitution, cross-dressing, homosexuality, parental roles, and the experience of women and men in wars and revolutions. We also explore key individuals and their writings in depth, including Mary Wollstonecraft, Sigmund Freud, Theodor Herzl, and Oscar Wilde. Open to any interested student. Prior study of European history, feminist theory, and women's history is useful but by no means required.

## Slavery and Emancipation

**Komozi Woodard**

*Advanced—Year*

This course examines the distinct history of racial bondage in the United States, paying special attention to the lives, narratives, music, folk tales, families, communities, cultures, religions, and strategies of resistance of African Americans in captivity. Historians W. E. B. DuBois and C. L. R. James pioneered a tradition of studying slavery and emancipation in a global context, thinking about slavery in terms of comparative labor history, emancipation, and revolution. How does U.S. slavery look when compared with bondage in the ancient world? What was the difference between slavery in the West and bondage in the East or in various African societies? How does the Atlantic slave trade contrast with the major slave trading systems in the Mediterranean and in the Black Sea? How does North American slavery measure up to plantation societies in Brazil and in the Caribbean? Moreover, what is the relationship between slavery and race relations in these societies? Furthermore, we will look at such controversial issues as: Is slavery a form of social death? Did American slavery deform the black personality? What debt does America owe blacks? How did Africans become African Americans? This seminar looks at those issues, with an eye toward understanding slavery and emancipation as two of the most formative processes in U.S. history and the Atlantic World.

## State-Building, Human Rights, and Governance: Reconstructing Afghanistan

**Charles Norchi**

*Open—Fall*

The goal of this course is to equip students with the analytical tools and substantive knowledge to effectively appraise and contribute to the reconstruction of war-torn societies. The course examines Afghanistan from the nineteenth-century Great Game to twenty-first century military operations and postconflict reconstruction. The small landlocked state has had an impact on international relations far exceeding its size and resources. Afghanistan is a crossroads of caravans, armies, and nations. It has been the pawn of great powers and the regional players who have forayed into the beehive of Afghan politics. And from the

nineteenth century through September 11, 2001, these powers and players were often stung. In the context of that history this course will consider Afghan traditional governance, modern state formation, and disintegration and postconflict governance. It will appraise the influences of the great powers and regional actors from the colonial period through the Soviet war, the failed Taliban state, and the American-lead military operations. Nonstate actors including tribes, private armies, nongovernmental organizations, multinational corporations, media and international organizations including United Nations specialized agencies will also be examined. Conditions and institutional arrangements necessary to achieve a human rights culture will be appraised, as will issues of foreign direct investment and accession to international trade agreements. The central themes will be public policy pertaining to postconflict governance and international law bearing on the reconstruction and development of Afghanistan. Other war-torn society cases will be considered in comparative perspective.

## The Consolation of Philosophy in Roman Antiquity

**Pauline Moffitt Watts**

*Open—Fall*

In 45 B.C.E., Tullia, the beloved daughter of the famous Roman orator, Cicero, died. Within two years of Tullia's death, Cicero composed all of his major philosophical works. Usually construed as eminently rational texts, these translations of the basic vocabulary of Greek philosophy into the Roman idiom were also lamentations — Cicero's desperate attempts to ease "searing pain" that threatened to consume him. Sometime in the early 520s, the Roman statesman and philosopher Boethius was condemned to death for treason against the Emperor Theodoric. He composed *The Consolation of Philosophy* while in prison waiting to die. Struggling with the decline of Roman culture under barbarian rule as well as his personal calamity, Boethius, like Cicero, sought consolation in the purificatory rituals of reading and writing and, like Cicero, he discovered consolation for the collapse of his life and culture in the fecund senescence of the "Cosmic God" of antique pagan monotheism. Readings will focus on Cicero's *Tusculan Disputations*, *On The Nature of The Gods*, *Republic*, and Boethius' *The Consolation of Philosophy*. The history that connects them will be indicated through selections from works by Seneca, Porphyry, Proclus, Iamblicus, and Apuleius. The works of all of these thinkers are rooted in ancient Mediterranean religious rituals and mystery cults, but their authors have transformed archaic praxis into something new — introspective spiritual exercises based upon texts that harvest Greco-Roman letters and

Neoplatonic philosophy and theurgy in brilliant, melancholy ways. In other words, they dip their pens into their minds.

## The Cuban Revolution: History, Culture, Politics

**Matilde Zimmermann**

*Intermediate—Spring*

Cuba has an impact on world affairs and culture completely disproportionate to its size and population. This is true not only in the political sphere but also in such varied areas as music, sports, and medicine. This course will examine both the internal dynamics of revolutionary Cuba (economic challenges, relations between workers and the State, changes in the family, race relations, art and revolution, the role of youth) and the place of Cuba in the world. After a brief look at the historical background (colonialism and slavery, Jose Martí, the War of 1898 and U.S. intervention), we will consider in some detail the formative years of the revolution, from the 1958 guerrilla war against Batista through the October 1962 Missile Crisis. We will try to understand the reasons for Washington's continuing hostility to Cuba in the post-cold-war world. Students planning to participate in the Sarah Lawrence program in Havana in Fall 2003 are strongly encouraged to take this course, but it is open to all interested sophomores, juniors, and seniors.

## The History of U.S. Social Movements

**Lyde Cullen Sizer**

*Advanced—Year*

Beginning with the Second Great Awakening, and the reform movements of temperance and antislavery that followed, this course will explore the daily lives of ordinary people who struggled to make change in the United States. We will look hard at the conditions of slaves before the War and freed-people afterwards; the movement of immigrants in the first and second "waves"; the resistance of working people to the terms of their existence under industrialism; the response of migrant farm workers in the Depression, and on through the post-WWII era to the civil rights, antiwar, women's, and youth movements, to current conditions in neighborhoods, schools, and workplaces. Gender will be a focus throughout, as will region, class, and race. The course will linger in the nineteenth and early twentieth centuries in the fall and move through the twentieth century in the spring. Although the readings will primarily be texts of social history, we will also use autobiography, memoir, and novels.

## Transatlantic Connections: Ideas and Politics in Europe and the United States

**Eileen Ka-May Cheng**

*Open—Year*

This course examines the relationship between ideas and politics in the United States and Europe from the seventeenth century to World War I by focusing on political writing from this period. Rather than studying the ideas of these writers in the abstract, the course will attempt to place these ideas within a broader social context by examining how they influenced and were influenced by political events and developments of this time. We will also explore the relationship between European and American thinkers, looking at how their ideas both converged with and diverged from one another. We will consider movements and ideologies such as Puritanism, the Enlightenment, Romanticism, republicanism, nationalism, socialism, capitalism, and liberalism. We will use both primary and secondary sources, but the course will place particular emphasis on primary documents as part of an effort to view history from the perspectives of historical actors themselves. Writers to be examined include John Locke, Mary Wollstonecraft, Jean-Jacques Rousseau, Thomas Jefferson, Alexis de Tocqueville, Karl Marx, John Stuart Mill, Abraham Lincoln, W. E. B. DuBois, and Jane Addams.

## Turn-of-the-Century U.S.: Influences and Consequences

**Lyde Cullen Sizer**

*Open—Spring*

This course will explore the United States at the crossroads of the modern era. Using primary texts from Europe as well as the United States, we will explore the ideas, conditions, and consequences of the maturing industrial revolution. From the rise of populism and anarchism in the U.S. among farmers and workers; to the reaction of Social Darwinists and Pragmatists; to the huge wave of immigrants from Russia, Poland, Southern Italy, and elsewhere (and the hardening of resistance to Asian immigration); to war with Spain and the Philippines; to imperialism worldwide and its consequences in the U.S., we will study the shedding of Victorian and religious norms, the growth of cities, the challenge to settled ruling classes, and the resulting sense of possibility and chaos. The course will move through World War I, as experienced in Europe and at home, and explore the postwar reaction against left politics, as the United States responded to the emergence of the Soviet Union. We will end with the onset of the Great Depression. Reading will include ample primary sources, from manifestoes, to novels, to autobiographies.

## Twentieth-Century Europe

**Jefferson Adams**

*Lecture, Open—Year*

Europe continues to face an uncertain future. Will the movement toward greater economic and political unity ultimately prevail and create a new historical community? Or will the focus of nationalism and religious and ethnic identity be the main determining factors in the coming decades? This course will attempt a fresh appraisal of the past hundred years, focusing on leading personalities, events, and movements throughout the European continent. Of particular concern are the advent of the First World War; the rise and development of communism in Russia and fascism in Italy and Germany; the impact of the Second World War; the reconstruction of Western Europe after 1945; and the collapse and aftermath of the Soviet empire. In order to achieve as full an understanding as possible, the course will rely not just on historical narrative but also on autobiography, biography, psychology, art and architecture, literature, and film. Group conferences will focus on primary readings and include important works by Graves, Luxemburg, Lenin, Hitler, Silone, Orwell, Solzhenitsyn, Arendt, and Kundera.

## Visions/Revisions: Issues in U.S. Women's History

**Lyde Cullen Sizer**

*Fall*

This seminar surveys path-breaking work in U.S. women's history and related fields over the past thirty years. Readings include scholarly literature and political treatises that exemplify major trends in feminist discourse since the 1960s, from early challenges to male-centered worldviews to the current stress on female diversity. Discussions will focus on the relationship between women's movements and women's studies; on women's history's intellectual debts and contributions to ethnic, labor, and lesbian and gay studies; and on the prospects for theorizing gender in ways that recognize women's heterogeneity without losing sight of their commonalities. The course is designed to help advanced students of U.S. women's history clarify research interests by assessing the foundations laid by their predecessors.

## Women, Gender, and Politics in American History

**Eileen Ka-May Cheng**

*Year*

This course offers an overview of women's history in America, beginning with the seventeenth-century colonial settlements and extending to the 1970s, by focusing on the relationship between gender and politics. We will examine the extent to which women were able to participate in the public sphere, despite

their exclusion from formal political power for much of the nation's history. We will place the topic of women and politics in the larger context of American history, studying how more general social and cultural trends affected and were affected by women's political activities. The emphasis of the course will be on women, but we will also look at the category of gender more broadly, examining relations between men and women and conceptions of masculinity and men's roles. Specific topics and themes will include the ideology of separate spheres; the relationship among gender, race, and class; the impact of war on women; sectional and regional differences; the suffrage movement; and the emergence of feminism. Advanced (juniors, seniors, and graduate students with background in history or related disciplines; sophomores with appropriate background).

## 2003-2004

### African Americans in the City

**Komozi Woodard**

*Open—Year*

There were hundreds of urban uprisings during the 1960's, causing a crisis in the U.S. political system. This seminar will examine the roots, the development, and the aftermath of that postwar urban crisis, including its impact on such cities as New York, Los Angeles, Oakland, Chicago, Detroit, and Newark. Harlem Nine, who struggled against school segregation in New York City in the 1950's; and they will think about the difference that race, ethnicity, class, and place made in the lives of Jews and blacks in Brownsville, Brooklyn. There will be discussions of the experience of Robert F. Williams in North Carolina, the Black Panther Party in Oakland and Chicago, as well as the Black Arts Movement in Harlem and in Newark. Above all, this course explores the historical, social, and cultural experience of African Americans in U.S. cities, examining the interplay between urban structure and human agency at each stage: slavery and emancipation in the city, the Great Migration, before the ghetto, the classic ghetto, the second ghetto, and black Americans in the postindustrial city.

### Art and the Sacred in Medieval Civilization

*Open—Spring*

In this interdisciplinary course we will investigate why certain features of contemporary western Christianity that are looked upon as quintessentially Catholic, rather than Protestant, were established not in the early years of the Church but in the eleventh, twelfth, and thirteenth centuries, a time historians speak of as the High Middle Ages: beliefs in purgatory, indulgences, and the cult of the Virgin; also, such institutions as a celibate clergy and a papal monarchy with virtually

unlimited powers. We will investigate such perplexing attitudes toward the afterlife as the belief that the living might affect the fate of the dead and even that some of the “very special dead” might assist, or punish, the living. To this end we will use case studies of “popular” religious activities—the cults of saints and their relics; pilgrimages to Rome, Santiago de Compostela, and Jerusalem; and the extraordinary story of the Crusades. We will also explore medieval intellectual activity at its highest levels in order to see why the High Middle Ages can, with justice, be called one of Europe’s most creative ages. In the realm of intellectual activity our main questions will be, first, why was there a revival of rational thought in the High Middle Ages after a long period of ignorance, superstition, and emphasis on man’s inabilities; and, second, how effectively did intellectuals in the High Middle Ages make their case for the inherent dignity of both man and nature, and even a case for the humanity of God? A special feature of this history course will be studying these topics in visual as well as written sources, especially the architecture and decoration of Romanesque churches, and, at St. Denis and Chartres, the birth of the uniquely Western style that we call Gothic. In New York museums we will examine works of medieval art that are among the world’s most precious treasures. Conference work can focus on medieval questions or some from another time and place, including the contemporary world.

## Between Civilization and Barbarism: Argentina 1810-2003

**Jorge Nallim**

*Open—Spring*

Frequently labeled as a case for psychiatrists rather than social scientists, Argentina is a kind of historical riddle for scholars in any field. After an initially chaotic postindependence period, Argentina built a modern republican state, a successful export economy, and a rich national culture between 1852 and 1930. However, after 1930, the country increasingly experienced political unrest, economic stagnation, and social conflict. This processes climaxed in 2001-2002, when the worst crisis in national history confirmed the underdeveloped situation of the country. What historical reasons explain the rise and fall of a seemingly successful country, and what lessons can be extracted for other cases in and outside Latin America? How is it possible that a nation that has achieved praise for its artists, culture, and scientists has nevertheless experienced the worst military dictatorships, economic involution, and social polarization? The course will survey the history of Argentina since its independence in the 1810’s to today, by exploring the relationship of the country to the world context and the role of different social groups—i.e., gauchos, women, immigrants, workers, upper classes—in the construction of the nation. The course will involve

not only specific historical works but also films and literary works that represent the rich culture of the country.

## Blood, Soil, and Race: Jewish and German Nationalism in the Twentieth Century

**Deborah Hertz**

*Open—Fall*

For centuries now, nationalism has been a dynamic and unpredictable force in the world. Balancing the positive and the negative aspects of any nationalist movement is always difficult. In twentieth-century Europe, the relationship between Jewish and German nationalism is especially provocative and disturbing. Careful comparison of these two nationalisms yields important insights into the complexities of Jewish and German history in this volatile century.

We begin the course in 1914, and try to understand why many Zionists in and beyond Germany supported the German cause in World War One. We try to grasp how defeat in that war, followed by economic crises, stimulated the growth of the Nazi party in the interwar years. As we enter the years of the Nazi Reich after 1933, we try to understand whether Jewish emigration to Palestine was or was not a policy favored by Nazi policymakers. We travel to Palestine to understand how Jewish refugees from Germany viewed their double identities as Germans and as Jews, as well as the practical measures required to save their lives. As World War Two comes to an end in 1945, we examine how difficult it was for Germans to find a post-war identity that could integrate their shame and guilt for the crimes of the Nazi government. Meanwhile, we re-visit the various versions of Zionism as the British Mandate came to an end in Palestine and the State of Israel was born.

Throughout the course our dominant task will be to use the painful comparison between Jewish and German nationalism to help us grasp when a nationalist movement becomes exclusionary, racist, or even racist.

Open to any interested student.

## Comparative Populisms in Twentieth-Century Latin America: Mexico, Brazil, Argentina

**Jorge Nallim**

*Lecture—Fall*

What do Juan and Eva Perón, Getulio Vargas, and Lázaro Cárdenas have in common? They are examples of charismatic leaders presiding over populist regimes that changed forever the social, economic, and political landscape of Argentina, Brazil, and Mexico between 1930 and 1955. These populist regimes rose over previous situations of inequality and exclusion and

enjoyed the support of vast sectors of the population that had been previously marginalized. How were they able to attract the attention and support of workers, peasants, women, and middle classes, and what kind of institutions and policies did they create and implement in order to channel that support? How did the relationship between populist leaders, their followers, and the rest of society change over time? In which ways did populism change these countries? Can populism re-emerge once again in these countries, as the example of Hugo Chávez in Venezuela has shown? This is a lecture course that will introduce students to a comparative study of populism in these countries. After an initial theoretical discussion on the nature and characteristics of populism, the course will aim at identifying similarities and differences among these different cases in terms of their historical roots in the pre-1930 export economies, oligarchical liberal republics, and earlier forms of organized labor and social protest; their particular process of construction and characteristics in 1930-1955; and their historical legacy between 1955 and 2000.

## Conflict, Change, and Identity in American History, 1600-1877

*Eileen Ka-May Cheng*

*Open—Year*

In the seventeenth century, British North America consisted of a disparate collection of colonies that were sharply divided in many ways—culturally, politically, and socially. Neither the Native Americans who lived in North America, nor the Europeans who colonized that region, nor the Africans whom the colonists imported as slaves had any intention of establishing a new nation. In examining American history from the early seventeenth century to the Civil War, then, the question should be not why did the United States divide during the Civil War, but rather, why were Americans able to unify as a nation at all? What constitutes nationhood, and when did America become a nation? Did this happen when the United States formally achieved its independence with the American Revolution, or even earlier? Was the American Revolution the cause or the result of a sense of American nationalism? Divisions in American society persisted after independence, as demonstrated by the outbreak of the Civil War, so could America really be considered a nation even then? Did America become a nation not despite, but because, of these divisions? What were the sources and character of these conflicts? What was the relationship between a sense of American identity and other forms of social identity such as race, gender, class, and culture? Who was included within the nation, and did this change over time? What did it mean to be considered American? How did those who were excluded from this status define their identity and their relationship to America? And ultimately, what did it mean for America to be a nation? We will address

these questions by examining major political, social, cultural, and intellectual developments in American history from the colonial period to the Civil War and Reconstruction. Specific topics to be studied will include the European colonization of North America, relations between European settlers and Native Americans, the relationship between the colonies and Britain, the causes and effects of the American Revolution, the shift to a capitalist economy and the advent of the Industrial Revolution, the character and development of slavery, and the causes and consequences of the Civil War. We will use both primary and secondary sources, but the course will place particular emphasis on primary documents as part of an effort to view history from the perspectives of historical actors themselves.

## Continuity and Change in the World Community: Policy Implications

*Charles Norchi*

*Intermediate—Spring*

In this seminar we will appraise continuity and change in the international system from the cold war to the present. We will pay particular attention to political and social ferment within and emanating from Islamic Central and South Asia and the global policy impact of the terrorist attacks of September 11, 2001. During the cold war, Harold Lasswell projected that a skills revolution was spawning a science-based civilization that was moving toward universality and that represented a “world revolution for our time.” The September 11 attacks and their effects call for a re-examination of that projected universality and may signal a break in an assumed continuity of the international system. In this seminar we will examine this and other assumptions and projections against post-September 11, 2001, trends and their global policy implications. We will learn policy analysis and apply those tools to appraise historical and contemporary ruptures in the world community under the themes anarchy, clash of civilizations, ideology, modernization, religion, and security. Core readings, and additional material for conference work, will be available on a closed seminar Web site. The Society for Policy Sciences will facilitate an Internet link to other campuses, enabling us to participate in virtual discussions with students studying the same material and themes.

## Decentering the Nation: State and Society in Latin America

*Jorge Nallim*

*Intermediate—Year*

In recent years new interdisciplinary studies from historians, political scientists, and sociologists have

challenged traditional narratives of state-building centered at the national level. In what ways, and through what means, have social groups in Latin America—e.g., peasants, Indians, workers, women—organized to take part in local and national politics, and with what consequences for state institutions and state policies? How, in turn, have state officials and agencies created the conditions under which social movements take place, and with what consequences for those movements, and for larger processes of state- and nation-building? This course will introduce students to current debates on the history of state/society relations in Latin America. After reviewing some specific theoretical approaches, the course will study those relations as represented in films and scholarly works by historians and social scientists for different historical periods, geographical areas, issues, and social actors. The yearlong seminar will cover the colonial period and nineteenth-century nation-building in the fall semester, while the spring semester will focus on the twentieth century.

## **Demarginalizing Race & Gender: African American Women's History & Social Movements**

**La Shonda Barnett**  
*Open—Spring*

In this seminar we place African American women's lives at the interpretive center of our inquiry into U.S. history. Our inquiry is framed by the political, social and artistic movements African American women's participation laid claim to and the ways in which this participation enables us to exercise power in American public life. Tracing African American women's experiences as slaves, abolitionists, club women, freedom fighters, laborers, artists and professionals we will analyze the intersection of race and gender in the American past and present. Drawing on historical and political secondary sources, music, and a vast array of primary sources including letters, speeches, black women's magazines and photographs, we will pay particular attention to (1) the social construction of African American womanhood (2) the meaning of freedom for African American women living in the shadow of slavery, and the strategies they employed to gain civil rights (3) African American women during the interwar period (4) Black women and the ascendancy of black nationalism, and (5) the relationship between corporeal representations of black women and the media, including the historicization of black women's beauty practices and the black female body as a site of political struggle. Designed to provide experience in the research and production of a scholarly paper based on primary source material, this course exposes students to the tools and techniques of historical research.

## **Divine Doctors and African Ideas: A History of Science, Technology, and Health in Africa**

**Mary Dillard**  
*Open—Year*

When people think of major advances in science and medicine, the continent of Africa does not usually come to mind. Instead, Africa tends to be invoked to describe situations where biology or disease has gone astray (e.g., African "killer bees," the West Nile virus, Ebola, and HIV/AIDS). This focus has tended to obscure the legacy of technology, innovation, indigenous philosophies, and healing practices that have developed and succeeded in Africa. This course will introduce students to the history of science and medicine in Africa by studying scientific practices in diverse African societies. Some of the questions that we will address in the class are, What has been the contribution of African scientists to technological innovation, healing practices, and international understanding of scientific problems? What is to be learned from studying indigenous approaches to health and healing? Is there an "African mathematics," and how have different numbering systems developed on the continent? How have African peoples articulated and lived a philosophy of science? How are African farmers and scientists critiquing, using, or modifying the latest agricultural biotechnology? A central goal of this class will be to highlight innovations, ideas, and scientific advances that have come from Africa. By studying several African countries including Kenya, Ghana, Ethiopia, Zimbabwe, and South Africa, students will examine the methods that these diverse societies have used to address scientific and technological problems.

## **First-Year Studies: Readings in U.S. Cultural and Intellectual History**

**Lyde Cullen Sizer**  
*FYS*

This course will begin and end with the voices of Americans struggling to make sense of their world. Commencing with the American Revolution, and continuing through the social movements of the 1960's and into the 1970's, we will read primary sources of all kinds, from editorials and essays, to cultural critiques, to memoir and narrative, to stories and novels. We will be looking significantly at the ways Americans chose to make change, to reveal the conflict they understood to be slowing or halting that change, and significantly, at the historical context that girds their words and efforts.

## First-Year Studies: Women in the Modern World

*Persis Charles*

FYS

This course will range over women's history since the 1600's, looking at changing ideas about work and family, sexuality and reproduction, and female roles in education, politics, and religion. Our focus will be mostly on Europe and America and some of their colonies, with attention to such phenomena as the early modern witch craze and women in the Enlightenment and French Revolution. We will look at women's labor in various settings, including peasant economies, industrial capitalism, and New World plantation slavery. In the second semester we will study women in the history of such movements as abolitionism, socialism, feminism, and fascism. The syllabus will consist mostly of works of history but will also include novels and readings from anthropology, psychology, and art history.

## First-Year Studies in Nineteenth-Century Biography and Autobiography

*Jefferson Adams*

FYS

In striking contrast to preceding periods, the nineteenth century began to place a high value on the written depiction of individual lives. This course will investigate some representative examples of the many biographies and autobiographies produced during this century along with a number of more recent accounts. Focusing on four countries—England, France, Germany, and Russia—the weekly readings will include some famous rulers and statesmen, writers, revolutionaries, philosophers, and artists, as well as more anonymous persons who were looking in the countryside or laboring in the new factories. Among the former will be Queen Victoria, Berlioz, Tolstoy, Dostoevsky, Marx, Bismarck, Nietzsche, and the young Churchill. Besides examining the major social and political issues of this dynamic age, we will also explore the question of why the genre itself gained such prominence and popularity. In conference, students may choose either another figure from this period or an individual from another century, country, or civilization.

## Gender, Education, and Identity in Modern Africa

*Mary Dillard*

*Open—Fall*

The introduction of Western-derived educational systems into Africa ushered in a social revolution that created, for some people, unprecedented opportunities for economic advancement. Unfortunately, this type of education also reinforced or created new inequalities in

many African societies and undermined the focus on precolonial forms of education. These inequalities have been particularly prevalent in relation to the provision of education for women and girls and the uneven distribution of Western education across various ethnic groups in Africa. This means that any balanced study of education in Africa needs to broaden the definition of education in order to encompass the bulk of the experiences faced by the majority of the population. This course will focus on the myriad of educational systems that are found in Africa and study the ways that education has been an important agent in changing an individual's identity. Some of the systems that we will focus on include apprenticeships, initiation into age-grades and secret societies, Koranic schools, Western schools, "education for development" programs, and adult literacy programs. Each of these educational systems shapes students' images of themselves and defines their place in the larger community. It also defines the expectations that they have for themselves once they complete their educational training. This course will make use of life histories, autobiographies, colonial office reports, educational policy papers, ethnographies, and studies of the relationship between education and economic development. We will study how educational practices in Africa have changed over time and place a particular focus on how gender has impacted the provision of educational opportunities for women and girls.

## Harvest! Land, Labor, and Natural Resources in Latin American History

*Matilde Zimmermann*

*Open—Spring*

This seminar looks at how natural environments and systems of labor and capital have intersected at different periods in the history of Latin America. How have humans transformed, tamed, devastated—and sometimes been devastated by—their material surroundings in the quest for food, shelter, and eventually profit, "progress," and power? We will start with a critical look at the idea of indigenous Americans' spiritual oneness with the earth and proceed through a series of case studies and analytical works on peasant production, plantation slavery, forest product exploitation, export agriculture, and corporate mining and logging. We will use the vehicle of agrarian/environmental history to examine some of the most important themes in Latin American history—violence, slavery, demographics, race, imperialism, gender, human rights, capitalism, labor, revolution.

## History and Memory: Race in American Life

**Priscilla Murolo**

*Intermediate—Spring*

This course examines American concepts of race and their change over time. Our primary lens is historical scholarship that seeks to explain racial hierarchy in the United States, but we will also turn to transnational comparisons and to a few portrayals of race in fiction, poetry, film, and museums. Topics include race as a rationale for conquest and slavery; the close relationship between racial and class stratification; imperialism's racial dynamics both at home and abroad; eugenics and "scientific" racism; racial stereotypes in popular culture; the new scholarship on "whiteness" and controversies about its value; and current debates on affirmative action and reparations for descendants of slaves. Students are expected to focus their independent research on historiographic issues.

## Ideology and Revolution in Modern History

**Jefferson Adams**

*Open—Year*

Revolutionary upheaval on a wide spectrum from left to right has characterized European history in the modern era. Beginning with the French Revolution of 1789 and continuing to the present day, this course will explore the phenomenon of revolutionary change and the emergence of ideology as a critical component. How essential to a revolutionary movement is a charismatic leader such as Lenin, Mussolini, or Hitler? What theoretical similarities and differences exist between communism and fascism, and how are they manifested in practice? In what ways does ideology impact key institutions such as the army and the civil service as well as individual writers and artists? To answer questions of this sort, we will rely on a variety of approaches: historical narrative; biographical and autobiographical accounts; economic, sociological, and psychological analysis; and contemporary film and literature. Of particular concern are recent debates about the fundamental nature of ideological regimes and the question of personal responsibility. In conference, students are encouraged to investigate revolutionary figures and movements not only in Europe but elsewhere in the modern world.

## International Law and Human Rights in Historical Perspective

**Charles Norchi**

*Lecture—Year*

This is a general course in public international law and international human rights. International law is the process by which the public order of our world

community is established and maintained, and it will be the focus of the first semester. International human rights are about the protection of people in an international system dominated by states. International human rights will be the focus of the second semester.

The central theme of the full course will be international legal relations in the world community and the challenges of achieving human dignity. We will study the processes of making lawful international decisions in historical and contemporary perspective. We will read principal cases and examine historical incidents giving rise to those cases. The role of power in the international legal system will be candidly acknowledged, and the problems and opportunities it presents for human rights will be explored. The objectives of the course are to understand how and why international law and international human rights have operated in history and to acquire analytical tools to appraise current—and to predict future—international legal decisions in the arenas in which international law is made and applied and in which human rights are implicated. Topics will include the historical foundations of international law; the rise of the modern state; the United Nations and specialized agencies; the International Court of Justice; treaties; diplomatic practice; state responsibility; establishment and state recognition; use and regulation of the military instrument; nationality; dispute settlement; human rights standard-setting; nongovernmental organizations (NGOs); women's rights as human rights; the right to development; international economic law and human rights; non-Western perspectives on human rights; indigenous people; postconflict reconstruction; and the challenges of globalization. This course entails reading and analysis of international law cases, commentary, and international legal instruments.

## Introduction to Global Studies: Ideas of Freedom

**Mary Dillard, Kasturi Ray**

*Open—Spring*

How have local struggles for justice and equality resonated internationally? How have activists in sometimes remote locales drawn strength from and demonstrated solidarity with other oppressed peoples? Ideas of freedom have long flowed across the globe, sparking revolutionary campaigns in places quite distant from their points of emergence. The goal of this course is to trace the circulation of key ideas of freedom and independence, as they are recorded in historical and literary texts, throughout the postcolonial world. We will examine the influence of slave revolts in the Caribbean on the imagination of revolutionaries across Europe and the Americas; the circulation of different models of decolonization within Africa and their effect on independence campaigns in, among other places, South Asia; subsequent experiments in third worldism

and nonalignment across the newly postcolonial world; the rise of indigenous organizing campaigns across continents; and critiques as well as endorsements of contemporary globalization efforts. Course materials include biographies, paintings, novels, short stories, speeches, pamphlets, and contemporaneous newspaper accounts.

## Magic, Science, and Religion in European Civilization

**Leah DeVun**

*Open—Spring*

To those of us living in the twenty-first century in the United States, the distinctions between science, religion, and magic may appear to be clear. In recent debates over medical ethics and technological advances, science and religion have come to represent separate—and even contrary—approaches to truth. This course will provide an historical context for the modern relationship between science, religion, and magic by tracing the distinctions between the three—which were much less clear than today—during the medieval and early modern periods. When a person fell ill in the Middle Ages, did he or she turn to university-approved medicine, or alchemy, or incantations and amulets, or all of the above? Did medical practitioners themselves differentiate between these approaches? Did the re-evaluation of cosmology during the Scientific Revolution affect these distinctions (or lack thereof)? Primary sources to be used for this course will include university textbooks on medicine and natural philosophy, Greek and Islamic astrological treatises, writings on alchemy and herbs, popular guides to curing witchcraft, and official responses to scientific innovation by civil and ecclesiastical authorities (including the thirteenth-century condemnations of natural philosophy at the University of Paris and later accounts of the inquisitorial trial of Galileo). Finally, students will study modern scholarship on these topics, including David Lindberg, *The Beginnings of Western Science*; Nancy Siraisi, *Medieval and Early Renaissance Medicine*; Richard Kieckhefer, *Magic in the Middle Ages*; Carlo Ginzburg, *The Night Battles*; and William Eamon, *Science and the Secrets of Nature*.

## Ottoman State and Society 1300-1918

**Etem Erol**

*Open—Year*

If you are puzzled by some of the current events regarding the Middle East, the Balkans, or Islam, a survey of a history of the Ottoman Empire may suggest some answers because the Ottoman Empire ruled the peoples of these territories for the better part of its six-hundred-year existence. This yearlong survey investigates the social, political, and cultural history of

the empire (1300-1918), which constitutes the heritage of the thirty-five newly formed states that emerged out of it. No prior background in the subject is assumed or required. This yearlong course will advance both thematically and chronologically. In the fall we will study the period from 1300 to 1800, the period of growth from a principality to multiethnic, multireligious empire. We will emphasize the role Islam played in shaping the social life of the subjects and the institutions of the Ottoman state. We will pay attention to different versions of Islam. Furthermore, we will examine commercialization and its impact on state-society relations during the period of expansion. This will set the stage for the spring when we will discuss westernization (1800-1918). We will see how different social, ethnic, and religious groups accommodated or resisted the changes and the challenges of the nineteenth century. The course will pay special attention to the social life of the political elites as well as non-Muslims, women, slaves, and the so-called “voiceless masses.” We will dwell on the social spaces such as the imperial court, “harem,” coffeehouses, bathhouses, barbershops, town-squares, neighborhoods, and Friday mosques as windows into social life. In addition to the standard historical narratives, the assignments will include readings from fiction, travelers’ accounts, dream narratives, and film.

## Religion in the Making of Europe

*Open—Spring*

“The past is not dead; in fact it is not even past.”

—William Faulkner This course focuses on that axial period at the end of Antiquity and the beginning of the Middle Ages when three rival civilizations, each with religion at its core, supplanted the Roman Empire. These were the Latin Christian West, the Greek Christian East (Byzantium), and a Middle East, North Africa, and Spain dominated by Arabs recently converted to Islam. Regarding the eastern and western Christian cultures that are the main focus of this course, we will be asking what was the nature of the Christianity that eventually triumphed in the Roman world, and what did “conversion” variously mean to Roman emperors, philosophically trained intellectuals, and barbarian tribal leaders. From another direction we will be asking if the Jewish Palestinian founders of the religion would have recognized what was becoming of their faith as it gained converts in the Greco-Roman world and later among Goths and Franks, Celts and Anglo-Saxons. Many of our sources are textual: selections from the Hebrew and Christian Testaments; Augustine’s *Confessions*; newly minted Christian mythology in popular “biographies” of martyrs and desert ascetics; *Beowulf*, Bede, and “The Song of the Rood”; Byzantine debates about whether icons ought to be kissed or smashed to pieces. A number of sources will be visual because the art of this period ranks among

mankind's supreme treasures. Moreover, both the eastern and western Christian cultures, as well as the Islamic, formulated ideas about art early on that became central to their self-identity. Think of differences between a Catholic basilica, a Byzantine (or Greek or Russian orthodox) church, and a mosque. Special attention will be paid to Santa Maria Maggiore in Rome and Hagia Sophia in Constantinople; Byzantine preiconoclastic mosaics and icons in Ravenna and St. Catherine's Monastery in the Sinai Desert; radically innovative books linked to Irish and Anglo-Saxon monasteries, especially Lindisfarne and Kells, which transformed the very idea of the book in Western civilization.

## The Museum in African America

*La Shonda Barnett*

*Open—Fall*

In a museum an object as simple as a hairbrush or as ephemeral as a song can be the means by which we can imagine the past. This seminar is designed to introduce students to museology (the study of museums with regard to their roles, functions, and histories), and the political and theoretical issues that occupy curators daily as they design, shape and produce the historical narratives of museum exhibits. Several key questions guide our inquiry, including: What types of objects and what kinds of materials conjure the past? How do museums as ideological sites produce moral and cultural systems that maintain existing social orders? How do history museums become opportunities for blacks to redefine themselves? Particular attention will be given to issues of theory and practice as they relate to African American museums. We will examine the museum's functions of collection, research, exhibition and interpretation. Students will read secondary sources from the two academic disciplines most concerned with museum studies, anthropology and history (including art history), but we will also consult material culture, popular culture and black cultural studies to address the theoretical and ethical concerns of museum staff. Students will:

- Visit museums, galleries and historic sites.
- Learn basic conservation and preservation techniques.
- Gain experience with collection registration and documentation (including cataloguing objects).
- Write exhibit labels.
- Evaluate exhibits.
- Plan an exhibit.
- Produce an on-line exhibit.

## The State of Israel: A Literary History

*Dara Horn Schulman*

*Open—Year*

This course is an introduction to the cultural history of the state of Israel through the evolving medium of modern Hebrew literature. While literature is often said to reflect the society that shaped it, the situation of modern Hebrew literature is so unique that it can almost be said that Israeli society was shaped by its literature rather than the other way around—beginning with the very words with which it was written. Starting with the unprecedented revival of a dead language out of literary remnants, the Hebrew language and its literature were not merely symbols of the Zionist movement but vehicles for it. Early Hebrew writers' secular reinterpretation of ancient Hebrew texts created a new way for the first Israelis to understand their history and move forward, while later generations challenged public attitudes by creating new styles virtually from scratch. In a society under constant siege, Hebrew literature has evolved as a voice of urgency, providing a space for expressions of both faith and doubt in the difficult choices facing the country. In a society burdened by a horrible past, Hebrew literature has forged a means of confronting the incomprehensible. In a society of many traditions, languages, and ethnicities, constantly altered by immigration from all over the world, Hebrew literature has emerged as a truly international forum, taking on a privileged role in defining what it means to be Israeli. In a society where every day can bring either new horror or new hope, Hebrew literature has taken on an even more privileged role in defining what it means to be human. Focusing on the artistic developments within this remarkable literature over the past fifty years of Israel's statehood, this course aims to acquaint students with the rich, varied, and constantly evolving culture of the state of Israel, through the texts that shaped and continue to shape it.

## U.S. Labor History: Class, Race, Gender, Work

*Priscilla Murolo*

*Advanced—Year*

This course examines American labor systems and labor struggles from the colonial period through the twentieth century. Along the way we will assess both classic and recent scholarship in labor history and related fields. Central issues include the interplay of class and racial hierarchies; gender's uses (and usefulness) as a category of historical analysis; poststructuralism's challenges to historical materialism; and the complex relationships between the state and civil society, delimiting structures and human agency, history "from the top down," and history "from the bottom up." Readings include fine-focus research, broad syntheses, theoretical work, and

some personal writings by scholars in labor history and related fields. Students are expected to undertake independent research that involves work with historical documents and to present their findings to the class.

## **Victorian Britain**

**Persis Charles**

*Open—Fall*

This course will survey the nineteenth century until the First World War: a peaceful century of material progress that culminated in one of the most terrible wars in history; a high point of comfort and prosperity for many, unprecedented poverty and degradation for others; an era of individualism, but one in which the foundations of the welfare state were laid. We will look at various explanations for these contradictory tendencies and set them in the context of the Industrial Revolution and the rise of imperialism and scientific racism, of the theory of evolution, and of the modern state.

## **Visions/Revisions: Issues in U.S. Women's History**

**Priscilla Murolo**

*Advanced—Fall*

This seminar surveys path-breaking studies of U.S. women's history and related subjects, including women's lives beyond the United States. Course readings, both scholarship and political treatises, exemplify major trends in feminist discourse since the 1960's, from early challenges to androcentric worldviews to the current stress on differences among women. Class discussions will range from fundamental questions—What is feminism and is “women” a meaningful category?—to theoretical, interpretive, and methodological debates among women's historians. The course is designed to help advanced students of women's history to clarify research interests by assessing the work of their predecessors.

## **War, Memory, and Nationalism in the United States: The American Revolution and the Civil War**

**Eileen Ka-May Cheng**

*Advanced—Year*

Americans often think of the United States as a nation founded on ideals, but the United States was also a nation created by war. The United States achieved its independence through the Revolutionary War, and it took another war—the Civil War—to keep the nation together. What did it mean for the United States to be a nation “founded in blood”? What was the relationship between war and definitions of national identity in the United States? What was the relationship between war and ideals in American identity? Were there tensions between these two aspects of American identity, or were

they compatible with one another? This course will examine these questions by focusing on the American Revolution and the Civil War. The causes and effects of both the Revolution and Civil War have been the subject of much controversy and debate. How radical was the Revolution? Was it simply a struggle for political independence, or was it a social revolution as well? What was the relationship between the Revolution and the Civil War? Was the Civil War a “second American Revolution”? Was the Civil War a conflict over slavery, or was it a conflict between two irreconcilable cultures? The course will address such questions and debates by studying the political, intellectual, cultural, and social dimensions of the Revolution and the Civil War. We will look not only at what these two events meant for those who participated in them but also at how Americans have remembered and memorialized these conflicts. How did Americans use the memory of the Revolution and of the Civil War to define their identity? What does this reveal about the character and meaning of nationalism in the United States?

## **Women, Culture, and Ideas in U.S. History**

**Lyde Cullen Sizer**

*Advanced—Year*

Beginning with the rise of the Industrial Revolution in the North, and its impact on working women of all kinds, this course will look at the ways women accommodated to, resisted, and changed their cultural, intellectual, and political world. Using scholarship on the history of work, culture, and ideas, coupled with primary documents by and about women, we will interrogate the meanings of slavery, race and ethnicity, work, public life, the limits and possibilities of social convention, and sexuality. The first semester will take us through the nineteenth century, and the second semester to the end of the twentieth.

## **Women in Medieval Religious Thought and Practice**

**Leah DeVun**

*Open—Fall*

It is well known that medieval Christianity was characterized by an ambivalent attitude toward women: the image of Eve as the cause of original sin was juxtaposed with the venerable presence of the Virgin Mary in popular devotion. We will examine this paradox by surveying the image and participation of women in European spirituality (focusing on, but not limited to, Christianity) until the early modern period. We will also critically analyze some of the major themes in recent scholarship on women's and gender history. Readings will provide students with evidence of women's activities in scholarship, mysticism, preaching, and martyrdom. Students will also examine contemporary

roles for females within familial and economic spheres, as well as perceptions of women in theological and medical discourse. Because the class will consider how gender roles and possibilities were conceptualized during the Middle Ages, we will continually turn to questions about men as well as women. We will pay special attention to female saints' lives (and the consequences of their authorship by men or women): sources will include *The Passion of Saints Perpetua and Felicity*; *The Life of Christina of Markyate*; *The Life of Catherine of Siena*; and *The Life of Margery Kempe*. We will also focus on nonhagiographical texts written by women, including Clare of Assisi's *Testament*; Hildegard of Bingen's *Scivias* and *The Letters of Abelard and Heloise*; Marguerite Porete's *Mirror of Simple Souls*; and the inquisitorial testimony of Na Prous Boneta. Scholarly sources will include Thomas Laqueur, *Making Sex*; Herbert Grundmann, *Religious Movements in the Middle Ages*; Caroline Walker Bynum, *Holy Feast and Holy Fast*; Emmanuel LeRoy Ladurie, *Montaillou*; and Jeffrey Hamburger, *Nuns as Artists*.

## Writers and States

### Charles Norchi

#### Open—Fall

In the history of international relations, writers and other creative people have challenged state and power elites. Notable are Emile Zola and the Dreyfus Affair, Pramodya Toer and Suharto's Indonesia, Salman Rushdie and the Ayatollahs. In this seminar we will study incidents in which writers and other creative people emerged as actors in international relations by virtue of their art. Our focus will be Islamic writers and artists. We will ask, When writers challenged states, how did states respond? How did the international system, including international organizations and nongovernmental organizations, respond? What state policies limit creative expression? What national and international policies encourage creativity? In exploring those questions with an historical perspective, we will devise methods to appraise contemporary public policies bearing on creative people. In conference, students will research and appraise a creative work that challenged a state.

## 2004-2005

### "Not by Fact Alone": The Making of History

#### Eileen Ka-May Cheng

#### Open—Year

History, like memory, is a reconstruction and as such does not call out to us to be seen or heard. Instead we seek and discover seeing only what our perspective illuminates. For the Puritans, history was the unfolding of providential design. Purpose, like the seed of a plant,

was always present in the unfolding of events. For Enlightenment philosophes, history was the story of progress effected by human reason. Purpose in this case was a human triumph, such as the triumph of medicine over prayer. For Marx, history was the story of class struggle. In this case purpose was no more than following the money trail, coupled with the added optimism that in the end the scales of justice would be balanced. Each of these perspectives recognized and struggled with the notion that history is, in the final analysis, a fate beyond human control because of the paramount role of unintended consequences that counterpoints the history of societies no less than it counterpoints the life of the individual, i.e., is purpose an artifact of human understanding or woven into the tapestry of history? Why did these thinkers have such different views of history? We will address this question by looking at American and European thinkers who wrote about history from the seventeenth to the twentieth centuries. The course will examine the conflicts and changes in their views on both the nature of the historical process and the way that history should be represented by historians. We will look at how these differences both reflected and contributed to broader intellectual, political, and social changes in this period. Such an examination will demonstrate the ways in which conceptions of history were themselves the product of history.

### African American Women's History and U.S. Social Movements: Demarginalizing Race and Gender

#### La Shonda Barnett

#### Year

In this seminar we place African American women's lives at the interpretive center of our inquiry into U.S. history. Our inquiry is framed by the social and political movements to which African American women's participation laid claim and the ways in which this participation enables them to exercise power in American public life. Tracing African American women's experiences as slaves, abolitionists, freed laborers, club women, freedom fighters, artists, and professionals, we will analyze the intersection of race and gender in the American past and present. Drawing on an array of primary sources including letters, speeches, photographs, as well as black women's magazines, music, and secondary sources, we will pay particular attention to (1) the social construction of African American womanhood; (2) the meaning of freedom for African American women living in the shadow of slavery and the strategies they employed to gain civil rights; (3) African American women during war periods; (4) black women and the ascendancy of black nationalism; and (5) the relationship between corporeal representations of black women and the media, including the historicization of black women's

beauty practices and the black female body as a site of political struggle. Designed to provide experience in the research and production of a scholarly paper based on primary source material, this course exposes students to the tools and techniques of historical research.

## Based on a True Story? Latin American History Through Film

**Matilde Zimmermann**

*Open—Spring*

What—if anything—can you learn about history by watching movies? This course looks at critical historical moments and issues over five centuries of conflict and change in Latin America, through the vehicle of film. The emphasis is on feature films created for a popular audience by Latin American directors (Brazil, Mexico, Argentina, and Cuba), with a few examples of how Latin America has been portrayed by filmmakers in Europe and the United States. We will look at issues of authenticity and voice, some of the pitfalls of using film to understand history, and the role of cinema in the creation of national and popular memory. Although most of these films have been analyzed on many levels, the emphasis of this particular course will be on content and social or political vision, rather than film theory, technique, or aesthetics. The topics or epochs we will examine include the encounter/conquest; slavery and race; colonial women; nationalism and the hero; dictatorship and the disappeared; El Norte—the U.S. and Latin America; urban indigeneity; revolution and power; revolution and culture wars; globalization. One of the two weekly class meetings will be a film showing; in addition to required readings, there will sometimes be a second film assigned to watch outside of class. There is no language prerequisite for this course; all films are available with English subtitles.

## Black Liberation: A History of Black Radicalism in the United States

**Komozi Woodard**

*Open—Fall*

This course examines the key dimensions of racial oppression and black liberation: historical, political, economic, cultural, and psychological. Students will study the dynamics of individual and group resistance to racial oppression in various forms. While the focus of the inquiry is the development of the African American struggle for liberation, throughout the seminar bases itself on the lessons of comparative slavery, colonialism, race relations, and liberation movements.

## Building Empires, Disputing Power: A History of Colonial Latin America

**Jorge Nallim**

*Lecture, Open—Spring*

Many of the characteristics that defined contemporary Latin American countries and societies are rooted in their colonial experience under Iberian imperialism. This course will explore the social, political, and economic development of colonial Latin America and is chronologically organized in three periods. The first period (1492-1550) covers European and Indigenous societies before Columbus, the arrival of the Europeans to the New World, and the conquest of America by Spain and Portugal. The second (1550-1700) deals with the political, economic, labor, and social structures set up by the colonial powers, Spain and Portugal, in America. The final period (1700-1824) examines the reforms and crisis of the Iberian empires in America and the independence of Latin American countries. In exploring these periods, we will discuss scholarly works, primary documents, and films, focusing on some major issues and problems: (1) how Spain and Portugal built the first overseas empires and, in doing so, they brought together Europeans, indigenous peoples, and Africans in new multiracial societies; (2) the conflictive relationship between imperial dreams and structures, their actual consequences, and the reactions they generated in different social groups; (3) the intrinsic relationship of the colonies to the international political and economic system; and (4) the role of religion and the Catholic Church in the colonial experience.

## Contested Nations: The Social History of Contemporary Latin America

**Jorge Nallim**

*Intermediate—Fall*

It is common knowledge in the United States that Latin America has a troubled historical record in achieving political democracy, economic development, and social justice. Moreover, North Americans frequently link Latin America with images and perceptions of dictatorship, poverty, and violence. How true are these perceptions? What are the historical roots of these and other problems that have besieged the region? Through the analysis of different primary and secondary sources, the course will provide students with a broad overview of Latin American history from the mid-nineteenth century to the present. For each subperiod in this time framework, we will ask: what strategies did the region adopt for achieving social, economic, and political development since the late nineteenth century? What were the roles and experiences of upper, middle, and lower classes in those strategies? In addressing these questions, we will view Latin American historical

processes as part of world development. How did that location of Latin America affect its pursuit of greater democracy and equality?

## Early Modern Europe: New Systems of Order for a World Out of Joint

**Philip Swoboda**

*Open—Year*

The early modern period of European history (roughly 1500-1800) was an era of vigorous efforts by rulers and church officials to impose standards of belief and behavior on their subjects. But this era of religious persecution, witchcraft trials, blue laws, and the Spanish Inquisition was also, paradoxically, the period during which Europeans laid the foundation for the relatively free societies of the modern world, with their market economies, elected governments, and unfettered exchange of ideas. This course will focus on the complex interplay between regimentation and liberty that marked the development of Europe during the early modern age. In the fall we will study the structure and workings of the late medieval political and social order. We will consider the threats posed to this order by the invention of printing, the rise of humanism, the Protestant Reformation, and the economic and social changes of the sixteenth century, and examine the various novel measures of control that civil and religious authorities adopted in an effort to blunt these threats. In the second semester, we will focus on the economic and intellectual developments of this period that heralded the coming of modernity: the rise of mercantile capitalism, the Scientific Revolution, improvements in technology and administration, the growth of a consumer market, and the Enlightenment. Our goal is to understand how an era that began in fear, religious conflict, and repressive social discipline ended by producing an upsurge of confidence in the capacity of properly educated human beings to make good use of freedom.

## Eastern Europe: Peoples, States, Nations

**Philip Swoboda**

*Open—Year*

This course aims to provide students with the conceptual tools required for making sense of the history of Eastern Europe during the past thousand years. It will give them the opportunity to explore the interlocking histories of the diverse peoples of Eastern Europe, as well as the histories of the various multinational states and empires that have ruled over modern-day Poland, Ukraine, and Russia from the Middle Ages to the present. Until recently, most books on East European history narrated, interpreted, and evaluated past events from the viewpoint of a particular modern nationalism.

We will resist this "monocentric" approach in favor of an "acentric" approach that does not favor any single national perspective. We will pay considerable attention to several submerged peoples of the region—peoples who spent centuries as subjects of alien states—notably the Ukrainians, the Baltic peoples, and the Ashkenazic Jews. We will be particularly concerned with examining what interethnic relationships in Eastern Europe looked like during the "prenational" era, before modern conceptions of nationhood took shape, and how ethnic differences interacted during this period with antagonisms of a religious and social character. We shall also try to identify the key factors that in modern times have generated distinct "Polish," "Ukrainian," and "Russian" national identities.

## Empires to Nations: Inventing the Modern Middle East

**Fawaz Gerges**

*Open—Year*

Most of the states in the modern Middle East were born out of the rubble of World War I and the destruction of the great empires. Britain and France not only divided the vast territories of the Ottoman Empire between themselves but also drew the map of the modern Middle East by reorganizing the old political structures along nation-states. This course will examine the complex sociopolitical, religious, and cultural dynamics and external forces that have shaped life in the region, as well as the dominant political ideologies—pan-nationalism, Islamism, Arab socialism. It will begin with a survey of the modern Middle East (geography, people, religions, major countries, and international relations) and emphasize the close linkage and interlay between domestic, regional, and international processes. Special attention will be paid to the rise of European hegemony after WWI and the response of social groups to the cultural, economic, and political influence of the West. For example, why have some countries developed democratic institutions, while others have become increasingly dictatorial, espousing a form of secular authoritarianism, and yet others have sought to define their politics in terms of Islamic activism? What are the causes and consequences of the five Arab-Israeli wars on political governance, economic development, and relations between state and society? What does explain the rise and consolidation of military rule? And what are the repercussions of continuing Western meddling in the region's internal affairs? This course will not only assess the role of the West in forging the region's modern history but also the input of indigenous forces, such as secular nationalism and religion. We will study the diverse societies and regime type of the major states—Egypt, Turkey, Iran, Israel, Syria, Iraq, and Saudi Arabia—in an effort to understand why some countries have succeeded in developing democratic forms of government, while others have become increasingly

dictatorial. The seminar will also address the question of reform and change. How and where will reform come from in light of the unholy alliance between authoritarian rulers and the reactionary religious establishment? What role does the dominant international political and economic order play in perpetuating the status quo in the Middle East?

## Espionage in the Twentieth Century

**Jefferson Adams**

*Open—Fall*

What has been called the world's second oldest profession truly came of age during the past hundred years. Never before have so many countries—ranging from superpowers to aspiring third-world regimes—invested such vast resources into the creation and maintenance of permanent intelligence organizations. This course will examine not only the reasons behind this major historical development but also the degree to which espionage has influenced the actual course of events. We will explore the ethical dilemma of a secret agency operating within an open democratic society as well as the role of intelligence in totalitarian regimes. Attention will also be directed to the ongoing debate over human versus technical collection and the overall reliability of such information. Utilizing a variety of sources and approaches, the class assignments will consist of firsthand accounts, historical analysis, case studies, novels, and film. For conference projects, students may choose a topic from an earlier century as well as the modern era.

## Europe Since 1945

**Jefferson Adams**

*Lecture, Open—Fall*

With the conclusion of the longest and most destructive war in modern history, the countries of Europe faced the formidable challenge of reconstructing their economies, societies, and national cultures. At the same time a new conflict soon emerged in the form of a Cold War—supported by massive nuclear arms—and kept the continent divided until the last decade of the century. This course will explore these critical years beginning with the Yalta and Potsdam treaties, the Nuremberg and successor trials, and the Marshall Plan. Other key topics to be investigated include the rise of the European welfare state, the historic rapprochement between France and Germany, the process of decolonization, and the nonviolent 1989 revolutions in the East bloc. Of major concern is the question of European unity and its prospects for realization in the present century along with the transatlantic relationship with the United States. The lectures will be supplemented by various documentary films as well as attention to developments in literature, art, and architecture. The group conferences will focus on individual works by such

leading authors as Hannah Arendt, George Orwell, Albert Camus, Alexander Solzhenitsyn, and Milan Kundera.

## Global Africa: Theories and Cultures of Diaspora

**Mary Dillard**

*Spring*

Changes in migration patterns, immigration laws, and refugee policies have meant that Africans are living and working in unexpected places. Studies of the African diaspora used to focus on the dispersion of Africans as a result of the trans-Saharan, trans-Atlantic, and Indian Ocean slave trades. More recent scholarship has focused on new African diasporas: Senegambians in Harlem and Rome, Ghanaians in Germany, Nigerians in Japan. These modern day dispersals, powered in part by the forces of globalization, demand new levels of analysis by scholars. How have people of African descent ended up settling in places far from their natal homes? How has the concept of an African homeland contributed to the articulation of religious and political movements (Ethiopianism, black power, Rastafarianism, pan-Africanism) in the diaspora? How have theories about other diasporas (South Asian, Jewish, Chinese, etc.) informed scholarship on the African diaspora? This class will study these new African migrations, as well as revisit the histories of older settlement patterns. Students who have taken courses in Africana Studies, Asian Studies, Global Studies, Latin American Studies, or International Relations are particularly encouraged to apply.  
*Sophomores and above.*

## International Law and the World Community: Origins and Prospects

**Andrew R. Willard**

*Open—Year*

The origins and development of our contemporary world community are examined and analyzed in this course. The role of what we now call international law in shaping this planetary history is given special emphasis. The reason for this emphasis concerns international law's capacity to shape shared expectations among peoples from around the world of what constitutes appropriate and permissible conduct. These shared expectations, in turn, bear importantly on the quality of life worldwide. In the fall the history of this interplay between a developing world community and international law will be the principal focus of our inquiry. During winter and spring, our attention will shift to the future. Throughout the second semester, we will explore alternative conceptions of the world community's potential and the ways in which international law can be modulated to help bring about more desirable futures. Although this course builds on

itself from the first to second semester, students with a suitable background may be able to join the course at midyear, space permitting, with the instructor's approval. Readings for this course are a blend of historical and contemporary material that draws from the traditions and experience of many fields of knowledge.

## Leisure and Danger

*Persis Charles*

*Open—Year*

The interaction between work and play has taken various forms in history. Our project in this course will be to examine the changes and continuities in the idea of leisure. Beginning in early modern Europe, we will trace the concept up to the present, concentrating on Europe and America, and reflecting on such subjects as travel and the pursuit of the exotic, theatricality, consumerism, luxury, and display. In the nineteenth century, leisure became democratized and an anxious debate grew louder. What were the implications of making leisure available to masses of people? From romance novels to cheap liquor, from shopping to the cinema, new avenues of leisure aroused both fear and excitement. Moralists felt a need to police both public and private space and to reassert the primacy of work, thrift, and duty. We will study them and the various forms of accommodations and resistance that met their efforts. Class, ethnicity, gender, and geography all acted to structure people's access to leisure. We will look at struggles over race, gender, and popular culture; the way certain groups became designated as providers of entertainment; or how certain locations were created as places of pleasure. To set the terms of the debate, we will begin with some eighteenth-century readings about the theatre and the market, the salon and the court. Readings will include work of Montesquieu, Flaubert, Wilde, Wharton, George Eliot, and Fitzgerald. In addition we will read works of nonfiction that show how leisure helped to create new forms of subjectivity and interiority. Students will be encouraged to work on conference topics linking leisure to a variety of subjects, such as childhood and education, or the construction of racial identities, or the changing nature of parenthood as birth control became more and more widely available, to name just a few areas. Potentially this course, through the study of complex oppositions like need and desire, purpose and aimlessness, the necessary and gratuitous, can give us a sense of the dizzying questions about life's very meaning that present themselves when we aim at a life of leisure.

## Literature, Politics, and Culture in U.S. History

*Lyde Cullen Sizer*

*Advanced—Year*

Using literature from the 1850's to the 1950's as potentially both reflection and prescription (though never as fact), we will study the political and cultural life of the United States. Half historical texts, half novels, this course will zero in on questions of gender, race, capitalism, and national identity. We will focus, in particular, on writers who challenge the status quo, and who seek, through their fiction, to create an alternate America. Writers may include Lydia Maria Child, Herman Melville, Frederick Douglass, Harriet Beecher Stowe, Abraham Cahan, W. E. B. DuBois, Upton Sinclair, Ann Petry, J. D. Salinger, Ralph Ellison, among other less well-known figures.

## Making the Medieval Cosmos

*Pauline Moffitt Watts*

*Open—Fall*

This course offers an introduction to the history of conceptions of celestial, terrestrial, and human order developed in Western Europe over a thousand year period (c. 500-1500). These orders were built out of fantastic mixtures of texts and images drawn from the Greek, Roman, Judaic, Christian, and Muslim traditions. The goal of this class will be to understand how these mixtures, based on models and metaphors that today are consigned to the separate realms of religion and science or else dismissed as superstitions, produced a vision of the cosmos that maintained its power to make meaning well into the early modern period. We will focus on three interrelated topics. First, we will study the legacy of ancient Greek, Roman, and Near Eastern conceptions of celestial and terrestrial order contained in influential early medieval treatises by Macrobius and others, then the transformation of these orders in the "new cosmology" developed in medieval universities in the twelfth and thirteenth centuries as a result of translations of works written in Greek, Hebrew, and Arabic, into Latin. Second, we will look at medieval mappaemundi and related diagrams and drawings to see how they come to represent simultaneously the order of the natural world and the divine plan for human redemption. To help us decipher these curious artifacts, we will consult texts by Hugh of St. Victor and Roger Bacon. Third, we will identify ways in which ancient astrological, medical, and magical materials linking the individual human being (microcosmos) to the terrestrial and celestial worlds (macrocosmos) survived in the works of figures such as the mystic, Hildegard of Bingen, and the physician who was also a priest and a philosopher, Marsilio Ficino.

## Medieval Christianity in Perspective: East and West, Past and Present

### *Open—Year*

Two principles will guide this study of religious life in Western Europe during Late Antiquity and the Middle Ages. The first is that "the past is not dead; in fact it is not even past." Nothing more vividly illustrates the truth of William Faulkner's aphorism than how religious experiments made in the deep past continue to shape the modern world, sometimes by continuity, at other times by negation. The second principle is that we cannot study the West in isolation from her Orthodox Christian and Islamic neighbors. The course is constructed around questions: why early Christianity's struggle to differentiate itself from its Jewish matrix still presents challenges to us today; what roles did classical culture play in the formation of a distinctive Christian literary and visual culture; why did Roman, Celtic, and Germanic peoples convert; why is the pope supreme only in the Western church; how did Catholic attitudes on sex and marriage evolve? In the second term we will examine attitudes toward the afterlife, including ways that the living were thought able to affect the fate of the dead in purgatory, as well as the inverse—how the "very special dead" (the saints) were believed to intervene in the affairs of the living. In conclusion we will investigate Europe's awakening from the "Dark Ages" in the "Renaissance of the Twelfth Century" with the revival of rational thought. Our primary sources include the Bible, Augustine's astonishing autobiographical account of his conversion as well as his influential writings on sexuality, lives of early martyrs and desert saints, *Beowulf*, and letters of Abelard and Heloise. We will learn to read the language of medieval art to better examine the celebrated architecture and mosaics at Santa Maria Maggiore, Hagia Sophia, and San Vitale; the icons preserved at St. Catherine's monastery in the Sinai desert; and such Irish/English books as the Lindisfarne Gospels and the Book of Kells. At Moissac and Autun, St-Denis and Chartres, we will investigate the Western styles we call Romanesque and Gothic—indebted to but different from those created in Antiquity and in the East. Use will be made of Byzantine and Western art in New York museums that are among the world's most precious treasures. Conference work may focus on medieval questions or some from another time and place, including the contemporary world.

*Open to any interested student with permission of the instructor.*

## Medieval Foundations of England: A Workshop in Doing History

### *Open—Spring*

After an introduction to the formation of England as a unified Christian nation out of numerous small pagan kingdoms in the Anglo-Saxon age, we will concentrate on what is arguably medieval England's most creative period, from 1066 and the coming of the Normans to the ratifying of Magna Carta by King John in 1215. Our focus will be on two questions: (1) Why was the Norman Conquest a critical turning point in English and European history and (2) Why did the great conflicts of the age—Saxon versus Norman, English versus French, church versus state, king versus baron—lead to the creation of ideals and institutions of such durability that they continue to shape our lives? Among the commanding individuals we will study are William the Conqueror; Henry II, the greatest of medieval English kings; his remarkable wife, Eleanor of Aquitaine; Henry's famous rival, Archbishop Becket; and King John of Magna Carta fame. Special attention will be devoted to such institutions as feudalism, monarchy, parliament, the papacy, monasticism, the rise of English Common Law, the origins of trial by jury and due process of law, all of which continue to fascinate and to shape English and world history. Indeed are we not presently facing a major conflict over "due process of law" in our own society? The class will also certainly not neglect such celebrated works of art and architecture as the Bayeux Tapestry, Fountains Abbey, Durham and Canterbury Cathedrals. The workshop aspect of the course means that in addition to investigating medieval history and discussing why modern historians differ in their assessments of the past, we will do history together in order to arrive at judgments based on what we usually confront in our lives, fragmentary or conflicting evidence. The research and critical skills learned are essential not only for students considering history or law or intelligence or journalism or business or public advocacy as a career, but for anyone in professional and personal life. Conference work may focus on medieval questions or those from another time and place, including the contemporary world.

*Open to any interested student with permission of instructor.*

## Medieval France: Art and the Sacred

### *Open—Fall*

Medieval France was home to many of the most creative, adventuresome, and influential figures in European history. Think of Charlemagne, Abelard and Heloise, St. Bernard of Clairvaux and Abbot Suger of St-Denis, Crusaders to the Holy Land or to the south of France, the latter attempting to annihilate Cathar heretics and their strongholds in Languedoc. Think of the architects, stone masons, sculptors, and stained-glass

artists creating incomparable churches at Vezelay, Conques, Autun, Moissac, Toulouse, Albi, St-Denis, and Chartres. Our main focus will be France in the eleventh, twelfth, and thirteenth centuries, a time historians speak of as the High Middle Ages, but the themes command a general European significance. Special attention will be paid to the rivalries of Europe's great monastic orders, the Cluniac and the Cistercian, each having its organizational center in Burgundy and each articulating its distinctive ideas about the proper place of art in sacred spaces. In intellectual life we will examine the shift from rural monasteries to urban schools located in the shadows of the great cathedrals. In this regard we will ask why was there a revival of rational thought after a long period of ignorance and superstition in the Early Middle Ages, and whether the intellectuals at these twelfth-century French schools made a convincing case for the inherent dignity of man and even for the humanity of God, ideas we usually associate with the later Italian Renaissance. A special feature of this interdisciplinary course will be studying these topics in visual as well as written texts, beginning with Carolingian buildings, ivories and manuscripts, followed by the architecture and sculpture in France's incomparable Romanesque churches and monasteries. We will conclude at the abbey church of St-Denis, in the environs of medieval Paris, and at the justly celebrated cathedral of Chartres, two monuments that gave birth to that quintessentially French style we call Gothic. To explore firsthand the interconnections of art and the sacred, we will view works of French medieval art in New York museums that are among Europe's most admired treasures. Conference work may focus on medieval questions or some from another time and place, including the contemporary world.

*Open to any interested student with permission of the instructor.*

## Profiles of Islamic Revolutionaries

**Fawaz Gerges**

*Open—Year*

This seminar examines the ideas and lives of leading Islamist (jihadist) revolutionaries who have left their imprint on Muslim society and politics in the 20th century. They have also have inspired young Muslim men and women to use religion as a political tool to bring about radical change in state and society. These revolutionaries—Abdu, Sayyid Qutub, Mawdudi, Khomeini, and others—have supplied the ammunition and arguments for dissatisfied and alienated young men to rebel against the existing sociopolitical order at home and its great powers patron. In this context, the Saudi dissident, Osama bin Laden, may be seen as just a recent inheritor of a powerful tradition of political-religious rebellion. Several critical questions will be posited: What are the religious, intellectual, and historical roots of revolutionary jihadism? What fuels its passion and

rage? What is the relative weight of religion in relation to other sociopolitical and economic variables? What is the role and impact of charisma in enabling certain individuals to reclaim and fertilize religion and revolution to establish Allah's kingdom on earth? Special attention will be given to certain powerful texts, which have served as holy writ for dedicated foot soldiers as well as to their views and theories about the status of women, the nature of the state, the use of violence, human rights, and relations with the West broadly defined.

## Public Stories, Private Lives: Methods of Oral History

**Mary Dillard**

*Advanced—Year*

Oral history methodology has moved from a contested approach to studying history to an integral method of learning about the past. This is because oral histories allow us to gain an understanding of past events from a diverse array of vantage points. Methods of recording oral history also allow the possibility of bringing private stories into the public. In contrast, public history in the form of monuments, museums, and World Heritage Sites are consciously preserved in order to emphasize particular aspects of a national, regional, or local past, which its protectors deem to be important. Who owns this history? Is it Civil War re-enactors who dedicate their weekends to remembering this war? Is it the African Americans who return to West Africa in search of their African past or the West Africans who want to forget about their slave trading past? What happens when the methods for interpreting public and oral histories combine? This class places particular attention on the importance of oral history in tracing memories of the past. We will discuss how Africanist and feminist scholars have used oral history to study the history of underrepresented groups. We will also investigate how methods of oral history and public history can be used in reconstructing the local history of our surrounding community (Yonkers, Bronxville, Westchester).

*Open to graduate students and advanced seniors.*

## Readings from the U.S. Women's Movement: Politics and Theory

**Lyde Cullen Sizer**

*Spring*

Using primary sources—essays, books of cultural criticism, novels, memoirs—coupled with framing history texts, this course will explore the ways women have protested their condition from late eighteenth century to late twentieth. In three sections, roughly corresponding to what historians have called the "waves" of the women's movement, we will explore the multiple ways women have constructed and reconstructed womanhood through both feminism and

womanism. Writers may include Mary Wollstonecraft, Harriet Jacobs, Charlotte Perkins Gilman, Virginia Woolf, Nella Larsen, Kate Millett, Audre Lorde, Maxine Hong Kingston, Shulamith Firestone, Toni Morrison, and less well-known "Third Wave" feminists and critics of feminism in the 1980's and 1990's.

## Sickness and Health in Africa

**Mary Dillard**

*Fall*

Depending on the level of his or her resources, a sick person in Africa potentially has access to a variety of options for treatment. How illness is perceived becomes a crucial determinant in how people seek care. Despite this array of treatment options, the state of public health in most African countries has become woefully inadequate. While the reasons for this decline in health status are related to questions of international political economy, they can also be traced historically. This class studies the history of health, healing, and medical practices in Africa in order to identify the social, historic, and economic factors that influence how therapeutic systems in Africa have changed over time. We will investigate a range of topics including the place of traditional healers in providing care, the impact of the AIDS pandemic on overall public health, and the role of globalization in changing the structure of health care delivery in most African countries.

## The Cuban Revolution: History, Culture, Politics

**Matilde Zimmermann**

*Intermediate—Spring*

Cuba has an impact on world affairs and culture completely disproportionate to its size and population. This is true not only in the political sphere but also in such varied areas as music, sports, and medicine. This course will examine both the internal dynamics of revolutionary Cuba (economic challenges, relations between workers and the state, changes in the family, race relations, art and revolution, the role of youth) and the place of Cuba in the world. After a brief look at the historical background (colonialism and slavery, José Martí, the War of 1898 and U.S. intervention), we will consider in some detail the formative years of the revolution, from the 1958 guerrilla war against Batista through the October 1962 missile crisis. We will analyze Cuban foreign policy in Africa and Latin America, and the continuing—even sharpening—hostility between the U.S. government and Cuba. We will use film, art, and firsthand accounts, as well as political analysis, to look at the contradictory reality of Cuba today. Students planning to participate in the Sarah Lawrence program in Havana any time in the next two years are strongly encouraged to take this course.

*Open to all interested sophomores, juniors, and seniors, and to first-year students considering going on the Cuba program in their junior year.*

## The Eagle and the "Backyard:" Readings on U.S.-Latin American Relations

**Jorge Nallim**

*Advanced—Year*

Few regions in the world share more historical, geographical, political, social, and economic ties than the United States and Latin America. The growing size, visibility, and power of the Hispanic population in the United States—now the largest minority in the country—is an example of the historical and increasing interrelationship between the two regions and their peoples. Despite this historical fact—or, maybe, because of it—these ties have been traditionally affected by misunderstanding, conflict, and violence. Combining approaches from international relations and social history, this course will explore the history of the relations between the United States and Latin America. It will pay attention to the rise of the United States as a world power throughout the nineteenth and twentieth centuries and to the deep impact of its policies on different Latin American countries. To provide a comprehensive view, the course will also analyze the responses and strategies from different Latin American countries and social sectors toward the emerging superpower, as well as the history and impact of the Hispanic population within the United States. We will study this dynamic relationship through the analysis of primary documents and scholarly works, focusing not only at the state level but also on how elites, intellectuals, women, workers, and peasants, among others, became involved, were affected, and reacted regarding this difficult relationship.

## The Sixties

**Priscilla Murolo**

*Open—Spring*

According to legend, social insurgencies of the 1960's pitted radical youth against the American mainstream. The real story is much more complicated. Politically speaking, the "sixties" began in the mid-1950's and extended well into the 1970's; and the ferment was by no means confined to youth. Insurgent movements and ideas reverberated throughout U.S. society: from rural communities to inner cities, from churches to military bases, from factories to rock concerts, from local school boards to national political conventions, from courtrooms to bedrooms, and from the White House to the International House of Pancakes. The course will touch on all of this but focus especially on insurgencies

based on race, gender, sexuality, and class. Readings include historical documents as well as scholarship, and we will also make use of music and film.

## U.S. Labor History: Class, Race, Gender, Work

**Priscilla Murolo**

*Year*

This course surveys the history of work and working people in the United States from the colonial period to the present. Core topics include slavery and other forms of bondage as well as the wage-labor system. We will focus especially on working people's efforts to alter their unequal condition through various forms of collective action, from slave revolts to political parties, from bread-and-butter unionism to revolutionary movements, and from ethnic associations to campaigns for gay and lesbian rights. We will also examine the history of labor processes, the personal dimensions of working people's lives, and the class dynamics of American culture; the interplay of class, racial, and gender hierarchies; and the complex relationships between oppression and resistance. Readings include historical documents, fiction, and autobiography as well as scholarly work. Students are expected to participate in community partnerships with labor unions or kindred organizations that address issues raised by our studies.

*Open to sophomores, juniors, and seniors.*

## Unmaking the Medieval Cosmos

**Pauline Moffitt Watts**

*Open—Spring*

Medieval conceptions of celestial, terrestrial, and human order were built out of fantastic mixtures of incongruous sources drawn from the Greek, Roman, Judaic, Christian, and Muslim traditions. The structures (and strictures) these orders provided underwrote much of the intellectual, political, and institutional history of Western Europe for a thousand years. Within a relatively brief period of time, they collapsed. Through the examples of Columbus, Luther, and Galileo, we will explore the complex, often conflicted ways in which Europeans fractured, if not shattered, this traditional cosmos and in so doing discovered and explored new worlds within and without themselves. We will study the curious mixes of medieval science and religion that led Columbus to design his "Enterprise of the Indies," which led to his finding what he called a "new heaven and new earth" in the Americas. We will reflect on how and why one man, Martin Luther, an Augustinian monk, could write three letters that would fundamentally challenge the most powerful institution in Europe—the Roman Catholic Church. We will trace the rapid dissolution of medieval conceptions of the

celestial world culminating in Galileo's public defense of the "double truths" of science and scripture before the Roman Inquisition.

## Urban Poverty and Public Policy in the United States

**Komozi Woodard**

*Advanced—Fall*

How do we explain the "savage inequalities" in American schools? How did America lose the war on poverty? Why have Americans been so preoccupied with distinguishing between the deserving and the undeserving poor rather than attacking poverty? What is the cause of such desperate want in the midst of such affluence and plenty? What are the roots of poverty in the United States? Do poor people need self-improvement in order to make it in the city? Or should there be a redistribution of the wealth? In this seminar students will explore the roots of urban poverty; interrogate the American public policy tradition toward urban poverty; examine the changing sources of dependency in the city, from the early industrial to the postindustrial eras; probe into the origins of profits, wages, and rents; study the political, economic, and cultural logic of welfare and educational reform; and discuss key issues in the interplay between race, class, and gender in urban poverty. Throughout the course the class will examine the alternating themes of social control from above and resistance from below. Through history, sociology, and ethnography, students will interrogate the American drama of poverty and the distinct roles played by industrialists, politicians, reformers, scholars, teachers, activists, laborers, immigrants, as well as Latinos and blacks in Atlanta, Los Angeles, Oakland, Chicago, Detroit, New York, Newark, and Boston. The course readings introduce a number of relevant comparisons with issues of poverty and dependency in Latin America, the Caribbean, Africa, and Europe.

## Visions/Revisions: Issues in U.S. Women's History

**Priscilla Murolo**

*Fall*

This seminar surveys path-breaking studies of U.S. women's history and related subjects, including women's lives beyond the United States. Course readings, both scholarship and political treatises, exemplify major trends in feminist discourse since the 1960's, from early challenges to androcentric worldviews to the current stress on differences among women. Class discussions will range from fundamental questions—what is feminism and is "women" a meaningful category?—to theoretical, interpretive, and methodological debates among women's historians. The course is designed to help advanced students of women's history to clarify

research interests by assessing the work of their predecessors.

*A graduate course open to qualified seniors.*

## Women, Gender, and Politics in American History

**Eileen Ka-May Cheng**

*Advanced—Year*

A course on women's history in America can only be understood by way of its inextricable connection to the history of men. Therefore, while the emphasis of the course will be on women, we will also look at the category of gender more broadly, examining relations between men and women and conceptions of masculinity and men's roles. More broadly, the course will provide an overview of women's history in America, beginning with the seventeenth-century colonial settlements and extending to the 1970's, by focusing on the relationship between gender and politics. We will examine the extent to which women were able to participate in the public sphere, despite their exclusion from formal political power for much of the nation's history. We will place the topic of women and politics in the larger context of American history, studying how more general social and cultural trends affected and were affected by women's political activities. Specific topics and themes will include the ideology of separate spheres; the relationship between gender, race, and class; the impact of war on women; sectional and regional differences; the suffrage movement; and the emergence of feminism.

*Juniors, seniors, and graduate students with background in history or related disciplines.*

## 2005-2006

### African Diasporas: Negotiating Dispersion in the Americas and Europe

**La Shonda Barnett**

*Open—Year*

Blackness is conceptualized in transnational and global terms in this yearlong seminar, which introduces students to the African diaspora by focusing on the ideologies and institutions among black communities in the United States, Canada, the Caribbean, and Western Europe, specifically England, Germany, and the Netherlands. With particular attention paid to slavery, migration patterns, political systems, and social movements, our multidisciplinary approach is largely rooted in diaspora theory and historical accounts. We will also draw on ethnographic works, novels, print media, electronic sources, and music to investigate the

intellectual work of activists, artists, and ordinary women and men of African descent who have debated the politics and identity(ies) of blackness.

## America's Encounter with the World of Islam

**Fawaz Gerges**

*Open—Year*

When the dust settled after World War II, the United States emerged as one of the two most powerful nations in the international system and, by far, one of the most respected great powers in the world of Islam. America was seen as a progressive island in a sea of colonial European reaction. The dominant question then was "Why do they like us so much?" not "Why do they hate us so much?" What went wrong with America's relations with Muslim civil societies in the second part of the twentieth century? Why has the initial promising encounter between the United States and Arabs/Muslims turned sour? What lies at the heart of the dramatic shift in American foreign policy and Muslims' perceptions as well? To what extent has the United States inherited the colonial legacy of its European allies? Or to what extent has the United States become a scapegoat for most of the ills and misfortunes that have befallen the world of Islam in the last 50 years? Is it misleading to talk about America and the world of Islam in such generalizing, all-encompassing terms? How are we to study and understand the nature and character of forces that have influenced relations between the two cultures and civilizations?

## Asians and Pacific Islanders in the U.S.

**Laurie M. Mengel**

*Open—Year*

This course explores the histories of conquest, immigration, settlement, and resistances of Asians and Pacific Islanders in the United States. The first semester of this course begins with U.S. expansion into the Pacific and Asia for land and labor. We will compare the labor and immigration histories; settlement and resistance strategies of native Hawaiians, Chinese, Japanese, Koreans, Filipinos, and South Asians; as well as U.S. exclusion and internment policies through 1965. Who are Asian Americans and why did they come to the United States? The second half of this course examines the creation of a panethnic solidarity colliding with the differences in the post-1965 labor migrations from India and refugee migrations from Vietnam, Laos, and Cambodia. What are the contemporary challenges facing Asian immigrants and Asian Americans today?

## Diplomacy and Intelligence in Modern History

**Jefferson Adams**

*Open—Year*

By what means have different historical states and empires acquired vital knowledge about one another? And how, over the centuries, have various techniques of negotiation evolved, leading either to reconciliation or to warfare? This course will begin its inquiry in the Italian Renaissance, which saw the birth of modern diplomacy, and then proceed to examine how balance of power and Realpolitik culminated in the remarkable state-system of the nineteenth century. The impact of totalitarianism in the twentieth century—as well as the struggles of the cold war—will also be carefully assessed. Finally, some key Eastern approaches to strategy and warfare will be explored to gain a better understanding of the nature of the non-Western world. Throughout the course, emphasis will be placed on the role of intelligence gathering and covert action and their influence on the course of events. Attention will also be given to the difficult problem of reconciling clandestine government operations with the ideals of an open democratic society. The class assignments will draw from a variety of sources—historical narrative, firsthand accounts, novels, and films.

## Dissent and Conversion in Late Antiquity and the Medieval West

**Susan R. Kramer**

*Open—Year*

“They have no fixed habitations. They go about two by two, barefoot, clad in woolen garments, owning nothing, holding all things common like the apostles, naked, following a naked Christ. They are making their first moves now in the humblest manner because they cannot launch an attack. If we admit them, we shall be driven out.” “They” refers to the Waldensians, a medieval heretical sect who sought to emulate Christ and the apostles by eschewing private property and preaching the Gospel. We owe this description of them to Walter Map, a twelfth-century cleric who was asked by the Pope to interrogate the Waldensians on matters of Christian faith. Map’s description, with its reference to both the scriptural ideal of early Christian life and the fear the sect aroused in church administrators, provides the theme for this course; the shifting line between those practices and beliefs deemed praiseworthy and those labeled aberrational or even heretical. The course will begin with the emergence of Christianity and its gradual transition from persecuted minority to imperial religion. We will focus on the diverse manifestations of Christian spirituality during specific periods and/or regions of intellectual and social volatility, from Late Antiquity to the expulsion of the Jews from the Iberian peninsula, in order to explore the

interrelations of institutions, rituals, practices, and doctrines in shaping religious experience. Primary source readings will be drawn from a range of sources including Augustine’s *City of God*, Burchard’s penitential handbook, canons from church councils, and the inquisitorial register of Jacques Fournier.

## Divine Doctors and African Ideas: A History of Science, Technology, and Health in Africa

**Mary Dillard**

*Open—Year*

When people think of major advances in science and medicine, the continent of Africa does not usually come to mind. Instead, Africa tends to be invoked to describe situations where biology or disease has gone astray (e.g., African “killer bees,” the West Nile virus, Ebola, and HIV/AIDS). This focus has tended to obscure the legacy of technology, innovation, indigenous philosophies, and healing practices that have developed and succeeded in Africa. This course will introduce students to the history of science and medicine in Africa by studying scientific practices in diverse African societies. Some of the questions that we will address in the class are, What has been the contribution of African scientists to technological innovation, healing practices, and international understanding of scientific problems? What is to be learned from studying indigenous approaches to health and healing? Is there an “African mathematics,” and how have different numbering systems developed on the continent? How have African peoples articulated and lived a philosophy of science? How are African farmers and scientists critiquing, using, or modifying the latest agricultural biotechnology? A central goal of this class will be to highlight innovations, ideas, and scientific advances that have come from Africa. By studying several African countries including Kenya, Ghana, Ethiopia, Zimbabwe, and South Africa, students will examine the methods that these diverse societies have used to address scientific and technological problems.

## Female Status, Female Voices: Women in the Medieval and Renaissance West

**Susan R. Kramer**

*Open—Fall*

We commonly make many assumptions about the status of women in the Middle Ages, and until quite recently, there were few opportunities for us to test these assumptions. A virtual flowering of studies and translated primary sources has now brought the study of women to the forefront, not only opening to examination previously held views on women’s status, but also testing the very methods of approaching historical sources. This course will begin by looking at

the agenda of women's history and how it has changed over the last few decades. We will then compare this agenda to what historical study has revealed about women's legal, political, biological, and social status in the medieval and Renaissance west looking both at how women are portrayed in different textual genres and at how women portrayed themselves. Primary source readings will be drawn from texts such as Hildegard of Bingen's medical writings, the personal correspondence of the abbess Heloise, Gratian's *Decretum*, and the romances of Chrétien de Troyes.

## First-Year Studies: Century of Revolution: Latin America Since 1898

**Matilde Zimmermann**

FYS

Mexico 1910. Bolivia 1952. Guatemala 1954. Cuba 1959. Chile 1970. Grenada 1979. Nicaragua 1979. And countless near-revolutions in twentieth-century Latin America. Why so many? What made some succeed and others fail? Why do movements that inspire such hope and sacrifice often end in disappointment? Is the era of revolution over? This course traces the development of national liberation movements, political revolutions, and other forms of resistance to social and economic inequality, from 1898 to the present. We will focus particularly on the Mexican, Cuban, and Nicaraguan revolutions, looking at the unique national histories and cultures that produced these social revolutions, as well as the international context in which they occurred. Special attention will be paid to the ways in which issues of ethnicity and gender affect participation in resistance movements. Readings are chosen to maximize the extent to which we are listening to Latin American voices, especially the speeches, manifestos, interviews, and *testimonios* of the rebels themselves, but also the portrayal of their struggles by novelists, filmmakers, and other artists. The course draws on Matilde Zimmermann's personal experience of two decades of living and working in Nicaragua and Cuba, most recently as the director of Sarah Lawrence's study abroad program at the University of Havana.

## First-Year Studies: Empires to Nations: Inventing the Modern Middle East

**Fawaz Gerges**

FYS

Most of the states in the modern Middle East were born out of the rubble of World War I and the destruction of the great empires. Britain and France not only divided the vast territories of the Ottoman Empire between themselves but also drew the map of the modern Middle East by reorganizing the old political structures along nation-states. This course will examine the complex

sociopolitical, religious, and cultural dynamics and external forces, which have shaped life in the region, as well as the dominant political ideologies—pan-nationalism, Islamism, Arab socialism. It will begin with a survey of the modern Middle East (geography, people, religions, major countries, and international relations) and emphasize the close linkage and interlay between domestic, regional, and international processes. Special attention will be paid to the rise of European hegemony after WWI and the response of social groups to the cultural, economic, and political influence of the West. For example, why have some countries developed democratic institutions, while others have become increasingly dictatorial, espousing a form of secular authoritarianism, and yet others have sought to define their politics in terms of Islamic activism? What are the causes and consequences of the five Arab-Israeli wars on political governance, economic development, and relations between state and society? What does explain the rise and consolidation of military rule? And what are the repercussions of continuing Western meddling in the region's internal affairs? This course will not only assess the role of the West in forging the region's modern history but also the input of indigenous forces, such as secular nationalism and religion. We will study the diverse societies and regime type of the major states—Egypt, Turkey, Iran, Israel, Syria, Iraq, and Saudi Arabia—in an effort to understand why some countries have succeeded in developing democratic forms of government, while others have become increasingly dictatorial. The seminar will also address the question of reform and change. How and where will reform come from in light of the unholy alliance that exists between authoritarian rulers and the reactionary religious establishment? What role does the dominant international political and economic order play in perpetuating the status quo in the Middle East?

## First-Year Studies: Introduction to African American History

**Komozi Woodard**

FYS

In this course we will examine a number of issues in African American history and culture, including controversies about the West African background to U.S. history; the impact of the Atlantic slave trade; the emergence of American colonial slavery; the development of African American families, communities, and culture; slave culture, consciousness, and resistance; the role of black Americans in the American Revolution; the rise of white racism; the changing black image in the white mind; the role of black abolitionists in the antislavery crusade; the dynamics of Emancipation and Reconstruction; the saga of the Kansas Exodus and the Great Migration; the black experience in the Progressive Era; the artists of the Harlem Renaissance; the rise of the black ghetto; the

impact of the New Deal on black America; the dynamics of the civil rights movement; the unfolding of the Black Arts Renaissance; and the dilemma of persistent urban poverty.

## First-Year Studies: Leisure and Danger

*Persis Charles*  
FYS

The interaction between work and play has taken various forms in history. Our project in this course will be to examine the changes and continuities in the idea of leisure. Beginning in early modern Europe, we will trace the concept up to the present, concentrating on Europe and America, and reflecting on such subjects as travel and the pursuit of the exotic, theatricality, consumerism, luxury, and display. In the nineteenth century, leisure became democratized and an anxious debate grew louder. What were the implications of making leisure available to masses of people? From romance novels to cheap liquor, from shopping to the cinema, new avenues of leisure aroused both fear and excitement. Moralists felt a need to police both public and private space and to reassert the primacy of work, thrift, and duty. We will study them and the various forms of accommodation and resistance that met their efforts. Class, ethnicity, gender, and geography all acted to structure people's access to leisure. We will look at struggles over race, gender, and popular culture, the way certain groups became designated as providers of entertainment, or how certain locations were created as places of pleasure. To set the terms of the debate, we will begin with some eighteenth-century readings about the theatre and the market, the salon and the court. Readings will include work of Montesquieu, Flaubert, Wilde, Wharton, George Eliot, and Fitzgerald. In addition, we will read works of nonfiction that show how leisure helped to create new forms of subjectivity and interiority. Students will be encouraged to work on conference topics linking leisure to a variety of subjects, such as childhood and education, or the construction of racial identities, or the changing nature of parenthood as birth control became more and more widely available, to name just a few areas. Potentially this course, through the study of complex oppositions like need and desire, purpose and aimlessness, the necessary and gratuitous, can give us a sense of the dizzying questions about life's very meaning that present themselves when we aim at a life of leisure.

## First-Year Studies: The Age of the French Revolution

*Philip Swoboda*  
FYS

The Revolution, which convulsed France between 1789 and 1799, and the subsequent dictatorship of Napoleon,

mark the true beginning of the modern era. Thanks to the worldwide impact of the "ideas of 1789," and the astounding conquests achieved by French armies between 1792 and 1812, the age of the Revolution and Napoleon can be seen as a watershed not only in the history of France, but also in global history. The Revolution radically affected the development of every country in Europe, and altered the destiny of the Middle East and the Americas. The purpose of this course is to introduce students to the study of modern history through an investigation of the causes and consequences of the French Revolution. We shall examine the civilization of eighteenth-century Europe and the crucial developments in the spheres of politics, economic life, culture, and thought, which set the stage for the Revolution. As we trace the course of political events in France from the accession of King Louis XVI in 1774 to the downfall of Napoleon in 1815, we shall also examine how people outside of France reacted to the early reports of the extraordinary happenings there and, later on, to the experience of French military domination. We shall devote particular attention to the modern ideologies—liberalism, conservatism, Romanticism, and nationalism—which were either born of the Revolution or decisively shaped by it.

## Gender, Education, and Opportunity in Africa

*Mary Dillard*  
*Intermediate—Spring*

The introduction of Western-derived educational systems into Africa ushered in a social revolution that created, for some people, unprecedented opportunities for economic advancement. Unfortunately, this type of education also rein- forced or created new inequalities in many African societies and undermined the focus on precolonial forms of education. These inequalities have been particularly prevalent in relation to the provision of education for women and girls and the uneven distribution of Western education across various ethnic groups in Africa. Any balanced study of education in Africa therefore needs to broaden the definition of education in order to encompass the bulk of experiences faced by the majority of the population. This course will focus on the myriad of educational systems that are found in Africa. We will study the ways that formal schooling has been crucial in providing new opportunities for some African students, but we will also seek to understand why education in Africa is sometimes described as being provided only to the "fortunate few." Some of the systems that we will focus on include apprenticeships, initiation into age-grades and secret societies, Koranic schools, Western schools, "education for development" programs, and adult literacy programs. We will study how educational practices in Africa have changed over time and place a

particular focus on how gender has impacted the provision of educational opportunities for women and girls.

*Sophomores and above.*

## Medieval Attitudes Toward the Past: The Western Use of Ancient Sources

**Susan R. Kramer**

*Open—Spring*

The great Renaissance historian Paul Kristeller argues that Renaissance scholars can be distinguished from their medieval counterparts by the fact that the former ceased to subordinate secular learning to religious and theological study. For the art historian Erwin Panofsky, the Renaissance attitude toward the classical past was characterized by creative reuse of ancient authority in contrast to a medieval perception of classical culture as too dangerous for true assimilation. Medieval culture was shaped not only by classical influences, of course. The eleventh- and twelfth-century cathedral schools embarked on the daunting project of glossing the Bible in its entirety, while the medieval papacy armed itself with ancient legal authorities in order to establish its jurisdiction in relation to the secular powers. In this course we will try to determine for ourselves medieval attitudes toward the past by looking at how some representative medieval thinkers used ancient authority for their own ends. Readings will include both ancient and medieval sources including, for example, excerpts from ancient authorities such as Ovid, Cicero, Plato, Galen, and the Bible, and medieval authors such as Bernard of Clairvaux, Bernard Silvestris, Abelard, Ivo of Chartres, and Pope Gregory VII.

## Modern American Women's Movements

**Priscilla Murolo**

*Advanced—Year*

This course surveys women's social activism in the United States since World War II. Feminist movements and their disparate, often conflicting agendas are a central theme, but not by any means the only important topic at hand. We will also explore women's activism as antifeminists—in the movement against abortion, for example—and in both progressive and conservative movements in which the "woman question" has generally taken a back seat to other issues. The emphasis on diversity is designed not only to clarify the impact of class, racial, and sexual identities on women's activism, but also to elucidate the myriad ways in which women's movements have defied the assumptions of identity politics. Readings include a variety of personal testimonies, political manifestos, and scholarship by historians and social scientists.

*Advanced. Open to seniors and graduate students, and to juniors with permission.*

## Modern Japanese Women in Japan and the United States

**Laurie M. Mengel**

*Intermediate—Spring*

Using Japanese and Japanese women's histories as a lens through which to explore Asian American historiography, this class will interrogate the ways in which theories and methods of Asian American studies facilitate and fail the study immigrants who are both raced and gendered. This course reaches beyond linear immigrant models and delves into the social histories of Japanese peasant women prior to their migrations to Hawai'i and the continental U.S. Taking into consideration larger global trends, competing empires, and the "mirroring of modernity," we will utilize interdisciplinary methods to interrogate the social histories of women in precontact Japan, during the periods of emigration, the contexts of immigration for the continental U.S. and Hawai'i, and the ways in which women (re)formed families and lives after migration.

*This is an intermediate class for juniors and seniors, and sophomores by permission. Previous or concurrent study in Asian American history or Asian American studies advised, but not required.*

## Private Lives: Methods of Life History and Oral History

**Mary Dillard**

*Advanced—Fall*

Oral history methodology has moved from a contested approach toward studying history to an integral method of learning about the past. This is because oral histories allow us to gain an understanding of past events from a diverse array of vantage points. Life histories enable us to focus on individual experiences and consider the historical significance of one person's life. Long used by anthropologists and sociologists, life history methods continue to be rediscovered by historians seeking to enrich their understandings of the past. This class places particular attention on how Africanist and feminist scholars have used oral history to study the history of underrepresented groups. Each student will conduct life history interviews and we will use this work to investigate, as a class, how methods of life history and oral history can be used in answering larger historical questions.

## Renaissance and Reformation England

### *Open—Fall*

Sixteenth-century England experienced radical shifts in intellectual life, profound religious upheavals, a transformation in government from medieval to modern, and the beginnings of overseas colonization. These developments continue to shape our lives. To men and women in Tudor England we owe much about the way we pursue learning at a college like Sarah Lawrence and how we construct our identities. To clarify what is distinctive about England's legacies, we will ask the following questions: How was the Renaissance humanist movement that began in Italy adapted to an English setting? How did Luther's insights and heroism shape the Reformation on the continent and in England? Should we speak of the English Reformation or of English Reformations, some sponsored by the government, others arising despite the wishes of those in power? How important were Henry VIII and his six wives in these momentous changes? Was the Reformation an outgrowth of the Renaissance or a reaction against it? In the second part of the term, we will focus on Queen Elizabeth's defense of her new Anglican Church against attacks at home by Papists and Puritans; abroad we will see how England's intervention on the continent and activities on the high seas played a decisive part in preventing the newly resurgent Catholic Church from rolling back Protestant gains across Europe. We will pay particular attention to Elizabeth's deeds, words, and cult in the light of the century's political debate over gender roles, asking whether she turned what was deemed her greatest liability—her sex—into her greatest asset. Much of our reading will be in primary sources (Lorenzo Valla, Erasmus, Thomas More, Luther, Elizabeth). A special feature of the course is that we will not only study history but try our hands at writing history, constructing a narrative and interpretation of a crisis in Elizabeth's reign out of selected primary sources in which that era's anxieties about politics, gender, and religion overlapped. Some remarkable films will be an additional resource during the term. In conference students might wish to go more deeply into Renaissance or Reformation questions or choose some from another time and place.

## Revolution in Eastern Europe

### *Philip Swoboda*

#### *Open—Year*

During the past two hundred years, East Central Europe, European Russia, and the Balkans have been fertile soil for revolutions. By the end of the eighteenth century, these lands—a complex mosaic of peoples, cultures, and religions—had been divided up among the Habsburg, Romanov, and Ottoman Empires. Their subsequent history is a saga of revolt against both alien rule and homegrown tyranny, greatly complicated by concurrent

struggles to defeat ethnic and religious oppression, reform archaic social structures, and overcome economic backwardness. This course constitutes an introduction both to the history of this region and to the comparative study of the causes and dynamics of revolutions. The course will focus on certain revolutions that illustrate the primary processes at work in modern East European history: the Greek and Serbian revolutions of the early nineteenth century; the 1848 Revolutions in the Habsburg Empire; the Young Turk Revolution of 1908; the Russian Revolution of 1917; the 1956 Hungarian uprising; the Solidarity crisis of 1980–1981 in Poland; and the recent Orange Revolution in Ukraine. In conference, students will be encouraged to apply the analytical skills they have acquired in class to making sense of other revolutionary episodes in the history of the region. *Open to any interested student.*

## The American Revolution

### *Eileen Ka-May Cheng*

#### *Intermediate—Fall*

“What do we mean by the Revolution?” asked John Adams. In an effort to understand the profound nature of Adams's question, we will look at the many different answers that revolutionary Americans gave to that question by examining the political, intellectual, social, and cultural dimensions of this event. Was the Revolution simply a struggle for political independence, or was it also a social conflict over who would “rule at home”? Was the American Revolution a transformation in the “minds and hearts” of the people, as Adams believed, or was the War for Independence integral to the meaning and character of the Revolution? Did the Revolution end with the close of the war, or was the war, to use Benjamin Rush's words, “but the first act of the great drama”? What was the relationship between the Constitution and the Revolution? Was the Constitution a conservative reaction against the radicalism of the Revolution, or did the Constitution extend and solidify what the Revolution had achieved? While the emphasis of the course will be on what the Revolution meant for those who participated in it, we also look more broadly at the long-term legacy and memory of the Revolution. Through this examination, the course ultimately seeks to address the question of what was the basis for and nature of American national identity?

## The Caribbean and the Atlantic World

### *Matilde Zimmermann*

#### *Intermediate—Year*

The Caribbean is Cuba, Jamaica, Haiti, Puerto Rico—and it is also Venezuela, eighteenth-century New Orleans, the coastal areas of Central America settled by runaway and shipwrecked slaves, and south Florida. The

Caribbean speaks Spanish, English, Creole, French, Dutch, Portuguese, Papiamentu, and Miskitu, and practices, in its own way, every world religion. It is an area of tremendous diversity but linked by common experiences of African slavery, colonial domination, underdevelopment, revolution. This course examines the history and culture of the Caribbean, from 1492 to the present, with special emphasis on its place in the world: a source of unprecedented wealth built by the labor of enslaved Africans; a hot spot of international competition, piracy, and war; a crossroads of goods, ideas, and people; and in the twentieth century, a region struggling to be more than an “American lake.” We will pay particular attention to Haiti and Cuba, whose democratic and socialist revolutions had an impact in the Americas as powerful as the other, better-known “great revolutions” of the eighteenth and twentieth centuries.

*Intermediate. Open to sophomores, juniors, and seniors.*

## The Medieval Foundations of English Art and History: An Interdisciplinary Workshop

*Open—Fall*

Interweaving history, religion, art, and archaeology, this course begins its exploration of major turning points in the making of England with the arrival of the Anglo-Saxons in Roman Britannia. To explore the resulting interplay of cultures out of which England is born—classical and barbarian, pagan and Christian, Celtic and Germanic, insular and continental—we will closely examine unique sources of compelling interest: the Sutton Hoo burial ship treasure, considered England’s most important archaeological discovery; *Beowulf*; and medieval histories and biographies that make vivid the coming of Christianity to pagan England, Ireland, and Scotland. With respect to early Christian visual culture, we will puzzle out how and why European painting and calligraphy were revolutionized in such manuscripts as the Lindisfarne Gospels and the Book of Kells, books that still amaze and inspire us. Our second major turning point will be the conquest of Anglo-Saxon England by the Normans, erstwhile pagan, seafaring Vikings who by 1066 had become Catholic, French, and Europe’s acknowledged masters of the arts of war. The Norman impact on Anglo-Saxon England, involving as it does the feudalization of every institution, secular and religious, the transformation of every social group, and the rebuilding of every Anglo-Saxon cathedral and abbey in the new Norman (i.e., Romanesque) style, will be the focus of much of our attention. In our study of the Norman and Angevin ages, we will constantly ask how great conflicts—English versus French, church versus state, king versus baron—led to the creation of ideals and institutions of such durability that they continue to

shape our lives. Since our studies involve close examination of medieval sources, including such celebrated works of art and architecture as the Bayeux Tapestry, that contemporary but sometimes very enigmatic depiction of the Norman Conquest, Durham Cathedral, a glorious building that embodies much of the spirit of the new Norman age, as well as Magna Carta, one might consider this not just a course about medieval England but also a workshop in actually “doing” medieval history, and “doing it” in an interdisciplinary way. Conference work may focus on medieval questions or related ones from another time and place.

## The Origins of the Urban Crisis: Race, Ethnicity, and Class in America

*Komozi Woodard*

*Intermediate—Year*

Tracing the roots of the post-World War II urban crisis, this seminar compares the experience of African Americans in housing, schooling, and employment to that of other groups in U.S. cities, including Puerto Ricans, Jews, Poles, Irish, and Italians. Students will examine a number of issues, including the difference between the ethnic experience in the slum and the black experience in the ghetto; and the distinction between the initial ghetto and the second ghetto. Why was there a postwar urban crisis? What is the history of class, race, and ethnicity in the American cities? What were the dynamics of class formation? Why did some groups become poor and others wealthy? How did some groups become white and others black? Was there a difference between a slum and a ghetto? Above all, the course explores the social movements that critiqued the urban crisis, including the movements around urban development, housing, welfare, employment, and schooling in Oakland, Los Angeles, Des Moines, Chicago, Milwaukee, Detroit, Pittsburgh, Philadelphia, Newark, and New York.

## The Sixties

*Priscilla Murolo*

*Open—Year*

According to legend, social insurgencies of the 1960s pitted student radicals against the American mainstream. The real story is much more complicated. Politically speaking, the “sixties” began in the mid-1950s and extended well into the 1970s; and the ferment was by no means confined to students. Insurgent movements and ideas reverberated throughout U.S. society: from rural communities to inner cities, from churches to military bases, from factories to rock concerts, from local school boards to national political conventions, from courtrooms to bedrooms, and from the White House to the International House of

Pancakes. The course will touch on all of this but focus especially on insurgencies modeled on the national liberation movements that transformed the third world in the decades that followed World War II. Readings include historical documents as well as scholarship, and we will screen numerous films.

## The World Turned Upside Down: Women, Race, and Struggle in the Civil War Era

**Lyde Cullen Sizer**

*Open—Spring*

"We weakened the rebels," Harriet Tubman dictated in a letter published in the *Boston Commonwealth* during the war, "by bringing away seven hundred fifty-six heads of their most valuable livestock." Scout and spy, here describing the Combahee River expedition and her work freeing slaves with deadly and deliberate irony—"their most valuable livestock"—Tubman was one of hundreds of women galvanized by the Civil War. In resisting federal authority, or in using it to help along their struggle against slavery, women were more than just victims of the bloodiest conflict on U.S. soil. Beginning in the 1850's, and extending through Reconstruction, this will be a close look at the era through the writing of women activists of all kinds.

## Twentieth-Century Europe

**Jefferson Adams**

*Lecture, Open—Year*

Europe continues to face an uncertain future. Will the movement toward greater economic and political unity ultimately prevail and create a new historical community? Or will the focus of nationalism and religious and ethnic identity be the main determining factors in the coming decades? This course will attempt a fresh appraisal of the past hundred years, focusing on leading personalities, events, and movements throughout the European continent. Of particular concerns are the advent of the First World War; the rise and development of communism in Russia and fascism in Italy and Germany; the impact of the Second World War; the reconstruction of Western Europe after 1945; and the collapse and aftermath of the Soviet empire. In order to achieve as full an understanding as possible, the course will rely not just on historical narrative but also on autobiography, biography, psychology, art and architecture, literature, and film. Group conferences will focus on primary readings and include important works by Graves, Luxemburg, Lenin, Hitler, Silone, Orwell, Solzhenitsyn, Arendt, and Kundera.

## Visions/Revisions: Issues in U.S. Women's History

**Lyde Cullen Sizer**

*Advanced—Fall*

This seminar surveys path-breaking studies of U.S. women's history and related subjects, including women's lives beyond the United States. Course readings, both scholarship and political treatises, exemplify major trends in feminist discourse since the 1960's, from early challenges to androcentric worldviews to the current stress on differences among women. Class discussions will range from fundamental questions—what is feminism? Is "women" a meaningful category?—to theoretical, interpretive, and methodological debates among women's historians. The course is designed to help advanced students of women's history to clarify research interests by assessing the work of their predecessors.

*Advanced. A graduate course open to qualified seniors and graduate students.*

## Who Are Asian Pacific Islander Americans and How Do We Know?

**Laurie M. Mengel**

*Intermediate—Fall*

How, when, where, and why are Asian Pacific Islanders defined? This course explores the ways in which this group has been defined and redefined, and by whom. Where are its centers and who is included and excluded from its margins? How has this category shifted over time? How has this identity been imposed and embraced? How do sexuality, gender, "model minority" status, and racial mixture complicate this grouping? Through historical, literary, film, and primary resources, we will examine the multiple spaces that interrogate the formation of a racial identity.

*This is an intermediate class for juniors and seniors, and sophomores by permission. Previous or concurrent study in Asian American history or Asian American studies advised, but not required.*

## "A Complex Fate": A History of Culture and Ideas in the U.S., 1800 to the Present

**Lyde Cullen Sizer**

*Advanced—Year*

"Weep and write," a British observer advised American antislavery women in the 1850's; tears from the "depths of womanhood/are very salt, and bitter, and good." This course will track the history of the efforts of writers, thinkers, and activists in the United States—the salt, the bitter, and the good—through histories of their world, and through their own writing over the last two centuries. Considering both the "depths" of their

cultural worlds, and their ideological and intellectual contexts, we will explore the way Americans played, danced, marched, moved, and identified themselves inside and outside the mainstream. Themes and questions will include the way Americans understood the nature of change—"a complex fate" Henry James called it—and their individual, collective, and national role in it.

*Advanced. Juniors with permission.*

## "Mystic Chords of Memory": Myth, Tradition, and the Making of American Nationalism

**Eileen Ka-May Cheng**

*Open—Fall*

Central to American definitions of national identity have been certain myths about the nation's past. One of the best known such myths is the story of George Washington and the cherry tree. On being questioned by his father about who chopped down the cherry tree, Washington confessed that he had done it, telling his father, "I can't tell a lie." Ironically, however, this story was itself a fabrication. Why have such myths been so important to American national identity? We will address this question by looking at the construction and function of tradition and myth in American culture from the Revolution to the Civil War. We will examine both American attitudes toward tradition and the specific traditions Americans invented for themselves. The course will pay special attention to the mythologization of the Revolution and the "Founding Fathers," and the myth of the self-made man, examining how figures such as George Washington, Benjamin Franklin, Andrew Jackson, and Abraham Lincoln both contributed to and embodied these myths. We will consider how and why myths about these events and individuals were created, and the extent to which they corresponded to social reality. We will study how these myths both unified and divided Americans, as different groups used the same myths for conflicting social purposes. And finally, we will examine what these myths revealed about how Americans defined the nation's identity. Was the United States a nation bound by "mystic chords of memory," as Lincoln claimed, or were Americans ultimately a "present-minded people," defined by their rejection of the past?

## 2006-2007

### ¡Sí Se Puede! Labor and Politics in Modern Latin America

**Matilde Zimmermann**

*Lecture, Open—Spring*

"Sí se puede/Yes we can!"—a chant heard today on picket lines and immigrant-rights marches in the United

States and throughout the Americas—has its origins in the strikes and protests of Latin American and Caribbean workers. This course looks at the many ways working men and women have struggled to increase their political influence and advance their economic and social standing in twentieth and twenty-first century Latin America. We will use and critique a variety of theoretical approaches to the relationship between labor, the state, and democracy. Special attention is paid to the phenomenon of leftist populist presidents on which a rich literature exists—from Mexican Lázaro Cárdenas to today's Hugo Chávez of Venezuela and Evo Morales of Bolivia. Case studies will illustrate how working people have tried to take advantage of periods of relative democracy to elect candidates and affect laws and also organized under harsh conditions of military dictatorship, when strikes, demonstrations, and unions themselves were often illegal and workers' actions met with state and employer violence. To understand the political campaigns of Latin American workers, we will look not only at conditions of work and economic exploitation, but also at the concerns of working-class communities, questions of nationalism/sovereignty, and concrete issues of gender, race, ethnicity, and identity. Assigned readings will include historical monographs and articles as well as the cultural product of workers' struggles: songs and poetry, documentary films, and murals and photographs.

*Open to any interested student.*

### African Americans in the City: Dynamics of History, Politics, and Public Policy

**Komozi Woodard**

*Year*

The central focus of this seminar is the historical experience of African Americans in cities: South, North, Midwest, and West. Thus, the issues students will examine range from the politics of space to the dynamics of cultural renaissance in the black urban experience. After a brief consideration of African experiences with cities, this course explores the social, cultural, economic, and political as well as public policy experiences of African Americans in cities, from the colonial era, through slavery and emancipation in the cities, the dynamics of the Great Migration and the New Negro Renaissance, to the postwar urban crisis and the contemporary urban catastrophe. Class discussions will involve analyses of the development of African American people, culture, and consciousness, as well as urban institutions, communities, and families. The seminar examines not only urban political movements, but it also takes a comparative look at the crucial relationship between the formation of "races" and the formation of nation-states in the United States, South Africa, and Brazil. And at another level, the course

looks at racial formation and urban development in the North, South, Midwest, and West of the United States. Another important aim of the course is an understanding of the impact of New Deal federal policy and government investment strategies on post-World War II urban development. What is the difference between the urban slum and the ghetto in American history? What is the difference between the “First Ghetto” and the “Second Ghetto”? And in many major cities, how did we go from the postwar urban crisis to the contemporary urban catastrophe? Above all, how do the post-Katrina ruins of New Orleans and the Gulf Area fit into that historical experience? And where do we go from here?

*Open to any interested student.*

## Asian American Experience: In Their Own Voices

**Evelyn Leong**  
Fall

Asian Americans have historically been seen in terms of two opposing stereotypes: the overachieving “model minority” and the nonassimilated immigrant or refugee. This course will examine how Asian Americans have used their own voices to challenge these views and complicate Asian American identity. Through the interdisciplinary exploration of autobiographical texts—in the form of memoir, film, and visual art—we will study the ways in which Chinese, Japanese, Korean, South Asian, Filipino, and Southeast Asian populations in the United States have represented themselves in contradiction to the ways they are perceived by others. In looking at the historical experiences Asian American men and women have had, this course will provide a context to better understand the impact of immigration on U.S. culture, history, and ethnic relations. We will also examine the meanings of race, sex, and political activism for both Asian Americans and the “white majority” of mainstream culture.

*Open to any interested student.*

## Based on a True Story? Latin American History Through Film

**Matilde Zimmermann**  
Open—Fall

This course looks at critical historical moments and issues of conflict and change in Latin America, through the vehicle of film. The emphasis is on feature films set in the nineteenth and twentieth centuries and created for a popular audience by Latin American directors. We will focus on the histories of the four countries with strong traditions of film production—Brazil, Mexico, Argentina, and Cuba—but we will also look at a few films from Central America and the Andean nations. We will study issues of authenticity and voice, some of

the pitfalls of using film to understand history, and at the role of cinema in the creation of national and popular memory. Although most of the films we will view have been analyzed on many levels, the emphasis of this particular course will be on content and social or political vision, rather than film theory, technique, or aesthetics. Some of the themes we will examine critically through required readings and film are slavery and religion (Cuba); colonial women and patriarchy (Mexico, Argentina); the frontier: land and people (Brazil), indigeneity and work (Bolivia), revolution and power (Mexico, Cuba), counterrevolution (Guatemala, Nicaragua), dictatorship and the disappeared (Argentina), women and liberation (Brazil, Cuba); “El Norte”—the United States and migration (Mexico, Cuba); and globalization and its discontents (Mexico, Argentina). One of the two weekly class meetings will be a film showing and the other a seminar discussion of the film and assigned reading. There is no language prerequisite for this course; all films are available with English subtitles.

*Open to any interested student.*

## Black Liberation: A History of Black Freedom Movements in the United States

**Komozi Woodard**  
Year

This is a history lecture course that examines the interplay between racial oppression and black liberation in several key dimensions: historical, political, economic, social, cultural, and psychological. Students will study the dynamics of individual and group resistance to racial oppression in various forms as they change over time. While the focus of the inquiry is the development of the African American struggle for freedom in different regions of the United States, the course bases itself throughout on the lessons of comparative slavery, emancipation, colonialism, race relations, and liberation movements. The seminar begins with an examination of resistance to slavery and develops with an exploration of the fight against Jim Crow racism: North, South, East and West. In addition to an abundance of readings, there will be weekly screenings of historical documentaries, including the *Eyes on the Prize* series. Finally, at times students will be asked to consider this history from the perspective of the experience of the post-Katrina catastrophe: How did cities with black populations in the United States go from decay to ruins, and where do we go from here?

*Open to any interested student.*

## Body Politics: A Cultural History of Beauty in the Twentieth-Century United States

**Lyde Cullen Sizer**  
*Advanced—Year*

In this course, we will analyze and explore the ways that the culture assigns and identifies beauty in women—with and through the prism of race, class, and sexuality—and the multiple ways women comply, resist, and accommodate that culture. Using novels, cultural criticism, history, film, and images of all kinds, we will move chronologically from the turn of the twentieth century to the turn of the twenty-first. We will come at this question from all angles, considering the beauty industry, the icons of beauty claimed by all classes (the ways that working girls, for example, fought for a safe place to hang their hats in the factory), the way beauty is culturally constructed, and the varied ways in which ethnic and racial communities alternately define and understand beauty. In the second semester, we will look especially at the ways feminists have challenged, undermined, rewritten, and reinforced ideals of beauty. Throughout we will stop and consider the multiple ways other disciplines have considered and understood beauty politics, from dance to social psychology to theatre, art history, and film.

*This is an advanced class and will be writing intensive.*

## Century of Revolution: Latin America Since 1898

**Matilde Zimmermann**  
*Intermediate—Year*

Mexico 1910. Bolivia 1952. Cuba 1959. Chile 1970. Grenada 1979. Nicaragua 1979. And countless near-revolutions in twentieth-century Latin America. Why so many? What made some succeed and others fail? Why do movements that inspire such hope and sacrifice often end in disappointment? Is the era of revolution over? This course will trace the development of national liberation movements, political revolutions, and other forms of resistance to social and economic inequality, from 1898 to the present. It is designed to familiarize students with various theories of revolution and their critiques and to advance historical research and writing skills. We will focus particularly on the Mexican, Cuban, and Nicaraguan revolutions, looking at the unique national histories and cultures that produced these social revolutions, as well as the international context in which they occurred. Special attention will be paid to the ways in which issues of ethnicity and gender affect participation in armed revolution. Readings are chosen to maximize the extent to which we are listening to Latin American voices, especially the speeches, manifestos, interviews, and testimonios of the rebels themselves, but also the portrayal of their struggles by novelists, filmmakers, and other artists.

*Sophomores and above.*

## Christianity and Classical Culture in European Thought Since the Renaissance

**Philip Swoboda**

*Open—Year*

The distinctive civilization of Europe is founded on two very different legacies: the heritage of pagan antiquity and the heritage of Christianity. The fusion of these elements in a single culture was never without its tensions, but as long as the Middle Ages lasted, the potential for conflict between them was held in check by the authority of the Church. Since the Renaissance and Reformation, however, Europeans' awareness of the dissonance between the cultural presuppositions of pagan Greece and Rome and biblical revelation has grown increasingly acute. The thinkers of the Enlightenment, and their spiritual offspring, rejecting the authority claims and ethical teachings of traditional Christianity, turned to the classical tradition to find the basis for an alternate system of values. The focus of this seminar, however, is an alternative tradition in European thought: one whose representatives, eager to preserve the best of both legacies, have sought to establish a new and more enduring synthesis between the values of Christianity and those of classical civilization. Students will read and discuss a number of works produced by thinkers in this tradition in the period from 1450 to the late twentieth century. These include some of the most influential books ever written on the ultimate structure of reality, the purposes of human society, and the meaning and ends of human life. In the fall semester, we will begin our inquiries by considering how the relationship between Christianity and classical culture presented itself to the first group of intellectuals who were compelled to define it, the fathers of the Christian Church. We will look at writings by the Apologists, Tertullian, Clement of Alexandria, and Augustine. We shall then jump forward to the Renaissance and consider how issues that these thinkers had addressed resurfaced in the writings of Pico, Erasmus, Montaigne, and Pascal. The rest of the semester will be devoted to the thought of the Enlightenment (Hume, Diderot, Kant) and its diverse eighteenth-century critics (Johnson, Rousseau, Butler, Herder, Goethe, and Schiller). In the spring, our attention will focus on nineteenth- and twentieth-century thinkers, such as Hölderlin, Schleiermacher, Hegel, Coleridge, Schopenhauer, Kierkegaard, Tennyson, Arnold, Newman, Nietzsche, Bergson, James, Berdiaev, Scheler, Heidegger, Whitehead, von Balthasar, and Charles Taylor.

*First-year students admitted at the instructor's discretion; otherwise open to any interested student.*

## East vs. West: Europe, the Mediterranean, and Western Asia from Alexander the Great to the Fall of Constantinople

**David Castriota**

*Lecture, Open—Year*

Historically, competition or conflict between the European or Mediterranean West and the regions of the Middle East has been seen as a struggle between Christian and Muslim worlds, with roots in the era of the Crusades whose precedent and implications reach into the present time. While this course will focus extensively on the medieval period, it seeks to do so by situating the relations between Christian Europe and the Muslim world within a larger context, as the result of geopolitical patterns that long antedated the emergence of Christianity or Islam. In the fall, the course will begin with the Greek invasion of the Near East under Alexander as a war of retribution for the Persian invasion of Greece over a century earlier. We will consider how the political structure and culture of the multiethnic Hellenistic Greek kingdoms emerged from the wreckage of the Persian Empire and how Rome subsequently built on Hellenistic Greek experience and conflict with the Near East in establishing its empire. We will examine the emergence of Christianity as an example of a Roman or Western response to an originally Eastern religion, and, conversely, the emergence of the Islamic faith and its new empire as an Eastern challenge to the Christianized Roman Empire of Late Antiquity. In the spring, we will see how this approach affords a very different view of the Crusades and the battle for the Holy Land as the outgrowth of longstanding cultural and political interactions or competitions that transcend religious faith and doctrine. The course will look at Christian and Muslim cultural relations in Spain and then close by examining the rise of the Ottoman Turkish Empire, which originated as a Muslim regime in Eastern Europe, becoming a major power in Asia only after it had conquered the remaining symbol of the old Christian Roman Empire, Constantinople in 1453. We will consider primary historical and literary sources as well as major artistic monuments.

*Open to any interested student.*

## End of Empires

**Philip Swoboda**

*Lecture, Open—Year*

The First World War (1914–1918) was a catastrophe for Europe's empires. Four ancient and powerful European dynasties were brought crashing down by the war: the

Hohenzollerns of Germany, the Habsburgs of Austria-Hungary, the Romanovs of Russia, and the Ottomans of Turkey. Though a unitary German state survived the overthrow of the Hohenzollerns, the Austrian, Russian, and Turkish Empires broke into pieces with the downfall of the dynasties that had created them. As a multitude of new states came into being on the territory that they had ruled, the modern map of Eastern Europe and the Middle East took shape. The collapse of the empires was welcomed by millions, but it brought immense confusion and suffering in its train. In the midst of this turmoil, communism and fascism emerged as credible alternatives to the Wilsonian ideal of liberal democracy that appeared to have triumphed in the war. The object of this course is to introduce students to the main themes of nineteenth-century European history by examining the dramatic downfall of the Central and East European empires. In the fall semester, we will briefly examine the earlier history of these empires and investigate how they functioned in a premodern setting. We will then consider the challenges posed to their rulers by the novel economic developments and political ideologies of the nineteenth century—by industrialization, consumer culture, rising literacy, liberalism, nationalism, and socialism. We will discuss how the regimes sought, with greater or lesser success, to master these challenges in the decades leading up to World War I. Special attention will be paid to the cultural history of Germany, Austria, and Russia, which, in spite of their political and social backwardness, played a disproportionately large role in the creation of twentieth-century culture. In the spring, we shall consider the causes of World War I, the course of the fighting, and the strains that the war imposed on the empires that participated in it. We will study the collapse of these empires in military defeat and revolutionary upheaval, describe the emergence of their successor-states, and trace the political-military struggles which, between 1917 and 1924, redrew the map of Europe and the Near East and set the stage for the great international conflicts of the past eighty years. In a final unit, we shall consider the impact of the First World War on the mightiest European empire of all: the British Empire. Ironically, though Britain is numbered among the victors of World War I, the war set in motion processes that were to lead, within a few decades, to the surrender of her imperial possessions. We shall focus on two fateful challenges to the integrity of the British Empire that arose immediately after the war: the nationalist struggle for Egyptian independence and the campaign for Swaraj (self-rule) in British India mounted by Mahatma Gandhi and the Indian National Congress. Readings will include secondary texts on political, economic, and cultural history, as well as memoirs, novels, poetry, and plays.

*Open to any interested student.*

## First-Year Studies: Science in Africa, African Science

**Mary Dillard**

**FYS**

The purpose of this class is to introduce students to the study of science, technology, and medicine in Africa by investigating scientific practices in diverse African societies. When people think of major advances in science and medicine, the continent of Africa does not usually come to mind. Instead, images of Africa tend to be invoked primarily when biology or disease has gone astray (e.g., African “killer bees,” West Nile Virus, Ebola, and HIV/AIDS). These perceptions allow a history of scientific development and technological innovation in Africa to be ignored. The goal of this class is to discuss significant themes and topics in African history, but do this by focusing through the lens of science, technology, and medicine. A major goal of our work will be to reconsider the assumption that advances in scientific thought and practice have not come from or occurred in Africa. Students will learn to ask, “What is science?” and to develop an inclusive definition of science focusing on practices and belief systems that are found in Africa. The first semester will focus specifically on the status of indigenous knowledge, health care, and medicine in Africa. The second semester will provide an overview into a variety of topics related to the history of science in Africa. By studying several African societies, including the Dogon of Mali, the Yoruba of Nigeria, and the Shona of Zimbabwe, students will examine the methods that these diverse societies have used to address scientific problems.

## First-Year Studies: “Inventing America”: Cultural Encounters and American Identity, 1607-1877

**Eileen Ka-May Cheng**

**FYS**

“The past is a foreign country,” T. H. Hartley once declared, and perhaps the past of one’s own country is doubly so. The present, after all, always seems inevitable. Surely the United States of 2006 is but the flowering of the seeds planted so many centuries ago. This course seeks to challenge this assertion, as we consider not only how Americans in the period between 1607 to 1877 differed from us but also how much they differed from one another. How did the early and diverse European colonists themselves deal with unfamiliar cultures at a time when the very concept of newness was alien to them? We must not forget that Columbus believed that he had simply discovered a new route to India. As different as they were from each other, neither the Native Americans who lived in North America, nor the Europeans who colonized that region, nor the Africans whom the colonists imported as slaves had any intention of establishing a new nation. Consequently, in

examining American history from the early seventeenth century to the Civil War, the question should not be why did the United States divide during the Civil War, but rather, why were Americans able to unify as a nation at all? In our consideration of this question, we will focus on two interrelated themes: how these different cultures interacted with and affected one another and how Americans defined their identity. Who was considered American and what did it mean to be an American? What was the relationship between American identity and other forms of social identity such as gender, class, race, and culture? We will address these questions by examining major political, social, cultural, and intellectual developments in American history from the colonial period to the Civil War and Reconstruction. Specific topics to be studied will include the European colonization of North America, relations between European settlers and Native Americans, the relationship between the colonies and Britain, the causes and effects of the American Revolution, the shift to a capitalist economy and the advent of the Industrial Revolution, the character and development of slavery, and the causes and consequences of the Civil War. We will use both primary and secondary sources, but the course will place particular emphasis on primary documents as part of an effort to view history from the perspectives of historical actors themselves.

## First-Year Studies in Nineteenth-Century Biography and Autobiography

*Jefferson Adams*

FYS

In striking contrast to preceding periods, the nineteenth century began to place a high value on the written depiction of individual lives. This course will investigate some representative examples of the many biographies and autobiographies produced during this century along with a number of more recent accounts. Focusing on four countries—England, France, Germany, and Russia—the weekly readings will include some famous rulers and statesmen, writers, soldiers, revolutionaries, philosophers, and artists, as well as more anonymous persons who were working in the countryside or laboring in the new factories. Among the former will be Queen Victoria, George Sand, Berlioz, Tolstoy, Dostoyevsky, Marx, Bismarck, Nietzsche, and the young Churchill. Besides examining the major social and political issues of this dynamic age, we will also explore the question of why the genre itself gained such prominence and popularity. In conference, students may choose either another figure from this period or an individual from another century, country, or civilization.

## Gender, Education, and Opportunity in Africa

*Mary Dillard*

*Advanced—Fall*

The introduction of western-derived educational systems into Africa ushered in a social revolution that created, for some people, unprecedented opportunities for economic advancement. Unfortunately, this type of education also reinforced or created new inequalities in many African societies and undermined the focus on precolonial forms of education. These inequalities have been particularly prevalent in relation to the provision of education for women and girls and the uneven distribution of Western education across various ethnic groups in Africa. Any balanced study of education in Africa therefore needs to broaden the definition of education in order to encompass the bulk of experiences faced by the majority of the population. This course will focus on the myriad of educational systems that are found in Africa. We will study the ways that formal schooling has been crucial in providing new opportunities for some African students, but we will also seek to understand why education in Africa is sometimes described as being provided only to the “fortunate few.” Some of the systems that we will focus on include apprenticeships, initiation into age-grades and secret societies, Koranic schools, Western schools, “education for development” programs, and adult literacy programs. We will study how educational practices in Africa have changed over time and place a particular focus on how gender has impacted the provision of educational opportunities for women and girls.

*Advanced.*

## Global Africa: Theories and Cultures of Diaspora

*Mary Dillard*

*Spring*

Changes in migration patterns, immigration laws, and refugee policies have meant that Africans are living and working in unexpected places. Studies of the African diaspora used to focus on the dispersion of Africans as a result of the trans-Saharan, transatlantic, and Indian Ocean slave trades. More recent scholarship has focused on new African diasporas: Senegambians in Harlem and Rome, Ghanaians in Germany, Nigerians in Japan. These modern-day dispersals, powered in part by the forces of globalization, demand new levels of analysis by scholars. How have people of African descent ended up settling in places far from their natal homes? How has the concept of an African homeland contributed to the articulation of religious and political movements (Ethiopianism, black power, Rastafarianism, Pan-Africanism) in the diaspora? How have theories about other diasporas (South Asian, Jewish, Chinese, etc.)

informed scholarship on the African diaspora? This class will study these new African migrations as well as revisit the histories of older settlement patterns. Students who have taken courses in Africana Studies, Asian Studies, Global Studies, Latin American Studies, or International Relations are particularly encouraged to apply.

*Advanced.*

Students who have taken courses in Africana Studies, Asian Studies, Global Studies, Latin American Studies, or International Relations are particularly encouraged to apply.

## History and Cultures of the U.S. Southwest

**Priscilla Murolo**

*Year*

This course explores Southwestern history from indigenous peoples' encounters with Spanish and African settlers in the sixteenth century, to Anglo invasions of the region following its annexation by the United States in the 1840s, to the national and international migrations that made the modern Southwest even more ethnically diverse. Central themes include Native Americans' resistance and adaptation to settler-colonial regimes; the emergence of new races and cultures rooted in Europe, Africa, and Asia, as well as the Americas; the development of a regional economy dependent on colonial and neocolonial labor systems; and the changing meanings of race and ethnicity against

the backdrop of World War II and the postwar rise of a host of new movements based on racial-ethnic identity. In all of this, the course rests on the premise that the history of race and ethnicity in the Southwest offers vital insight into U.S. history as a whole. Reading ranges from primary documents—reportage, autobiography, and fiction—to scholarship in history, social science, and cultural studies.

*Open to sophomores and above.*

## Human Rights and Concepts of International Law

**Tai-Heng Cheng**

*Open—Year*

Global human rights are rife with apparent contradictions. Should governments ignore fundamental freedoms and detain without trial individuals who might otherwise succeed in executing terrorist attacks? Why did the U.S. government help its corporations overseas guard their HIV medicine patents while threatening to breach its own patent for ciprofloxacin, a drug that treats anthrax? Why are some territories, but not others, permitted to secede from their predecessor state and achieve statehood? The first half of the course analyzes such apparent contradictions under different theories of human rights and international law as they have evolved over the previous several hundred years. The course will discuss the universalist, relativist, and central case approaches to human rights alongside the positivist and policy-oriented approaches to international law. By applying human rights and international law theories to global decision-making processes involving governments, nongovernmental organizations, the media, and other actors, the course offers varying explanations of global human rights as they currently exist. In the second half of the course, each student will select a contemporary human rights problem to research, such as the right to self-determination under different models of national government; human rights and national security in the context of terrorism; socioeconomic rights of developing countries versus the rights of foreign corporations to the protection of investments; the right to medicines versus the patent rights of pharmaceuticals; gay and lesbian rights; women's rights; freedom to practice religions that may be antithetical to other human rights; and freedom of movement across nations versus national rights to protect citizens and citizenship. Each student will, through a paper and a presentation, analyze his or her selected problem theoretically and will make recommendations to address that problem.

*Level TK*

## Ideology and Revolution in Modern History

**Jefferson Adams**

*Open—Year*

Revolutionary upheaval on a wide spectrum from left to right has characterized European history in the modern era. Beginning with the French Revolution of 1789 and continuing to the present day, this course will explore the phenomenon of revolutionary change and the emergence of ideology as a critical component. How essential to a revolutionary movement is a charismatic leader such as Lenin, Mussolini, or Hitler? What theoretical similarities and differences exist between communism and fascism, and how are they reflected in actual practice? In what ways does ideology impact key state institutions such as the army and the civil service as well as the work and careers of individual writers and artists? To answer questions of this sort, we will rely on a variety of approaches: historical narratives; biographical and autobiographical accounts; revolutionary manifestos; economic, sociological, and psychological studies; and contemporary film and literature. Of particular concern are recent debates about the fundamental nature of ideological regimes and the question of personal motivation and responsibility. In conference, students are encouraged to investigate revolutionary figures and movements not only in Europe but elsewhere in the modern world.

*Open to any interested student.*

## Literacy and Its Discontents: A History of Education

**Persis Charles**

*Open—Year*

In this course, we will explore the changing meaning of literacy from the Renaissance to the present. In part this is a history of formal education, but it is also contextualized within the whole culture and society of Europe and the Americas. Thus we will examine the development of the modern curriculum; the increasing use of the vernacular instead of classical languages; the different forms of literacy seen as suitable for men and women, masters and servants; and the power struggle over reading and writing instruction for the lower classes in the eighteenth and nineteenth centuries. These matters will be studied against the background of revolution, industrialization, slavery, and abolition. As we approach more recent times, we will look at how the changing role of literacy became prominent in the creation of meritocratic systems, the notion of equality of opportunity, the concept of IQ, and the belief in the accuracy of various types of testing. Finally, we will study the current culture wars over affirmative action, the entertainment industry, the struggles for legitimization of

various modes of education, and attitudes toward competition, excellence, and achievement. Among the authors we will read are Locke, Rousseau, and Dewey.

## Material Moves: People, Ideas, Things

**Shahnaz Rouse**

*Year*

In public discourse, we are bombarded with assertions of the newly “global” nature of the contemporary world. This assertion assumes formerly stable categories of nation, personhood, and ideational systems that are now fragmented and transcended by intensified travel, digital technology, and culture contact. In fact, current global moves are but the most recent version of a phenomenon that has historically occurred in many forms and places. In this seminar, we will consider what actually happens when people, ideas, and things move in time and space. We will explore how apparently stable categories such as citizen, commodity, refugee, and nation are constructed and consider a variety of theories for making sense of these categorizations and the processes accompanying their normalization and dissemination. Our questions will include, What are the political, navigational, and epistemological foundations that go into mapmaking? How do farmers become squatters? How does travel

become tourism? How do commodities travel and acquire meaning? What is the relationship between legal and illicit moves? How do technologies of violence, such as weapons and drugs, circulate? How do modern technologies enable time-space compression? What are the shifting logics of globalization? What happens to authenticity, subjectivity, and identity under these conditions? Our resources in this seminar will be scholarly writings, films, and literary narratives.

## Modern Iran: A Cultural, Political, and Intellectual Overview

**Jason Mohaghegh**

*Open—Year*

This course will trace several of the most crucial instances in modern Iranian history through the writings of its intellectuals, political figures, and cultural visionaries. As such, we will examine an array of discourses and positions that have defined this particular historical trajectory and that continue to influence the state of present-day Iranian society. From inside accounts of the rise and fall of monarchism to the insurgent manifestos of the Islamic Revolution, from the prison notebooks of leftist rebels to the fierce creative innovations of the “new poets,” a multiplicity of ideological, critical, and artistic texts will be investigated alongside the provocative events they inspired. Ultimately, the intent is to arrive at a more extensive and intricate understanding of Iran through the eyes of those who have shaped its historical experience, as well as to recognize its vital significance within the larger scope of modernity.

*Open to any interested student.*

## Pax Romana: Rome from the Late Republic to Marcus Aurelius

**David Castriota**

*Fall*

Traditionally, the art and culture of imperial Rome have been seen as a derivative extension of classical Greek civilization, interesting primarily for the wealth and extent of its production and for determining the final form in which the classical tradition was handed down to Western posterity. This course seeks to give such an approach a different twist—to see the Roman development as Greek culture under new management, a process in which the Romans reinvented themselves in response to the world they inherited or appropriated from the Greeks. The course will examine the evidence of literature, military, and political history as well as major artistic monuments, tracing the Roman response to Greece from its origins in the Late Roman Republic in the second century B.C. down through the prosperous second century A.D., when the concept “Greco-Roman” had become a cultural reality.

*Open to any interested student.*

## Renaissance and Reformation England

*Open—Fall*

In the sixteenth century, England experienced radical shifts in intellectual life, profound religious upheavals, a transformation in government from medieval to modern, and the beginnings of overseas colonization. These developments continue to shape our lives. To men and women in Tudor England we owe much about the way we pursue learning at a college like Sarah Lawrence and how we construct our identities. To clarify what is distinctive about England's legacies, we will ask the following questions: How was the Renaissance humanist movement that began in Italy adapted to an English setting? How did Luther's insights and heroism shape the Reformation on the continent and in England? Should we speak of the English Reformation or of English Reformations, some sponsored by the government, others arising despite the wishes of those in power? How important were Henry VIII and his six wives in these momentous changes? Was the Reformation an outgrowth of the Renaissance or a reaction against it? Is it true, as some have claimed, that the Reformations of the “Little Tudors,” Edward and “Bloody” Mary, were of long-lasting importance in shaping England's identity? At the end of the term, we will consider the first years of young Elizabeth's astonishing forty-five year reign, focusing on her religious-political settlement and the opposition it spawned in the light of that century's great debates between Papists and Protestants and its heated arguments over whether an unmarried woman could be head of state and church. Much of our reading will be in primary sources (Lorenzo Valla, Erasmus, Thomas More, Luther, Henry VIII, and Elizabeth). Celebrated biographies and remarkable films will be additional resources. In conference, students might wish to go more deeply into Renaissance or Reformation questions or choose some from another time and place.

*Open to any interested student. Students might consider as a successor to this fall course a spring Literature offering on the reign of Elizabeth.*

## The Fall of the Roman Empire: Rome from the Soldier Emperors to the Barbarian Invasions

**David Castriota**

*Spring*

The fall of the Roman Empire was not an event, but a process, one that unfolded slowly over several centuries. This course will examine how Rome went from a period of unquestioned power and prosperity in the late second century A.D. into an era of economic, political, and

military instability that resulted in a steady decline, punctuated by periodic revivals that ultimately failed. We will examine the evidence of literature, military and political history, and major artistic monuments. The course will focus on the root causes of this decline in Roman military and economic policy, in relentless pressure from barbarian Europe, and in competition with the neighboring Persian Empire. We will also consider the emergency of Christianity, not so much as a cause or symptom of decline, but as the cultural process through which the Romans reinvented themselves one last time.

*Open to any interested student.*

## The Medieval Foundations of English Art and History: An Interdisciplinary Workshop

**Open—Fall**

Interweaving history, religion, art, and archaeology, this course begins its exploration of major turning points in the making of England with the arrival of the Anglo-Saxons in Roman Britannia. To explore the resulting interplay of cultures out of which England is born—classical and barbarian, pagan and Christian, Celtic and Germanic, insular and continental—we will closely examine unique sources of compelling interest: the Sutton Hoo burial ship treasure, considered England's most important archaeological discovery; *Beowulf*; medieval histories and biographies that make vivid the coming of Christianity to pagan England, Ireland, and Scotland. With respect to early Christian visual culture, we will puzzle out how and why European painting and calligraphy were revolutionized in such manuscripts as the Lindisfarne Gospels and the Book of Kells, books that still amaze and inspire us. Our second major turning point will be the conquest of Anglo-Saxon England by the Normans, erstwhile pagan, seafaring Vikings who by 1066 had become Catholic, French, and Europe's acknowledged masters of the arts of war. The Norman impact on Anglo-Saxon England, involving as it does the feudalization of every institution, secular and religious, the transformation of every social group, and the rebuilding of every Anglo-Saxon cathedral and abbey in the new Norman (i.e., Romanesque) style will be the focus of much of our attention. In our study of the Norman and Angevin ages, we will constantly ask how great conflicts—English versus French, church versus state, king versus baron—led to the creation of ideals and institutions of such durability that they continue to shape our lives. Since our studies involve close examination of medieval sources, including such celebrated works of art and architecture as the Bayeux Tapestry, that contemporary but sometimes very enigmatic depiction of the Norman Conquest and Durham Cathedral, a glorious building that embodies much of the spirit of the new Norman age, one might

consider this not just a course about medieval England but also a workshop in actually “doing” medieval history, and “doing it” in an interdisciplinary way. Conference work may focus on medieval questions or related ones from another time and place.

*Open to any interested student.*

## The Twelfth-Century Renaissance

**Susan R. Kramer**

**Open—Spring**

In a movement characterized by one scholar as “the revolt of the medievalists,” many historians now claim for the High Middle Ages attributes once reserved to the fifteen-century Italian Renaissance. Twelfth-century Europe is said to have rediscovered not only its Latin literary past and its Roman architectural roots, but also jurisprudence, a new appreciation for the natural world, a sense of historical perspective, and the importance of the individual. Autobiographies, translations of ancient learning, scholastic arguments, and spiritual treatises are interpreted as evidence of a new optimism and creativity in the secular and religious realms. But this age was also witness to a growing appreciation of difference between groups and among individuals. As invigorated medieval institutions developed new mechanisms for establishing religious orthodoxy, the Papacy was censuring which texts could be taught in the schools. Through reading a variety of primary sources, including the autobiography of the twelfth-century monk Guibert of Nogent, St. Anselm's proofs of God, excerpts from the *Ethics* of Peter Abelard, and newly issued church canons, we will consider how the period defined itself.

*Open to any interested student.*

## Visions/Revisions: Issues in U.S. Women's History

**Priscilla Murolo**

**Advanced—Year**

This seminar surveys pathbreaking studies of U.S. women's history and related subjects, including women's lives beyond the United States. Course readings, both scholarship and political treatises, exemplify major trends in feminist discourse since the 1960s, from early challenges to androcentric worldviews to the current stress on differences among women. Class discussions will range from fundamental questions—What is feminism?

Is “women” a meaningful category?—to theoretical, interpretive, and methodological debates among women's historians. The course is designed to help advanced students of women's history to clarify research interests by assessing the work of their predecessors. M.A. candidates will also use the course to define thesis projects.

*Advanced. A graduate course open to qualified seniors and graduate students.*

## Women, Gender, and Politics in American History

**Eileen Ka-May Cheng**

*Advanced—Year*

A course on women's history in the United States can only be understood by way of its inextricable connection to the history of men. Therefore, while the emphasis of the course will be on women, we will also look at the category of gender more broadly, examining relations between men and women, and conceptions of masculinity and men's roles. More generally, the course will provide an overview of women's history in America, beginning with the seventeenth-century colonial settlements and extending to the 1970's, by focusing on the relationship between gender and politics. We will examine the extent to which women were able to participate in the public sphere, despite their exclusion from formal political power for much of the nation's history. We will place the topic of women and politics in the larger context of American history, studying how more general social and cultural trends affected and were affected by women's political activities. Specific topics and themes will include the ideology of separate spheres; the relationship between gender, race, and class; the impact of war on women; sectional and regional differences; the suffrage movement; and the emergence of feminism.

*Advanced. Juniors, seniors, and graduate students with background in history or related disciplines.*

## 2007-2008

1919

## Art and the Sacred in Late Antiquity and Medieval Europe

*Lecture, Open—Spring*

No time in history saw a richer, more varied expression of sacred art than the European Middle Ages. And no other age has known as powerful, as all-embracing a religious institution as the medieval church. In this interdisciplinary lecture course, we will ask why the Christian church and the art made in its service took such extraordinarily varied forms in the thousand-year period from the catacombs to Chartres, from the third century to the thirteenth. We will also ask why certain features of contemporary Christianity that are looked upon as quintessentially Catholic rather than Protestant were established not in the earliest years of the church but in Late Antiquity and the Middle Ages: monasteries and nunneries, the cult of the Virgin, a celibate clergy,

and a papal monarchy with virtually unlimited powers. Since Christianity is a religion not only for the here and now but for the afterlife, of special interest will be such perplexing beliefs as that we on earth might affect the fate of the dead in purgatory and, conversely, that some of the "very special dead" might assist the living, or perhaps punish them. Perhaps the most distinguishing feature of the course will be studying these topics in visual as well as written texts, for instance in the architecture and decoration of early Christian and Romanesque churches and, at St. Denis and Chartres, in the birth of the uniquely Western style that we call Gothic. By also examining how sacred words were illuminated in manuscripts linked to Lindisfarne, Kells, and Charlemagne's court, we will attempt to engage with a novel expression of spirituality in the Middle Ages, the book as icon. Near the end of our course, we will follow men and women from all over Europe on their pilgrimages to Santiago de Compostela, stopping at such memorable French Romanesque churches as Vézelay, Conques, and Moissac. In New York museums, students will have opportunities to view chapels and cloisters brought from Europe, as well as sculptures, ivories, metalwork, stained glass, books, paintings, and tapestries that are among the world's most precious treasures. Lectures will be devoted primarily to art; the weekly group conferences, to readings from the Middle Ages.

## Concepts of International Law and Human Rights: Their History and Contemporary Practice

**Tai-Heng Cheng**

*Open—Year*

Global human rights are rife with apparent contradictions. Should governments ignore fundamental freedoms and detain without trial individuals who might otherwise succeed in executing terrorist attacks? Why did the U.S. government help its corporations overseas guard their HIV medicine patents while threatening to breach its own patent for ciprofloxacin, a drug that treats anthrax? Why are some territories, but not others, permitted to secede from their predecessor state and achieve statehood? The first half of the course analyzes such apparent contradictions under different theories of human rights and international law as they have evolved over the previous several hundred years. The course will discuss the universalist, relativist, and central case approaches to human rights alongside the positivist and policy-oriented approaches to international law. By applying human rights and international law theories to global decision-making processes involving governments, nongovernmental organizations, the media, and other actors, the course offers varying explanations of global human rights as they currently exist. In the second half of the course, students will apply various human rights theories to different

contemporary human rights problems, such as the right to self-determination under different models of national government; human rights and national security in the context of terrorism; socioeconomic rights of developing countries versus the rights of foreign corporations to the protection of investments; the right to medicines versus the patent rights of pharmaceuticals; gay and lesbian rights; women's rights; freedom to practice religions that may be antithetical to other human rights; and freedom of movement across nations versus national rights to protect citizens and citizenship. If there is sufficient interest among seminar participants, students may each draft sections of a larger law review article on a pressing human rights issue.

## Effort, Merit, Privilege

*Persis Charles*

*Intermediate, Lecture—Fall*

This course is a history of ideas and practices connected to the notion of advancement by individual merit rather than inherited status or wealth. This comparatively modern idea is more complex and self-contradictory than it may first appear. We will focus on four historical epochs in which personal merit came increasingly to the fore. The first is the age of the French Revolution and Napoleon. With the cry "the career open to talent" and the abolition of feudal privilege, the revolutionaries helped to further the development of individualism, personal ambition, and self assertion, while at the same time implicating the citizen more and more deeply in the apparatus of the state. The second era will be Britain from 1859 until 1870, from the publication of the *Origin of Species*, with the anxieties it provoked about the struggle for existence, through the 1867 reform bill, enfranchising working men, itself a form of electoral meritocracy, to the education act of 1870, setting popular education on its feet as a national project. We will study the right to vote and to get an education as means by which the culture created marks of merit and look at the struggles of those excluded, such as women or the very poor, to find their place. The next period is the aftermath of the American Civil War, from Reconstruction through the era of Jim Crow. The slaves now free—what was to become of them? Should they compete in society at large, or was it their lot to be kept permanently in a kind of quasi-slavery? Could they ever hope to vote, own property securely, go to good schools, and reach the level of higher education? The debate over this was almost as fierce as the previous debate on the abolition of slavery. The last period is the aftermath of World War II. The foundation of the welfare state, especially in Britain and America, the coming of the G.I. Bill, the consequences of *Brown v. Board of Education*, the increasing use of intelligence testing, and the massive entrance of women into paid employment will be studied. The course will address such questions as whether meritocracy is compatible with democracy,

whether it is desirable or even possible, and to what extent it can influence ideas about work, social hierarchy, equality, and competition. Conference topics could be drawn from such areas as Victorian Britain, women's history, and African American history, among others. Authors to be read include Rousseau, Tocqueville, Darwin, Huxley, Booker T. Washington, and W. E. B. DuBois, among others.

*Best for students with some previous exposure to history or the social sciences*

## Espionage in the Twentieth Century

*Jefferson Adams*

*Open—Fall*

What has been called the world's second oldest profession truly came of age in the present era. Never before have so many countries—ranging from superpowers to aspiring third-world regimes—invested such vast resources into the creation and maintenance of permanent intelligence organizations. This course will explore not only the reasons behind this major historical development but also the different branches of intelligence—specifically cryptography, covert action, estimates and analysis, and counterintelligence. Besides examining how espionage has influenced the larger course of events, we will discuss the ethical dilemma of a secret government agency operating within a democratic society and the question of providing reliable intelligence for policymakers. Particular attention will be given to the cold war conflict as well as to the more recent war on terrorism. Relying on a variety of sources and approaches, the class assignments will consist of autobiography, historical analysis, case studies, fictionalized accounts, and film. For conference, some past topics have included the evolution of the Mossad, the case of the double agent Robert Hanssen, the life and writings of Lawrence of Arabia, and women in the OSS.

## First-Year Studies: Readings in U.S. Cultural and Intellectual History

*Lyde Cullen Sizer*

*FYS*

This course will begin and end with the voices of Americans struggling to make sense of their world. Commencing with the American Revolution, and continuing through the social movements of the 1960's and into the 1970's, we will read primary sources of all kinds, from editorials and essays, to cultural critiques, to memoir and narrative, to stories and novels. We will be looking at the ways Americans chose to make change, to reveal the conflict they understood to be slowing or halting that change, and, significantly, at the historical context that girds their words and efforts.

## First-Year Studies: Religion and Art in the Making of Europe

FYS

"In the beginning was the Word ..." We will start with this mysterious evocation of Genesis at the opening of John's Gospel account of Jesus. The Hebrew Scriptures, what Christians call the "Old Testament," as well as what is known as the "New Testament," are the basis of Judaism and Christianity. Throughout this course, we shall inquire how these works of literature, through interpretation and reinterpretation, generated a variety of different cultural systems. Topics to be examined include canon, exegesis, Midrash, prefiguration; temple, synagogue, church; Wisdom and Logos. Questions about the historical development of Europe as a Christian culture include, What were rival forms of Christianity in the early church? Was the victory of "orthodoxy" and the burial of texts labeled heretical (until their rediscovery in the twentieth century) a "good thing"? "What does Athens have to do with Jerusalem?" or, as we might say, What did classical civilization have to do with Christianity? What did "conversion" variously mean to Roman emperors like Constantine, intellectuals like St. Augustine, barbarian tribal leaders like Clovis, and missionaries like St. Patrick, and how did these converts in turn reshape Christianity? Would the Jewish Palestinian founders of Christianity recognize what had become of their faith as it gained converts throughout the Roman Empire and medieval Europe? Why does a history course that highlights religious thought, behavior, and institutions also focus on art? One reason is that it is fun to read the art and architecture alongside texts as historical evidence. Another is that they are some of mankind's greatest treasures. A third is that basilicas, mosaics, sculptures, and illuminated manuscripts were central to the self-identity of early Christians and medieval Europeans; moreover, future generations, whether they admired or detested what they saw, also considered this art as quintessentially European and Christian, as opposed to Byzantine or Islamic. Thus, while many of our sources are literary—selections from the Bible, Augustine's *Confessions*, *Beowulf*, the letters of Abelard and Heloise—many are visual: the Arch of Constantine; St. Peter's basilica and Santa Maria Maggiore; illuminations in Gospel books linked to such monasteries as Lindisfarne in England and Kells in Ireland that radically transformed the very idea of a book in Western culture; Romanesque and Gothic cathedrals like Durham, Vézelay, and Chartres. We will also take advantage of our proximity to New York museums to view the finest medieval collections in North America.

## First-Year Studies: Self and Society in Medieval Christendom

Susan R. Kramer

Year

"In the Middle Ages both sides of human consciousness—that which was turned within and that which was turned without—lay dreaming or half awake beneath a common veil. The veil was woven of faith, illusion and childish prepossession through which the world and history was clad in strange hues."  
—Jacob Burckhardt, *The Civilization of the Renaissance in Italy*

Though most historians now would nuance Burckhardt's famous characterization of medieval culture, few would dispute the critical role of religion in shaping medieval life and thought. Drawing on sources from the first century to the fourteenth, this course will look at the interplay of religious faith and religious institutions in creation of medieval Christendom. Readings in the first semester will focus primarily on foundational texts in shaping Western thought, while the second semester will examine the church's use of force against those both within and without the Christian community.

## France and Germany in the Twentieth Century

Jefferson Adams

Open—Spring

"If France were married to a country," one historian astutely observed, "it would be to Germany." Bitter adversaries during the First World War and yet today intimate partners within the European Union, France and Germany have indeed sustained one of the most complex and intriguing relationships during the past century. This course will examine the development of that relationship, looking carefully at economic, political, and social conditions in both countries. As they each experienced remarkable cultural effloresces (albeit under quite different circumstances), we will also investigate the role played by various writers and artists. The class assignments will be varied, relying not only on historical accounts but also on memoirs, biographies, novels, and films. A few of the main topics include the legacy of the First World War; the rise of totalitarian movements; the impact of the Second World War on ordinary citizens of both countries; the significance of leaders such as Philippe Pétain, Charles de Gaulle, Adolf Hitler, and Konrad Adenauer; the construction of a larger European community after 1945; and the impact of Germany's reunification in 1990. For conference projects, students may select a historical figure or problem from either country; topics that embrace both France and Germany are especially encouraged.

## From Baroque to Romanticism: The Winding Course of the European Enlightenment

**Philip Swoboda**

*Open—Year*

The eighteenth-century Enlightenment was arguably the most important single episode in the last thousand years of European intellectual history—the true watershed between the “modern” and the “premodern” world. Yet historians have found the Enlightenment a singularly elusive phenomenon. Enlightenment thought was woven of several very different strands; the champions of “enlightenment” shared a surprisingly large number of assumptions with their supposed opponents; and some of the beliefs we regard as most characteristic of the Enlightenment were already being attacked by Rousseau and other adventurous pre-Romantic thinkers before the century was half over. This course will examine the development of the Enlightenment from its origins in the age of the Baroque to its demise in the era of the French Revolution and Romanticism. While the course’s central focus will be ideas, values, and sensibilities, we will also consider the economic, social, and political context of the Enlightenment and examine the revolutionary upheavals in European politics and culture that brought it to an end.

## From Nasser to bin Laden: Understanding Contemporary Arab Politics

**Fawaz Gerges**

*Open—Year*

This seminar examines the complex dynamics of Arab politics since the establishment of the contemporary Middle Eastern state in the early 1920’s. Most of these states were born out of the rubble of World War I and the destruction of the Ottoman Empire. Britain and France not only divided the vast territories of the Ottoman Empire between themselves but also drew the political map of the modern Middle East by reorganizing the old political structures along nation-states. This course will focus on the internal dynamics—sociopolitical and economic, religious and cultural forces—as well as on external forces, which have shaped political life in the region. In other words, the seminar will not only assess the role of European colonialism in forging the region’s modern history but also the input of the indigenous forces like the interplay between secular nationalism and political Islam. Special attention will be paid to the rise of European hegemony after World War I and the response of social and religious groups to the cultural, economic, and political influence of Western power. For example, why have some countries developed democratic institutions, while others have become increasingly dictatorial, espousing a form of secular

authoritarianism, and yet others have sought to define their identity in terms of Islamic activism? What have been the causes and consequences of the five Arab-Israeli wars on political governance, economic development, and relations between state and society? What does explain the vacuum of legitimate authority and the absence of “liberal democracy” in the Arab Middle East? What does explain the rise of military rule and the cult of personality and revolutionary Islamism, or jihadism? What lies at heart of the longevity and durability of Arab dictatorships? Can we understand the prolonged turmoil and upheaval in Arab politics in the twentieth and twenty-first centuries—the rise of the man on the horseback and the bin Laden phenomenon—without delving deeper into the structure of Arab political culture and American foreign policies?

## From the Catacombs to Chartres: A Research Seminar in Christian Iconography

*Advanced—Fall*

All three religions of the book have rich traditions of verbal exegesis, but unlike Judaism and Islam, only Christianity created and sustained an elaborate visual language to represent and interpret its sacred texts. If the study of the subject matter in art is iconography, what such an investigation might mean in practice can vary widely from identification of personages, episodes, and symbols to the more challenging, historically oriented examination of what text is the basis for the imagery (if indeed the imagery is grounded in a text), why that imagery or architectural form was chosen in a particular time and place, why it might be grouped with others that appear unrelated, and what such choices might have meant to a patron, an artist, and their community. In short, iconography is about human beings making choices. Thus, one might need to consider biblical exegesis, theology, legends, historical context (including society, politics, controversies, psychology, climate of opinion), in addition to possible artistic models—indeed all the tools of history. Our goal in this course will be to strive for this more inclusive study of iconography, while recognizing time limitations. To move toward this goal we will learn from, while critiquing, iconographical interpretations by some of art history’s masters, André Grabar, Émile Mâle, Erwin Panofsky, Richard Krautheimer, Meyer Schapiro, scholars who sought the relationships of words to images, and of art more generally, including architecture, to historical context. However, student research projects, perhaps undertaken in collaboration with others, are the core of this course. We will learn how to use library research tools and, with the assistance of professionals in computer technology, we will refine skills to better use Internet images in doing research and making presentations. We will assist each other at every

step of the way and present findings orally and in written drafts to the class for help and criticism. One might envision the results being “published,” i.e., posted on the Internet. Previous college study in some aspects of ancient, medieval, Renaissance culture is mandatory, though not necessarily in art history.

*Permission of the instructor is required.*

## Global Africa: Theories and Cultures of Diaspora

**Mary Dillard**

*Advanced—Spring*

Changes in migration patterns, immigration laws, and refugee policies have meant that Africans are living and working in unexpected places. Studies of the African diaspora used to focus on the dispersion of Africans as a result of the trans-Saharan, transatlantic, and Indian Ocean slave trades. More recent scholarship has focused on new African diasporas: Senegambians in Harlem and Rome, Ghanaians in Germany, Nigerians in Japan. These modern-day dispersals, powered in part by the forces of globalization, demand new levels of analysis by scholars. How have people of African descent ended up settling in places far from their natal homes? How has the concept of an African homeland contributed to the articulation of religious and political movements (Ethiopianism, black power, Rastafarianism, Pan-Africanism) in the diaspora? How have theories about other diasporas (South Asian, Jewish, Chinese, etc.) informed scholarship on the African diaspora? This course will study these new African migrations, as well as revisit the histories of older settlement patterns. Students who have taken courses in Africana Studies, Asian Studies, Global Studies, Latin American Studies, or International Relations are particularly encouraged to apply.

## Harvest! Land, Labor, and Natural Resources in Latin American History

**Matilde Zimmermann**

*Intermediate—Fall*

This seminar looks at how natural environments and systems of labor and capital have intersected at different periods in the history of Latin America. How have humans transformed, tamed, devastated—and sometimes been devastated by—their material surroundings in the quest for sustenance, shelter, and eventually profit, “progress,” and power? We will start with Jared Diamond’s materialist, “long-view” explanation of global inequality in *Guns, Germs, and Steel*; take a critical look at the idea of indigenous Americans’ spiritual oneness with the earth; and proceed through a series of case studies and theoretical essays covering peasant production, plantation slavery,

forest product exploitation, export agriculture, and corporate mining and logging. We will use the vehicle of agrarian/environmental history to examine some of the most important themes in Latin American history—violence, slavery, migrations, race, imperialism, gender, human rights, trade, labor, revolution.

*Open to sophomores and above.*

## Modern Russia

**Philip Swoboda**

*Open—Spring*

To grasp the nature and causes of Russia’s current political and economic predicament, one has to understand the extraordinary path that the country followed to become a literate, urban, industrial society. In this course, we will examine seven decades of Communist Party rule in Russia and consider how the experiences the country underwent during that era have shaped its post-Communist development under Yeltsin and Putin. The assigned reading will center on episodes in Soviet history that left a particularly enduring mark on Russian society: Stalin’s war on the peasantry and his crash industrialization drive of the 1930’s, the Great Purge, the Second World War, the Khrushchev-era cultural “Thaw,” the development of a consumer economy and embryonic civil society in the 1960’s and 1970’s, and Gorbachev’s failed attempt to reform the Communist system. The assigned reading will include, besides primary texts and historical monographs, a variety of literary works and films that illustrate the impact of these events on ordinary Russians.

## Public Stories, Private Lives: Methods of Oral History

**Mary Dillard**

*Intermediate—Spring*

Oral history methodology has moved from a contested approach to studying history to an integral method of learning about the past. This is because oral histories allow us to gain an understanding of past events from a diverse array of vantage points. Methods of recording oral history also allow the possibility of bringing private stories into the public. In contrast, public history in the form of monuments, museums, and World Heritage Sites are consciously preserved in order to emphasize particular aspects of a national, regional, or local past, which its protectors deem to be important. Who owns this history? Is it Civil War re-enactors who dedicate their weekends to remembering this war? Is it the African Americans who return to West Africa in search of their African past or the West Africans who want to forget about their slave trading past? What happens when the methods for interpreting public and oral histories combine? This course places particular attention on the importance of oral history in tracing memories of the past. We will discuss how Africanist

and feminist scholars have used oral history to study the history of underrepresented groups. We will also investigate how methods of oral history and public history can be used in reconstructing the local history of our surrounding community (Yonkers, Bronxville, Westchester).

## Sisters in Struggle: Women and U.S. Social Movements in the Twentieth Century

**Mary Reynolds**

*Advanced—Year*

From kitchen tables to assembly lines, from legislative podiums to sidewalk soapboxes, women have demanded dignity and respect for themselves, their families, and their communities. This course traces the history of such mobilizations in the twentieth-century United States, focusing especially on moments that can illuminate the gender dynamics of epic contests over class, race, and empire. We will explore the many varieties of women's work for labor and civil rights movements; the multiple ways in which women have constructed activist identities; competing definitions of women's liberation, women's issues, and women's rights; and their activism's impacts on personal relationships and family life as well as national and international politics. Readings and materials include oral history, fiction, film, and autobiography, in addition to historical scholarship.

*Open to graduate students, seniors, and qualified juniors.*

## The American Revolution and Its Legacy: The Making of American Nationalism

**Eileen Ka-May Cheng**

*Advanced—Year*

It may be comforting to know that historians agree that an American Revolution did indeed occur. Less comforting but more intriguing may be the realization that historians do not agree on when it commenced and when it ended, much less on the full meaning of what exactly took place beyond the mere facts of the Revolution. Certainly, the question was profound enough to move John Adams to ask, "What do we mean by the Revolution?" In the fall, we will examine the causes and character of the Revolution by studying the political, intellectual, social, and cultural dimensions of this event. In the spring, we will look at how Americans adapted the legacy of the Revolution to the social and political changes of the nineteenth century and at how that legacy at once divided and unified Americans in this period. How were both opponents and defenders of slavery able to appeal to the Revolution to legitimize their views? What was the relationship between the Revolution and the Civil War? Was the Civil War a "second American Revolution"? By looking at how

Americans used the memory of the Revolution to define their identity, the course ultimately aims to achieve a better understanding of the basis for and nature of American nationalism.

## The Caribbean and the Atlantic World

**Matilde Zimmermann**

*Intermediate—Year*

The Caribbean is Cuba, Jamaica, Haiti, Puerto Rico—and it is also Venezuela, eighteenth-century New Orleans, the coastal areas of Central America settled by runaway shipwrecked slaves, and south Florida. The Caribbean speaks Spanish, English, Creole, French, Dutch, Portuguese, Papaminto, and Miskitu. It is an area of tremendous diversity but linked by common experiences of African slavery, colonial domination, underdevelopment, nationalism, and revolution. This course examines the history and culture of the Caribbean, from 1492 to the present, with special emphasis on its place in the world: a source of unprecedented wealth built by the labor of enslaved Africans; a hot spot of international competition, piracy, and war; a crossroads of goods, ideas, and people; and in the twentieth century, a region struggling to be more than an "American lake." We will pay particular attention to Haiti and Cuba, whose democratic and socialist revolutions had an impact in the Americas as powerful as the other, better-known "great revolutions" of the eighteenth and twentieth centuries. In our study of the ways in which the Caribbean has been connected to other parts of the Atlantic World, we will use monographs that represent a variety of different historical methodologies and emphases (social, economic, cultural, Atlantic, environmental, and gender history), as well as primary sources.

*Open to sophomores and above.*

## The Many Faces of Political Islam

**Fawaz Gerges**

*Open—Year*

This seminar examines political Islam or Islamism by situating its various manifestations in their historical, sociological, and geographic contexts. It will begin by defining political Islam while posing two critical questions: (1) Is there one political Islam, or are there many? and (2) Is politicized religion unique to Islam, or is it a part of the worldwide phenomenon? The course will attempt to answer these questions by looking back in time and space; it will analyze the interactions between religion and politics historically in Muslim societies and comparing them to similar interactions in other religious traditions. The seminar will also identify different categories of actors who claim to speak on Islam, especially in the political arena. Next, the seminar will move to studying the emergence and course

of political Islam, both as ideology and political movement, in seven of the most important Muslim countries—Egypt, Pakistan, Saudi Arabia, Iran, Turkey, Algeria, and Indonesia. The case studies show how political Islam manifested itself differently in these countries and how it has been the product of discreet contexts that have “nationalized” political expressions of Islam. Transnational manifestations of political Islam in both its peaceful varieties and those that find expressions through armed struggle and extremist means will also be covered. To what extent are transnational manifestations of Islam marginal to mainstream Islamism, and what is the relative weight of militant Islamists within political Islam? The course will look at important variables that are not inherent in political Islam but that contribute to particular manifestations of Islamism, such as authoritarianism in many Muslim countries, the failure of imported models of developments, and policies pursued by Western powers, particularly the United States. Finally, we will evaluate the future prospects of political Islam.

## The Twelfth-Century Renaissance

**Susan R. Kramer**

*Open—Spring*

In a movement characterized by one scholar as “the revolt of the medievalists,” many historians now claim for the High Middle Ages attributes once reserved to the fifteen-century Italian Renaissance. Twelfth-century Europe is said to have rediscovered not only its Latin literary past and its Roman architectural roots, but also jurisprudence, a new appreciation for the natural world, a sense of historical perspective, and the importance of the individual. Autobiographies, translations of ancient learning, scholastic arguments, and spiritual treatises are interpreted as evidence of a new optimism and creativity in the secular and religious realms. But this age was also witness to a growing appreciation of difference between groups and among individuals. As invigorated medieval institutions developed new mechanisms for establishing religious orthodoxy, the papacy was censoring which texts could be taught in the schools. Through reading a variety of primary sources, including the autobiography of the twelfth-century monk Guibert of Nogent, St. Anselm’s proof of God, and excerpts from the medical and spiritual writings of Hildegard of Bingen, we will consider how the period defined itself.

*Open to any interested student. First-year students with permission.*

## The World’s Women During the Enlightenment

**Gina Luria Walker**

*Open—Year*

“Et nous aussi, nous sommes citoyennes” (And we too are citizens). Could the *Rights of Man* be rewritten to address the *Wrongs of Woman* in a revolutionary era? In her groundbreaking *Legislative Views for Women* (1790), Marie Madeleine Jodin expresses the aspirations and frustrations of attempts to do so. This course traces women’s unprecedented engagement in the republic of letters and public action during a period of geopolitical and intellectual turbulence. To understand the emergence of late Enlightenment feminisms, we consider the cognitive advances proposed by Descartes, Newton, and Locke in the seventeenth century; the explosion of print culture; Caribbean slave rebellions; and the American and French Revolutions in the eighteenth century. We read landmark and little-known texts by and about women that address the “right to private judgment,” debates over “female education,” the gendering of knowledge, and ongoing battles about slavery, political representation, and suffrage. New research on women’s global history allows us to explore neglected continuities and alliances among women from diverse cultures that challenge conventional narratives of empire. Students will have the opportunity to design a research project of their choice that expands our knowledge of women’s roles in early modern history.

## Urban Poverty and Public Policy in United States

**Komozi Woodard**

*Intermediate—Year*

Since the United States of America is a rich country and the Supreme Court ruled against school segregation in 1954, many would like to believe that in the United States poverty and school segregation are issues in America’s distant past. The paradox between American wealth and the nation’s poverty raises a number of questions. What is the extent of inequality in America’s schools? What is the history of America’s poor? What has been the public policy on urban poverty through the years? Have there been any major changes in economic hardship over time? What is the poorhouse and what is its legacy of the poorhouse on our nation’s welfare system? Has there always been a housing crisis in Manhattan? What was the nature of the urban crisis in the aftermath of the Second World War? And what did the Great Society and the war on poverty do to solve it? This seminar explores the dynamics of capitalism in cities with merchant, industrial, and postindustrial economies; it investigates the nature of immigration, class formation, social reformers and political bosses, ethnic and race relations, slums and ghettos, work and residence, opportunity structures and social mobility,

corporate investment strategies and federal urban renewal policies, as well as poverty and welfare. Students will pay special attention to the relationship of ideas and institutions in the rise of schools, prisons, and asylums in urban America. What is the meaning of blackness and whiteness in the United States? And why does that matter? Finally, what is the impact of the economic degradation of poor people on American citizenship in general? What is the price of citizenship in the era of globalization?

## Visions/Revisions: Issues in U.S. Women's History

**Lyde Cullen Sizer**

*Advanced—Year*

This seminar surveys path-breaking studies of U.S. women's history and related subjects, including women's lives beyond the United States. Course readings, both scholarship and political treatises, exemplify major trends in feminist discourse since the 1960's, from early challenges to androcentric worldviews to the current stress on differences among women. Class discussions will range from fundamental questions—What is feminism? Is “women” a meaningful category?—to theoretical, interpretive, and methodological debates among women's historians. The course is designed to help advanced students of women's history to clarify research interests by assessing the work of their predecessors. M.A. candidates will also use the course to define thesis projects.

*A graduate course open to qualified seniors and graduate students.*

## Women and the Church in Late Antiquity Through the Late Middle Ages

**Susan R. Kramer**

*Open—Fall*

The Christian Bible is notably ambiguous on the place of women in the church. While one New Testament letter admonishes that women must be silent in church, other scriptural passages have been read as supporting women's active ministry. This course will examine primary as well as secondary sources to determine women's public and private roles in the church from the first century through the Late Middle Ages. A central theme will be the degree to which women's religious activities were sanctioned or condemned by ecclesiastical authorities.

## Women in the Black Revolt: The Lecture

**Komozi Woodard**

*Lecture, Open—Fall*

This lecture course explores several historical dimensions of women's leadership in the black freedom struggle in the United States. Women like Mary Prince and Linda Brent fought American slavery on a number of fronts, resisting their exploitation in production and reproduction, defining the meaning of kinship, creating sisterhood and community, fashioning spiritual movements, and writing narratives as the liberating act of self-definition. Forging their freedom, washer women like Callie House fought for the right to have some pleasure in life; they also led labor battles, initiated general strikes, and mobilized mass movements for reparations. Women like Ida B. Wells led anti-lynching crusades and those like Amy Jacques Garvey sustained Pan-African political movements. Intellectuals like Anna Julia Cooper criticized male chauvinism and challenged patriarchy. Sisters like Vicki Garvin created radical theories and those like Gloria Richardson and Diane Nash mapped strategies for liberation. Sarah Muhammad led the Nation of Islam and Elaine Brown chaired the Black Panther Party. Women like Ella Baker and Septima Clark pioneered the organizing tradition in the Black Revolt, and sisters like Johnnie Tillmon and Ruby Duncan served as the vanguard of the welfare rights movement. Thus, this course examines the lives of a number of those leaders, writers, artists, and intellectuals, including Mary Bethune, Elizabeth Catlett, Anne Moody, Fannie Lou Hamer, Angela Davis, and Assata Shakur.

## Women in the Black Revolt: The Seminar

**Komozi Woodard**

*Open—Spring*

This seminar explores several historical dimensions of women's leadership in the black freedom struggle in the United States. Women like Mary Prince and Linda Brent fought American slavery on a number of fronts, resisting their exploitation in production and reproduction, defining the meaning of kinship, creating sisterhood and community, fashioning spiritual movements, and writing narratives as the liberating act of self-definition. Forging their freedom, washer women like Callie House fought for the right to have some pleasure in life; they also led labor battles, initiated general strikes, and mobilized mass movements for reparations. Women like Ida B. Wells led anti-lynching crusades and those like Amy Jacques Garvey sustained Pan-African political movements. Intellectuals like Anna Julia Cooper criticized male chauvinism and challenged patriarchy. Sisters like Vicki Garvin created radical theories and those like Gloria Richardson and

Diane Nash mapped strategies for liberation. Sarah Muhammad led the Nation of Islam and Elaine Brown chaired the Black Panther Party. Women like Ella Baker and Septima Clark pioneered the organizing tradition in the Black Revolt, and sisters like Johnnie Tillmon and Ruby Duncan served as the vanguard of the welfare rights movement. Thus, this course examines the lives of a number of those leaders, writers, artists, and intellectuals, including Mary Bethune, Elizabeth Catlett, Anne Moody, Fannie Lou Hamer, Angela Davis, and Assata Shakur.

## **“If You Can Make it Here ...”: A History of New York City**

**Rona Holub**

*Open—Year*

This course traces the development of New York City from a trading post into a great commercial and cultural center. We will explore the social, political, economic, and cultural histories of the city through a wide range of readings that include primary documents, historical scholarship, and literature. We will also experience the rhythms of this famous metropolis on its streets, in its museums, and through the stories told by its built environment. With special emphasis on the diverse groups of people who built the city, this course will provide an understanding of how and why New York City came to be what it is today and how, as a dynamic organism, it continues to change.

## **“Not by Fact Alone”: The Making of History**

**Eileen Ka-May Cheng**

*Open—Year*

History, like memory, is a reconstruction and as such does not call out to us to be seen or heard. Instead we seek and discover seeing only what our perspective illuminates. For the Puritans, history was the unfolding of providential design. Purpose, like the seed of a plant, was always present in the unfolding of events. For Enlightenment philosophers, history was the story of progress effected by human reason. Purpose in this case was a human triumph, such as the triumph of medicine over prayer. For Marx, history was the story of class struggle. In this case, purpose was no more than following the money trail, coupled with the added optimism that in the end the scales of justice would be balanced. Each of these perspectives recognized and struggled with the notion that history is, in the final analysis, a fate beyond human control because of the paramount role of unintended consequences that counterpoints the history of societies no less than it counterpoints the life of the individual. In other words, is purpose an artifact of human understanding or woven into the tapestry of history? We will study the different ways that American and European thinkers from the

seventeenth to the twentieth centuries grappled with this question in their writings on history. The course will examine the conflicts and changes in their views on both the nature of the historical process and the way that history should be represented by historians. We will look at how these differences both reflected and contributed to broader intellectual, political, and social changes in this period. Such an examination will demonstrate the ways in which conceptions of history were themselves the product of history.

## **2008-2009**

### **Art and the Sacred in Late Antiquity and Medieval Europe**

*Lecture—Spring*

No time in history saw a richer, more varied expression of sacred art than the European Middle Ages. And no other age has known as powerful, as all-embracing a religious institution as the medieval church. In this interdisciplinary lecture course, we will ask why the Christian church and the art made in its service took such extraordinarily varied forms in the thousand-year period from the catacombs to Chartres, from the third century to the thirteenth. We will also ask why certain features of contemporary Christianity that are looked upon as quintessentially Catholic rather than Protestant were established not in the earliest years of the church but in Late Antiquity and the Middle Ages: monasteries and nunneries, the cult of the Virgin, a celibate clergy, and a papal monarchy with virtually unlimited powers. Since Christianity is a religion not only for the here and now but for the afterlife, of special interest will be such perplexing beliefs as that we on earth might affect the fate of the dead in purgatory and, conversely, that some of the “very special dead” might assist the living or perhaps punish them. Perhaps the most distinguishing feature of the course will be studying these topics in visual as well as written texts, for instance, in the architecture and decoration of early Christian and Romanesque churches and, at St. Denis and Chartres, in the birth of the uniquely Western style that we call Gothic. By also examining how sacred words were illuminated in manuscripts linked to Lindisfarne, Kells, and Charlemagne’s court, we will attempt to engage with a novel expression of spirituality in the Middle Ages, the book as icon. Near the end of our course, we will follow men and women from all over Europe on their pilgrimages to Santiago de Compostela, stopping at such memorable French Romanesque churches as Vézelay, Conques, and Moissac. In New York museums, students will have opportunities to view chapels and cloisters brought from Europe, as well as sculptures, ivories, metalwork, stained glass, books, paintings, and tapestries that are among the world’s most precious

treasures. Lectures will be devoted primarily to art; the weekly group conferences, to readings from the Middle Ages.

## Deadly Embrace: America's Encounter with the World of Islam

**Fawaz Gerges**

*Open—Year*

When the dust settled after World War II, the United States emerged as one of the two most powerful nations in the international system and, by far, one of the most respected great powers in the world of Islam. America was seen as a progressive island in a sea of European reaction and colonialism. At that moment, the dominant question was “why do they like us so much?” not “why do they hate us so much?” What went wrong with America's relations with Muslim civil societies in the second part of the twentieth century? Why has the initial promising encounter between the United States and Arabs/ Muslims turned sour? What lies at the heart of the dramatic shift in American foreign policy and Muslims' perceptions of the United States as well? To what extent has the United States inherited the colonial legacy of its European allies? Has the United States played empire? Or to what extent has America become a scapegoat for most of the ills and misfortunes that have befallen the world of Islam in the last fifty years? Is it not misleading to frame the debate about America and the world of Islam in such generalizing and reductionist terms? What are the most critical approaches and frameworks that throw lights on the nature, structure, and character of forces that have influenced relations between the two cultures and civilizations?

## Diplomacy and Intelligence in Modern History

**Jefferson Adams**

*Open—Year*

By what means have different historical states and empires acquired vital knowledge about one another? And how, over the centuries, have various techniques of negotiation evolved, leading either to reconciliation or to warfare? This course will begin its inquiry in the Italian Renaissance, which saw the birth of modern diplomacy, and then proceed to examine how balance of power and Realpolitik culminated in the remarkable state-system of the nineteenth century. The impact of totalitarianism in the twentieth century—as well as the struggles of the cold war—will also be carefully assessed. Finally, some key Eastern approaches to strategy and warfare will be explored to gain a better understanding of the nature of the non-Western world. Throughout the course, emphasis will be placed on the role of intelligence gathering and covert action and their influence on the course of events. Attention will also be

given to the difficult problem of reconciling clandestine government operations with the ideals of an open democratic society. The class assignments will draw from a variety of sources—historical narrative, firsthand accounts, novels, and films.

## First-Year Studies: Becoming Modern: Europe in the Nineteenth Century

**Philip Swoboda**

*FYS*

What are the distinctive features of our “modern” civilization? A partial list would include representative democracy, political parties, nationalism, religious pluralism, mass production, rapid technological change, consumerism, free markets, a global economy, and unceasing artistic experimentation. All these characteristically modern things became established in the nineteenth century, and most of them were pioneered by Europeans. Yet in Europe, with its ancient institutions and deeply rooted traditions, this new form of civilization encountered greater resistance than it did in that other center of innovation, the United States. The resulting tensions between old and new in Europe set the stage for the devastating world wars and revolutions of the twentieth century. In this course, we will examine various aspects of the epochal transformation in ways of making, thinking, and living that occurred in Europe during what historians call the “long nineteenth century” (1789–1914). We will also consider how the development of modern civilization in Europe was shaped by the resistance it encountered from the defenders of older ways. The course reading will focus primarily on the most innovative regions of nineteenth-century Europe: Britain, France, Germany, Scandinavia, and Italy; but we will also give some attention to the Hapsburg Empire and Russia, which gave birth to some of the most influential ideas of the twentieth century during the three decades that preceded World War I. We will ponder and discuss a broad array of historical evidence: from government documents, revolutionary proclamations, and political tracts to philosophical essays, fiction, plays, poetry, and works of visual art.

## First-Year Studies: Empires to Nations: Inventing the Modern Middle East

**Fawaz Gerges**

*FYS*

Most of the states in the modern Middle East were born out of the rubble of World War I and the destruction of great empires. Britain and France divided the vast territories of the Ottoman Empire between themselves and drew the map of the modern Middle East by reorganizing the old political structures along nation-

states. This seminar will examine the complex sociopolitical, religious, and cultural dynamics and external forces, which have shaped life in the region, as well as the dominant political ideologies—pan-nationalism, Islamism, and Arab socialism. It will begin with a survey of the modern Middle East (geography, people, religions, major countries, and international relations) and emphasize the close linkage and interlay between domestic, regional, and international processes. Special attention will be paid to the rise of European hegemony after World War I and the response of social groups to the cultural, economic, and political influence of Western powers. For example, why have some countries developed democratic institutions, while others have become increasingly dictatorial, espousing a form of secular authoritarianism, and yet others have sought to define their politics in terms of Islamic activism? What are the causes and consequences of the five Arab-Israeli wars on political governance, economic development, and relations between state and society? What does explain the rise and consolidation of military rule? And what are the repercussions of continuing Western meddling in the region's internal affairs? This seminar will not only assess the role of Western powers in forging the region's modern history but also the input of indigenous forces, such as secular nationalism and religion. We will study the diverse societies and regime type of the major states—Egypt, Turkey, Iran, Israel, Syria, Iraq, and Saudi Arabia—in an effort to understand why some countries have succeeded in developing democratic forms of government, while others have become increasingly dictatorial. The seminar will also address the question of reform and change. How and where will reform come from in light of the unholy alliance that exists between authoritarian rulers and the religious establishment? What role does the dominant international political and economic order play in perpetuating the status quo in the Middle East?

## First-Year Studies: “In the Tradition”: An Introduction to African American History and Black Cultural Renaissance

**Komozi Woodard**

FYS

African American history is an important window into the history of the United States and the rise of the modern world. Using African American history, culture, and consciousness as the focus, this course will introduce students to American history and world history. Students will begin with such classics as *The Souls of Black Folk* and *Up from Slavery* as well as *Coming of Age in Mississippi* and *Down These Mean Streets*. We will explore where such writers as St. Augustine, Aleksandr Pushkin, and Alexandre Dumas fit into the traditions of the African diaspora and Africana studies. The course

will also examine such major developments as the Atlantic slave trade in the making of the modern world; comparative slavery and emancipation; the classic slave narratives; the Civil War and Reconstruction; the Great Migration and Harlem Renaissance; making race and nation in the United States, Brazil, and South Africa; the racial politics of New Deal citizenship; African Americans in the city; the rise of blues and jazz; women in the black revolt; civil rights and black power; and the black arts movement.

## From the Catacombs to Chartres: A Research Seminar in Christian Iconography

**Advanced—Year**

All three religions of the book have rich traditions of verbal exegesis, but unlike Judaism and Islam, only Christianity created and sustained an elaborate visual language to represent and interpret its sacred texts. If the study of the subject matter in art is iconography, what such an investigation might mean in practice can vary widely from identification of personages, episodes, and symbols to the more challenging, historically oriented examination of what text is the basis for the imagery (if indeed the imagery is grounded in a text); why that imagery or architectural form was chosen in a particular time and place; why it might be grouped with others that appear unrelated; and what such choices might have meant to a patron, an artist, and their community. In short, iconography is about human beings making choices. Thus, one might need to consider biblical exegesis, theology, legends, historical context (including society, politics, controversies, psychology, climate of opinion), in addition to possible artistic models—indeed all the tools of history. Our goal in this course will be to strive for this more inclusive study of iconography, while recognizing time limitations. To move toward this goal we will learn from, while critiquing, iconographical interpretations by some of art history's masters, André Grabar, Émile Mâle, Erwin Panofsky, Richard Krautheimer, Meyer Schapiro, scholars who sought the relationships of words to images, and of art more generally, including architecture, to historical context. However, student research projects, perhaps undertaken in collaboration with others, are the core of this course. We will learn how to use library research tools and, with the assistance of professionals in computer technology, we will refine skills to better use Internet images in doing research and making presentations. We will assist each other at every step of the way and present findings orally and in written drafts to the class for help and criticism. One might envision the results being “published,” i.e., posted on the Internet. Previous college study in some aspects of ancient, medieval, Renaissance culture is mandatory, though not necessarily in art history.

*Permission of the instructor is required.*

## Global Africa: Theories and Cultures of Diaspora

**Mary Dillard**

*Intermediate—Year*

Changes in migration patterns, immigration laws, and refugee policies have meant that Africans are living and working in unexpected places. Studies of the African diaspora used to focus on the dispersion of Africans as a result of the trans-Saharan, transatlantic, and Indian Ocean slave trades. More recent scholarship has focused on new African diasporas: Senegambians in Harlem and Rome, Ghanaians in Germany, Nigerians in Japan. These modern-day dispersals, powered in part by the forces of globalization, demand new levels of analysis by scholars. How have people of African descent ended up settling in places far from their natal homes? How has the concept of an African homeland contributed to the articulation of religious and political movements (Ethiopianism, black power, Rastafarianism, Pan-Africanism) in the diaspora? How have theories about other diasporas (South Asian, Jewish, Chinese, etc.) informed scholarship on the African diaspora? This course will study these new African migrations, as well as revisit the histories of older settlement patterns. This will be a service learning course.

*Students who have taken courses in Africana Studies, Asian Studies, Global Studies, Latin American Studies, or International Relations are particularly encouraged to apply.*

## Leisure and Danger

**Persis Charles**

*Advanced—Year*

The interaction between work and play has taken various forms in history. Our project in this course will be to examine the changes and continuities in the idea of leisure. Beginning in early modern Europe, we will trace the concept up to the present, concentrating on Europe and America, and reflecting on such subjects as travel and the pursuit of the exotic, theatricality, consumerism, luxury, and display. In the nineteenth century, leisure became democratized and an anxious debate grew louder. What were the implications of making leisure available to masses of people? From romance novels to cheap liquor, from shopping to the cinema, new avenues of leisure aroused both fear and excitement. Moralists felt a need to police both public and private space and to reassert the primacy of work, thrift, and duty. We will study them and the various forms of accommodations and resistance that met their efforts. Class, ethnicity, gender, and geography all acted to structure people's access to leisure. We will look at struggles over race, gender, and popular culture; the way certain groups became designated as providers of

entertainment; or how certain locations were created as places of pleasure. To set the terms of the debate, we will begin with some eighteenth-century readings about the theatre and the market, the salon and the court. Readings will include work of Montesquieu, Flaubert, Wilde, Wharton, George Eliot, and Fitzgerald. In addition we will read works of nonfiction that show how leisure helped to create new forms of subjectivity and interiority. Students will be encouraged to work on conference topics linking leisure to a variety of subjects, such as childhood and education, or the construction of racial identities, or the changing nature of parenthood as birth control became more and more widely available, to name just a few areas. Potentially this course, through the study of complex oppositions like need and desire, purpose and aimlessness, the necessary and gratuitous, can give us a sense of the dizzying questions about life's very meaning that present themselves when we aim at a life of leisure.

## Medieval Spirituality

**Susan R. Kramer**

*Open—Spring*

The French medievalist André Vauchez defines spirituality as "the dynamic unity between the content of a faith and the way in which it is lived by historically determined human beings." This course will explore this dynamic unity and the impact of gender and social status on the nature of religious experience. Topics will include medieval understandings of God, spirits, saints, relics, rituals, prayers, and visions.

*Sophomores and above. Open to first-year students with permission of the instructor.*

## Nature, Progress, and the Individual: American Exceptionalism in Historical Perspective

**Eileen Ka-May Cheng**

*Open—Year*

"Whoso would be a man must be a nonconformist," announced Ralph Waldo Emerson in 1841. Emerson recognized in this clarion call that the individual is not born so much as achieved. The belief in the potential of the individual to be at one and the same time an origin as well as a thread in the tapestry of the human condition has often been seen as a quintessentially American trait. The idea of America as a land of opportunity where the ideal of the self-made man could best be realized was in turn rooted in the perception of America as a place that by virtue of its closeness to nature was uniquely free of the corruption and burden of the past. Consequently, according to American exceptionalist ideology, not only did America have a special mission to further human progress, but it also

possessed the unique ability to avoid the cycles of decay that had destroyed other nations and remain indefinitely in a state of continual progress. This course will look at how and why the belief in American exceptionalism came to be such an important element of American identity by focusing on the development of three central themes in exceptionalist ideology—nature, progress, and the individual—from the seventeenth century to World War I. How did a sense of American exceptionalism grow out of a colonial society that was deeply attached to its English roots and had no intention of establishing an independent nation? How did Americans come to define themselves in terms of the individual when the colonies they established were very much rooted in a communal ideal? What did Americans mean by the individual, and to whom did this ideal apply? What was the relationship between the Puritans' view of their society as a "city on a hill" and the concept of "manifest destiny" that undergirded westward expansion in the nineteenth century? How did the rise of industrial capitalism in the nineteenth century affect the exceptionalist faith in the nation's ability to escape social corruption through its closeness to nature? What were the political and social consequences of America's view of itself as an exceptional nation—both for Americans' relationship to one another and their relationship to others?

## Public Stories, Private Lives: Methods of Oral History

**Mary Dillard**  
*Advanced—Year*

Oral history methodology has moved from a contested approach to studying history to an integral method of learning about the past. This is because oral histories allow us to gain an understanding of past events from a diverse array of vantage points. Methods of recording oral history also allow the possibility of bringing private stories into the public. In contrast, public history in the form of monuments, museums, and World Heritage Sites are consciously preserved in order to emphasize particular aspects of a national, regional, or local past, which its protectors deem to be important. Who owns this history? Is it Civil War reenactors who dedicate their weekends to remembering this war? Is it the African Americans who return to West Africa in search of their African past or the West Africans who want to forget about their slave trading past? What happens when the methods for interpreting public and oral histories combine? This course places particular attention on the importance of oral history in tracing memories of the past. We will discuss how Africanist and feminist scholars have used oral history to study the history of underrepresented groups. We will also investigate how methods of oral history and public

history can be used in reconstructing the local history of our surrounding community (Yonkers, Bronxville, Westchester).

## Rethinking the Racial Politics of the New Deal and Cold War Citizenship, Public Policy, and Social Welfare

**Komozi Woodard**  
*Intermediate—Year*

Was the New Deal a major turning point in American history? The New Deal transformed the meaning of American citizenship. It introduced universal social welfare as an essential component of "social citizenship." American citizenship was enriched from simple voting rights to social welfare rights that entitled citizens to a vast safety net of social programs from Social Security to the GI Bill. Programs such as the GI Bill had dramatic educational, cultural, and economic consequences as well. The GI Bill dramatically enlarged the American middle class, transforming millions of urban workers into college-educated suburban professionals and businesspeople. However, today scholars are debating the meaning and substance of the "universality" of those programs. They have questioned to what extent was that social citizenship "raced" and "gendered." Did the New Deal trigger "identity politics" by excluding some women, African Americans, and Latinos from its new rights and economic bounty? Some scholars suggest that the New Deal programs that propelled some "white" groups into the middle-class plunged "nonwhite" groups into the underclass. This course explores the wealth of political, social, cultural, psychological, and economic issues at the heart of that rich debate. The seminar will draw on comparative history, looking not only at different ethnic groups but also exploring differences of "race and nation" between the United States, Germany, South Africa, and Brazil. In the United States, we will pay special attention to the impact those political and policy dynamics had on the "racial formation" of "white," "black," "Chicano," and "Nuyorican" identities between the New Deal and the cold war and on the trajectory of American politics up to the 2008 elections.

## The Contemporary Practice of International Law

**Viviane Meunier**  
*Open—Year*

International law, once quite marginal, has become an essential feature of contemporary legal and political life. It is not confined anymore to states in their relations to each other, but extends to international nongovernmental organizations and pervades the everyday life of individuals and multinational corporations alike. Can one identify which rules will ultimately prevail in the peculiar legal system of

international law? How do sovereign states effectively yield to pressing common interests and cooperate, if ever they do? How can economic development, security concerns, and environmental protection be pursued cooperatively by states whose priorities often differ dramatically? Can those countries possessing a nuclear arsenal legitimately condemn those that also aspire to this status? By which process can entities acquire independence and statehood? What is the potential impact of the existence of an international criminal court on the conduct of the world's various military establishments? Modern international law is under great scrutiny as high expectations have now been placed on it. This is a general course on public international law providing concepts and tools to understand the international legal system and its dynamic, and to analyze the decision-making process of the world community. Starting with how international law has been conceived, and then with how it is made and applied, the course will cover its main basic prescriptions. The expanding scope and depth of international law will be explored—the establishment of states and other actors, the pacific resolution of disputes and the banishment of the use of force, arms control, the protection and control of persons (nationality and human rights), the use of international areas, the utilization of the planet's resources, environmental protection, and the regulation of trade. Drawing from a variety of sources, class assignments will work with a number of theoretical approaches as well as concrete cases.

## The Medieval Foundations of English Art and History: An Interdisciplinary Workshop

### *Open—Fall*

Interweaving history, religion, art, and archaeology, this course begins its exploration of major turning points in the making of England with the arrival of the Anglo-Saxons in Roman Britannia. To explore the resulting interplay of cultures out of which England is born—classical and barbarian, pagan and Christian, Celtic and Germanic, insular and continental—we will closely examine unique sources of compelling interest: the Sutton Hoo burial ship treasure, considered England's most important archaeological discovery; *Beowulf*; medieval histories and biographies that make vivid the coming of Christianity to pagan England, Ireland, and Scotland. With respect to early Christian visual culture, we will puzzle out how and why European painting and calligraphy were revolutionized in such manuscripts as the Lindisfarne Gospels and the Book of Kells, books that still amaze and inspire us. Our second major turning point will be the conquest of Anglo-Saxon England by the Normans, erstwhile pagan, seafaring Vikings who by 1066 had become Catholic, French, and Europe's acknowledged masters of the arts

of war. The Norman impact on Anglo-Saxon England, involving as it does the feudalization of every institution, secular and religious; the transformation of every social group; and the rebuilding of every Anglo-Saxon cathedral and abbey in the new Norman (i.e., Romanesque) style, will be the focus of much of our attention. In our study of the Norman and Angevin ages, we will constantly ask how great conflicts—English versus French, church versus state, king versus baron—led to the creation of ideals and institutions of such durability that they continue to shape our lives. Since our studies involve close examination of medieval sources, including such celebrated works of art and architecture as the Bayeux Tapestry, that contemporary but sometimes very enigmatic depiction of the Norman Conquest, and Durham Cathedral, a glorious building that embodies much of the spirit of the new Norman Age, one might consider this not just a course about medieval England but also a workshop in actually “doing” medieval history and “doing it” in an interdisciplinary way. Conference work may focus on medieval questions or related ones from another time and place.

## The Sixties

### *Priscilla Murolo*

#### *Open—Year*

According to our national mythology, social insurgencies of the 1960s originated in the United States and pitted radical youth against the American mainstream. The real story is much more complicated. Politically speaking, the “sixties” began in the late 1940s and extended well into the 1970s; the ferment was by no means confined to youth; and developments within the United States reflected global patterns. Revolutionary movements and ideas reverberated from Asia and Africa to Europe and the Americas, and they mobilized people from virtually all walks of life. This course will situate U.S. movements within their global contexts and will focus especially on movements inspired by revolutionary nationalism and its various permutations among activists addressing issues of colonialism, class, race, gender, and sexuality. Readings include historical documents as well as scholarship, and we will also make ample use of music and film.

## Twentieth-Century Europe

### *Jefferson Adams*

#### *Lecture, Open—Year*

Europe continues to face an uncertain future. Will the movement toward greater economic and political unity ultimately prevail and create a new historical community? Or will the focus of nationalism and religious and ethnic identity be the main determining factors in the coming decades? This course will attempt a fresh appraisal of the past hundred years, focusing on leading personalities, events, and movements

throughout the European Continent. Of particular concerns are the advent of the First World War; the rise and development of communism in Russia and fascism in Italy and Germany; the impact of the Second World War; the reconstruction of Western Europe after 1945; and the collapse and aftermath of the Soviet empire. In order to achieve as full an understanding as possible, the course will rely not just on historical narrative but also on autobiography, biography, psychology, art and architecture, literature, and film. Group conferences will focus on primary readings and include important works by Robert Graves, Rosa Luxemburg, Vladimir Lenin, Adolf Hitler, Ignazio Silone, George Orwell, Aleksandr Solzhenitsyn, Hannah Arendt, and Milan Kundera.

## Visions/Revisions: Issues in U.S. Women's History

**Lyde Cullen Sizer**

*Advanced—Year*

This seminar surveys path-breaking studies of U.S. women's history and related subjects, including women's lives beyond the United States. Course readings, both scholarship and political treatises, exemplify major trends in feminist discourse since the 1960's, from early challenges to androcentric worldviews to the current stress on differences among women. Class discussions will range from fundamental questions—What is feminism? Is “women” a meaningful category?—to theoretical, interpretive, and methodological debates among women's historians. The course is designed to help advanced students of women's history to clarify research interests by assessing the work of their predecessors. M.A. candidates will also use the course to define thesis projects.

*A graduate course open to qualified seniors and graduate students.*

## Winds of Doctrine: Europe in the Age of the Reformation

**Philip Swoboda**

*Open—Year*

In the sixteenth century, Europe entered upon a religious crisis that was to permanently alter the character of Western Christianity. Between 1520 and 1580 the religious unity of Catholic Christendom was destroyed, as believers throughout Central and Northern Europe severed their ties with the papacy to form new “Protestant” communities. But the impact of the religious crisis was by no means confined to the emergence of the churches of the Reformation. Luther's revolt against the Roman church ushered in an era of soaring religious creativity and savage religious conflict that lasted for nearly two centuries and revolutionized thought, art, music—and politics. The modern state is ultimately a product of the Reformation crisis, as is

the system of international law that still governs the relations among sovereign states. Students in this course will examine multiple aspects of the religious, intellectual, and political history of Europe during the sixteenth and seventeenth centuries. The reading will focus attention on the diversity of religious thinking and religious experience in this era. Besides tracing the rise of the Lutheran, Calvinist, and Anglican churches, and the complex history of the “radical Reformation,” we will consider forms of belief independent of any church, and new varieties of skepticism and doubt. We also will devote considerable attention to the reform movements that transformed Roman Catholicism during these two centuries and the upsurge of missionary energy and mystical spirituality that accompanied them. We will investigate the effects of the Reformation crisis on politics and the state and on the social order that Europe inherited from the Middle Ages. To this purpose, we will look at a number of political struggles waged in the name of religion, including the Peasants' Revolt and Thirty Years' War in Germany, the Dutch revolt against Spain, the French Wars of Religion, and the English Revolution.

## Women, Culture, and Politics in U.S. History

**Lyde Cullen Sizer**

*Open—Year*

Through fiction, memoir, poetry, and cultural criticism and through dance, visual art and sport, activism and organizing, American women have expressed their ideas and their desires, their values and their politics. This course will approach U.S. history through the words and actions of all kinds of American women from the early nineteenth century through the late twentieth century. Using a variety of primary sources mixed with histories narrow and broad, we will analyze the ways that women worked to intervene in the cultural and political world. Themes will include race, class, ethnicity, immigration and migration, sexuality, and of course gender. Considerable attention will be paid to the development or refinement of a fluent and graceful expository writing style well-butressed by the careful use of textual evidence.

## Women and the City

**Rona Holub**

*Advanced—Year*

Using a variety of sources, both historical (primary and secondary) and from popular culture (literature, film, art, music), we will examine the relationship between women and American cities from the colonial era to the present. How have women negotiated for power in cities? What roles have they played in shaping how cities developed and operated in public and private spheres, and on social, political, economic, and cultural

fronts? Have women been merely pawns of patriarchal urban machines or powerful participants in the development of urban landscapes or something else? What brings/brought women together and pulls them apart? These are only some of the questions that we will address as we examine the place of women from many backgrounds throughout urban American history. There will be one field trip into New York City required per semester to look at the built environment and its relationship to what will be discussed in class.

*Open to juniors and seniors with permission.*

## “Not by Fact Alone”: The Making of History

**Eileen Ka-May Cheng**

*Open—Year*

History, like memory, is a reconstruction and as such does not call out to us to be seen or heard. Instead we seek and discover seeing only what our perspective illuminates. For the Puritans, history was the unfolding of providential design. Purpose, like the seed of a plant, was always present in the unfolding of events. For Enlightenment philosophes, history was the story of progress effected by human reason. Purpose in this case was a human triumph, such as the triumph of medicine over prayer. For Marx, history was the story of class struggle. In this case, purpose was no more than following the money trail, coupled with the added optimism that in the end the scales of justice would be balanced. Each of these perspectives recognized and struggled with the notion that history is, in the final analysis, a fate beyond human control because of the paramount role of unintended consequences that counterpoints the history of societies no less than it counterpoints the life of the individual. In other words, is purpose an artifact of human understanding or woven into the tapestry of history? We will study the different ways that American and European thinkers from the seventeenth to the twentieth centuries grappled with this question in their writings on history. The course will examine the conflicts and changes in their views on both the nature of the historical process and the way that history should be represented by historians. We will look at how these differences both reflected and contributed to broader intellectual, political, and social changes in this period. Such an examination will demonstrate the ways in which conceptions of history were themselves the product of history.

## 2009-2010

### A History of African American Renaissance in the City: Hidden Transcripts of Kinship, Communities, and Culture

**Komozi Woodard**

*Open—Year*

Invisible in the master narrative of American history, hidden transcripts of kinship, community, and culture shaped the black urban experience. But how did African American culture flower in blues and jazz in the midst of persistent urban poverty? This seminar explores the history of African Americans in the city: political, economic, social, and cultural. The African American experience began with ways of life that flowered in black language and musical consciousness when Africans were transplanted in the Americas: spirituals, work songs, blues, jazz, swing, bebop, and cool, as well as rhythm & blues, funk, reggae, hip hop, and so forth. The blues ethos and jazz aesthetic that developed in America informed black consciousness in not only the music, dance, and tales but also the epic Great Migration, Black Spiritual Movements, Harlem Renaissance, New Negro Radicalism, Chicago Black Renaissance, and Black Arts Movement. The course concludes with the examination of hidden transcripts of black leadership that led to the Hip Hop Political Convention and the Barack Obama presidential election.

### A History of New York City

**Rona Holub**

*Advanced—Year*

This course traces the development of New York City from a trading post into a great commercial and cultural center. We will explore the social, political, economic, and cultural histories of the city through a wide range of readings that include primary documents, historical scholarship, and literature. We will also experience the rhythms of this famous metropolis on its streets, in its museums, and through the stories told by its built environment. With special emphasis on the diverse groups of people who built the city, this course will provide an understanding of how and why New York City came to be what it is today and how, as a dynamic organism, it continues to change.

*Sophomores with permission.*

### Art and the Sacred in Late Antiquity and the Middle Ages

*Lecture, Open—Spring*

No time in history saw a richer, more varied expression of sacred art than the European Middle Ages. And no other age has known as powerful, as all-embracing a

religious institution as the medieval church. In this interdisciplinary lecture course, we will ask why the Christian church and the art made in its service took such extraordinarily varied forms in the thousand-year period from the catacombs to Chartres, from the third century to the 13th. We will also ask why certain features of contemporary Christianity that are looked upon as quintessentially Catholic rather than Protestant were established not in the earliest years of the church but in Late Antiquity and the Middle Ages: monasteries and nunneries, the cult of the Virgin, a celibate clergy, and a papal monarchy with virtually unlimited powers. Since Christianity is a religion not only for the here and now but for the afterlife, of special interest will be such perplexing beliefs as that we on earth might affect the fate of the dead in purgatory and, conversely, that some of the “very special dead” might assist the living or perhaps punish them. Perhaps the most distinguishing feature of the course will be studying these topics in visual, as well as written, texts; for instance, in the architecture and decoration of early Christian and Romanesque churches and, at St. Denis and Chartres, in the birth of the uniquely Western style that we call Gothic. By also examining how sacred words were illuminated in manuscripts linked to Lindisfarne, Kells, and Charlemagne’s court, we will attempt to engage with a novel expression of spirituality in the Middle Ages: the book as icon. Near the end of our course, we will follow men and women from all over Europe on their pilgrimages to Santiago de Compostela, stopping at such memorable French Romanesque churches as Vézelay, Conques, and Moissac. In New York museums, students will have opportunities to view chapels and cloisters brought from Europe, as well as sculptures, ivories, metalwork, stained glass, books, paintings, and tapestries that are among the world’s most precious treasures. Lectures will be devoted primarily to art; the weekly group conferences, to readings from the Middle Ages.

## Between Baroque and Romanticism: The European Enlightenment

**Philip Swoboda**

*Open—Year*

The 18th-century Enlightenment was, arguably, the most important single episode in the last thousand years of European intellectual history—the true watershed between the “pre-modern” and the “modern” world. Yet historians have found the Enlightenment a singularly elusive phenomenon. Enlightenment thought was woven of several very different strands; the champions of “enlightenment” shared a surprisingly large number of assumptions with their supposed opponents; and some of the beliefs we regard as most characteristic of the Enlightenment were already being attacked by Rousseau and other adventurous pre-Romantic thinkers before the century was half over. This course will examine the

development of the Enlightenment from its origins in the age of the Baroque to its demise in the era of the French Revolution and Romanticism. While the course’s central focus will be ideas, values, and sensibilities, we will also consider the economic, social, and political context of the Enlightenment and examine the revolutionary upheavals in European politics and culture that brought it to an end. We will conclude by discussing several key texts of the 1790s, including works by Schiller, Goethe, and Novalis, that typify the revolt against the Enlightenment outlook with which the 18th century ended.

## Body Politics: A 20th-Century Cultural History of the United States

**Lyde Cullen Sizer**

*Advanced—Year*

Historian Joan Jacobs Brumberg argues: “In the 20th century, the body has become the central personal project of American girls.” Increasingly in U.S. culture, the body is seen as the ultimate expression of the self. This course will analyze the emergence of this consuming anxiety against the backdrop of other conversations about women’s (and, to some extent, men’s) bodies as workers, mothers and fathers, public figures, and sexual beings. Using cultural criticism, novels, and films, as well as history, we will introduce the issues of the 19th century, then move to the turn of the 20th century and continue until the turn of the 21st century, to explore the larger meanings of these shifts and anxieties for U.S. political culture.

*Open to seniors and graduate students; open to juniors with permission.*

## Boundaries and Affiliations: National Identities in the Modern Arab Middle East

**Andrea Stanton**

*Open—Fall*

For the Arab Middle East, the twentieth century was a time of frequent and sometimes overwhelming changes. The first twenty years brought two sweeping political shifts: the CUP (“Young Turk”) revolution in 1908, and the replacement of the Ottoman Empire after World War I by a set of embryonic nation-states with boundaries drawn by the new overlords of the region, the British and French. Elite groups in Iraq, Lebanon, Palestine, Syria, Transjordan, and the Persian Gulf strove to inculcate a consciousness of national identity among the inhabitants of each of these new states. They faced a double challenge: creating national feeling toward “Syria” or “Iraq” where none had existed before, and managing the conflicts that arose between new

national identities and preexisting affiliations of a class, cultural, educational, ethnic, geographic, linguistic, regional, and religious character.

This course looks at the interaction between these older loyalties and the new national identities that the inhabitants of the Arab Middle East were invited to adopt after 1920. Affiliations could complicate the task of establishing national identities within new political boundaries; but they could also support and enrich feelings of national identity. We will trace the historical development of national identities in several key states, comparing states that have succeeded in creating a strong national consciousness (e.g., Egypt), with others that have had more difficulty in doing so (e.g., Iraq, Lebanon). We will conclude by considering the contemporary situation. How durable are national identities in the Arab Middle East today? What capacity do they have to build the national community and to mobilize citizens to support the nation-state? What other identities today provide the strongest competition for the national?

## Desire and Experiment: Colonial and Post-Colonial French North Africa

**Andrea Stanton**

*Open—Spring*

What made North Africa an important colonial space, and what impact did colonial projects have on both colonizer and colonized? The 'colonial moment' in North Africa began with France's conquest of Algeria in 1830 and continued with its subsequent establishment of protectorates in Morocco and Tunisia. It ended slowly and painfully: the French gave up their North African lands with great reluctance, granting independence to Tunisia in 1954, to Morocco in 1956, and to Algeria -- which they considered not a colony but an integral part of France -- only in 1962, after a bloody civil war.

This course asks: Why was North Africa so important to France, and what effect did colonization have on both North African and French societies? It explores the overarching role of desire in the colonial enterprise, including the political desire to have territory that spanned the Mediterranean and that reconfirmed France's status as a global power. On the ground, it examines how desire, fascination, and disgust were paired by assumptions about the 'noble' rural populations and their 'degenerate' urban compatriots, often refracted through equally polarized stereotypes about Islam.

It also reflects on the connection between desire and experimentation, considering how the French colonies served as 'laboratories' in which the young graduates of elite schools tested the latest theories of urban planning,

agricultural science, public health, and good governance in the hope of later applying them in France. It considers the ways in which the colonies were depicted in Europe both as utopias and dystopias -- the former envisioned as the happy result of successful reform-oriented experiments, and the latter often attributed to the insistence of the 'indigènes' on maintaining their religious identity (Muslim), and their languages (Arabic or Berber). Finally, it examines the crucial role played by information-gathering, looking at colonial rule as a management project involving the careful deployment of knowledge. The course will also briefly discuss Italy's colonization of Libya to highlight the impact of the French North African experience.

The course ends by considering the enduring impact of the colonial experience in French, Algerian, Moroccan, and Tunisian societies in the decades following independence. Decolonization brought both ruptures and continuities -- continuities in the dictatorial regime forms that have characterized North Africa's governments since the 1960s, for example, and ruptures in French society's self-definition of itself as homogenous in culture, religion, and race. It examines the genealogy of the Islamist oppositions that emerged starting in the mid-1970s, and which represent the primary political alternative in all three countries. In what ways do their religious focus, social activism, and political opposition reflect an ongoing response to the administrative structures first established by the colonial power?

## El Norte: History of Latinos/as in the United States

**Matilde Zimmermann**

*Open—Spring*

This course examines how immigrants from Latin America and the Caribbean have adjusted, integrated, resisted, and adapted to the many forces that have affected their lives in the United States over the last 150 years, creating new ethnic, racial, and local identities and new forms of community in the process. The focus is on the role that Latino immigrant workers have played in the U.S. economy, the labor movement, and working-class communities and culture. Latinos/as have historically shared neighborhoods and work sites with white and black workers, Native-Americans, and Asians in complex relationships marked by racial divisions, competition, and violence but also by solidarity and cultural exchange. Men and women from Latin America have participated in and led some of the most important union-organizing drives and workers' rights movements in U.S. history, from the unionization of the railroads in the late 19th and early 20th centuries to the United Farm Workers campaign to win collective bargain

## English Reformations in the Ages of Henry VIII and Elizabeth

### *Open—Fall*

Sixteenth-century England experienced radical shifts in intellectual life and profound religious upheavals. These developments continue to shape our lives. To men and women in Tudor England, we owe much about the way we pursue learning at a college such as Sarah Lawrence and how we construct our identities, including religious ones, even by those who do not consider themselves part of any religious denomination. While much of our focus will be on religion, many of our “religious” questions will be bound up with issues categorized as politics, scholarship, or gender. For instance, while it is well known that the marital and dynastic desires of Henry VIII were the catalyst for the first English Reformation, should we speak, as some revisionists would have it, of a vibrant late medieval English Catholic culture violently destroyed by a Tudor government to satisfy a despotic monarch’s desires? Or should we speak of the twilight of medieval Catholic culture and “the people” actively supporting Henry’s Reformation? Regarding scholarship and religion, if on the continent a German monk sparked the Reformation with his populist propaganda against such abuses as indulgences, recall that this same monk was also the very learned professor of biblical studies who correctly said of his writings against the papists, “Many can attack their abuses. I attack their theology.” Our questions: Was theology also at stake in England? Were scholars essential to the Reformations in England? And last, but hardly least, why was sex fundamental to how the Reformations played out in England? In the last part of the term, we will focus on the early years of Elizabeth’s reign, especially her era’s anxieties about the overlapping of gender, politics, and religion. Of special interest will be how the young queen—she was 25 at her accession—defended her shaky new Anglican Church against the right and the left, the papists and the puritans. We will pay particular attention to the young Elizabeth’s deeds, words, and famed virginity in the light of 16th-century debates over gender roles, asking whether it is correct to say that, against all odds, she was able to turn what contemporaries deemed her chief liability—her sex—into her greatest asset. Much of our reading will be in primary sources (writings by Lorenzo Valla, Erasmus, Thomas More, Martin Luther). Some remarkable films will be an additional resource. Students might wish to test the historical accuracy of some they have seen. In conference, students may go more deeply into Renaissance or Reformation questions or choose one from another time and place.

## First-Year Studies: Biography and Autobiography in 19th-Century Europe

### *Jefferson Adams* *FYS*

In striking contrast to preceding eras, the 19th century began to place a high value on the written depiction of individual lives. This course will investigate some representative examples of the many biographies and autobiographies produced during this century, along with a number of more recent accounts. Focusing on four countries—England and France during the fall semester; Germany, and Russia during the spring term—the weekly readings will include some famous rulers and statesmen, writers, soldiers, revolutionaries, philosophers, and artists, as well as more anonymous persons who were working in the countryside or laboring in the new factories. Among the former will be Queen Victoria, George Sand, Hector Berlioz, Leo Tolstoy, Fyodor Dostoyevsky, Karl Marx, Otto von Bismarck, Friedrich Nietzsche, and the young Winston Churchill. Besides examining the major social and political issues of this dynamic age, we will also explore the question of why the genre itself gained such prominence and popularity. In conference, students may choose either another figure from this period or an individual from another century, country, or civilization.

## First-Year Studies: Global Africa: Theories and Cultures of Diaspora

### *Mary Dillard* *FYS*

Changes in migration patterns, immigration laws, and refugee policies have meant that Africans are living and working in unexpected places. Studies of the African diaspora used to focus on the dispersion of Africans as a result of the trans-Saharan, transatlantic, and Indian Ocean slave trades. More recent scholarship has focused on new African diasporas: Senegambians in Harlem and Rome, Ghanaians in Germany, Nigerians in Japan. These modern-day dispersals—powered, in part, by the forces of globalization—demand new levels of analysis by scholars. How have people of African descent ended up settling in places far from their natal homes? How has the concept of an African homeland contributed to the articulation of religious and political movements (Ethiopianism, black power, Rastafarianism, Pan-Africanism) in the diaspora? How have theories about other diasporas (South Asian, Jewish, Chinese, etc.) informed scholarship on the African diaspora? This course will study these new African migrations, as well as revisit the histories of older settlement patterns. This will be a service learning course.

## First Year Studies: Literacy and Its Discontents: A History of Education

**Persis Charles**  
FYS

In this course, we will explore the changing meaning of literacy from the Renaissance to the present. This is, in part, a history of formal education; but it is also contextualized within the whole culture and society of Europe and the Americas. Thus, we will examine the development of the modern curriculum; the increasing use of the vernacular instead of classical languages; the different forms of literacy seen as suitable for men and women, masters and servants; and the power struggle over reading and writing instruction for the lower classes in the 18th and 19th centuries. These matters will be studied against the background of revolution, industrialization, slavery, and abolition. As we approach more recent times, we will look at how the changing role of literacy became prominent in the creation of meritocratic systems, the notion of equality of opportunity, the concept of IQ, and the belief in the accuracy of various types of testing. Finally, we will study the current culture wars over affirmative action, the entertainment industry, the struggles for legitimization of various modes of education, and attitudes toward competition, excellence, and achievement. Among the authors we will read are Locke, Rousseau, and Dewey.

## First Year Studies: “Inventing America”: Cultural Encounters and American Identity, 1607-1877

**Eileen Ka-May Cheng**  
FYS

“The past is a foreign country,” T.H. Hartley once declared, and perhaps the past of one’s own country is doubly so. The present, after all, always seems inevitable. Surely, the United States of 2009 is but the flowering of the seeds planted so many centuries ago. This course seeks to challenge this assertion, as we consider not only how Americans in the period from 1607 to 1877 differed from us but also how much they differed from one another. How did the early and diverse European colonists themselves deal with unfamiliar cultures at a time when the very concept of newness was alien to them? We must not forget that Columbus believed that he had simply discovered a new route to India. As different as they were from each other, neither the Native Americans who lived in North America, nor the Europeans who colonized that region, nor the Africans whom the colonists imported as slaves, had any intention of establishing a new nation. Consequently, in examining American history from the early 17th century to the Civil War, the question should be not why did the United States divide during the Civil War but, rather, why were Americans able to unify as a

nation at all? In our consideration of this question, we will focus on two interrelated themes: how these different cultures interacted with and affected one another, and how Americans defined their identity. Who was considered American, and what did it mean to be an American? What was the relationship between American identity and other forms of social identity such as gender, class, race, and culture? We will address these questions by examining major political, social, cultural, and intellectual developments in American history from the colonial period to the Civil War and Reconstruction. Specific topics to be studied will include the European colonization of North America, relations between European settlers and Native Americans, the relationship between the colonies and Britain, the causes and effects of the American Revolution, the shift to a capitalist economy and the advent of the Industrial Revolution, the character and development of slavery, and the causes and consequences of the Civil War. We will use both primary and secondary sources, but the course will place particular emphasis on primary documents as part of an effort to view history from the perspectives of historical actors themselves.

## Gender, Education and Opportunity in Africa

**Mary Dillard**  
*Advanced—Fall*

In modern Africa, equity in education—whether in relation to gender, ethnicity, race, class, or religion—remains an important arena of social and political debate. As formal colonial rule ended on the African continent and more African nations gained independence, education became synonymous with modernity and a leading indicator of a country’s progress towards development. Gender has consistently played a powerful role in determining who would receive access to education. An awareness of the significance of both formal and nonformal education has been reflected within the realms of African politics, popular culture, literature, and film. This class studies the history of education in Africa, focusing on a wide variety of training, classroom experiences, and socialization practices. In particular, we will investigate the influence of gender in defining access to educational opportunity. We will begin by questioning prevailing constructs of gender and determine how relevant western gender categories have historically been for African societies. By focusing several of our readings on countries as diverse as Nigeria, Tanzania, Ethiopia, and Zimbabwe, students will develop a broad overview of educational policy changes and practices throughout the African continent.

*Sophomores and above.*

## History of the Cuban Revolution(s), 1898 to Today

**Matilde Zimmermann**

*Open—Spring*

Cuba has an impact on world affairs and culture completely disproportionate to its size and population. This is true not only in the political sphere but also in such varied areas as music, sports, and medicine. This course will look at elements of continuity and change in three revolutionary movements: the 19th-century struggle against slavery and Spanish colonialism, which culminated in the U.S. occupation of 1898; a revolutionary, anti-dictatorial upsurge in the 1930s; and the socialist revolution of 1959. We will examine the internal dynamics of revolutionary Cuba (economic challenges, relations between workers and the state, race relations, changes in the family, art and revolution, and the role of youth in the revolution and in Cuban society today). We will look at the reasons for the half-decade of hostility between the United States and Cuba and the possibility of improved relations. We will use film, art, and first-hand accounts, as well as political analysis, to look at the contradictory reality of Cuba today. Students planning to apply, at any point, to the Sarah Lawrence study-abroad program in Havana are strongly encouraged to take this course, which is given every three or four years.

## Ideology and Revolution in Modern History

**Jefferson Adams**

*Open—Year*

Revolutionary upheaval on a wide spectrum from left to right has left a strong imprint on European history in the modern era. Beginning with the French Revolution of 1789 and continuing to the present day, this course will explore the phenomenon of revolutionary change and the emergence of ideology as a critical component. How essential to a revolutionary movement is a charismatic leader such as V. I. Lenin, Benito Mussolini, or Adolf Hitler? What theoretical similarities and differences exist between communism and fascism, and how are they manifested in practice? In what ways does ideology impact key institutions such as the army and the civil service, as well as individual writers and artists? Did the nonviolent revolutions of 1989 establish new precedents regarding regime change? To attempt to answer questions of this sort, we will rely on a variety of approaches: historical narrative; biographical and autobiographical accounts; economic, sociological, and psychological analysis; and contemporary film and literature. Of particular concern are recent debates about the fundamental nature of ideological regimes and the question of personal responsibility. In conference,

students are encouraged to investigate revolutionary figures and movements not only in Europe but elsewhere in the modern world.

## Imagining Race and Nation: The Unfinished Democratic Revolution

**Komozi Woodard**

*Lecture, Open—Year*

This course will rethink the narrative of American urban and ethnic history up to the 21st century in terms of what historian Anthony Marx called "Making Race and Nation." At times, a nation is born in revolutionary war; and, at times, a nation is born in poetic, sermonic and lyrical dreams of national community. America is an imagined national community whose history is continuously reworked in poetic images that help generations of American people reorder and make meaning of this country's dynamic chaos. In other words, one of the underpinnings of history writing (historiography) is poetic. This course explores major contours in the long road of democratic revolution that led to the Barack Obama White House. For centuries, a black president of the United States was unimaginable. Far too many Americans conceived of America as a White Nation. In that national vision, nonwhites were thought to be segregated somewhere outside of the boundaries of full American citizenship. This course will rethink the meta-narrative of American history up to the 21st century in terms of unfinished American revolutions attempting to re-make race and nation.

## Muslim Modernities: From Classical Pattern to Life Today

**Andrea Stanton**

*Open—Year*

Fundamentalist discourse today often focuses on the need for Muslims to return to a classical pattern of Muslim living, which is understood to include particular forms of dress, types of food, occupations, inter-personal relations, and leisure pursuits, as well as modes of religious practice. But how accurate are these Salafi definitions? What was the classical pattern of Muslim life in the past, and what influence does it have on the modern world?

This course examines the patterns of Muslim life in four pre-modern eras – the Meccan, the Abbasid, the Fatimid, and the high Ottoman – and investigates how people's thinking about being Muslim has altered in the modern era. It considers the effects of colonialism, globalized trade, and advances in communication and transportation technology, as well as developments in education. How, for example, has increased literacy changed believers' relationship with the Qur'an and supporting texts like the biography of the Prophet

Muhammad (sira), the sayings of or stories about Muhammad (hadith), and the exegetic texts describing the context of each Quranic revelation (asbab al-nuzul)?

The first half of this year-long course will focus on the classical patterns of Muslim life established in the pre-modern era. The second half will examine changes in these classical patterns in modern and contemporary times, looking thematically at changes in different spheres of Muslim life. It will consider changes that relate to political systems and forms of governance, styles of education, labor and professional work, changes in daily life habits such as timing and organization, changes in gender relations, and changes in ordinary believers' relationships with religious authority figures.

## Profiles of Islamic Revolutionaries from Ayatollah Khomeini to Osama bin Laden

**Fawaz Gerges**

*Open—Year*

This seminar examines the ideas and lives of leading Islamist and jihadist revolutionaries, who have left their imprint on Muslim society and politics in the 20th and 21st centuries. They have also have inspired young Muslim men and women to use religion as a political tool to bring about radical change in state and society. These revolutionaries—Mohamed Abdu, Sayyid Qutb, Mawdudi, Khomeini, Abdallah Azzam, Ayman Zawahiri, bin Laden, and others—have supplied the ideological ammunition for dissatisfied and alienated young men and motivated them to rebel against the existing sociopolitical order at home and its great powers patrons. In this context, the Saudi dissident bin Laden should be seen as the most recent inheritor of a powerful tradition of political-religious revolt. Several critical questions will be posited: What are the religious, intellectual, and historical roots of revolutionary jihadism? What fuels its passion and rage? What is the relative weight of religion in relation to other sociopolitical, and economic and foreign policy variables? What is the role of charisma of ideas and personalities in fueling local and global jihad? Special attention will be given to certain powerful texts, which have served as holy writ for dedicated foot soldiers and influenced their attitudes towards the use of force in the service of politics, the status of women, the structure of the state, human rights, and relations with the West broadly defined.

*Open to any interested student.*

## Revolutionary Women

**Priscilla Murolo**

*Advanced—Year*

From 19th-century struggles against slavery to recent uprisings against apartheid and global capitalism, this

seminar explores women's relationships to revolutions that have shaped the modern world. Although the course focuses largely on U.S. history, we will also consider developments in Europe, Asia, Africa, Latin America, the Caribbean and the Middle East. Topics include: the extraordinary work of revolutionaries such as Harriet Tubman, Aleksandra Kollontai, Yuri Kochiyama, and Rigoberta Menchu; unsung women's essential contributions to revolutionary movements around the globe; the ways in which revolutions have addressed—or failed to address—women's demands for equality and self-determination; and the emergence of independent women's movements within revolutionary contexts. Reading includes memoir, fiction, and political treatises, as well as historical scholarship.

*Open to juniors, seniors, and graduate students; open to sophomores with permission.*

## Romanesque: A Research Seminar in Christian Iconography, the Language of Artistic Forms, and Medieval History

*Advanced—Year*

*Romanesque:* Mont-St-Michel and Chartres; Durham Cathedral; Cluny, Autun, and Vezelay; Conques and Moissac; *Le guide du pelerin de Saint-Jacques de Compostelle*, the medieval guide for pilgrims to Santiago de Compostela; Cistercian "architecture of silence" at Fontenay and Senanque, Fountains and Rievaulx; the Royal Abbey of St-Denis. How Roman was Romanesque? How different is Gothic? All three religions of the book have rich traditions of verbal exegesis, but unlike Judaism and Islam, only Christianity created and sustained an elaborate visual language to represent and interpret its sacred texts. If the study of the subject matter in art is iconography, what such an investigation might mean in practice can vary widely from identification of personages, episodes, and symbols to the more challenging, historically oriented examination of what text is the basis for the imagery (if indeed the imagery is grounded in a text), why that imagery or architectural form was chosen in a particular time and place, and what such choices might have meant to a patron, an artist, and the community. In short, iconography is about human beings making choices. Thus, one might need to consider biblical exegesis, theology, legends, historical context (including society, politics, heresies, psychology, and climates of opinion) in addition to possible artistic models—indeed, all the tools of history. We will also be asking questions about composition, materials, style, monumental sculpture and its architectural matrix, and whether artists were free or constrained; i.e., what might be called "the language of Romanesque forms." Our goal in this course is to strive for a more inclusive study of iconography, while investigating one of the most

creative ages in European art and culture: the Romanesque (usually dated from 1000 to 1200). To move toward this goal, we will engage in critical analyses of interpretations by some of art history's masters: Emile Mâle, Erwin Panofsky, and Meyer Schapiro—scholars who sought the relationships of words to images and of art to historical context. Student research projects are the core of the second semester. We will learn how to use library research tools and refine skills to better use images in doing research and making presentations. We will assist each other at every step of the way and present findings to the class, both orally and in written drafts, for help and criticism. Advantage will be taken of our proximity to three of the world's greatest collections of medieval art at the Met, the Cloisters, and the Morgan Library. Previous college study in some aspects of ancient, medieval, or Renaissance/Reformation culture, though not necessarily in art history, is a prerequisite.

## Russia and Its Neighbors: From Lenin to Putin

**Philip Swoboda**

*Lecture, Open—Spring*

This course is a continuation of "Russia and Its Neighbors: From the Mongol Era to Lenin," but it is open to students who have not taken that course. The aim of the lecture will be to provide students with the historical background required to make sense of Russia's current predicament and the policies of its present-day leaders. We will first examine seven decades of Communist Party rule, tracing the extraordinary path that Russia took in the 20th century to become a literate, urban, industrial society. We look at such crucial episodes in Soviet history as Stalin's war on the peasantry and his crash industrialization drive of the 1930s, the Great Purge, the World War II, the Khrushchev-era cultural "Thaw," the development of a consumer economy and embryonic civil society in the 1960s and 1970s, and Gorbachev's failed attempt to reform the communist system. We will also discuss the methods by which the communist regime maintained control over the minority peoples of the USSR and the evolution of its relationships with its East European satellites and the non-communist world during the era of the Cold War. We will devote some attention to the causes and effects of the breakup of the Soviet Union in 1990–1991 and to Russian policies toward the newly independent states that came into being as a result of the dissolution of the USSR. In the final weeks of the course, we will consider how the travails endured by the Russian people during the unhappy Yeltsin period set the stage for a resurgence of authoritarianism and national self-assertion under Putin. Group conference readings will include a variety of memoirs and literary texts that capture the experience of ordinary Russians in the decades since 1917.

## Russia and Its Neighbors: From the Mongol Era to Lenin

**Philip Swoboda**

*Lecture, Open—Fall*

This course will introduce students to the main themes of Russia history from the Middle Ages to 1917. We will first consider the medieval principality of Moscow, in which Russia's enduring traditions of autocratic government, territorial expansionism, and xenophobia originally took shape. We will examine how rulers such as Ivan the Terrible, Peter the Great, and Catherine the Great endeavored to meet "the challenge of the West"—to marshal the resources of their huge but economically backward empire in order to remain militarily competitive with the more advanced societies of Northern and Western Europe. We will discuss resistance to the oppressive demands of the state on the part of peasants, Cossacks, religious dissidents, and national minorities. We will consider how the tsars' response to the Western challenge called into being a new, Europeanized elite that, in the 19th century, grew restive under the tutelage of the autocratic state and was increasingly attracted to liberal and socialist ideas. In the final weeks of the semester, we will consider the revolutionary upheavals that convulsed the Russian Empire in the early years of the 20th century and created the conditions for the establishment in Russia of the world's first socialist regime. In group conferences, students will discuss a wide range of primary sources: saints' lives, picaresque tales, classic works of 19th-century poetry and fiction, and the writings of leading revolutionary thinkers.

## The American Revolution

**Eileen Ka-May Cheng**

*Open—Fall*

It may be comforting to know that historians agree that an American Revolution did indeed occur. Less comforting but more intriguing may be the realization that historians do not agree on when it commenced and when it ended, much less on the full meaning of what exactly took place beyond the mere facts of the Revolution. Certainly, the question was profound enough to move John Adams to ask, "What do we mean by the Revolution?" The course will look at the many different answers that revolutionary Americans gave to Adams's question by examining the political, intellectual, social, and cultural dimensions of this event. Was the Revolution simply a struggle for political independence, or was it also a social conflict over who would "rule at home"? Was the American Revolution a transformation in the "hearts and minds" of the people, as Adams believed, or was the War for Independence integral to the meaning and character of the Revolution? Did the Revolution end with the close of the war, or was the war, to use Benjamin Rush's words, "but the first act of the great drama"? What was the

relationship between the Constitution and the Revolution? Was the Constitution a conservative reaction against the radicalism of the Revolution, or did the Constitution extend and solidify what the Revolution had achieved? While the emphasis of the course will be on what the Revolution meant for those who participated in it, we also look more broadly at the long-term legacy and memory of the Revolution. Through this examination, the course ultimately seeks to address the question of what was the basis for and nature of American national identity?

*Some background in history is helpful but not required.*

## The Contemporary Practice of International Law

### Open—Fall

In a landscape pocked by genocide, wars of choice, piracy, and international terrorism, what good is international law? Can it mean anything without a global police force and a universal judiciary? Is “might makes right” the only law? Or is it true that most states comply with most of their obligations most of the time? These essential questions frame the contemporary practice of law across borders. This seminar provides an overview of international law, its substance, theory, and practice. It addresses a wide range of issues, including the bases and norms of international law, the law of war (*jus ad bellum* and *jus in bello*), human rights claims, domestic implementation of international norms, treaty interpretation, and state formation/succession. We will examine such important cases as *Nuremberg*, *Hamdan v Rumsfeld*, and *Abu Ghraib*. The readings consist mainly of historical case studies (*International Law Stories*), supplemented by international conventions and judicial decisions. Each student writes a source analysis and a case analysis, as well as completing a major conference project.

*Open to any interested student.*

## The Evolution of Human Rights Law

### Open—Spring

History is replete with rabid pogroms, merciless religious wars, tragic show trials and even genocide. For as long as people have congregated, they have defined themselves in part as against an “other” – and have persecuted that other. But history has also yielded systems of constraints. So how can we hope to achieve a meaningful understanding of the human experience without examining both the wrongs and the rights? Should the human story be left to so-called realists who claim that power wins out over ideals every time? Or is there a logic of mutual respect that offers better solutions? This seminar examines the history of human rights law and

humanitarian law. Approximately half the course will address the long and remarkably consistent history of the laws of war focusing on the principles of military necessity, proportionality, and discrimination, as well as the cultural, political, and technological context in which these laws evolved. The other half of the course will focus on the rights that individuals and groups claim against their own states. We will examine such important cases as *Roper v. Simmons* (juvenile death penalty), *El-Masri* (“war on terror”), and *Srebrenica/Kriti*. The readings consist of an edited book (*The Laws of War: Constraints on Warfare in the Western World*), a selection of case studies, and primary source documents, including treaties and judicial decisions. In addition to the conference project, students will analyze a human rights convention and a firsthand account of their choosing.

*Although there are no prerequisites, students would benefit from having taken The Contemporary Practice of International Law.*

## Understanding Contemporary Arab Politics: From Nasser to Nasrallah

### Fawaz Gerges

#### Advanced—Year

This seminar examines the complex dynamics of Arab politics since the establishment of the contemporary Middle Eastern state in the early 1920s. Most of these states were born out of the rubble of World War I and the destruction of the Ottoman Empire. Britain and France not only divided the vast territories of the Ottoman Empire between themselves but also drew the political map of the modern Middle East by reorganizing the old political structures along nation-states. This course will focus on the internal dynamics—sociopolitical and economic, religious and cultural forces—as well as on external forces that have shaped political life in the region. In other words, the seminar will not only assess the role of European colonialism in forging the region’s modern history but also the input of the indigenous forces such as the interplay between secular nationalism and political Islam. Special attention will be paid to the rise of European hegemony after World War I and the response of social and religious groups to the cultural, economic, and political influence of Western power. For example, why have some countries developed democratic institutions, while others have become increasingly dictatorial, espousing a form of secular authoritarianism, and yet others have sought to define their identity in terms of Islamic activism? What have been the causes and consequences of the five Arab-Israeli wars on political governance, economic development, and relations between state and society? What does explain the vacuum of legitimate authority and the absence of “liberal democracy” in the Arab Middle East? What does

explain the rise of military rule and the cult of personality and revolutionary Islamism or jihadism? What lies at heart of the longevity and durability of Arab dictatorships? Can we understand the prolonged turmoil and upheaval in Arab politics in the 20th and 21st centuries—the rise of the man on the horseback and the bin Laden phenomenon—without delving deeper into the structure of Arab political culture and American foreign policies? Open to any interested student.

## Whose Body is it Anyway?: A Cultural History of the 20th Century

**La Shonda Barnett**  
*Advanced—Year*

This course explores the history of the body as a site and as a means for the social construction of gender, race, sexuality, class, and modern selfhood. We will touch on topics as diverse as prostitution, pornography, and other aspects of the sex industry; medical technologies such as birth control, gender reassignment, and aesthetic surgery; and historic shifts in social categories that we commonly attribute to an unchanging biology of race, sex, disability, and health. Our goal is to understand “body history” in a way that not only illuminates the past but also interrogates the received wisdom that governs how we live our lives. Readings include fiction and cultural theory, as well as scholarship in history, anthropology, sociology, and gender studies. The course is also designed to expose students to the tools and techniques of historical research and writing.

*Open to juniors, seniors, and graduate students.*

Full descriptions of the courses may be found under the appropriate disciplines.

**East vs. West: Europe, the Mediterranean, and Western Asia from Alexander the Great to the Fall of Constantinople (p. 52), David Castriota**  
*Art History*

**The Age of Arthur: Post-Roman Britain in History and Legend (p. 54), David Castriota**  
*Art History*

**The Fall of the Roman Empire: Rome from the Soldier Emperors to the Barbarian Invasions (p. 54), David Castriota**  
*Art History*

## 2010-2011

### ¡Sí Se Puede! Labor and Politics in Modern Latin America

**Matilde Zimmermann**  
*Lecture, Open—Spring*

"Sí se puede/Yes we can!"—a chant heard today on picket lines and immigrant-rights marches in the United States

and throughout the Americas—has its origins in the strikes and protests of Latin American and Caribbean workers. This course looks at the many ways working men and women have struggled to increase their political influence and advance their economic and social standing in 20th and 21st-century Latin America. Although the focus is on events in Latin America, we will begin and end with a look at the struggles of Latino/a immigrant workers within the United States. We will use and critique a variety of theoretical approaches to the relationship between labor, the State, and democracy. Special attention is paid to the phenomenon of leftist populist presidents on which a rich literature exists—from Mexico's Lázaro Cárdenas to today's Hugo Chávez of Venezuela and Evo Morales of Bolivia. Case studies will illustrate how working people have tried to take advantage of periods of relative democracy to elect candidates and affect laws, as well as how they have organized under harsh conditions of military dictatorship when strikes, demonstrations, and unions themselves were often illegal and workers' actions met with State and employer violence. To understand the political campaigns of Latin American workers, we will look at conditions of work and economic exploitation, as well as the concerns of working-class communities, questions of nationalism/sovereignty, and concrete issues of gender, race, ethnicity, and generational differences. Assigned readings will include historical monographs and articles, along with the cultural product of workers' struggles: songs and poetry, documentary films, murals, and photographs.

*Open to any interested student.*

## 1919

### Based on a True Story? Latin American History Through Film

**Matilde Zimmermann**  
*Open—Fall*

This course looks at critical historical moments and issues over five centuries of conflict and change in Latin America through the vehicle of film. The emphasis is on feature films created for a popular audience by Latin American directors (Brazil, Mexico, Argentina, and Cuba), with a few examples of how Latin America has been portrayed by filmmakers in Europe and the United States. We will look at issues of authenticity and voice, some of the pitfalls of using film to understand history, and at the role of cinema in the creation of national and popular memory. Although most of these films have been analyzed on many levels, the emphasis of this particular course will be on content and social or political vision rather than film theory, technique, or aesthetics. The topics or epochs we will examine include: The Encounter/Conquest, Slavery and Race, Colonial Women, Nationalism, Dictatorship and the

Disappeared, El Norte-The United States and Latin America, Urban Indigeneity, Revolution and Power, Revolution and Culture Wars, Imperialism, and Globalization. Required readings will include historical monographs and primary sources; one of the two weekly class meetings will be a film showing. There is no language prerequisite for this course; all films are available with English subtitles.

*Open to any interested student.*

## Borderlands: Histories of Race and Gender in the U.S. Southwest

**Priscilla Murolo**

*Advanced—Year*

This seminar uses Southwestern history as a lens for the study of race and gender: their production, reproduction, contestation, and intersection in a region that has, for centuries, been a global crossroads. Gender and race offer exceptionally illuminating categories for analyzing the colonial regime that forged Native Americans, Spaniards, and Africans into the Mexican people; the Anglo conquest that transformed Northern Mexico into the Southwestern United States; and the modern Southwest created by successive waves of national and international migration. Our central themes within these contexts include indigenous peoples' resistance and adaptation to settler-colonial regimes; the emergence of new races and cultures rooted in Europe, Africa, and Asia, as well as the Americas; the racial and gender dynamics of a regional economy dependent on colonial and neocolonial labor systems; and, following World War II, the rise of new social movements based on identity politics. Our investigations rest on the premise that histories of race and gender in the Southwest offer vital insight into the larger dimensions of U.S. and world history. Course reading ranges from primary documents-reportage, autobiography, and fiction-to scholarship in history, social science, and cultural studies.

*Advanced. Open to juniors and seniors and to sophomores with permission.*

## Diplomacy and Intelligence in Modern History

**Jefferson Adams**

*Open—Year*

By what means have different historical states and empires acquired vital knowledge about one another? And how, over the centuries, have various techniques of negotiation evolved, leading either to reconciliation or to warfare? This course will begin its inquiry in the Italian Renaissance, which saw the birth of modern diplomacy, and then proceed to examine how balance of power and Realpolitik culminated in the remarkable

state-system of the 19th century. The impact of totalitarianism in the 20th century—as well as the struggles of the Cold War—will also be carefully assessed. Finally, some key Eastern approaches to strategy and warfare will be explored to gain a better understanding of the nature of the non-Western world. Throughout the course, emphasis will be placed on the role of intelligence gathering and covert action and their influence on the course of events. Attention will also be given to the difficult problem of reconciling clandestine government operations with the ideals of an open democratic society. The class assignments will draw from a variety of sources—historical narrative, firsthand accounts, novels, and films.

*Open to any interested student.*

## Europe Since 1945

**Jefferson Adams**

*Lecture, Open—Fall*

With the conclusion of the longest and most destructive war in modern history, the countries of Europe faced the formidable challenge of reconstructing their economies, societies, and national cultures. At the same time, a new conflict soon emerged in the form of a cold war—one supported by a massive number of nuclear weapons—and kept the continent divided until the last decade of the century. This course will explore these critical years, beginning with the Yalta and Potsdam treaties, the Nuremberg and successor trials, and the Marshall Plan. Other key topics to be investigated include the rise of the European welfare state, the historic rapprochement between France and Germany, the process of decolonization, and the nonviolent 1989 revolutions in the East bloc. Of major concern is the question of European unity and its prospects for realization in the present century, along with the transatlantic relationship with the United States. Various documentary films, as well as attention to cultural developments, especially in the visual arts, will supplement the lectures. The group conferences will focus on individual works by leading authors such as Hannah Arendt, George Orwell, Albert Camus, Alexander Solzhenitsyn, and Milan Kundera.

*Open to any interested student.*

## First Year Studies: Century of Revolution: Latin America Since 1898

**Matilde Zimmermann**

*FYS*

Mexico 1910. Bolivia 1952. Cuba 1959. Chile 1970. Grenada 1979. Nicaragua 1979. And countless near-revolutions in 20th-century Latin America. Why so many? What made some succeed and others fail? Why do movements that inspire such hope and sacrifice often

end in disappointment? Is the era of armed revolution over? Are the governments of Venezuela and Bolivia today part of this pattern, or do they represent a new "21st-century socialism"? What has been the response of the United States to Latin American revolutions? This course will trace the development of national liberation movements, political revolutions, and other forms of resistance to social and economic inequality from 1898 to the present. It is designed to familiarize students with various theories of revolution and their critiques and to advance historical research and writing skills. We will focus particularly on the Mexican, Cuban, and Nicaraguan revolutions, looking at the unique national histories and cultures that produced these social revolutions, as well as the international context in which they occurred. Special attention will be paid to the ways in which issues of ethnicity and gender affect participation in armed revolution. Readings are chosen to maximize the extent to which we are listening to Latin American voices, especially the speeches, manifestos, interviews and *testimonios* of the rebels themselves, but also the portrayal of their struggles by novelists, filmmakers, and other artists. Ms. Zimmermann is also the director of the SLC study-abroad program in Havana, Cuba.

## First Year Studies: Religion and Art in the Making of Europe

### FYS

"In the beginning was the Word..." We will start with this mysterious and unforgettable evocation of Genesis at the opening of John's gospel account of Jesus. How did ancient Jewish writers interpret Genesis differently from ancient Christians? Are differences in the ways they read the same book, what Jews call the Bible and what Christians call the Old Testament, at the heart of the split between Judaism and Christianity? Throughout this course, we shall inquire how these works of literature, through interpretation and reinterpretation, generated a variety of different cultural systems. Topics to be examined include: canon, exegesis, *Midrash*, typology; temple, synagogue, church; Wisdom and Logos; atonement, sacrifice, penance; martyrdom, asceticism, sainthood. Other questions include: Over what issues did Jews and Christians part ways? Why were some of the many rival groups within the early Christian movement considered too Jewish and others not Jewish enough? Was classical civilization incompatible with Christianity? Or, as it was expressed in antiquity: "What does Athens have to do with Jerusalem?" What did "conversion" mean to different leaders such as a Roman emperor like Constantine, a philosophically inclined intellectual like St. Augustine, a barbarian tribal leader like Clovis? How did these converts in turn reshape Christianity? Would the Jewish Palestinian founders of Christianity recognize what had become of their faith as it gained converts throughout the Roman Empire and

early medieval Europe? Why does a history course that highlights religious thought, behavior, and institutions also focus on art? One reason: It is great fun to read the art and architecture alongside texts. Another is that they are some of mankind's greatest treasures. A third is that basilicas, mosaics, sculptures, and illuminated manuscripts were central to how Early Christians and Medieval Europeans defined themselves. Thus, while many of our sources are literary, many are visual: the Arch of Constantine; some of the most famous mosaics in the world at the churches of Santa Maria Maggiore and San Vitale; paintings and calligraphy in gospel books linked to such monasteries as Lindisfarne in England and Kells in Ireland that radically transformed the very idea of a book in Western culture. If time permits, we will also explore French Romanesque and Gothic churches at Moissac, Autun and Chartres. We will also take advantage of our proximity to New York museums to view some of the finest collections in North America. This includes the Metropolitan Museum, The Cloisters Museum, and the Morgan Library and Museum.

## From the Catacombs to Chartres: A Research Seminar in Christian Iconography, History, and the Language of Forms

### *Advanced, Intermediate—Year*

All three religions of the book have rich traditions of verbal exegesis; but unlike Judaism and Islam, only Christianity created and sustained an elaborate visual language to represent and interpret its sacred texts. If the study of the subject matter in art is iconography, what such an investigation might mean in practice can vary widely from identification of personages, episodes, and symbols to the more challenging, historically oriented examination of what text is the basis for the imagery (if, indeed, the imagery is grounded in a text), why that imagery or architectural form was chosen in a particular time and place, why it might be grouped with others that appear unrelated, and what such choices might have meant to a patron, an artist, and the community. In short, iconography is about human beings making choices. Thus, one might need to consider biblical exegesis, theology, legends, historical context (including society, politics, controversies, psychology, climate of opinion), in addition to possible artistic models—indeed, all the tools of history. Our goal in this course will be to strive for this more inclusive study of iconography. To move towards this goal, we will learn from, while critiquing, interpretations by some of art history's masters: Andre Grabar, Emile Mâle, Erwin Panofsky, Richard Krautheimer, Meyer Schapiro—scholars who sought the relationships of words to images and of art and, more generally, to historical contexts. We will also be asking questions about style, composition, materials, main fields, and

margins; i.e., what might be called the language of artistic forms. Student research projects are the core of this course in the second term. We will learn how to use and evaluate library and Internet research tools. We will assist each other at every step of the way and present findings to the class orally and in written drafts for help and criticism. One might envision the results being "published"—i.e., posted on the Internet. Previous college study in some aspects of ancient, medieval, Renaissance culture is mandatory, though not necessarily in art history.

*Intermediate/Advanced. Permission of the instructor is required.*

## Gender, Education and Opportunity in Africa

**Mary Dillard**

*Intermediate—Fall*

In modern Africa, equity in education—whether in relation to gender, ethnicity, race, class, or religion—remains an important arena of social and political debate. As formal colonial rule ended on the African continent and more African nations gained independence, education became synonymous with modernity and a leading indicator of a country's progress towards development. Gender has consistently played a powerful role in determining who would receive access to education. An awareness of the significance of both formal and informal education has been reflected within the realms of African politics, popular culture, literature, and film. This class studies the history of education in Africa, focusing on a wide variety of training, classroom experiences, and socialization practices. In particular, we will investigate the influence of gender in defining access to educational opportunity. We will begin by questioning prevailing constructs of gender and determine how relevant western gender categories have historically been for African societies. By focusing several of our readings on countries as diverse as Nigeria, Tanzania, Ethiopia, and Zimbabwe, students will develop a broad overview of educational policy changes and practices throughout the African continent.

*Intermediate.*

## History and Politics of the Modern Middle East

**Hamid Rezai**

*Open—Fall*

The contemporary Middle East is one of the most important regions in today's world. This course explores the origins and development of events that have placed this region at the center of international politics in the 20th and 21st centuries. Although a vast majority of the region is composed of Arabs and Muslims, we pay

particularly close attention to the rich ethnic, religious, and cultural diversity of the modern Middle East. We begin with the 19th century, asking how Western expansion and imperialism impacted the domestic politics of countries such as Turkey, Egypt, Iran, and Syria. Next, we transition to the Middle East since World War I, examining the emergence of nationalism and nation-states in the region, the origins and future of the Arab-Israeli conflict, and the role of ethnic and religious minorities in political affairs. Along the way, we ask questions such as these: Why did nationalism and state formation differ from country to country in the region? Why has the Arab-Israeli conflict become such a central issue in international politics? And how do minorities such as the Kurds and democratic forces such as the green movement in Iran compete for power and influence in the region? We then analyze the rise of political Islam, the Middle East since 9/11, and the U.S. presence in Iraq. We conclude by reflecting on the future of America's interests and involvement in the Middle East.

*Open to any interested student.*

## Hunger and Excess: Histories, Politics, and Cultures of Food

**Persis Charles, Charles Zerner**

*Intermediate—Spring*

Beliefs about food, food making and food consumption are practices that have historically indexed, identified, and mapped the contours of self, community, and nation. This course analyzes food issues through the lenses of culture and history. Histories of particular foods, including sugar and potatoes, coffee, and chocolate, are examined in order to reveal their crucial roles in social change, identity, class formation and conflict, nationalism, and the promotion of slavery. How were potatoes, famine, and the enforcement of free-trade ideology linked in 19<sup>th</sup> century Anglo-Irish relations? How have episodic food riots, greeting perceived shortages and injustices in distribution, led to the constitution of new forms of sociability? What accounts for the birth of the restaurants? How has the coming of the recipe book affected gender roles and domesticity? And how has the arrival of abundance brought changes to the human body, ideas, and ideals of normality? The course explores relationships between ideas of "nature" and the "natural" and ideas of natural diets, "locavorisms," the "wild," the raw, and the cooked. Through the lens of cultural studies and cultural anthropology, food production and consumption is revealed as a symbolic medium whose "travels" across continents, as well as into individual digestive systems, illuminate and map topographies of class, tastes, the forbidden, and the erotic. Food as a symbolic substance moves through fashion, contemporary art, and nutrition. How, for example, is the natural body imagined and

modeled in the 21<sup>st</sup> century? Is it taboo to eat chocolate after yoga? What do the rules of kosher do? And how do food taboos in the natural food movement resonate with the rules of kosher in the Old Testament?

*Open to sophomores and above.*

## Powers of Desire: Urban Narratives of Politics and Sex

**Rona Holub**

*Advanced—Year*

What are and have been the narratives of sex, gender, and desire in urban spaces? How does urban space (political and physical) create, bolster, and inhibit desire of all kinds? The course will examine relationships between urban space and sexual identities, the socio-economic implications and outcomes of urban planning and design and political decisions on a variety of people living and working in cities. Some specific topics addressed will include crime, consumerism, leisure, and capitalism. This is a history course that uses historical scholarship combined with fiction, film, art, and music. The course will focus mainly on modern U.S. cities but will include some discussion of cities around the world, including the ancient world. The instructor will lead field trips (which are required) into New York City.

*Advanced. Open to juniors and seniors and to sophomores with permission.*

## Public Stories, Private Lives: Methods of Oral History

**Mary Dillard**

*Advanced—Year*

Oral history methodology has moved from a contested approach to studying history to an integral method of learning about the past. This is because oral histories allow us to gain an understanding of past events from a diverse array of vantage points. Methods of recording oral history also allow the possibility of bringing private stories into the public. In contrast, public history in the form of monuments, museums, and World Heritage Sites are consciously preserved in order to emphasize particular aspects of a national, regional, or local past, which its protectors deem to be important. Who owns this history? Is it Civil War re-enactors who dedicate their weekends to remembering this war? Is it the African Americans who return to West Africa in search of their African past or the West Africans who want to forget about their slave-trading past? What happens when the methods for interpreting public and oral histories combine? This course places particular attention on the importance of oral history in tracing memories of the past. We will discuss how Africanist and feminist scholars have used oral history to study the history of underrepresented groups. We will also

investigate how methods of oral history and public history can be used in reconstructing the local history of our surrounding community (i.e., Yonkers, Bronxville, Westchester).

*Advanced.*

## Realisms: Currents and Crosscurrents in 19th-Century European Thought

**Philip Swoboda**

*Open—Fall*

The term "realism" enjoyed an unprecedented vogue in 19th-century Europe. All manner of doctrines and ideologies prided themselves on their "realistic" understanding of the human predicament and the structure of the universe, while disdaining rival doctrines as captive to illusions and prejudices. Students in this course will read and discuss texts illustrating influential forms of 19th-century European realism in philosophy, ethics, and politics. They will also consider realism in literature and painting. We will try to identify what exactly "realism" meant to each of these philosophical and artistic tendencies and to discover why 19th-century Europeans found the concept of "realism" so irresistible. Since the schools of thought to be investigated often conceived "reality" in diametrically opposed ways, the course will provide an introduction to a number of the most significant intellectual debates of the 19th century. Thinkers to be discussed include Mill, Marx, Darwin, Schopenhauer, Nietzsche, James, and Weber, along with assorted Romantics, materialists, racists, Impressionists, Symbolists, Futurists, and neo-Kantians.

*Open to any interested student.*

## Rethinking Malcolm X: Imagination and Power

**Komozi Woodard**

*Open—Fall*

One biographer of Malcolm X concluded that he was neither a thinker nor a planner nor a tactician but rather a charismatic minister. Leaving aside that one-dimensional analysis, students will explore the imaginative power and poetic insight of Malcolm X. How did Malcolm X rise to the helm of a grassroots movement in the midst of the postwar urban crisis? Students will examine the different skills that Malcolm X mastered at each stage of his leadership: debater, preacher, organizer, publisher, social commentator, political agitator, religious reformer, media icon, and so forth. Above all, Malcolm X was a great spoken-word artist, who shaped a new and explosive political language to foster a black awakening. Finally, the

seminar will examine the spiritual sons and daughters of Malcolm X in the Black Power and Black Arts Renaissance.

*Open to any interested student.*

## Sickness and Health in Africa

**Mary Dillard**

**Open—Spring**

Depending on the level of his or her resources, a sick person in Africa potentially has access to a variety of options for treatment. How illness is perceived becomes a crucial determinant in how people seek care. Despite this array of treatment options, the state of public health in most African countries has become woefully inadequate. While the reasons for this decline in health status are related to questions of international political economy, they can also be traced historically. This class studies the history of health, healing, and medical practices in Africa in order to identify the social, historic, and economic factors that influence how therapeutic systems in Africa have changed over time. We will investigate a range of topics, including the place of traditional healers in providing care, the impact of the AIDS pandemic on overall public health, and the role of globalization in changing the structure of health-care delivery in most African countries.

*Open to any interested student.*

## Standing On My Sisters' Shoulders: Women in the Black Freedom Struggle

**Komozi Woodard**

**Lecture, Open—Fall**

An older generation of scholars left intact a "leading man" narrative of the black freedom struggle. Those master narratives have centered men and trivialized women. The women examined in this course were not inconsequential figures in their day. Rethinking the history of the Black Revolt requires interrogating a narrative of black activism that casts these leading women in supporting roles. Epic leaders such as Rosa Parks, Toni Cade Bambara, Sonia Sanchez, Shirley Chisholm, Flo Kennedy, Denise Oliver, and Assata Shakur were outspoken proponents of self-defense and antiterrorism; they represented a black radical tradition pioneered by Harriet Tubman and Ida B. Wells. How did leaders develop self-defense against rape and anti-lynching movements against terrorism? Leaders like Septima Clark, Ella Baker, Gloria Richardson, and Fannie Lou Hamer fashioned an organizing tradition for self-emancipation and participatory democracy. Thus, this course explores those dimensions of a new narrative of the Black Revolt, with women at the center of history.

*Open to any interested student.*

## The Arab Israeli Conflict

**Yoav Peled**

**Open—Spring**

The course will examine the Arab-Israeli conflict from its origins at the beginning of Zionist settlement in Palestine in the 1880s to the present. It will focus more on the social and economic processes that have taken place in Palestine/Israel and in the Middle East generally and less on diplomacy and war. The key issues to be discussed are: the struggle over land and labor in Palestine/Israel, Zionist/Israeli nation- and state-building efforts, Palestinian resistance and Arab intervention, the broader Middle Eastern context, the role of the superpowers, globalization, liberalization and the peace process, failure of the Israeli-Palestinian peace process, and prospects for the future.

*Open to any interested student.*

## The Cold War in History and Film

**Jefferson Adams**

**Open—Spring**

The half-century conflict that, following the end of World War II, developed between the United States and the Soviet Union—along with their respective allies—manifested itself in many different spheres of life. This course will explore the integral role that film played on both sides of the Iron Curtain. Following an introductory survey of the main events of the Cold War, we will examine a series of major films—mostly in chronological order—focusing on the context in which they were made and the larger historical themes that they contain. Various genres—such as the rubble film, the thaw film, the Czech new wave, the spy film, and the musical—are also represented. A sampling of the syllabus includes *The Murderers Are Among Us*, *The Cranes Are Flying*, *On the Waterfront*, *Man of Marble*, *The Spy Who Came in From the Cold*, and *The Lives of Others*. A short written assessment is required after each of the weekly screenings; supplementary readings will be assigned, as well, to aid our discussions. For conference work, students are encouraged to investigate the work of an individual director during this era, the depiction of a specific Cold War event or issue in several films, or the national cinemas of countries particularly in the East bloc.

*Open to any interested student.*

## The Contemporary Practice of International Law

**Lecture, Open—Fall**

In a landscape pocked by genocide, wars of choice, piracy, and international terrorism, what good is

international law? Can it mean anything without a global police force and a universal judiciary? Is "might makes right" the only law that works? Or is it true that "most states comply with most of their obligations most of the time"? These essential questions frame the contemporary practice of law across borders. This lecture provides an overview of international law, its substance, theory, and practice. It addresses a wide range of issues, including the bases and norms of international law, the law of war (*jus ad bellum* and *jus in bello*), human rights claims, domestic implementation of international norms, treaty interpretation, and state formation/succession. Readings will draw from two key texts: Murphy's treatise *Principles of International Law* and *International Law Stories* edited by Noyes, Janis & Dickinson. These readings will be supplemented by articles and such original sources as conventions, cases, and statutes. There are no prerequisites.

*Open to any interested student.*

## The Disreputable 16th Century

**Philip Swoboda**

*Open—Fall*

This course looks at a number of 16th-century thinkers, men of letters, and visionaries whose unconventional ideas scandalized their contemporaries. Many were denounced with equal fervor by both Catholic and Protestant authorities. The thinkers to be examined include famous figures such as Machiavelli and More, Rabelais and Montaigne, Erasmus and Jacob Boehme, but also a variety of less familiar names: eccentric philosophers, unorthodox theologians, and practitioners of alchemy, astrology, and magic. We will seek to determine what was genuinely original about their thought and which of their ideas proved particularly alarming to their contemporaries. Examining the writings of those who were seen in their time as the most outrageous challengers of received wisdom will help us discover what the fundamental beliefs of 16th-century Europeans actually were. We will also devote some attention to the social and institutional setting of 16th-century thought in an effort to understand how heterodox currents of opinion were able to maintain themselves for long periods on the fringes of respectable intellectual life.

*Open to any interested student.*

## The Evolution of Humanitarian Law and Human Rights

**Lecture, Open—Spring**

History is replete with rabid pogroms, merciless religious wars, tragic show trials, and even genocide. For as long as people have congregated, they have defined themselves, in part, as against an other-and persecuted that other. But history has also yielded systems of

constraints. So how can we hope to achieve a meaningful understanding of the human experience without examining both the wrongs and the rights? Should the human story be left to so-called realists, who claim that power wins out over ideals every time? Or is there a logic of mutual respect that offers better solutions? This lecture examines the history of human rights and humanitarian law. Approximately half the course will address the long and remarkably consistent history of the laws of war, focusing on the principles of military necessity, proportionality, and discrimination, as well as the cultural, political, and technological context in which these laws evolved. The other half will focus on the rights that individuals and groups claim against their own states. Although there are no prerequisites, students would benefit from having taken The Contemporary Practice of International Law. Readings will draw from three key texts: Howard, Andreopolous & Shulman's *The Laws of War: Constraints on Warfare in the Western World* and Buergeth, Shelton & Stewart's *International Human Rights in a Nutshell* and *Human Rights Advocacy Stories* edited by Hurwitz, Satterthwaite & Ford. These readings will be supplemented by articles and such original sources as conventions, cases, and statutes.

*Open to any interested student.*

## The Founders and the Origins of American Politics

**Eileen Ka-May Cheng**

*Open—Year*

From the establishment of the nation to the present, the Founding Fathers have served as a touchstone for American identity. How differently that sentence would read if, instead of American identity, we substituted American identities. What were the common visions of figures such as Thomas Jefferson, George Washington, John Adams, and Benjamin Franklin, and to what extent have their differences created multiple and perhaps irreconcilable American identities? The very term "Founding Fathers" may be an evasion of the conflicts that have run through our entire history. Is the notion of the Founding Fathers our nation's counterpart to the Garden of Eden? Of course, conflict is not incompatible with harmony; instead, one requires the other so that the denial of one is, in effect, the denial of the other. This course will explore how and why Americans have put such a premium on the Founding Fathers as a source of political legitimacy by examining the colonial roots of the political thought of the founding generation, going back to the Jamestown and Puritan settlements, as well as the influences of such European thinkers as John Locke and Adam Smith on the founders' political ideology. The course will then look at the political vision of the Founding Fathers themselves, putting into question commonly held views

about the ideals they embraced. Were the founders proponents of liberal individualism and democracy, as so many Americans assume, or were they backward looking reactionaries seeking to hold onto a communal ideal modeled on the ancient republics of Greece and Rome? Finally, the course will analyze the political legacy of the founders from the early 19th century to the Civil War, ending with the question of how could both the Union and the Confederacy view themselves as the true inheritors of that legacy when they seemed to represent such opposed causes?

*Open to any interested student. Some background in history is helpful but not required.*

## “Not by Fact Alone”: The Making of History

**Eileen Ka-May Cheng**

*Open—Year*

History, like memory, is a reconstruction and, as such, does not call out to us to be seen or heard. Instead, we seek and discover, seeing only what our perspective illuminates. For the Puritans, history was the unfolding of providential design. Purpose, like the seed of a plant, was always present in the unfolding of events. For Enlightenment philosophers, history was the story of progress effected by human reason. Purpose, in this case, was a human triumph—such as the triumph of medicine over prayer. For Marx, history was the story of class struggle. In this case, purpose was no more than following the money trail, coupled with the added optimism that, in the end, the scales of justice would be balanced. Each of these perspectives recognized and struggled with the notion that history is, in the final analysis, a fate beyond human control because of the paramount role of unintended consequences that counterpoints the history of societies no less than it counterpoints the life of the individual. In other words, is purpose an artifact of human understanding or woven into the tapestry of history? We will study the different ways that American and European thinkers from the 17th to the 20th centuries grappled with this question in their writings on history. The course will examine the conflicts and changes in their views on both the nature of the historical process and the way that historians should represent history. We will look at how these differences both reflected and contributed to broader intellectual, political, and social changes in this period. Such an examination will demonstrate the ways in which conceptions of history were, themselves, the product of history.

*Open to any interested student.*

## 2011-2012

### Art and the Sacred in Late Antiquity and the Middle Ages

*Lecture, Open—Spring*

No time in history saw a richer, more varied expression of sacred art than the European Middle Ages. And no other age has known as powerful, as all-embracing a religious institution as the medieval church. In this interdisciplinary lecture course, we will ask why the Christian church and the art made in its service took such extraordinarily varied forms in the 1,000-year period from the catacombs to Chartres, from the third century to the 13th. We will also ask why certain features of contemporary Christianity that are looked upon as quintessentially Catholic rather than Protestant were established not in the earliest years of the church but in Late Antiquity and the Middle Ages: monasteries and nunneries, the cult of the Virgin, a celibate clergy, and a papal monarchy with virtually unlimited powers. Since Christianity is a religion not only for the here and now but for the afterlife, of special interest will be perplexing beliefs such as that we on earth might affect the fate of the dead in purgatory and, conversely, that some of the “very special dead” might assist the living or perhaps punish them. Perhaps the most distinguishing feature of the course will be studying these topics in visual, as well as in written, texts; for instance, in the architecture and decoration of early Christian and Romanesque churches and, at St. Denis and Chartres, in the birth of the uniquely Western style that we call Gothic. By also examining how sacred words were illuminated in manuscripts linked to Lindisfarne, Kells, and Charlemagne’s court, we will attempt to engage with a novel expression of spirituality in the Middle Ages: the book as icon. Near the end of our course, we will follow men and women from all over Europe on their pilgrimages to Santiago de Compostela, stopping at such memorable French Romanesque churches as Vézelay, Conques, and Moissac. In New York museums, students will have opportunities to view chapels and cloisters brought from Europe, as well as sculptures, ivories, metalwork, stained glass, books, paintings, and tapestries that are among the world’s most precious treasures. Lectures will be devoted primarily to art; the weekly group conferences, to readings from the Middle Ages.

### Cinema and Society in the Middle East and North Africa

**Hamid Rezai**

*Open—Spring*

As a pathway to modernity and an important part of intellectual life, cinema has been playing a crucial role in the sociopolitical and cultural development of the Middle East and North Africa since its emergence in the

early 20th century. In the popular media and language of official politics, the voices of artists and filmmakers of this region have not received the attention they deserve. For decades, Algerian, Egyptian, Iranian, and Palestinian cinemas have been a major force reflecting on their countries' and the region's struggle against colonialism, authoritarianism, gender inequality, and poverty. In this course, we will read works on film theory and Middle Eastern and North African directors and their films. In addition to watching and discussing films, we will ask questions such as these: What role did cinema play in the formation of national and ethnic identities since its emergence in the early 20th century? How does film serve as a medium for transformation from a "traditional" society to a "modern" one? How do feminist directors use their films to negotiate women's rights? How do filmmakers resist censorship by authoritarian and repressive regimes? And finally, what role does cinema play as an influential medium in the representation of this region within global culture?

## First-Year Studies: Gender and the Culture of War in US History, 1775-1975

**Lyde Cullen Sizer**  
FYS

The course will look closely—and from several vantage points—at domestic and international wars in the history of the United States from the American Revolution to Vietnam. Instead of a classic political-history approach, we will study the ways in which war drew attention to, and often reshaped, daily life and core assumptions about manhood and masculinity, womanhood and femininity. Rather than focusing on leaders and decision makers alone, we will analyze the work and lives of other affected constituents: rank-and-file soldiers, war workers, cultural critics, and those left to juggle new responsibilities on the home front. This course will also consider other "wars"—in particular, over slavery—that are not usually so named and their effect on domestic and gender sensibilities. Texts will include history books, biographies, memoirs, letters, editorials, novels, and, when historically appropriate, photographs and films. This will be a writing-intensive course.

## First-Year Studies: The Sixties

**Priscilla Murolo**  
FYS

According to our national mythology, social insurgencies of the 1960s originated in the United States and pitted radical youth against the American mainstream. The real story is much more complicated. Politically speaking, "the sixties" began in the late 1940s and extended well into the 1970s, the ferment was by no means confined to youth, and developments within the

United States were following global patterns. Revolutionary movements and ideas reverberated from Asia and Africa to Europe and the Americas, and they mobilized people from virtually all walks of life. This course will situate US movements within their global contexts and will focus especially on movements inspired by revolutionary nationalism and its various permutations among activists addressing issues of colonialism, class, race, gender, and sexuality. Readings include historical documents, as well as scholarship; we will also make ample use of music and film.

## First-Year Studies: "In the Tradition": An Introduction to African American History and Black Cultural Renaissance

**Komozi Woodard**  
FYS

African American history is an important window into the history of the United States and the rise of the modern world. Using African American history, culture, and consciousness as the focus, this course will introduce students to American history and world history. Students will begin with classics such as *The Souls of Black Folk* and *Up from Slavery*, as well as *Coming of Age in Mississippi* and *Down These Mean Streets*. We will explore where writers such as St. Augustine, Aleksandr Pushkin, and Alexandre Dumas fit into the traditions of the African diaspora and Africana studies. The course will also examine major developments such as the Atlantic slave trade in the making of the modern world; comparative slavery and emancipation; the classic slave narratives; the Civil War and Reconstruction; the Great Migration and Harlem Renaissance; making race and nation in the United States, Brazil, and South Africa; the racial politics of New Deal citizenship; African Americans in the city; the rise of blues and jazz; women in the black revolt; civil rights and black power; and the black arts movement.

## France and Germany in the 20th Century

**Jefferson Adams**  
Open—Fall

"If France were married to a country," one historian astutely observed, "it would be to Germany." Bitter adversaries during the First World War and yet, today, intimate partners within the European Union, France and Germany have indeed sustained one of the most complex and intriguing relationships during the past century. This course will examine the development of that relationship, looking carefully at economic, political, and social conditions in both countries. As they each experienced a remarkable cultural efflorescence (albeit under quite different circumstances), we will also investigate the role played

by various writers and artists. The class assignments will be varied, relying not only on historical accounts but also on memoirs, biographies, novels, and films. A few of the main topics include: the legacy of the First World War; the rise of totalitarian movements; the impact of the Second World War on ordinary citizens of both countries; the significance of leaders such as Philippe Pétain, Charles de Gaulle, Adolf Hitler, and Konrad Adenauer; the construction of a larger European community after 1945; and the impact of Germany's reunification in 1990. For conference projects, students may select a historical figure or problem from either country; topics that embrace both France and Germany are especially encouraged.

## Gender, Education, and Opportunity in Africa

**Mary Dillard**

*Intermediate—Spring*

In modern Africa, equity in education—whether in relation to gender, ethnicity, race, class, or religion—remains an important arena of social and political debate. As formal colonial rule ended on the African continent and more African nations gained independence, education became synonymous with modernity and a leading indicator of a country's progress towards development. Gender has consistently played a powerful role in determining who would receive access to education. An awareness of the significance of both formal and informal education has been reflected within the realms of African politics, popular culture, literature, and film. This class studies the history of education in Africa, focusing on a wide variety of training, classroom experiences, and socialization practices. In particular, we will investigate the influence of gender in defining access to educational opportunity. We will begin by questioning prevailing constructs of gender and determine how relevant Western gender categories have historically been for African societies. By focusing several of our readings on countries as diverse as Nigeria, Tanzania, Ethiopia, and Zimbabwe, students will develop a broad overview of educational policy changes and practices throughout the African continent.

## Harvest: A Social History of Agriculture in Latin America

**Matilde Zimmermann**

*Intermediate, Sophomore and above—Spring*

Two irrepressible conflicts run through the history of agriculture in Latin America: first, between the men and women who work the soil and those who own and control the land; and second, between, on the one hand, the growing of food and fiber for the farmers' own use and trade and, on the other, the production of cash crops for export to a world market. This course looks at various forms of agricultural production that have had

important impacts on Latin American history: pre-colonial agriculture in the Andes; plantation economies based on African slave labor in the Caribbean and Brazil; the introduction of European livestock and the development of huge ranches and haciendas in the colonial period; extractive industries ("plunder agriculture") such as rubber and lumber; peasant production and how it has changed over time; modern agribusiness and its relationship to globalization and imperialism. We will look at the impact of these different forms of production on the environment and on rural cultural practices, including religion, family relations and popular art. We will study the relationship between the landowning classes and the state, especially in the 19th and 20th centuries, and the role of peasants and other rural workers in movements for national liberation and social revolution. Sources will include theoretical articles, historical monographs, and primary sources.

## Hunger and Excess: Histories, Politics, and Cultures of Food

**Charles Zerner, Persis Charles**

*Open—Spring*

Beliefs about food, foodmaking, and food consumption are practices that have historically indexed, identified, and mapped the contours of self, community, and nation. This course analyzes food issues through the lenses of culture and history. Histories of particular foods, including sugar, potatoes, coffee, and chocolate, are examined in order to reveal their crucial roles in social change, identity, class formation and conflict, nationalism, and the promotion of slavery. How were potatoes, famine, and the enforcement of free-trade ideology linked in 19th-century Anglo-Irish relations? How have episodic food riots, greeting perceived shortages and injustices in distribution, led to the constitution of new forms of sociability? What accounts for the birth of restaurants? How has the coming of the recipe book affected gender roles and domesticity? And how has the arrival of abundance brought changes to the human body, ideas, and ideals of normality? The course explores relationships between ideas of "nature" and the "natural" and ideas of natural diets, "locavorisms," the "wild," the raw, and the cooked. Through the lens of cultural studies and cultural anthropology, food production and consumption are revealed as a symbolic medium whose "travels" across continents, as well as into individual digestive systems, illuminate and map topographies of class, tastes, the forbidden, and the erotic. Food as a symbolic substance moves through fashion, contemporary art, and nutrition. How, for example, is the natural body imagined and modeled in the 21st century? Is it taboo to eat chocolate after yoga? What do the rules of kosher do? And how do food taboos in the natural food movement resonate with the rules of kosher in the Old Testament?

## Ideas of Africa: Africa Writes Back

Mary Dillard

*Intermediate—Fall*

The continent of Africa has been variously described as the birthplace of humanity, the Motherland, a country, a continent, and a heart of darkness. All of these descriptions reflect representations of Africa, but how accurately do they reflect reality? This course analyzes the intellectual history of ideas about Africa and argues that some ideas have an enduring shelf life—even when they have been consistently proven to be inaccurate. We will critically interrogate historical and anthropological studies, travelers' accounts, media representations, and films created by non-Africans. However, we will also examine the critical responses by African philosophers, novelists, academics, artists, and journalists who have attempted to address these images.

## Imperial Russia: Power and Society

Philip Swoboda

*Open, Sophomore and above—Year*

Imperial Russia was the creation of Peter the Great (1672–1725). It was he who decided to impose on the backward country over which he ruled the modernizing reforms that would enable Russia to occupy a respected place among the European Great Powers. To provide himself with collaborators in realizing this vision of Russian greatness, he created a new cultural elite of landed noblemen educated on Western lines. It was this new elite, called into being by Peter and fostered by the empresses and tsars who succeeded him, whose offspring were responsible for 19th-century Russia's stupendous achievements in the realms of literature, art, music, and science. Over the course of the two centuries between 1700 and 1900, Russia's educated elite grew increasingly restive under the tutelage of the autocratic state, and some of its members eventually set about overthrowing the rule of the tsars by revolutionary means—a goal they achieved in 1917. The hypothesis to be considered in this course is that the tremendous flowering of cultural creativity for which 19th-century Russia is remembered was directly the product of the difficult relationship between the modernizing state and the Westernized elite that it had brought into being—between what Russians called “the power” (*vlast*) and “educated society” (*obshchestvo*). To explore this hypothesis, we will examine from a number of different angles the evolution of the Russian state, Russian society, and Russian culture in the 18th and 19th centuries. We will look at court politics, institutional and legal history, economic developments, and the system of serfdom that sustained the elite's material position and social status until 1861. We will discuss government decrees, poems, novels, publicism, paintings, and operas. In the second half of the spring semester, we will trace the history of the Russian revolutionary movement and investigate how and why the Imperial regime abruptly collapsed in 1917.

## In/Migration: How Immigrants and Migrants Changed New York City From a Small Trading Post to an Emerging World Metropolis

Rona Holub

*Advanced—Spring*

The question is: Who Created New York City? The answer is: slaves, immigrants, migrants—its people! This course traces the development of New York City beginning with its first inhabitants, the Lenape. It then follows its growth from a small trading post at the tip of Manhattan into a great commercial and cultural center. With special emphasis on the factors that push people out of one place and pull them into another, what they find when they arrive in their new environments, and how they struggle, negotiate, and figure out how to survive there—including how they exert power and how they deal with power exerted over them—we will explore the social, political, economic, and cultural history of the city through a wide range of readings that include primary source documents and historical scholarship. We will also experience the rhythms of this famous metropolis on its streets, as we attempt to understand the complex relationship between the city's social history and its built environment through field trips (attendance required). The class focuses on those groups of migrants and immigrants who entered into and lived in the city from the early 1600s to the 1920s. Our historical explorations will provide an understanding of how and why New York City came to be what it is today and how, as a dynamic organism, it continues to change. Although the course covers a particular time period, students may do conference projects that cover years not specifically addressed in the course.

## Leisure and Danger

Persis Charles

*Intermediate—Year*

The interaction between work and play has taken various forms in history. Our project in this course will be to examine the changes and continuities in the idea of leisure. Beginning in early modern Europe, we will trace the concept up to the present—concentrating on Europe and America and reflecting on subjects such as travel and the pursuit of the exotic, theatricality, consumerism, luxury, and display. In the 19th century, leisure became democratized, and an anxious debate grew louder. What were the implications of making leisure available to masses of people? From romance novels to cheap liquor, from shopping to the cinema, new avenues of leisure aroused both fear and excitement. Moralists felt a need to police both public and private space and to reassert the primacy of work, thrift, and duty. We will study them and the various forms of accommodations and resistance that met their efforts. Class, ethnicity, gender, and geography all acted

to structure people's access to leisure. We will look at struggles over race, gender, and popular culture; the way certain groups became designated as providers of entertainment; or how certain locations were created as places of pleasure. To set the terms of the debate, we will begin with some 18th-century readings about the theatre and the market, the salon and the court. Readings will include work of Montesquieu, Flaubert, Wilde, Wharton, George Eliot, and Fitzgerald. In addition, we will read works of nonfiction that show how leisure helped to create new forms of subjectivity and interiority. Students will be encouraged to work on conference topics linking leisure to a variety of subjects such as childhood and education, the construction of racial identities, or the changing nature of parenthood as birth control became more and more widely available, to name just a few areas. Potentially, this course—through the study of complex oppositions such as need and desire, purpose and aimlessness, the necessary and gratuitous—can give us a sense of the dizzying questions about life's very meaning that present themselves when we aim at a life of leisure.

## Public Stories, Private Lives: Methods of Oral History

**Mary Dillard**

*Advanced—Fall*

Oral history methodology has moved from a contested approach to studying history to an integral method of learning about the past. This is because oral histories allow us to gain an understanding of past events from a diverse array of vantage points. Methods of recording oral history also allow the possibility of bringing private stories into the public. In contrast, public history in the form of monuments, museums, and World Heritage Sites are consciously preserved in order to emphasize particular aspects of a national, regional, or local past that their protectors deem to be important. Who owns this history? Is it Civil War reenactors, who dedicate their weekends to remembering that war? Is it the African Americans who return to West Africa in search of their African past or the West Africans who want to forget about their slave-trading past? What happens when the methods for interpreting public and oral histories combine? This course places particular attention on the importance of oral history in tracing memories of the past. We will discuss how Africanist and feminist scholars have used oral history to study the history of underrepresented groups. We will also investigate how methods of oral history and public history can be used in reconstructing the local history of our surrounding community (i.e., Yonkers, Bronxville, Westchester County).

## Reform and Revolution in the Contemporary Middle East and North Africa

**Hamid Rezai**

*Open—Fall*

There is no doubt that, in today's age of information, states are not the only important players in the national and global political arena. Since their emergence in 18th-century England, social movements have played an increasingly crucial role in political and social developments. They have impacted the political decision making of almost every country in the Middle East, from the constitutional revolution in Turkey and Iran in the early 20th century to the nationalist movements in the Arab world in the 1950s and '60s and to the recent waves of popular uprising in Tunisia, Egypt, and Libya. Despite the vitality and complexity of these movements in authoritarian contexts, many analysts and observers have assumed until recently that public collective actions and popular protests are predominantly specific to liberal democracies. This course challenges this assumption by examining numerous powerful protest movements in the contemporary Middle East from the 20th century to the present, including those in Egypt, Algeria, Turkey, Tunisia, Libya, and Iran, and exploring the impact of people's power on the course and direction of their respective societies. Examining the collective actions of students, women, youth, and ethnic and religious minorities as vital forces towards change and democratization, this course investigates the profound impact of social movements on political and institutional decision-making procedures in the region. We will read and discuss texts on social movements that have shaped the sociopolitical landscape of the modern Middle East and North Africa. We will evaluate from a comparative perspective the origins, trajectories, and outcomes of popular unrest throughout this strategically important and contentious region. In this course, we will ask and debate questions such as these: What important internal players, other than the state and political parties, competed for power in the social and political arenas of each country? What are the demographic and historical roots of these movements, and how did they rise and fall? Why did the tactics of movements differ at divergent localities and times, and why did some movements turn militant? And finally, what are the social, intellectual, and historical causes of the emergence and outcomes of popular unrest?

## Revolution and Counterrevolution in Central America

**Matilde Zimmermann**

*Open—Spring*

Until the 1970s, most Americans were only dimly aware of Central America—if anything, it might bring forth an

association with earthquakes or “banana republics.” The victory of the Nicaraguan revolution in 1979 and then the eruption of guerrilla wars in El Salvador and Guatemala changed all that, bringing the active intervention of the US government, sparking the interest of a post-Vietnam generation of American youth, and putting new terms and faces on the front pages: Iran-Contra, Archbishop Oscar Romero, Sandino and the FSLN, the sanctuary movement, “low intensity warfare,” the annihilation of Mayan villages. This course examines the origins and dynamics of these revolutionary movements and the reasons for their success or failure. We will look at the revolutionaries’ ideologies, political and military strategies, class base, and the ethnic and gender composition of their leadership and ranks. To what extent was each side inspired by or dependent upon outside forces—Cuba and the Soviet Union in the case of the leftist guerrillas and the United States in the case of the counterrevolutionary armies and governments? What lessons can we draw from the fact that the leading revolutionary parties of the 1980s have all now abandoned armed struggle in favor of elections? In addition to historical monographs, we will make extensive use of primary sources—including revolutionary speeches, memoirs, songs, and manifestos, as well as declassified CIA and other US government documents.

## Romantic Europe

*Philip Swoboda*

*Open—Year*

Between the 1790s and the middle of the 19th century, European culture was largely shaped by the broad current of thought and feeling that we know as “romanticism.” This course will examine the rise of the romantic sensibility in the decades between the 1760s and 1800 and survey diverse manifestations of romanticism in thought, literature, and art during the subsequent half-century. We will give particular attention to the complex relations between romanticism and the three most portentous historical developments of its era: the French Revolution, the birth of industrial society in Britain, and the rise of national consciousness among Germans, Italians, and other European peoples. Readings will include prose fiction by Goethe, E. T. A. Hoffmann, and Walter Scott; poetry by Wordsworth, Shelley, Hölderlin, and Mickiewicz; works on religion, ethics, and the philosophy of history; and political treatises by the pioneers of modern conservatism, liberalism, and socialism.

## Sickness and Health in Africa

*Mary Dillard*

*Open—Fall*

Depending on the level of his or her resources, a sick person in Africa potentially has access to a variety of

options for treatment. How illness is perceived becomes a crucial determinant in how people seek care. Despite the array of treatment options, the state of public health in most African countries has become woefully inadequate. While the reasons for this decline in health status are related to questions of the international political economy, they can also be traced historically. This class studies the history of health, healing, and medical practices in Africa in order to identify the social, historic, and economic factors that influence how therapeutic systems in Africa have changed over time. We will investigate a range of topics, including the place of traditional healers in providing care, the impact of the AIDS pandemic on overall public health, and the role of globalization in changing the structure of health-care delivery in most African countries.

## The American Revolution and Its Legacy: From British to American Nationalism

*Eileen Ka-May Cheng*

*Open—Year*

It may be comforting to know that historians agree that an American Revolution did indeed occur. Less comforting but more intriguing may be the realization that historians do not agree on when it commenced and when it ended, much less on the full meaning of what exactly took place beyond the mere facts of the Revolution. Certainly, the question was profound enough to move John Adams to ask, “What do we mean by the Revolution?” In the fall, we will examine the causes and character of the Revolution by studying the political, intellectual, social, and cultural dimensions of this event. In the spring, we will look at how Americans adapted the legacy of the Revolution to the social and political changes of the 19th century and at how that legacy at once divided and unified Americans in this period. How were both opponents and defenders of slavery able to appeal to the Revolution to legitimize their views? What was the relationship between the Revolution and the Civil War? Was the Civil War a “second American Revolution”? By looking at how Americans used the memory of the Revolution to define their identity, the course ultimately aims to achieve a better understanding of the basis for and nature of American nationalism.

## The Black Arts Renaissance and American Culture: Rethinking Urban and Ethnic History in America

*Komozi Woodard*

*Lecture, Open—Year*

The Black Arts Renaissance is an essential window into American cultural history. How did jazz become American classical music? Looking back one century,

American culture was defined *not* in terms of our way of life but rather in terms of “refinement.” In line with that, Black America was defined not in terms of an American ethnic group but rather in terms of an inferior race. By 1903, Anglo-American authorities insisted that “no full-blooded Negro has ever been distinguished as a man of science, a poet, or an artist.” The lectures and films in this course examine the contours of US history and American studies to explore how, in one century, the value of Black America, blues, jazz, and hip-hop culture was transformed from worthless to priceless. The triumph of the Black Arts Renaissance, jazz studies, and African studies was produced by an epic century of extraordinary American cultural revolution; and that cultural revolution embraced social and cultural transformations that also produced golden ages of Irish, Yiddish, Chicano, and Nuyorican Renaissance. In other words, this course introduces students to the rethinking of urban and ethnic history in America.

## The Cold War In History and Film

**Jefferson Adams**

*Open—Fall*

The half-century conflict that, following the end of World War II, developed between the United States and the Soviet Union—along with their respective allies—manifested itself in many different spheres of life. This course will explore the integral role that film played on both sides of the Iron Curtain. Following an introductory survey of the leading events of the Cold War, we will examine a series of major films (mostly in chronological order), focusing on the context in which they were made and the larger historical themes that they contain. Various genres—such as the rubble film, the thaw film, the Czech new wave, the spy film, the musical, and animation—will also be represented. A sampling of the syllabus includes *The Murderers Are Among Us*, *The Cranes Are Flying*, *On the Waterfront*, *Man of Marble*, *The Spy Who Came in From the Cold*, and *Goodbye Lenin!* A short written assessment is required after each of the weekly screenings, and supplementary readings will be assigned, as well, to aid our discussions. For conference, students are encouraged to investigate the work of an individual director during this era, the depiction of a specific Cold War event or issue in several films, or the national cinemas of countries—particularly in the East block.

## The Contemporary Practice of International Law

**Lecture, Open—Fall**

In a landscape pocked by genocide, wars of choice, piracy, and international terrorism, what good is international law? Can it mean anything without a global police force and a universal judiciary? Is “might makes right” the only law that works? Or is it true that

“most states comply with most of their obligations most of the time”? These essential questions frame the contemporary practice of law across borders. This lecture provides an overview of international law—its substance, theory, and practice. It addresses a wide range of issues, including the bases and norms of international law, the law of war (*jus ad bellum* and *jus in bello*), human-rights claims, domestic implementation of international norms, treaty interpretation, and state formation/succession. Readings will draw from two key texts: Murphy’s treatise, *Principles of International Law*, and *International Law Stories* edited by Noyes, Janis & Dickinson. These readings will be supplemented by articles and original sources such as conventions, cases, and statutes.

## The Idea of a Balance of Power

**Fredric Smoler**

*Open—Year*

In this course, we will examine the idea of a balance of power—one of the key terms in the disciplines of international relations, strategic theory, and history—and also some instances in diplomatic and military history that will allow us to assess some versions of the theory. In its purest and most optimistic version, a balance of power is imagined to be a self-adjusting system of military alliances, one in which a balance of power keeps the peace by preventing any one state from accumulating so great a relative military advantage that war may seem a rational course of action. In a slightly less optimistic form, a balance of power can mean a distribution of power among states sufficient to prevent any one major power from seriously threatening the fundamental interests of another. In significantly less optimistic versions, the pursuit of a balance of power is imagined to be as likely to provoke wars as to prevent them, and a very equal balance of power may simply insure that a war will be peculiarly protracted and destructive. The First World War is sometimes imagined to be a war both caused and protracted by balance-of-power policies, while the Second World War is often imagined as the horrific result of insufficient attention to the maintenance of a dissuasive balance of power. The phrase dates to at least 1701, was memorably expressed in an essay of Hume’s (*Of the Balance of Power*) in 1752, is clearly imagined to exert pressure on political actors as early as Thucydides’ *The Peloponnesian War*, and is sometimes considered one of the core theories of international relations. We shall look at different versions of the theory and at some of the history that the theories attempt to explain, particularly the outbreak and prevention of wars, some sequences of diplomatic history, and arms races.

## The U.S. Constitution: Interpretation and History

**Jeffrey Miller**

*Lecture, Open—Spring*

This lecture course examines how the structure of our government and the guarantees of our liberties have been shaped by history, political philosophy, and experience. We will study the Constitution, related documents, and Supreme Court decisions interpreting the Constitution. The course should be considered by students interested in American history, government, politics, and intellectual analysis. Lectures will combine presentations by the instructor, discussion, and Socratic dialogue to develop analytical skills. Grades will be based on open-book midterm and final exams in which students will be asked to write a Supreme Court opinion resolving a constitutional issue.

## Tudor England: Politics, Gender, and Religion. An Introductory Workshop in Doing History

*Open—Spring*

Sixteenth-century England experienced radical shifts in intellectual life, profound religious upheavals, and the first successful experiment in English history of a woman ruler. These developments, part of the broader European movements of Renaissance and Reformation, continue to shape our lives. To sharpen what is distinctive about England's legacies, we will ask the following questions: How was the Renaissance humanist movement that began in Italy transformed by those debating how Tudor religion and society ought to be reformed? How did Luther's insights and heroism shape the Reformation on the continent? Did Lutheranism take hold in England? *The Bible* in English: Since 2011 is the 400th anniversary of the King James Bible, shouldn't we give credit to the scholar and reformer in Henry VIII's reign—William Tyndale—who really deserves credit for the most influential book in the English language? In all these momentous changes, how important were the desires and deeds of individual Tudors: Henry VIII, his six wives, his three children—Edward, Mary, and Elizabeth? During the second part of the semester, Queen Elizabeth's reign will be the focus. Of special import will be her decision, outrageous to contemporaries, to be known as The Virgin Queen. A question: Could it be that she was successful politically precisely because she turned what was deemed her greatest liability—her sex—into her greatest asset? Distinguished biographies and famous plays and films will be resources. Much of our reading will be in primary sources by Lorenzo Valla, Erasmus, Luther, William Tyndale, Thomas More, Thomas Cromwell, Queen Elizabeth. In a series of workshop sessions, we will try our hands at doing biography and history, as we help each other reconstruct out of primary sources a profound

crisis confronting the young Elizabeth. Many of her advisors and many in her House of Commons and in her House of Lords were arrayed against her. Feeling deserted by those she thought supported her, she stood alone against hundreds of the most powerful men in the kingdom throughout a crisis in which that age's anxieties about politics, gender, and religion overlapped.

## “Mystic Chords of Memory”: Myth, Tradition, and the Making of American Nationalism

**Eileen Ka-May Cheng**

*Open—Year*

Is history just a memory of memories? The course will explore this question by looking at how Americans have remembered and mythologized important events and individuals in the nation's history. One of the best-known such myths is the story of George Washington and the cherry tree. On being questioned by his father about who chopped down the cherry tree, Washington confessed that he had done it, telling his father, “I cannot tell a lie.” Ironically, however, this story was itself a fabrication. We must also not forget “Honest Abe,” where the theme of “honesty” recurs. Why have such myths been so important to the American national identity? For example, was Washington's purported truthfulness a way of creating a sense of transparency and a bond of trust between the people and their democratically elected government? The course will address such questions by looking at the construction and function of tradition and myth, as well as the relationship between myth and tradition in American culture from the colonial period to World War II. We will examine some of the specific myths and traditions that Americans invented, beginning with the story of Pocahontas and John Smith and ending with the image of World War II as “The Good War.” The course will pay special attention to the mythologization of the American Revolution and the “Founding Fathers” and the myth of the self-made man, examining how figures such as George Washington, Benjamin Franklin, Andrew Jackson, and Abraham Lincoln both contributed to and embodied these myths. We will consider how and why myths about these events and individuals were created and the extent to which they corresponded to social reality. The course will study how these myths both unified and divided Americans, as different groups used the same myths for conflicting social purposes. And finally, we will examine what these myths revealed about how Americans defined the nation's identity. Was the United States a nation bound by “mystic chords of memory,” as Lincoln so poetically claimed, or were Americans ultimately a “present-minded people,” defined by their rejection of the past? More precisely, did Americans view the very notion of

tradition as an impediment to the unlimited possibilities for growth and the actualization of their “manifest destiny”?

# Italian

## 2002-2003

### Advanced Italian: — Read the Book! See the Movie!"

**Judith P. Serafini-Sauli**

*Advanced—Year*

This course is intended for students with proficiency in Italian who want to study works of Italian literature in the original, as well as continue their work in the language. The course will study modern Italian novels and the films based on them. We will read the novels as linguistic, literary, and cultural texts and examine the films they inspired as both language and "translation." The texts and films will be chosen to reflect a range of issues in modern Italian culture — regionalism, Sicily and the Mafia, Fascism and anti-Fascism, politics, and social representation. Class work will be supplemented by a grammar review based on "analisi logica" using Italian scholastic texts. Conference work can explore Italian literature or Italian film and can also focus on further perfecting language skills. There will be emphasis on writing Italian through the frequent submission of short papers, and weekly conferences with the language assistant will offer additional opportunities to speak Italian.

### Beginning Italian

**Simone Marchesi**

*Open—Year*

This course is for students with no previous knowledge of Italian. Its goal is to give the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language — phonological, grammatical, syntactical — with practice in conversation, reading, composition, and translation. The readings are chosen from a range that includes journalistic prose, recipe books, the language of publicity, and literary prose and poetry, and use of the language will be encouraged through songs, games, and creative composition. Course work will be supplemented by computer activities and regular conversation and workshops with the language assistant. Conference work will be based large-ly on reading and writing.

### Intermediate Italian

**Judith P. Serafini-Sauli**

*Intermediate—Year*

This course will constitute a review of Italian grammar and an introduction to modern Italian literature and

culture. For each aspect of the grammar, we will use a text — chosen from writers such as Calvino, Eco, Moravia, Baricco — which will serve as a focus for culture, as well as elements of the language. Work on the Web is an integral part of the course for grammar exercises and research, as well as audio, video, and film. Each week students will present a short paper or a "Web piece." These might include topics such as planning a trip, writing a film review, creating a recipe, describing a sports event, as well as critical analysis of the literary texts. Conference work will focus on an author, a genre, or a topic of particular interest to the student. All students attend conversation twice a week.

## 2003-2004

### Advanced Italian: "Read the Book! See the Movie!"

**Judith P. Serafini-Sauli**

*Advanced—Fall*

This course is intended for students with proficiency in Italian who want to study works of Italian literature in the original, as well as continue their work in the language. The course will study modern Italian novels and the films based on them. We will read the novels as linguistic, literary, and cultural texts and examine the films they inspired as both language and "translation." The texts and films will be chosen to reflect a range of issues in modern Italian culture—regionalism, Sicily and the mafia, fascism and antifascism, politics and social representation. Class work will be supplemented by a grammar review based on "analisi logica" using Italian scholastic texts. Conference work can explore Italian literature or Italian film and can also focus on further perfecting language skills. There will be emphasis on writing Italian through the frequent submission of short papers, and weekly conferences with the language assistant will offer additional opportunities to speak Italian.

### Beginning Italian

**Filippo Naitana**

*Open—Year*

This course is for students with no previous knowledge of Italian. Its goal is to give the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, and syntactical—with practice in conversation, reading, composition, and translation. The readings are chosen from a range that includes journalistic prose, recipe books, the language of publicity, and literary prose and poetry, and use of the language will be encouraged through songs, games, and

creative composition. Course work will be supplemented by computer activities and regular conversation and workshops with the language assistant. Conference work will be based largely on reading and writing.

## Intermediate Italian—Modern Italian Prose

*Judith P. Serafini-Sauli, Tristana Rorandelli*

*Intermediate—Year*

This course will constitute an in-depth review of Italian grammar and an introduction to modern Italian literature and culture. For each aspect of the grammar we will use a text—short stories, poems, songs, films, newspaper articles, plays, novels—that will serve as a focus for aspects of Italian culture, as well as elements of the language. Authors will include Calvino, Eco, Moravia, Pavese, Fo, and many others. Work on the Web is an integral part of the course for grammar exercises and research, as well as a source for audio, video, and film. Each week students will present a short paper or a “Web piece.” These might include topics such as planning a trip, writing a film review, creating a recipe, describing a sports event, as well as critical analysis of the literary texts. Conference work will focus on an author, a genre, or a topic of particular interest to the student. All students attend conversation sections twice a week.

## 2004-2005

### Beginning Italian

*Judith P. Serafini-Sauli*

*Open—Year*

This course is for students with no previous knowledge of Italian. It aims at giving the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use and to all aspects of Italian culture. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, syntactical—with practice in conversation, reading, composition, and translation. In addition to the basic Italian textbook, and an array of supplementary computer and Internet material, the course will also include texts from prose fiction, poetry, journalistic prose, songs, films, recipe books, and the language of publicity. Conference work is largely based on reading and writing, and the use of the language is encouraged through games and creative composition. In addition to class and group conference, the course also has a conversation component in regular workshops with the language assistants. Supplementary activities such as opera and relevant exhibits in New York are made

available as possible. The course is for a full year, by the end of which students attain a basic competence in all aspects of the language.

## Eros, Beauty, and the Pursuit of Happiness

*Filippo Naitana*

Passions have a vexed and compelling status in Western culture. They have been viewed as the very bricks of subjectivity as well as a threat to the individual's well-being and to social order. Authors throughout the ages have spoken of the war between passions and reason. Plato compared passions to wild horses and reason to the charioteer who must subdue them—indeed, politics, religion, medicine, and philosophy all created strategies for “timing” and thus taming human passions. What is it, exactly, that we find so frightening about them? Are they timeless and integral components of our humanity, or simply another product of culture, ultimately meaningless outside a specific net of symbols, values, and rules? To explore such questions, this course will focus on a characteristic element of the Western literary tradition: its inexhaustible fascination with Eros. We will examine some of most successful and long-lasting ideas about love and sexuality and how they intertwine with different conceptions of beauty and theories of happiness. Equal importance will be given to poetry and works of fiction, encompassing works from classical antiquity to the Renaissance. Readings will include selections from Sappho, Plato, Catullus, Ovid, Andre the Chaplain, Chrétien de Troyes, Guido Cavalcanti, Dante, Boccaccio, Michelangelo, Vittoria Colonna, and Pietro Aretino.

## Intermediate Italian—Modern Italian Prose

*Filippo Naitana*

*Intermediate—Year*

This course will constitute an in-depth review of Italian grammar and an introduction to modern Italian literature and culture. For each aspect of the grammar, we will use a text—short stories, poems, songs, films, newspaper articles, plays, novels—that will serve as a focus for aspects of Italian culture, as well as elements of the language. Authors will include Calvino, Eco, Moravia, Pavese, Fo, and many others. Work on the Web is an integral part of the course for grammar exercises and research, as well as a source for audio, video, and film. Each week students will present a short paper or a “Web piece.” These might include topics such as planning a trip, writing a film review, creating a recipe, describing a sports event, as well as critical analysis of the literary texts. Conference work will focus on an author, a genre, or a topic of particular interest to the student. All students attend conversation sections twice a week.

## Read the Book! See the Movie!

**Judith P. Serafini-Sauli**

*Advanced—Year*

This course is intended for students with proficiency in Italian who want to read works of Italian literature in the original, as well as continue their work in the language. The course is a study of some modern Italian narratives and the films based on them. We will read the novels as linguistic, literary, and cultural texts and examine the films they inspired as language, cinema, and "translation." The texts and films will be chosen to reflect a range of issues in modern Italian culture: regionalism, Sicily and the mafia, fascism and antifascism, politics, and social representation. We will also read some film theory, particularly theories of adaptation. Class work will be supplemented by a grammar review based on "analisi logica" using Italian scholastic texts. Conference work can explore Italian literature or Italian film and can also focus on further perfecting language skills. There will be emphasis on writing Italian through the frequent submission of short papers, and weekly conferences with the language assistant will offer additional opportunities to speak Italian.

*Open to students with advanced proficiency in Italian.*

## 2005-2006

### Advanced Italian: "Read the Book! See the Movie!"

**Judith P. Serafini-Sauli**

*Advanced—Fall*

This course is intended for students with proficiency in Italian who want to read works of Italian literature in the original, as well as continue their work in the language. The course is a study of some modern Italian narratives and the films based on them. We will read the novels as linguistic, literary, and cultural texts and examine the films they inspired as both language, cinema, and "translation." The texts and films will be chosen to reflect a range of issues in modern Italian culture—regionalism, Sicily and the mafia, fascism and antifascism, politics and social representation. Examples of works are *Il Gattopardo*, *Il giardino dei Finzi-Contini*, *Sostiene Pereira*, and *Io non ho paura*. We will also read some film theory, particularly theories of adaptation. Class work will be supplemented by a grammar review based on "analisi logica" using Italian scholastic texts. Conference work can explore Italian literature or Italian film and can also focus on further perfecting language skills. There will be emphasis on writing Italian through the frequent submission of short papers, and weekly conferences with the language assistant will offer additional opportunities to speak Italian.

*Open to students with advanced proficiency in Italian.*

## Beginning Italian

**Judith P. Serafini-Sauli, Tristana Rorandelli**

*Open—Year*

TWO SECTIONS

This course is for students with no previous knowledge of Italian. It aims at giving the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use and to all aspects of Italian culture. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, syntactical—with practice in conversation, reading, composition, and translation. In addition to the basic Italian textbook, and an array of supplementary computer and Internet material, the course will also include texts from prose fiction, poetry, journalistic prose, songs, films, recipe books, and the language of publicity. Conference work is largely based on reading and writing, and the use of the language is encouraged through games and creative composition. In addition to class and group conference, the course also has a conversation component in regular workshops with the language assistants. Supplementary activities such as opera and relevant exhibits in New York are made available as possible. The course is for a full year, by the end of which students attain a basic competence in all aspects of the language.

## Intermediate Italian—Modern Italian Prose

**Tristana Rorandelli**

*Intermediate—Year*

This intermediate-level course aims at improving and perfecting the students' speaking, listening, reading, and writing skills, as well as their knowledge of Italy's contemporary culture and literature. In order to acquire the necessary knowledge of Italian grammar, idiomatic expressions, and vocabulary, students will be exposed to present-day Italy through the selection of specific newspaper articles, music, and cinema, as well as modern Italian literature (i.e., short stories, poems, and passages from literary works) in the original language. Some of the literary works will include selections from Gianni Rodari, Carlo Castellaneta, Clara Sereni, Dino Buzzati, Stefano Benni, Antonio Tabucchi, and Italo Calvino. In order to address the students' own writing skills, written compositions will also be required as an integral part of the course. The materials selected for the class, be they a literary text, a song, video, or grammar exercise, will be accessible at all times to the students through the course's "Web Board"; research on the Web

will be central to the course and will offer the basis for the weekly “Web piece,” a short paper on a particular topic. Conference topics might include the study of a particular author, literary text, film, or any other aspect of Italian society and culture that might be of interest to the student. Conversation classes will be held twice a week with the language assistants.

## **2006-2007**

### **Advanced Italian: Read the Book! See the Movie!**

**Judith P. Serafini-Sauli**

*Advanced—Fall*

This course is intended for students with proficiency in Italian who want to read works of Italian literature in the original, as well as continue their work in the language. The course will study some modern Italian narratives and the films based on them. We will read the novels as linguistic, literary, and cultural texts and examine the films they inspired as language, cinema, and “translation.” The texts and films will be chosen to reflect a range of issues in modern Italian culture—regionalism, Sicily and the mafia, fascism and antifascism, politics and social representation—as well as consideration of the adaptation from literature to cinema. Class work will be supplemented by a grammar review based on “analisi logica” using Italian scholastic texts. Conference work can explore Italian literature or Italian film and can also focus on further perfecting language skills. There will be emphasis on writing Italian through the frequent submission of short papers, and weekly conferences with the language assistant will offer additional opportunities to speak Italian.

*Open to students with advanced proficiency in Italian.*

### **Beginning Italian**

**Tristana Rorandelli, Judith P. Serafini-Sauli, Stefania Benzoni**

*Year*

This course is for students with no previous knowledge of Italian. It aims at giving the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use and to all aspects of Italian culture. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, and syntactical—with practice in conversation, reading, composition, and translation. In addition to the basic Italian textbook, and an array of supplementary computer and Internet material, the course will also include texts from prose fiction, poetry, journalistic prose, songs, films, recipe books, and the language of

publicity. Conference work is largely based on reading and writing, and the use of the language is encouraged through games and creative composition. In addition to class and group conference, the course also has a conversation component in regular workshops with the language assistants. Supplementary activities such as opera and relevant exhibits in New York are made available as possible. The course is for a full year, by the end of which students attain a basic competence in all aspects of the language.

### **Intermediate Italian—Modern Italian Prose**

**Judith P. Serafini-Sauli**

*Intermediate—Year*

This course will constitute an in-depth review of Italian grammar and an introduction to modern Italian literature and culture. For each aspect of the grammar we will use a text—short stories, poems, songs, films, newspaper articles, plays, novels—which will serve as a focus for aspects of Italian culture, as well as elements of the language. Authors will include Calvino, Eco, Moravia, Pavese, Fo, and many others. Work on the Web is an integral part of the course for grammar exercises and research, as well as a source for audio, video, and film. Each week students will present a short paper or a Web piece. These might include topics such as planning a trip, writing a film review, creating a recipe, describing a sports event, as well as critical analysis of the literary texts. Conference work will focus on an author, a genre, or a topic of particular interest to the student. All students attend conversation sections twice a week with the Italian language assistants.

*Open to students with one year of college Italian or the equivalent.*

## **2007-2008**

### **Beginning Italian**

**Judith P. Serafini-Sauli, Tristana Rorandelli, Stefania Benzoni**

*Open—Year*

This course is for students with no previous knowledge of Italian. It aims at giving the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use and to all aspects of Italian culture. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, syntactical—with practice in conversation, reading, composition, and translation. In addition to the basic Italian textbook and an array of supplementary

computer and Internet material, the course will also include texts from prose fiction, poetry, journalistic prose, songs, films, recipe books, and the language of publicity. Conference work is largely based on reading and writing, and the use of the language is encouraged through games and creative composition. In addition to class and group conference, the course also has a conversation component in regular workshops with the language assistants. Supplementary activities such as opera and relevant exhibits in New York are made available as possible. The course is for a full year, by the end of which students attain a basic competence in all aspects of the language.

*Ms. Serafini-Sauli, section 1*

*Ms. Benzoni, Ms. Rorandelli, section 2*

## Fascism, World War Two, and the Resistance in Twentieth-Century Italian Narrative and Cinema

**Tristana Rorandelli**

*Year*

This course is intended for advanced students of Italian who want to better their comprehension as well as their oral and written skills in the language. This will be achieved by reading literary works and watching films in the original language, producing written compositions, and also through in-class discussion of the material. The course examines the manner in which crucial historical events that occurred during the twentieth century (such as the rise and fall of fascism, World War II, and the Resistance) were represented within Italian literature and cinema of the time as well as throughout the decades following the end of the war (up to the 1970's). Literary texts will include those authored by Italo Calvino, Alba de Céspedes, Ignazio Silone, Vasco Pratolini, Renata Viganò, Cesare Pavese, Carlo Cassola, Beppe Fenoglio, Elio Vittorini, Elsa Morante, Alberto Moravia, and Carlo Levi. Films will include fascist propaganda and documentaries (from the Istituto Luce's archives), as well as films by Roberto Rossellini (his fascist-era war trilogy as well as his neorealist films), Paolo and Vittorio Taviani, Bernardo Bertolucci, Mario Camerini, and Alessandro Blasetti. Conference topics might include the study of a particular author, literary text, or film that might be of interest to the student. Conversation classes will be held with the language assistants. Literary texts will be available for purchase; critical material will be available through e-reserve.

*Open to students with advanced proficiency in Italian.*

## Modern Italian Prose

**Tristana Rorandelli**

*Intermediate—Year*

This intermediate-level course aims at improving and perfecting the students' speaking, listening, reading, and writing skills, as well as their knowledge of Italy's contemporary culture and literature. In order to acquire the necessary knowledge of Italian grammar, idiomatic expressions, and vocabulary, students will be exposed to present-day Italy through the selection of specific newspaper articles, music, and cinema, as well as modern Italian literature (i.e., short stories, poems, and excerpts from literary works) in the original language. Literary works will include selections from Alessandro Baricco, Gianni Rodari, Carlo Castellana, Clara Sereni, Dino Buzzati, Stefano Benni, Antonio Tabucchi, Niccolò Ammaniti, and Italo Calvino. In order to address the students' own writing skills, written compositions will also be assigned and will constitute an integral part of the course. The materials selected for the course, be they a literary text, a song, video, or grammar exercise, will be accessible at all times to the students through the course's "Web Board"; research on the Web will be central to the course and will offer the basis for the weekly "Web piece," a short paper on a particular topic. Conference topics might include the study of a particular author, literary text, film, or any other aspect of Italian society and culture that might be of interest to the student. Conversation classes will be held twice a week with the language assistants.

## 2008-2009

### Beginning Italian

**Judith P. Serafini-Sauli, Tristana Rorandelli**

*Open—Year*

This course is for students with no previous knowledge of Italian. It aims at giving the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use and to all aspects of Italian culture. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, syntactical—with practice in conversation, reading, composition, and translation. Conference work is largely based on reading and writing, and the use of the language is encouraged through games and creative composition. In addition to class and group conference, the course also has a conversation component in regular workshops with the

language assistants. Supplementary activities such as opera and relevant exhibits in New York are made available as possible. The course is for a full year, by the end of which students attain a basic competence in all aspects of the language.

*Ms. Serafini-Sauli, Section 1*  
*Ms. Rorandelli, Section 2*

## Depictions of Family Relations and Italian Society in Postwar Italian Women's Writings

**Tristana Rorandelli**

*Advanced—Year*

This course will examine the manner in which postwar Italian women authors represent the changing conditions of Italian society in the period following the end of fascism and World War II, a period characterized by the birth of the Republic, postwar reconstruction, and the 1950's and 1960's economic boom. More specifically, we will focus on the manner in which the women writers of this period portray family relations (i.e., the generational gap between those born and raised under fascism and those brought up in its wake, shifts in the traditional patriarchal value system, the changing role of women within Italian society) and observe how these social and familial transformations anticipate and influence the students' and women's movements of the 1960's and 70's. Literary texts will include those authored by Natalia Ginzburg, Elsa Morante, Alba de Céspedes, Anna Banti, Lalla Romano, and Dacia Maraini. This course is intended for advanced students of Italian who want to better their comprehension as well as their oral and written skills in the language. This will be achieved by reading literary works in the original language and producing written compositions, as well as through in-class discussion of the material. Conference topics might include the study of a particular author or literary text that might be of interest to the student. Conversation classes will be held with the language assistants. Literary texts will be available for purchase; critical material will be available through e-reserve.

*Open to students with advanced proficiency in Italian*

## Intermediate Italian, "Modern Italian Prose"

**Judith P. Serafini-Sauli**

*Intermediate—Year*

This course will constitute an in-depth review of Italian grammar and an introduction to modern Italian literature and culture. For each aspect of the grammar we will use a text—short stories, poems, songs, films, newspaper articles, plays, novels—which will serve as a focus for aspects of Italian culture, as well as elements of the language. Authors will include Calvino, Eco,

Moravia, Pavese, Fo, and many others. Work on the Web is an integral part of the course for grammar exercises and research, as well as a source for audio, video, and film. Students will present "Web pieces" on topics such as planning a trip, writing a film review, creating a recipe, describing a sports event, etc. Students will also be expected to do critical analysis of literary texts. Conference work will focus on an author, a genre, or a topic of particular interest to the student. All students attend conversation sections twice a week.

*Open to students with one year of college Italian or the equivalent.*

## 2009-2010

### Advanced Italian: Read the Book! See the movie!

**Judith P. Serafini-Sauli**

*Advanced—Fall*

This course is intended for students with proficiency in Italian who want to study works of Italian literature in the original, as well as continue their work in the language. The course will study modern Italian novels and the films based on them. We will read the novels as linguistic, literary, and cultural texts and examine the films they inspired as both language and "translation." The texts and films will be chosen to reflect a range of issues in modern Italian culture—regionalism, Sicily and the Mafia, fascism and antifascism, politics, and social representation. Class work will be supplemented by a grammar review based on "analisi logica," using Italian scholastic texts. Conference work may explore Italian literature or Italian film and can also focus on further perfecting language skills. There will be emphasis on writing Italian through the frequent submission of short papers, and weekly conferences with the language assistant will offer additional opportunities to speak Italian.

*Open to students with advanced proficiency in Italian.*

### Beginning Italian, Section 1

**Judith P. Serafini-Sauli**

*Open—Year*

This course is for students with no previous knowledge of Italian. It aims at giving the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use and to all aspects of Italian culture. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, syntactical—with practice in conversation, reading, composition and translation. In addition to the basic Italian textbook, and an array of supplementary

computer and Internet material, the course will also include texts from prose fiction, poetry, journalistic prose, songs, films, recipe books, and the language of publicity. Conference work is largely based on reading and writing, and the use of the language is encouraged through games and creative composition. In addition to class and group conference, the course also has a conversation component in regular workshops with the language assistants. Supplementary activities such as opera and relevant exhibits in New York are made available as possible. The course is for a full year, by the end of which students attain a basic competence in all aspects of the language.

## **Beginning Italian, Section 2**

***Tristana Rorandelli***

This course is for students with no previous knowledge of Italian. It aims at giving the student a complete foundation in the Italian language, with particular attention to the oral and written communication of everyday use and to all aspects of Italian culture. The course will be conducted in Italian after the first month and will involve the study of all the basic structures of the language—phonological, grammatical, syntactical—with practice in conversation, reading, composition and translation. In addition to the basic Italian textbook, and an array of supplementary computer and Internet material, the course will also include texts from prose fiction, poetry, journalistic prose, songs, films, recipe books, and the language of publicity. Conference work is largely based on reading and writing, and the use of the language is encouraged through games and creative composition. # Japanese

## 2002-2003

### Beginning Japanese

**Sayuri I. Oyama**

*Open—Year*

In this course, students will develop basic communicative skills in listening comprehension and speaking, as well as skills in reading and writing (katakana, hiragana, and basic kanji) in Japanese. While class time and conference work will be devoted primarily to language practice in Japanese, an understanding of Japanese grammar will also be emphasized as an important basis for continued language learning.

## 2003-2004

### Beginning Japanese

**Sayuri I. Oyama**

*Open—Year*

This course is for students with no previous knowledge of Japanese. In this course, students will develop basic communicative skills in listening comprehension and speaking, as well as skills in reading and writing (katakana, hiragana, and basic kanji) in Japanese. While class time and weekly conference meetings will be devoted primarily to language practice, an understanding of Japanese grammar will also be emphasized as an important basis for continued language learning.

### Intermediate Japanese

**Sayuri I. Oyama**

*Intermediate—Year*

This course is designed for students who have completed Beginning Japanese or its equivalent. In this course students will continue to develop their skills in speaking, listening, reading, and writing while expanding their vocabulary and knowledge of grammar. At the end of the course, students should be able to handle simple communicative tasks and situations effectively, understand simple daily conversations, write short essays, read simple essays, and discuss their content.

Full descriptions of the courses may be found under the appropriate disciplines.

In this course, students will continue to develop their skills in speaking, listening, reading, and writing while expanding their vocabulary and knowledge of grammar. At the end of the course, students should be able to handle simple communicative tasks and situations effectively, understand simple daily conversations, write short essays, read simple essays, and discuss their content.

*Intermediate.*

## Readings in the Japanese Language

**Herschel Miller**

*Advanced—Fall*

This course is not for native readers of Japanese but for third-year Japanese language students. It will use no language textbook, utilizing instead a selection of actual texts written in Japanese for native Japanese readers. Most will be literary texts (short stories, novels, and poems). We will adopt a two-pronged strategy: first, selected shorter texts to be closely read and precisely translated into English; and second, one or more longer texts to be swiftly read through for general comprehension and summarized rather than translated. Narrative, rather than rote memorization, will be the vehicle for language learning here. Presuming that the thirst to understand and follow specific narratives is the primary motive force behind the learning of any language, this approach capitalizes on that natural human thirst to accelerate the learning of written Japanese. Students will need both a good electronic dictionary and a copy of Andrew N. Nelson's *Japanese-English Character Dictionary*. After a rapid introduction to kanji lookup skills, we will dive right into close reading of some short texts, meanwhile starting also on a longer text to be read for general comprehension only.

*Advanced.*

## 2007-2008

## Beginning Japanese

**Kuniko Katz**

*Open—Year*

This course is for students with no previous knowledge of Japanese. In this course, students will develop basic communicative skills in listening comprehension and speaking, as well as skills in reading and writing (katakana, hiragana, and basic kanji) in Japanese. While class time and weekly conference meetings will be devoted primarily to language practice, an understanding of Japanese grammar will also be emphasized as an important basis for continued language learning. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet once a week in small groups with a language assistant, a mandatory component of the course.

*Beginning. Open to any interested student.*

## Intermediate Japanese

**Sayuri I. Oyama**

*Intermediate—Year*

This course is designed for students who have completed Beginning Japanese or its equivalent. In this course, students will continue to develop their skills in speaking, listening, reading, and writing while

expanding their vocabulary and knowledge of grammar. At the end of the course, students should be able to handle simple communicative tasks and situations effectively, understand simple daily conversations, write short essays, read simple essays, and discuss their content. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet once a week in small groups with a language assistant, a mandatory component of the course.

## Readings in the Japanese Language

**Herschel Miller**

*Advanced—Fall*

This course is not for native readers of Japanese but for third-year Japanese language students. It will use both a standard language textbook and also a selection of actual texts (mostly literary) written in Japanese for native Japanese readers. We will adopt a three-pronged strategy: first, guided readings from a textbook, with memorization of grammar patterns, vocabulary, and kanji; second, selected shorter texts to be closely read and precisely translated into English; and third, one or more longer texts to be swiftly read through for general comprehension and summarized rather than translated. Students will need both a good electronic dictionary and a copy of Andrew N. Nelson's *Japanese-English Character Dictionary*. After a rapid introduction to kanji lookup skills and a review of the more important radicals, we will dive right into our short readings, starting also on a longer text to be read for general comprehension only.

## 2008-2009

### Advanced Japanese

**Herschel Miller, Kuniko Katz**

*Advanced—Year*

This course aims to further develop students' Japanese proficiency in aural and reading comprehension, in addition to speaking and writing skills. Activities include listening to and discussing television programs and films; writing and performing dialogues and speeches; reading essays, newspaper articles, and short stories; writing a diary, letters, and short essays. Students will also gain experience in using kanji-English dictionaries, as well as other reference dictionaries, as they begin tackling Japanese texts without glosses. Classes will be conducted in Japanese.

for continued language learning. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet once a week, in small groups, with a language assistant for tutorials, a mandatory component of the course.

## Japanese II

**Eiko Ishioka Guclu**

*Intermediate—Year*

This course is designed for students who have completed Japanese I (formerly Beginning Japanese) or its equivalent. Students will continue to develop their speaking, listening, reading, and writing skills, while expanding their vocabulary and knowledge of grammar. At the end of the course, students should be able to handle simple communicative tasks and situations effectively, understand simple daily conversations, write short essays, read simple essays, and discuss their content. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet once a week, in small groups, with a language assistant for tutorials, a mandatory component of the course.

## Japanese III

**Sayuri I. Oyama**

*Advanced—Year*

This course is designed for students who have completed Japanese II (formerly Intermediate Japanese) or its equivalent. Students will continue to develop Japanese proficiency in aural and reading comprehension, in addition to speaking and writing skills. Activities include listening to and discussing television programs and films; writing and performing dialogues and speeches; reading essays, newspaper articles, and short stories; and writing a diary, letters, and short essays. Students will also gain experience in using *kanji*-English dictionaries, as well as other reference dictionaries, as they begin tackling Japanese texts without glosses. Students will also meet weekly with a language assistant for tutorials, a mandatory component of the course.

Full descriptions of the courses may be found under the appropriate disciplines.

*Japanese*

## 2010-2011

### Japanese I

**Kuniko Katz**

*Open—Year*

This course is for students with no previous knowledge of Japanese. Students will develop basic communicative skills in listening comprehension and speaking, as well as skills in reading and writing (*katakana*, *hiragana*, and basic *kanji*) in Japanese. While class time and weekly conference meetings will be devoted primarily to language practice, an understanding of Japanese grammar will also be emphasized as an important basis for continued language learning. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet once a week, in small groups, with a language assistant for tutorials, a mandatory component of the course.

*Open to any interested student.*

### Japanese II

**Sayuri I. Oyama**

*Intermediate—Year*

This course is designed for students who have completed Japanese I or its equivalent. Students will continue to develop their speaking, listening, reading, and writing skills, while expanding their vocabulary and knowledge of grammar. At the end of the course, students should be able to handle simple communicative tasks and situations effectively, understand simple daily conversations, write short essays, read simple essays, and discuss their content. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet once a week, in small groups, with a language assistant for tutorials, a mandatory component of the course.

*Intermediate.*

### Japanese III

**Eiko Ishioka Guclu**

*Advanced—Year*

This course is designed for students who have completed Japanese II or its equivalent. Students will continue to develop Japanese proficiency in aural and reading comprehension, in addition to speaking and writing skills. Activities include listening to and discussing television programs and films; writing and performing dialogues and speeches; reading essays, newspaper articles, and short stories; and writing a diary, letters, and short essays. Students will also gain experience in using *kanji*-English dictionaries, as well as other reference dictionaries, as they begin tackling Japanese

texts without glosses. Students will also meet weekly with a language assistant for tutorials, a mandatory component of the course.

*Advanced.*

## 2011-2012

### Japanese I

**Kuniko Katz**

*Open—Year*

This course is for students with no previous knowledge of Japanese. Students will develop basic communicative skills in listening comprehension and speaking, as well as skills in reading and writing (*katakana*, *hiragana*, and basic *kanji*) in Japanese. While class time and weekly conference meetings will be devoted primarily to language practice, an understanding of Japanese grammar will also be emphasized as an important basis for continued language learning. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet with a language assistant once a week, in small groups, for tutorials, a mandatory component of the course.

### Japanese II

**Miyabi Yamamoto**

*Intermediate—Year*

This course is designed for students who have completed Japanese I (formerly Beginning Japanese) or its

equivalent. Students will continue to develop their speaking, listening, reading, and writing skills, while expanding their vocabulary and knowledge of grammar. At the end of the course, students should be able to handle simple communicative tasks and situations effectively, understand simple daily conversations, write short essays, read simple essays, and discuss their content. Class work will be supplemented with weekly group conferences with the instructor. Students will also meet with a language assistant once a week, in small groups, for tutorials, a mandatory component of the course.

### Japanese III

**Chieko Naka**

*Advanced—Year*

This course is designed for students who have completed Japanese II or its equivalent. Students will continue to develop Japanese proficiency in aural and reading comprehension, in addition to speaking and writing skills. Activities include listening to and discussing television programs and films; writing and performing dialogues and speeches; reading essays, newspaper articles, and short stories; and writing a diary, letters, and short essays. Students will also meet weekly with a language assistant for tutorials, a mandatory component of the course.

# Latin

## 2002-2003

### Advanced Latin

**Samuel B. Seigle**

*Advanced—Year*

This course has two aims: to extend the student's ability to read classical Latin and to deepen the student's appreciation of the literary traditions of the Romans. The authors to be read will be determined at the time of registration.

### Beginning Latin

**Samuel B. Seigle**

*Open—Year*

This course seeks to introduce the student to the reading of classical Latin literature as quickly as possible. In the second semester selections by the poet Ovid will be read. This course has openings for spring semester. Permission of the instructor is required. Please see Mr. Seigle or call him on x 2337 for details.

### Intermediate Latin

**Samuel B. Seigle**

*Intermediate—Year*

This course has two aims: to develop the student's ability to read Latin intelligently and fluently and to give the student a general understanding of Roman history and Latin literature. The course should prove particularly useful as background to students contemplating graduate study in any branch of Western literature. The authors to be read will be determined at the time of registration.

## 2003-2004

### Advanced Latin

**Samuel B. Seigle**

*Advanced—Fall*

This course has two aims: to extend the student's ability to read classical Latin and to deepen the student's appreciation of the literary traditions of the Romans. The authors to be read will be determined at the time of registration.

### Beginning Latin

**Samuel B. Seigle**

*Open—Year*

This course seeks to introduce the student to the reading of classical Latin literature as quickly as possible. In the second semester selections by the poet Ovid will be read.

### Intermediate Latin

**Samuel B. Seigle**

*Intermediate—Year*

This course has two aims: to develop the student's ability to read Latin intelligently and fluently and to give the student a general understanding of Roman history and Latin literature. The course should prove particularly useful as background to students contemplating graduate study in any branch of Western literature. The authors to be read will be determined at the time of registration.

## 2004-2005

### Advanced Latin: The Age of Augustus

**Emily Katz Anhalt**

*Advanced—Year*

An exploration of the literature, history, and politics of the early Roman Empire. Assessing the extraordinary flowering of Roman culture under Rome's first emperor, we will examine the emergence of a distinctively Roman humanitas that still exerts an influence on the modern world. Selected works of Vergil, Horace, Tibullus, Propertius, Ovid, and Livy will be read in Latin. Additional works will be read in translation.

### Beginning Latin

**Emily Katz Anhalt**

*Open—Year*

An introduction to Latin grammar, syntax, and vocabulary, with a view to reading the language as soon as possible. (By mid-semester in the fall, students will be translating authentic excerpts of Latin poetry and prose.) During the spring semester, while continuing to refine their knowledge of Latin, students will study Vergil's *Aeneid* in translation and read portions of the *Aeneid* in Latin.

### Intermediate Latin: The Age of Caesar

**Emily Katz Anhalt**

*Intermediate—Year*

An exploration of the literature, history, and politics of the Roman Republic, with particular emphasis on the tumultuous years of the Late Republic, from the death of Sulla (78 B.C.E.) to the death of Caesar (44 B.C.E.) We will consider how the violent struggle for political power resulted in the centralization of authority in the hands of one individual, and we will assess the relationship between intellectual views and political action during this critical moment in Western history. Selected works of Catullus, Lucretius, Cicero, Caesar, and Sallust will be read in Latin. Additional works will be read in translation.

## 2005-2006

### Advanced Latin

**Samuel B. Seigle**

*Advanced—Fall*

This course has two aims: to extend the student's ability to read classical Latin and to deepen the student's appreciation of the literary traditions of the Romans. The authors to be read will be determined at the time of registration.

# Lesbian, Gay, Bisexual, and Transgender Studies

## 2002-2003

### Postwar, Postmodern, and Post-Stonewall

**Julie Abraham**

*Open—Year*

This course will make literary works the center of an exploration of lesbian/gay/queer cultures (arts, social worlds, and politics), from the 1950s to the present. Alongside the fiction, poetry, plays, and memoirs we will be focusing on, we will also be considering histories, films, scientific studies, political and theoretical analyses by and/or about lesbians, gay men, and queers. Questions we will be considering include how have literary works shaped understandings of sexual difference; how have understandings of sexual difference been shaped by assumptions about gender, race, class, nation, and political differences; and how have sexual politics, cultural politics, and electoral politics — or alternatively, advocates of revolution and advocates of assimilation — interacted within recent lesbian/gay/queer histories? We will also be discussing origins, evidence, and narrative (Where have lesbian/ gay/queer histories begun? What have they been made out of? How have they been told? What are the consequences of those choices?); experience (How is experience used in the assessment of evidence and the construction of narratives?); and interpretation (How, where, and why do we learn to "read" texts by and about lesbians, gay men, and queers?). This course will serve as an introduction to a broad range of literary work from the past half-century as well as key concepts and works in contemporary lesbian/gay/queer studies.

### Queer Theory: A History

**Julie Abraham**

*Intermediate—Spring*

Queer theory emerged in the United States, in tandem with Queer Nation, at the beginning of the 1990s, as the intellectual framework for a new round in the ongoing contests over understandings of sexuality and gender in Western culture. "Queer" was presented as a radical break with homosexual as well as heterosexual pasts. Queer theorists and activists hoped to reconstruct lesbian and gay politics, intellectual life, and culture; renegotiate differences of gender, race, and class among lesbians and gay men; and establish new ways of thinking about sexuality, new understandings of sexual dissidence, and new relations among sexual dissidents as well as between dissidents and sexual norms. Nevertheless, queer theory had complex sources in the

intellectual and political work that had gone before. And it has had, predictably, unpredictable effects on current intellectual and political projects. This class will make a history of queer theory the basis for an intensive study of contemporary intellectual and political work on sexuality and gender. We will also be addressing the fundamental questions raised by the career of queer theory, about the relations between political movements and intellectual movements, the politics of intellectual life, and the politics of the academy, in the United States in particular, at this turn of the century. For students with a background in women's, gender, or LGBT studies. Sophomores and above.

### Virginia Woolf in the Twentieth Century

**Julie Abraham**

*Intermediate—Fall*

"On or about December 1910," Virginia Woolf observed, "human character changed. . . . All human relations shifted — those between masters and servants, husbands and wives, parents and children. And when human relations change there is at the same time a change in religion, conduct, politics, and literature." In her novels, essays, biographies, and polemics, as well as in her diaries, letters, and memoirs, Woolf charted, and fostered, the cultural and political forces behind those changes, as they developed over the course of the next century. Woolf's image also changed, across the decades, from that of the "invalid lady of Bloomsbury," a modern, a madwoman, and perhaps a genius, to that of a monster, a feminist, a socialist, a lesbian, and certainly an icon. While this course will be focused on her writing, we will also consider her life and its interpretations, her politics and their implications, her own use of the art and images of others, and the use of her art and image by others. We will be studying a wide range of her work, as well as the work of her precursors, her peers, and those who took up her art and image, in the decades after her death, in fiction, theatre, and film. This course will serve as an introduction to modern literature, feminist literary study, lesbian/gay/queer studies, the study of sexuality, and the study of politics in literature. Conference projects might focus on one other writer, a range of other writers, or one of these approaches to literary analysis. Sophomores and above.

### Between the Tongue and the Taste: Shifts, Transformations and Contradictions in Contemporary Gay and Lesbian Literature

Ernesto Mestre

Open—Year

Central to the study of gay and lesbian literature is how through characters, plot, intent, and place, it identifies and defines itself. Using a range of work that draws from a variety of places, histories, and themes this course will attempt to ask questions both of the written work and of the reader. How and why do we identify gay literature as such? Do characters and situations have to be "gay" to create a sense of queerness—or are there more "universal" elements that could construe it as such? How are gay lives presented through a spectrum of time? Working from the 1920's, but concentrating on more contemporary literature, we will find instances of isolation and liberation, spaces of tension and rest, and a literature that is both gay and not necessarily so. From Carson McCullers' treatment of desire and circumstance in *The Heart is a Lonely Hunter* to Michael Cunningham's portrayal of how haphazard dreams coalesce to create new families in *A Home at the End of the World*; from such variant classics as Djuna Barnes' *Nightwood*, Reinaldo Arenas' *Old Rosa* and Jose Donoso's *Hell Has No Limits* (works that at times seem to exist in different worlds); and from the seeds of sexual and political liberation in Edmund White's *The Beautiful Room is Empty* to the dangerously entwined lives created in the work of Jane Bowles, we will question how one thing can be many things at once—how gay literature can be "straight" (and vice-versa), how liberation can lead to entrapment, or entrapment to a type of freedom, and finally, how gay and lesbian stories are constructed to be identified as such and how this literature works within itself and with a humanity that is accessible both within and outside its boundaries.

## The Invention of Homosexuality

Julie Abraham

Open—Year

Different historians trace the invention of modern homosexuality to different historical moments, from the sixteenth to the mid-nineteenth centuries. The invention of heterosexuality, it would seem, followed after. Certainly the term "heterosexuality" appeared only after the term "homosexuality" was coined, in the later nineteenth century. Neither meant, at first, what they mean today. In this class we will study the development of modern understandings of same-sex desire in relation to understandings of sex, gender, race, class, nation, nature, culture, and heterosexuality. We will be drawing centrally on literary works, especially novels, which have been crucial sites for the construction and dissemination of modern understandings of sexuality. But we will also be reading histories, science, laws, letters, and polemics and watching films. Although we will be considering both earlier and more recent materials, we will focus on the period from the 1880's to the 1960's. By the 1880's, almost everyone agrees, a recognizably modern understanding of homosexuality was becoming available. The sexual/cultural landscapes that subsequently developed were not radically rearranged until the 1960's, when the gay and women's liberation movements insisted on a political analysis of sexuality. This course will serve as an introduction to a broad range of modern literature, to fundamental works in the history of sexuality and contemporary lesbian/gay/queer studies, and to critical thinking about how we talk, read, and write about sex. Conference work may be focused on any period from the nineteenth century to the present.

### Virginia Woolf in the Twentieth Century

Julie Abraham

Intermediate—Spring

"On or about December, 1910," Virginia Woolf observed, "human character changed. . . . All human relations shifted—those between masters and servants, husbands and wives, parents, and children. And when human relations change there is at the same time a change in religion, conduct, politics, and literature." In her novels, essays, reviews, biographies, and polemics, as well as in her diaries, letters, and memoirs, Woolf charted, and fostered, the cultural and political forces behind those changes, as they developed across the century. Over the course of that century, Woolf's image also changed, from that of the "invalid lady of Bloomsbury," a modern, a madwoman, and perhaps a genius, to that of a monster, a feminist, a socialist, a lesbian, and an icon. While focusing on the development of her writing, we will also consider her life and its interpretation, her politics and their implications, and the use of her art and image by others

as points of reference for new work of their own. Her family, friends, lovers, and critics will all appear. We will also be reading her precursors, her peers, and those who took up her work and image in the decades after her death, in fiction, theatre, and film. This course will serve as an introduction to twentieth-century fiction, feminist literary study, lesbian/gay/queer studies, the study of sexuality, and the study of politics in literature. Conference projects might focus on one other writer, a range of other writers, or one of these approaches to literary analysis.

## 2004-2005

### Queer Theory: A History

**Julie Abraham**  
*Advanced—Fall*

Queer theory emerged in the United States, in tandem with Queer Nation, at the beginning of the 1990's, as the intellectual framework for a new round in the ongoing contests over understandings of sexuality and gender in Western culture. "Queer" was presented as a radical break with homosexual as well as heterosexual pasts. Queer theorists and activists hoped to reconstruct lesbian and gay politics, intellectual life, and culture; renegotiate differences of gender, race, and class among lesbians and gay men; and establish new ways of thinking about sexuality, new understandings of sexual dissidence, and new relations among sexual dissidents as well as between dissidents and sexual norms. Nevertheless, queer theory had complex sources in the intellectual and political work that had gone before. And it has had, predictably, unpredictable effects on current intellectual and political projects. This class will make a history of queer theory the basis for an intensive study of contemporary intellectual and political work on

sexuality and gender. We will also be addressing the fundamental questions raised by the career of queer theory, about the relations between political movements and intellectual movements, the politics of intellectual life, and the politics of the academy, in the United States in particular, at this turn of the century.

### The City of Feeling: Sexuality and Space

**Julie Abraham**  
*Open—Fall*

Female couples in nineteenth-century New England were said to live in "Boston marriages"; Whitman aspired to a "city of friends"; Proust anatomized "the cities of the plain"; Baldwin's all-American boy fled to Paris to have his fears confirmed by Giovanni's love. Contemporary lesbian and gay scholars describe the development of urban communities as crucial to the history of modern lesbian and gay cultures and politics. Contemporary queer geographers have begun to map what they are calling "queer space," which is most often either urban or understood in relation to the urban. In this course we will trace the interdependent development of modern understandings of homosexualities and of cities within the framework of a wide-ranging discussion of modern histories of sexuality, the city, gender, and space. At the intersection of queer studies and urban studies—with Jane Jacobs (*The Death and Life of Great American Cities*) and Samuel Delany (*Times Square Red, Times Square Blue*) as presiding godmother and godfather—this course will bring together classic work on the cultures of cities, lesbian/gay/queer urban histories and community studies, and new analyses of "place" in urban studies and of "queer space" in geography and cultural studies, novels, and film. From Paris and Berlin to Buffalo and Wyoming, we will consider "the country" and "the suburbs" as they help define "the city"; great cities, global cities, industrial cities, and simulated cities; public and private space; the street and domestic life; anonymity and home.

Full descriptions of the courses may be found under the appropriate disciplines.

## 2005-2006

### First-Year Studies: The Invention of Homosexuality

*Julie Abraham*  
 FYS

Different historians trace the invention of modern homosexuality to different historical moments, from the sixteenth to the mid-nineteenth centuries. The invention of heterosexuality, it would seem, followed after. Certainly the term "heterosexuality" appeared only after the term "homosexuality" was coined, in the later nineteenth century. Neither meant, at first, what they mean today. In this class we will study the development of modern understandings of same-sex desire in relation to understandings of sex, gender, race, class, nation, nature, culture, and heterosexuality. We will be drawing centrally on literary works, especially novels, which have been crucial sites for the construction and dissemination of modern understandings of sexuality. But we will also be reading histories, science, laws, letters, and polemics, and watching films. Although we will be considering both earlier and more recent materials, we will focus on the period from the 1880's to the 1960's. By the 1880's, almost everyone agrees, a recognizably modern understanding of homosexuality was becoming available. The sexual/cultural landscapes that subsequently developed were not radically rearranged until the 1960's, when the gay and women's liberation movements insisted on a political analysis of sexuality. This course will serve as an introduction to a broad range of modern literature, to fundamental works in the history of sexuality and contemporary lesbian/gay/queer studies, and to critical thinking about how we talk, read, and write about sex. Conference work may be focused on any period from the nineteenth century to the present.

### Pretty, Witty, and Gay—the Classics

*Julie Abraham*  
 Intermediate—Spring

How has modern culture thought about sexuality and art, love and literature? Are you ready to review your cultural map, to reconstruct your expectations? Gertrude Stein once said, "Literature—creative literature—unconnected with sex is inconceivable. But not literary sex, because sex is a part of something of which the other parts are not sex at all." More recently, Fran Leibowitz observed, "If you removed all of the homosexuals and homosexual influence from what is

generally regarded as American culture, you would be pretty much left with *Let's Make a Deal*." Unlike Leibowitz, we will not limit ourselves to America. But then, where do we begin: in the pantheon, in prison, or "in the family"; in London, Paris, Berlin, or New York; with the "friends of Dorothy" or "the twilight women"? There are novels, plays, poems, essays, songs, films, and critics, to be read and read about, listened to, or watched. There are dark hints, delicate suggestions, "positive images," "negative images," and sympathy-grabbing melodramas to be reviewed. There is high culture, high camp, tragedy, comedy, the good, the bad, and the awful, to be enjoyed and assessed. What do we mean when we say some novel is "too gay," some film is "so lesbian," or some play is "not queer enough"? How might we think again? Conference work may be focused on a particular artist, set of texts, or genre, or some aspect of the historical background of the materials we will be considering.

*Sophomores and above.*

### Virginia Woolf in the Twentieth Century

## **2006-2007**

### **Queer Americans: James, Stein, Cather, Baldwin**

**Julie Abraham**

*Intermediate—Year*

Queer Americans certainly, Henry James, Gertrude Stein, Willa Cather, and James Baldwin each fled "America." James (1843-1916) and Stein (1874-1946) spent their adult lives in Europe. Cather (1873-1947) left Nebraska for Greenwich Village—after a decade in Pittsburgh, with a judge's daughter, along the way. Baldwin (1924-1987) left Harlem for Greenwich Village, then the Village for Paris. As sexual subjects and as writers, these four could hardly appear more different, yet Stein described James as "the first person in literature to find the way to the literary methods of the twentieth century," Cather rewrote James in developing her own subjects and methods, and Baldwin found in James's writings frameworks for his own. In the second half of the nineteenth century and the first half of the twentieth, James, Stein, and Cather witnessed the emergence of modern understanding of homosexuality and made modern literature, each pushing boundaries always, in subtle or dramatic ways. (Stein, for example, managed to parlay the story of her life with Alice B. Toklas into an American best seller in 1933.) In the second half of the twentieth century, Baldwin began to dismantle modern understandings of sexuality and of literature. Examining the development of their works side by side will allow us to push the boundaries of lesbian/gay/queer cultural analyses by pursuing different meanings of "queer" and "American" through an extraordinary range of subjects and forms. Beginning with James on old New York and older forms of vulnerability and ruthlessness, this course will range from Cather's plantations and pioneers to Stein on art and atom bombs and Baldwin on sex and civil rights. We will read novels, novellas, stories, essays, and memoirs by James, Cather, and Baldwin, plus Stein's portraits, geographical histories, lectures, plays, operas, and autobiographies. We will also examine key

biographical, critical, and theoretical studies. The histories of readers' responses to and current uses of James, Stein, Cather, and Baldwin offer an excellent introduction to the cultural construction of "the modern" through lesbian/gay/queer subjects over the past century. Gender and cross-gender affiliations, class, race, and ethnic differences were all urgent matters for these four. James's, Stein's, Cather's, and Baldwin's lives and works challenge many postmodern assumptions about what it meant—and what it might mean—to be a queer American. Conference projects may include historical and political as well as literary studies, focusing on any period from the mid-nineteenth century to the present.

*Intermediate.*

### **The Invention of Homosexuality**

**Julie Abraham**

*Open—Year*

Different historians trace the invention of modern homosexuality to different historical moments, from the sixteenth to the mid-nineteenth centuries. ### Queer Theory: A History

**Julie Abraham**

*Intermediate—Spring*

Queer Theory emerged in the United States, in tandem with Queer Nation, at the beginning of the 1990s as the intellectual framework for a new round in ongoing contests over understandings of sexuality and gender in Western culture. "Queer" was presented as a radical break with homosexual, as well as heterosexual, pasts. Queer theorists and activists hoped to reconstruct lesbian and gay politics, intellectual life, and culture; renegotiate differences of gender, race, and class among lesbians and gay men; and establish new ways of thinking about sexuality, new understandings of sexual dissidence, and new relations among sexual dissidents. Nevertheless, Queer Theory had complex sources in the intellectual and political work that had gone before. And it has had, predictably, unpredictable effects on current intellectual and political projects. This class will make the history of Queer Theory the basis for an intensive study of contemporary intellectual and political work on sexuality and gender. We will also be addressing the fundamental questions raised by the career of Queer Theory, about the relations between political movements and intellectual movements, the politics of intellectual life, and the politics of the academy in the United States, in particular, in this new millennium. For students with a background in women's, gender or LGBT studies.

*Sophomores and above.*

### The Invention of Homosexuality

**Julie Abraham**

*Open—Year*

Different historians trace the invention of modern homosexuality to different historical moments from the 16th to the mid-19th centuries. The invention of heterosexuality, it would seem, followed after. Certainly the term "heterosexual" appeared only after the term "homosexual" was coined in the later 19th century. At first, neither meant what they mean today. In this class, we will study the development of modern understandings of same-sex desire in relation to understandings of sex, gender, race, class, nation, nature,

culture, and opposite-sex desire. We will be drawing centrally on literary works, especially novels, which have been crucial sites for the construction and dissemination of modern understandings of sexuality. But we will also be reading histories, science, laws, letters, and polemics and watching films. Although we will be considering both earlier and more recent materials, we will focus on the period from the 1880s to the 1960s. By the 1880s, almost everyone agrees, a recognizably modern understanding of homosexuality was becoming available. The sexual/cultural landscapes that subsequently developed were not radically rearranged until the 1960s, when the gay and women's liberation movements insisted on a political analysis of sexuality. This course will serve as an introduction to a broad range of modern literature, to fundamental works in the history of sexuality and contemporary lesbian/gay/queer studies, and to critical thinking about how we talk, read, and write about sex. Conference work may be focused on any period from the 19th century to the present.

### Virginia Woolf in the 20th Century

**Julie Abraham**

*Intermediate—Fall*

"On or about December, 1910," Virginia Woolf observed, "human character changed...All human relations shifted—those between masters and servants, husbands and wives, parents and children. And when human relations change, there is, at the same time, a change in religion, conduct, politics, and literature." In her novels, essays, reviews, biographies, and polemics, as well as in her diaries, letters, and memoirs, Woolf charted and fostered the cultural and political forces behind those changes as they developed across the century. Over the course of that century, Woolf's image also changed—from that of the "invalid lady of Bloomsbury," a modern, a madwoman, and perhaps a genius to that of a monster, a feminist, a socialist, a lesbian, and an icon. While focusing on the development of her writing, we will also consider her life and its interpretation, her politics and their implications, and the use of her art and image by others as points of reference for new work of their own. Her family, friends, lovers, and critics will all appear. We will also be reading her precursors, her peers, and those who took up her work and image—in the decades after her death—in fiction, theater, and film. This course will serve as an introduction to 20th-century fiction, feminist literary study, lesbian/gay/queer studies, the study of sexuality, and the study of politics in literature. Conference projects might focus on one other writer, a range of other writers, or one of these approaches to literary analysis.

## 2010-2011

### Queer Americans: James, Stein, Cather, Baldwin

**Julie Abraham**  
*Intermediate—Year*

Queer Americans certainly, Henry James, Gertrude Stein, Willa Cather, and James Baldwin each fled "America." James (1843-1916) and Stein (1874-1946) spent their adult lives in Europe. Cather (1873-1947) left Nebraska for Greenwich Village-after a decade in Pittsburgh, with a judge's daughter, along the way. Baldwin (1924-1987) left Harlem for Greenwich Village, then the Village for Paris. As sexual subjects and as writers, these four could hardly appear more different, yet Stein described James as "the first person in literature to find the way to the literary methods of the 20th century," Cather rewrote James in developing her own subjects and methods, and Baldwin found in James's writings frameworks for his own. In the second half of the 19th century and the first half of the 20th, James, Stein, and Cather witnessed the emergence of a modern understanding of homosexuality and made modern literature, each pushing boundaries always in subtle or dramatic ways. (Stein, for example, managed to parlay the story of her life with Alice B. Toklas into an American best seller in 1933.) In the second half of the 20th century, Baldwin began to dismantle modern understandings of sexuality and of literature. Examining the development of their works side by side will allow us to push the boundaries of lesbian/gay/queer cultural analyses by pursuing different meanings of "queer" and "American" through an extraordinary range of subjects and forms. Beginning with James on old New York and older forms of vulnerability and ruthlessness, this course will range from Cather's plantations and pioneers to Stein on art and atom bombs and Baldwin on sex and civil rights. We will read novels, novellas, stories, essays, and memoirs by James, Cather, and Baldwin, plus Stein's portraits, geographical histories, lectures, plays, operas, and autobiographies. We will also examine key

biographical, critical, and theoretical studies. The histories of readers' responses to and current uses of James, Stein, Cather, and Baldwin offer an excellent introduction to the cultural construction of "the modern" through lesbian/gay/queer subjects over the past century. Gender and cross-gender affiliations, class, race, and ethnic differences were all urgent matters for these four. James's, Stein's, Cather's, and Baldwin's lives and works challenge many postmodern assumptions about what it meant-and what it might mean-to be a queer American. Conference projects may include historical and political, as well as literary, studies, focusing on any period from the mid-19th century to the present.

*Open to sophomores and above.*

### The City of Feeling: Sexuality and Space

**Julie Abraham**  
*Open—Year*

Female couples in 19th-century New England were said to live in "Boston marriages." Whitman aspired to a "city of friends." Proust anatomized "the cities of the plain." Baldwin's all-American boy fled to Paris to have his fears confirmed by Giovanni's love. Contemporary lesbian and gay scholars describe the development of urban communities as crucial to the history of modern lesbian and gay cultures and politics. Contemporary queer geographers have begun to map what they are calling "queer space," which is most often either urban or understood in relation to the urban. In this course, we will be tracing the interdependent development of modern understandings of homosexualities and of cities within the framework of a wide-ranging discussion of modern histories of sexuality, the city, gender, and space. At the intersection of queer studies and urban studies-with Jane Jacobs (*The Death and Life of Great American Cities*) and Samuel Delany (*Times Square Red, Times Square Blue*) as presiding godmother and godfather-this course will bring together classic works on the cultures of cities, lesbian/gay/queer urban histories and community studies, new analyses of "place" in urban studies, and of "queer space" in geography and cultural studies, novels, and films. From Paris and Berlin to Buffalo and Wyoming, we will be considering understandings of "the country" and "the suburbs," as they help to define "the city"-great cities, global cities, industrial cities, simulated cities; public and private space; the street and domestic life; anonymity and home.

*Open to any interested student.*

**2011-2012****Perverts in Groups: The Social Life of Homosexuals**

**Julie Abraham**

*Open—Fall*

Contradictory assumptions about the relation of homosexuals to groups have dominated accounts of modern LGBT life. In Western Europe and the United States from the late-19th century onwards, queers have been presented as profoundly isolated persons—burdened by the conviction that they are the only ones ever to have had such feelings when they first realize their deviant desires and are immediately separated by those desires from the families and cultures into which they were born. Yet, at the same time, these isolated individuals have been seen as inseparable from a worldwide network. By means of mysterious signs decipherable only by other group members, homosexuals were supposed to instantly recognize each other and to be committed, above all, to protecting their fellows and advancing their collective interests. Homosexuals were, then, denounced as persons who did not contribute to society; homosexuality was presented as, by definition, the hedonistic choice of reckless, self-indulgent individualism over sober, social good. Nevertheless, all homosexuals were implicated in a nefarious conspiracy, stealthily working through their web of connections to one another to take over the world—or at least whichever part of the world the commentator wished to defend: the political establishment of the United States or its art, theatre, or film industries, for example. Recent manifestations of these contradictory assumptions can be seen in the battles that have raged since the 1970s, when queers began seeking public recognition of their lives within existing social institutions from the military to marriage. LGBT persons have been attacked as threats (whether to unit cohesion or to the family), intent on destroying the very groups they are working to openly join. In this class, we will use these contradictions as a framework for studying the complex social roles that queers have occupied and the complex social worlds they have created at different times and places—shaped by different understandings of gender, race, class, ethnicity, and nationality—since the

emergence of modern homosexual identities. We will also consider the implications of these contradictions for current LGBT political battles. Our sources will include histories, sociological and anthropological studies, the writings of scientists and political activists, legal cases, novels, and films.

**Queer Theory: A History**

**Julie Abraham**

*Intermediate, Sophomore and above—Fall*

Queer Theory emerged in the United States, in tandem with Queer Nation, at the beginning of the 1990s as the intellectual framework for a new round in ongoing contests over understandings of sexuality and gender in Western culture. “Queer” was presented as a radical break with homosexual, as well as heterosexual, pasts. Queer theorists and activists hoped to reconstruct lesbian and gay politics, intellectual life, and culture; renegotiate differences of gender, race, and class among lesbians and gay men; and establish new ways of thinking about sexuality, new understandings of sexual dissidence, and new relations among sexual dissidents. Nevertheless, Queer Theory had complex sources in the intellectual and political work that had gone before. And it has had, predictably, unpredictable effects on current intellectual and political projects. This class will make the history of Queer Theory the basis for an intensive study of contemporary intellectual and political work on sexuality and gender. We will also be addressing the fundamental questions raised by the career of Queer Theory, about the relations between political movements and intellectual movements, the politics of intellectual life, and the politics of the academy in the United States in particular, in this new millennium. (For students with a background in women's, gender, or LGBT studies.)

# Literature

## 2000-2001

### First-Year Studies: Text and Theatre

#### *Joseph Lauinger*

This course explores the relation between the play as written text and the play as staged event. More than any other literary form, drama depends upon a specific place and time—a theatre and its audience—for its realization. The words of a play are the fossils of a cultural experience: They provide the decipherable means by which we can reconstruct approximations of the living past. With this goal in mind, we will read and examine texts from ancient Athens and medieval Japan to Elizabethan London and contemporary New York (with many stops in between) in an attempt to understand the range of dramatic possibility and the human necessity of making theatre.

## 2002-2003

### "Best Books": Toni Morrison and Her Sisters

#### *Chikwenye Okonjo Ogunyemi*

This yearlong seminar will examine the idea of "100 Best Books," whether it is Eurocentric, African centered, or gender biased, as we self-consciously fall into the trap of excluding books either for political reasons or for time management. We will concentrate on all of Toni Morrison's novels (for aficionados) and the "best books" written by her sisters in Africa, the Caribbean, and the United States. The runners-up are Aidoo, Angelou, Ba, Beyala, Condé, Djébar, Emecheta, hooks, Kincaid, Naylor, Saadawi, Shange, Vera, Walker ... This is merely a list. Students can work on their lists for their conference projects.

### American Literature: 1830-1914

#### *Arnold Krupat*

In the 1830s America "removed" its eastern Indians to the far side of the Mississippi while nonetheless defining itself, in Perry Miller's phrase, as "Nature's Nation." The Civil War led to "emancipation," but by the late 1870s the condition of those who once had been bound hardly resembled freedom. In 1890 the "frontier" was officially pronounced "closed"; nonetheless, still "facing west" (that phrase is Richard Drinnon's), we fought the Spanish to acquire the Philippines, advancing yet further "west" to "open" China and Japan. The America that turned east again, toward Europe, when "the guns of August" — the beginning of World War I — sounded was obviously very different from what it had been in

the days of Andrew Jackson. This course covers some of the literature of this period — the "canonical" writers (Emerson, Whitman, Thoreau, Hawthorne, Melville, Dickinson, Twain, James) for the most part, but also some writers (Frederick Douglass, Margaret Fuller, Charlotte Perkins Gilman, Stephen Crane) only newly or still marginally canonical, and others (the Native Americans, William Apess, and Gertrude Bonnin) whose place has yet to be established. All of these, along with texts by Abraham Lincoln, Booker T. Washington, and W. E. B. DuBois, will call into question not only the meaning of American but of literature as well.

### A Small Circle of Friends: A Topic in Renaissance Literature

#### *Ann Lauinger*

The love poetry of the Renaissance is famous, and justly so. But sixteenth- and seventeenth-century writers also thought a great deal about friendship, fellowship, and community and about the settings in which such relationships might thrive. This course looks at some versions of living together — as best friends, in the idyllic setting of a country house, or in the ideal society — set forth in a variety of texts from classical antiquity and the Renaissance. What does it mean to call a friend "a second self"? Do men and women envision friendship differently? How did the country and the city turn into ideological opposites? These and similar questions are raised by our reading: poems by Horace, Juvenal, Martial, Aemilia Lanyer, Spenser, Ben Jonson, and others; essays of Erasmus, Montaigne, and Francis Bacon; Thomas More's *Utopia*; the Abbey of Thélème (from Rabelais' *Gargantua*); Shakespeare's *Henry IV* and *The Tempest*.

### Changing Places: "Imposture" Narratives in Nineteenth- and Twentieth-Century America

#### *Amy Schrager Lang*

This course focuses on ideas of self-invention and self-creation as these are played out in American narratives written, for the most part, in the second half of the nineteenth century and the first half of the twentieth. The narratives on which we will focus — some of them novels, others autobiography, journalism, film — all entail a self-conscious passage, or passing, from one social, racial, ethnic, national, or sexual status to another, an "imposture." We will look, for example, at the production of "our nig" in Harriet Wilson's autobiographical novel and at the equally systematic production of the self as "Negro" in Sinclair Lewis's *Kingsblood Royal*; we will consider Dorothy Richardson's sojourn into working-class girlhood in *The Long Day* and the journey of others out of it; John Howard Griffin's travels in the world of African Americans in *Black Like Me* and Barbara Ehrenreich's

visit to the world of low-wage work in Nickel and Dimed; the creation of the American in the work of Abraham Cahan or Mary Antin; and the re-gendering of the self in Jackie Kay's *Trumpet*. The object of this course is to investigate the literary, historical, and ideological questions that attend the cultural project of self-invention in the United States and the shifting ground against which this project is undertaken.

## Chastity, Desire, and the Eighteenth-Century Novel

*Paula Loscocco*

In late seventeenth- and eighteenth-century England, the traditions of European humanism, courtly and libertine love-poetry, and prose romance competed not only with the religious and political works of the recent civil wars, but with a rising tide of popular writing — love letters, political lampoons, tabloid journalism, advice columns, pornography, stock reports, travelogues, etc. Out of this mix emerged the novel, a form that existed sixty years before it was named, that was developed (mainly) by women whose work was forgotten when a new generation of men took over, and that rooted an entire era's understanding of what constitutes social, economic, and political subjectivity in coming-of-age stories obsessed with sexuality and gender. This course explores how the discourses and strategies of chastity (sexual virtue) and desire (sexual want) developed into a genre that writers and readers used to understand themselves and their world; it traces the related rise of a feminist tradition in English letters; and it considers various contemporary phenomena, from neoclassical aesthetics to revolutionary politics, exploring how these resisted, shaped, and themselves manifested novelistic language and structure. Our survey covers early fiction and neoclassical response (Behn, Heywood, Barker, Davys, Astell, Defoe, Swift, Pope); major players of the 1740-1750s (Richardson, Fielding, Hogarth, Montagu, Johnson); early permutations (Lennox, Burney, Sterne, Radcliffe); and revolution (Jefferson, Paine, Burke, Wollstonecraft, Austen).

## Culture Wars: Literature and the Politics of Culture Since Romanticism

*Daniel Kaiser*

The current controversies over multiculturalism and the attacks on the literary canon and on the idea of high culture itself suggest that this may be a good moment to examine how the ideologies of culture currently in question have been shaped over the last century. We will begin with the late nineteenth century, when what we think of as modernist conceptions of the unique social role of imaginative writing and of aesthetic experience generally begin to take shape, and continue up to the "culture wars" of the 1980s. Some of the course

reading will be in fiction, poetry, and drama that can be read as offering in themselves theories of cultural politics; these writers will include Flaubert, James, Mann, Brecht, Yeats, Eliot, Pynchon, and Morrison. Theorists of the relations between art, society, and politics will range from the Victorians and "Decadents" (Arnold, Wilde) to late Romanticism (Nietzsche, Wagner) to Marxist cultural theory (Lukacs) to poststructuralism (Barthes, Derrida) to recent American theorists of gender and ethnicity. For students who have had at least a year of literature or philosophy.

## Declarations of Independence: Masterworks in American Literature

*Nicolaus Mills*

On July 4, 1845, Henry Thoreau began spending his days and nights at Walden Pond. His declaration of independence from the America in which he was living epitomizes a tradition that goes to the heart of American writing. This course will focus on a series of such declarations in American prose from the 1830s through the 1930s. The heart of the course will be a series of nineteenth-century classics: Henry Thoreau's *Walden*, Nathaniel Hawthorne's *The Scarlet Letter*, Narrative of the Life of Frederick Douglass, Herman Melville's *Moby Dick*, Mark Twain's *Huckleberry Finn*, and Henry James's *Portrait of a Lady*. Students will be expected to do assigned critical readings on the course texts and to devote part of their conference work to studying the European writing going on at this time.

## English: History of a Language

*Ann Lauinger*

What happened to English between Beowulf and Virginia Woolf? What's happening to it now? The first semester of this course introduces students to some basic concepts in linguistics and traces the evolution of pronunciation, vocabulary, and grammar from Old English (Anglo-Saxon) through the Middle English of Chaucer and the Early Modern English of Shakespeare and the eighteenth century to an English we recognize — for all its variety — as our own. The second semester turns from the history of English and a study of language change over time to the varieties of contemporary English and a sociolinguistic approach to how language differs from one community of speakers to another. Among the topics for second semester are pidgins and Creoles, American Sign Language, language and gender, and African-American Vernacular English (Ebonics). This course is intended for anyone who loves language and literature, and students may do conference work in either linguistics or literature or both.

## Epic Vision and Tradition

### William Shullenberger

The epic is a monumental literary form that is an index to the depth and richness of a culture and the ultimate test of a writer's creative power. Encyclopedic in its inclusiveness, epic reflects a culture's origins and projects its destiny, giving definitive form to its vital mythology, problematically asserting and questioning its formative values. This course on the emergence and development of the epic genre developed in the Western tradition will be organized around four central purposes. First, we will study the major structural, stylistic, and thematic features of each epic. Second, we will consider the cultural significance of the epic as the collective or heroic memory of a people. Third, we will examine how each bard weaves an inspired yet troubled image of visionary selfhood into the cultural and historical themes of the poem. Fourth, we will notice how the epic form changes shape under changing cultural and historical circumstances, and measure the degree to which the influence of epic tradition becomes a resource for literary and cultural power. First term: Homer, *Odyssey*; Virgil, *Aeneid*; Dante, *Inferno*; Milton, *Paradise Lost*. Second term: Pope, *The Rape of the Lock*; Wordsworth, *The Prelude*; Eliot, *The Waste Land*; Joyce, *Ulysses*; Walcott, *Omeros*.

## Experimental Literature Post-1945

### Stefanie Sobelle

This course will continue some of the topics introduced in fall's Historical Avant-Garde seminar as they evolve after World War II, though that course is not a prerequisite for this one. We will look at fiction and poetry that play with form and genre, and we will address questions such as: How do different types of formal play help construct/deconstruct identity? In what ways does formal experimentation address or interact with issues of race, gender, and nationality? Why do so many of these works invent fantastical, exoticized spaces in which to act out their less than conventional narratives? How do some use photography and autobiography to address problems with the authenticity of memory? Throughout the semester, we will look at developments in formal play—that is, how technology, media, and politics effect the types of experimentation taking place, and in what ways these works do or do not succeed in their formal "potentiality." Though the course will be divided between fiction and poetry, several of the books cross such boundaries, and in part we will look at what post-war fiction does with conventions of genre. Authors read may include Raymond Roussel, Samuel Beckett, Raymond Queneau, Harry Mathews, Georges Perec, Gilbert Sorrentino, Italo Calvino, Thomas Pynchon, Julio Cortázar, Vladimir Nabokov, William Demby, Clarence Major, Theresa Hak Kyung Cha, Kenneth

Koch, David Antin, Robert Creeley, Amiri Baraka, Susan Howe, Lynn Hejninian, Charles Olson, and Jeanette Winterson. Open to any interested student.

## First-Year Studies: Impossible Landscapes: Literatures of the Spanish-Speaking World

### Eduardo Lago

In this course we will embark on an unusual journey of discovery and exploration: the mapping of a world whose geography seems to be the dream of a visionary cartographer. However, such world exists. Unified by language, our aim will be to study the literary manifestations of the Spanish-speaking world. The journey will take us from the imaginary kingdom of Aztlán in the USA to the cities of contemporary Iberia; from the Latino neighborhoods in Chicago, the Bronx, and L. A., across the Río Grande, to the plains of Mexico. From the jungles of Meso-America to the straits off Tierra del Fuego — where the rough cold waters of the Atlantic and the Pacific Oceans meet. From the islands of the Caribbean to the heartland of Amazonia. This is a literature that blends the worldview of the Amerindian peoples, with those of African and European cultures. Ours will be a global approach, so we shall incorporate works written in English by Latinos, as well as Luso-Brazilians authors. We shall travel back in time, tracking down the historical steps that converged into the formation of the different canonical traditions. During the first semester we will not go beyond the twentieth century. After the winter break, we shall explore the historical roots of the pan-Hispanic world, which hark back to the Mediterranean cultures of Greece and Rome — together with elements from the Arab, the Jewish, and the Gothic. Although literature will be our main concern, there will be ample room for the study of other cultural manifestations, such as music, art, and film.

## First-Year Studies: Introduction to Literary Study

### Arnold Krupat

The European Tradition: The first semester offers brief encounters with, among many others, Sophocles and Aristotle, Shakespeare and Ben Jonson, E. Bronte and G. Flaubert, James Joyce, John Stuart Mill, and Samuel Beckett, not necessarily in that order. We will talk about such things as form and function, style and structure, problems of translation and periodization, aesthetics and aestheticization (again, not necessarily in that order). Short papers on a fairly regularly basis is the writing aim of the first semester: how to compose a good sentence, good paragraph, good argument. Some American Literatures: The second semester shifts to the literatures of the United States. Our questions now address such concerns as the meaning of voices, selves, and, nature,

and the content of such terms as ideology, race, ethnicity, gender, among others. Some of our authors: Walt Whitman, Emily Dickinson, Frederick Douglass, Richard Wright, Robert Frost, Rudolfo Anaya, Herman Melville, and Leslie Marmon Silko, among others. Although we will do two short class papers, the writing aim will be to put together something approximating a more developed "conference" paper.

## First-Year Studies: Myths of Creation

**Neil Arditi**

This course examines the ways in which generations of literary authors have made use of primitive mythic material to explore new hopes and fears about the human condition. The course was originally conceived around one central text, Mary Shelley's *Frankenstein*, and a large portion of our syllabus is cribbed from the reading lists of the characters in Shelley's novel, including the unnamed creature who teaches himself to read, among other works, Milton's *Paradise Lost*. We will begin by contrasting the two creation myths offered in *Genesis*, ascribed by Biblical scholars to different authors ("J" and "P"). Other readings will include Rousseau's secular, naturalistic vision of the fall in his "Discourse on the Origin of Inequality," the quest for new forms of redemption in Romantic and post-Romantic poetry, Goethe's *Faust*, Nietzsche's *Genealogy of Morals*, H. G. Wells' *The Island of Dr. Moreau*, and Kristen Bacis' *Lives of the Monster Dogs*.

## First-Year Studies: Representing Themselves: Postcolonial Cultures and Politics

**Kasturi Ray**

The twentieth century has been called the century of decolonization, when many former colonies gained independence from their Western rulers and attempted to carve out their own postcolonial histories. These ex-colonies grappled with previous representations of themselves and struggled to represent their own positions both to themselves and to the rest of the world. We will consider these politics of representation through four historic moments in the development of the postcolonial world: colonialism, independence movements, decolonization, and globalization. We will study these four moments cross-culturally, by looking at the experiences of Africa, Asia, the Middle East, and Latin America. We will read literature and view films from particular nations in these regions and also look for similar strategies of decolonization across the postcolonial world. Themes to be covered include the function of violence in independence movements; the representation of women from the so-called Third World; the role of postcolonial feminists, particularly as they rebuild religious, sexual, and economic institutions;

the rise of Global English and its effects on vernacular languages; and the continuing role of the West in the decolonizing world.

## Forms of Comedy

**Fredric Smoler**

Comedy is a startlingly various form, and it operates with a variety of logics: It can be politically conservative or starkly radical, savage or gentle, optimistic or despairing. In this course we will explore some comic modes — from philosophical comedy to modern film — and examine a few theories of comedy, including those of Freud, Frye, Fielding, Bakhtin, and Bergson. A tentative reading list for the first semester includes a Platonic dialogue (the Protagoras), moves on to Aristophanes' *Old Comedy* (*The Clouds*), Plautus' *New Comedy*, Roman satire, Shakespeare's *Midsummer Night's Dream*, *As You Like It*, and *Twelfth Night*, Molière, Dryden, Fielding, and Byron. In the second semester we will read Mark Twain, Norman Mailer, Dickens, Philip Roth, and Tom Stoppard and look at Preston Sturges' and Frank Capra's screwball comedies. Both semesters' reading lists are subject to revision.

## Growin' Up Black: Memories of Childhood and Beyond

**Chikwenye Okonjo Ogunyemi**

What are the cultural and political implications of growing up as a black girl or boy in the twentieth century? How do societies and individuals remember and reconstruct a past? With Paul Connerton's *How Societies Remember* as a frame of reference, this course surveys autobiographies and fictional narratives of childhood from Africa and the African diaspora. We will focus on issues of religion, nationalism, blurry borders, poverty, sexuality, ethnicity, education, politics, and gender in this semester-long seminar and in conference projects. The following are some of the writers we will work on in class and for conference projects: Angelou, Baldwin, Beyala, Dangarembga, Danticatt, Emecheta, Kenan, Kincaid, Morrison, Okri, Sapphire, Soyinka, Vera, and Wright.

## Introduction to Shakespeare

**Daniel Kaiser**

Over the centuries, Shakespeare's plays have moved from being primarily scripts for actors to being literary works read by a large middle-class public to being texts for study in the academy. We will consider the ways in which this perennial classic is reinvented as our contemporary, as well as the radical differences between the Shakespearean imagination of social life, erotic life, and the nature of the self and our own. The plays studied will include examples of Shakespeare's four main genres — comedy, history, tragedy, and romance. Occasionally we will also read critical essays that

connect Shakespeare to issues in contemporary literary and cultural theory. This course is open to any interested student, but some previous work in literature or philosophy is desirable.

## Love and the Canon

### *Simone Marchesi*

Why is the discourse about love so central in the Latin West? And what does it have to do with the mechanisms of literature? From ancient erotic poetry to the mystical love of the Middle Ages, practitioners and theorists of literature alike have discussed the link between learning how to love, how to write about love, and how to read amatory texts. The course consists of an in-depth reading of a selection of literary texts that combine the analysis of "love" and an inquiry into the essence of literature. We will start from how Latin poets addressed the difficult choice between light erotic poetry and epic (Roman Elegists, Virgil, and Ovid) and move to Augustine's theory and practice of writing about a different kind of love in a Christian spiritual framework. We will then measure the impact of the Latin past on the beginnings of French and Italian literature. We will study the contradictory images of love offered in the Roman de la Rose and Dante's evolution from his early self-portrait as a love poet to his identification with a biblical author. Finally, we will address Boccaccio's demanding ethics of reading — the challenge to become active readers of his simultaneously serious and amatory texts.

## Readings of Modern Japanese Literature in Translation

### *Sayuri I. Oyama*

Recent translations of literature by Murakami Haruki, Yoshimoto Banana, and Nobel Prize winner O'e Kenzaburo have helped spark popular interest in contemporary Japanese literature. What are the forms, subjects, and contexts of earlier works of modern Japanese literature that provide different perspectives on the notion of "Japan" or "Japanese-ness" in relationship to national identity and history? In this course, we will read a variety of Japa-nese literature, from the late nineteenth century to the present, in English translation. Some issues to be explored include: What does it mean to read "in translation" and specifically in terms of translated Japanese literature? What is the relationship of the author to literary text, and how does our biographical knowledge of the author influence (or limit) our literary interpretations? How do our readings of modern Japanese literature influence our understanding of Japan's modern history, from the Meiji period (1868-1912) to the present? Class time will be devoted primarily to careful readings of the texts, oral

presentations, and group discussions. Students will be strongly encouraged to do focused readings of other literary texts in conference work.

## Representations of Ethnicity in Japanese Literature and Film

### *Sayuri I. Oyama*

Japan has often been characterized as an ethnically and culturally homogeneous society, yet what does this stereotype belie? In this course, we will examine a variety of literary and cinematic representations of burakumin, resident Koreans, Okinawans, and foreign workers in Japan. Rather than take these representations "at face value" as evidence of ethnic or cultural diversity in Japan, we will attempt to engage with them as cultural products that contribute to the discourses of race and ethnicity in and about Japan. In considering how Japan's "minorities" have been represented, we will also consider comparative cases and approaches to the study of national identity, race, and ethnicity.

## Representing Indians

### *Arnold Krupat*

Late in the sixteenth century, after speaking through an interpreter to one of three Brazilian Indians brought to Rouen, Michel de Montaigne, in his essay on "The Cannibals," compared what he knew of the peoples of the New World with those of old Europe and found the latter no more "civilized" than the former. Early in the seventeenth century, in *The Tempest*, William Shakespeare anagrammatized cannibal into the proper name Caliban and portrayed this native as cruel, crude, and lustful. No more than a decade later, Shakespeare's countrymen, the Pilgrims and Puritans, mounted their successful invasion of North America's eastern shore, establishing permanent settlements among the "wild beasts and wild men," as William Bradford called them, they found here. Ever since, outsiders have been representing the indigenes as "savages" or "noble savages"; monosyllabic utterers of an inscrutable "Ugh!" or natural orators; an inevitably "vanishing race" or holders of the keys to ecological and spiritual survival. But for nearly a century now Native peoples have begun to write back, producing self-representations of a variety of kinds. This course will look at some of the ways Europeans and European Americans have represented Indians and how, more recently, Native peoples have represented themselves in a variety of genres (essays, fiction, poetry, film). For juniors and seniors with prior college background in anthropology, history, or literature. Advanced.

## Romanticism to Modernism in British Poetry: The Line of Shelley

### Neil Arditi

Percy Bysshe Shelley's literary reputation has been subject to violent oscillations. In his own time — a time of conservative British reaction to the French Revolution — he was persecuted for his atheism and his political activism. Following his death at the age of twenty-nine, Shelley was increasingly portrayed as a political martyr and a "singing God." Among major Victorian and twentieth-century poets, Robert Browning, A. C. Swinburne, Thomas Hardy, W. B. Yeats, and T. S. Eliot all acknowledged Shelley's massive influence on their early imaginative life. Some — most notably Eliot — turned against Shelley's legacy with polemical force in both his poetry and his literary criticism, setting the distinctly anti-Shelleyan tone of High Modernism. But to some degree all of the poets we will be reading in Shelley's wake were torn between their attraction to Shelley's apocalyptic sublimity and their quest for sustainable voices in significantly different cultural contexts. In the first half of this course, we will immerse ourselves in the poetry of Shelley and his most important Romantic precursors before turning to his Victorian and twentieth-century revisionists. Intermediate.

## Shakespeare

### Ann Lauinger

A reading of selected works spanning Shakespeare's career and forming a representative sample of the genres in which he wrote. Emphasis will be placed on close examination of Shakespeare's language and dramatic construction, with contexts for our work provided by a look at the physical and social organization of playhouses and acting companies in Shakespeare's London and by some cultural and intellectual traditions of the Renaissance. Conference projects may be related (narrowly or broadly) to the material of the course, or they may center on an unrelated field of literary study, depending on the student's interests and needs.

## Shakespeare and Film

### Joseph Lauinger

"O for a muse of fire that would ascend/The brightest heaven of invention. . . ." With these words, the chorus of Shakespeare's *Henry V* prays for the language to transform the "wooden O" of the Globe Theatre into a more powerful vehicle of the imagination. What Shakespeare set out to do in 1600 solely by means of words, costumes, and a few musicians now can be magnified by the immense technological resources of cinema. But is it really "Shakespeare"? What is the relation between a performance text that is essentially based on language to one that is based on image? In this course we examine and try to reconstruct several works

of Shakespeare as they were performed in their own time; we will then screen and discuss films by different directors that are derived from these texts. Directors include Olivier, Welles, Zeffirelli, Branagh, Kurosawa, among others. For conference work students can concentrate on either theatre or film, or they may go further in the study of cinematic adaptation.

## Shaping Contemporary Literature: The Latin American Avant-Garde

### Mariela Dreyfus

In the 1920s several innovations take place that are crucial to understand the most important trends in current Latin American literature. Those are the years of intense debate, when manifestos are launched, and the search of originality leads into experimental writing that radically changes the form and contents of the literary works. In this course we will study the most important avant-garde movements in Latin America and their literary productions, including poetry and fiction. We will focus on both the peculiarities of the Latin American avant-garde with respect to its European namesake and on the relations between the modernistic aesthetics of the avant-garde and the social and cultural context of Latin America. At the same time we will try to understand the ways in which the poetics of the avant-garde continues to shape the works of the most recent generations of writers. Among the authors included in class and conferences will be Vincent Huidobro, César Vallejo, Pablo Neruda, Jorge Luis Borges, Rosamel del Valle, María Luisa Bombal, Octavio Paz, Olga Orozco, Julio Cortázar, and Cristina Peri Rossi.

## Studies in the Nineteenth-Century Novel

### Ilja Wachs

This course entails an intensive and close textual encounter with the novelistic worlds of the nineteenth-century realist tradition. The first fictional tradition to accept social reality as the ultimate horizon for human striving, the nineteenth-century novels we will study are all intensely critical of the severe limitations to human wholeness and meaning posed by the new social world they are confronting. At the same time that they accept the world as a setting and boundary for human life, they seek to find grounds for transcending its limitations. We will explore the tensions in these novelists' work between accepting the world as given and seeking to transcend it. At the same time we will try to understand why — in spite of a century and a half of great historical and cultural change — these novels continue to speak to the issues posed by the human condition with such beauty, depth, and wisdom. We will read in the works of such novelists as Tolstoy, Dostoevski, Balzac, Stendhal,

Eliot, Austen, Dickens, Twain, and Goethe. Open to juniors and seniors. Sophomores with permission of instructor only.

## The African American Novel in the Twentieth Century

### *Chikwenye Okonjo Ogunyemi*

Taking off with the conversations between Bell Hooks and Cornel West in *Breaking Bread*, this class will examine the discourses on racism, gender, slavery, conjure, sexual orientation, religion, the triangular relationship with Africa and Europe, and the concern for the endangered black child in the African American novel. We will focus on the works of Chesnutt, Wright, Hurston, Ellison, Baldwin, Morrison, Alice Walker, and Naylor.

## Theatre of the Enlightenment: Restoration and Revolution

### *Joseph Lauinger*

Following the dictates of reason (increasingly subversive, surprisingly reconstitutive), the period that has come to be known as the Enlightenment represents a disorienting and exhilarating shift in the perceptions, tastes, and values of Western culture. This course begins with an examination of the drama of the English Restoration, a peculiar blend of court and city theatre, whose comedies display the cross-fertilization of English Ben Jonson and French Molière, rooted in Italian *commedia dell'arte*. We shall then study the works of three playwrights from three countries: England's John Gay (particularly *The Beggar's Opera*), France's Beaumarchais (*The Marriage of Figaro*), and Germany's Georg Büchner (*Danton's Death* and *Woyzeck*). For these writers, theatre literally becomes the stage for testing new ideas of personal authenticity, gender definition, social class, and economic theory. Our discussions will be supplemented by readings in influential writers of the time (Hobbes and Locke, Pope and Swift, Voltaire and Diderot, Lessing and Goethe). We shall also try to trace the mutual influences and special collaboration of the arts integral to all drama (literature, music, visual design).

## The Legacy of France: French Fiction From the Seventeenth to the Twentieth Century

### *Angela Moger*

French soil has been propitious to the development of that "upstart," the novel, a genre that insinuated itself only recently into the panorama of Western literary statement, and has enjoyed a particularly sustained and luxurious flowering in that country. French experiments with the prose narrative have, indeed, exerted considerable influence on the practice and the theory of

the novel beyond the borders of France. In this course we will taste from the major monuments of that tradition in an attempt to isolate both those features that have provoked the engagement and emulation of foreign high priests such as Henry James and those that merit the attention of any serious acolyte of the cult of narrative. Accordingly, we will scrutinize works of Laclos, Balzac, Flaubert, and Proust, among others, seeking not only to uncover the rich implications of discrete elements such as props and locus and costume; but also to probe the significance of narrative organization/architecture such as epistolary, interpolation, and framing. Finally, as style is always as revelatory of worldview as situation (plot), this investigation of the formal aspects of each work should permit delineation of ideological stance and should thus be suggestive of the conditions and preoccupations at work in the evolution of Europe throughout this period.

## The Modern German Novel

### *Roland Dollinger*

This lecture analyses the history of the modern German novel from the late nineteenth century to the present. While in the first half of the semester we will deal with texts written between the creation of a modern national state in 1871 and the collapse of the Third Reich, we will explore the novel in postwar Germany during the second half. Students will study the following novels: *Effie Briest* (Theodor Fontane); *Buddenbrooks* (Thomas Mann); *The Notebooks of Malte Laurids Brigge* (Rainer M. Rilke); *The Road into the Open* (Arthur Schnitzler); *Berlin Alexanderplatz* (Alfred Döblin); *The Tin Drum* (Günter Grass); *And Where Were You, Adam?* (Heinrich Böll); *Jakob the Liar* (Jurek Becker). Students will also have to read a history of modern Germany and criticism about these texts. Some German films from the Weimar Republic and the New German Cinema will complement our reading of these texts.

## The Nonfiction Essay

### *Nicolaus Mills*

In his anthology *The New Journalism*, Tom Wolfe writes, "In the early 1960s a curious new notion, just hot enough to inflame the ego had begun to intrude into the tiny confines of the feature statusphere. The discovery, modest at first, humble, in fact, deferential, you might say, was that it just might be possible to write journalism that would read like a novel." Wolfe then goes on to say, "Not even the journalists who pioneered in this direction doubted for a moment that the novelist was the reigning literary artist, now and forever. All they were asking for was the privilege of dressing up like him." Wolfe's history may be off slightly. One can see signs of the kind of writing he describes as far back as William Hazlitt's early essays, and in our own century both George Orwell and James Agee were practicing the new journalism a half-century ago. But Wolfe's overall

claim is on target. Since the 1960s, the nonfiction essay has flourished, and it has flourished by showing that the techniques of fiction and the traditional essay can be combined with great effectiveness. The aim of this course is to produce nonfiction as lively as fiction. The course will begin by emphasizing writing technique, then place an increasingly heavy focus on research. Students will be expected to do multiple drafts of each essay and meet weekly deadlines. While personal essays will be very much a part of this course, this is not a course in autobiography or covert fiction. Among the writers studied will be George Orwell, Tom Wolfe, Maxine Hong Kingston, James Baldwin, Richard Rodriguez, and Joan Didion. Students taking this course should not be taking another writing course at the same time. To be admitted into this course, students must submit a writing sample. Open to sophomores, juniors, and seniors only.

## Theorizing the Other: U.S. Minority Discourse

**Kasturi Ray**

Often minor or marginal figures are mined from Third World texts and theorized, or processed, through First World theories. This course seeks to examine this process of representation, as well as to provide a survey of U.S. minority and other Third World cultural theories. We will focus on theories (understood as programs, philosophies, and interpretations) of minority culture and representation as they have emerged in the twentieth-century United States. We will explore how minority people have represented and resisted their marginal status through cultural and other forms of struggle. We will examine important influences on the shaping of U.S. minority discourse, including relevant texts of Western critical theory and the struggles of Third World people in the context of decolonization. The course will be devoted primarily to theory, but we will spend some time on key literary and filmic productions as well. Major theorists include Karl Marx, W. E. B. DuBois, Roland Barthes, Frantz Fanon, Audre Lorde, bell hooks, Michael Omi, Howard Winant, Gloria Anzaldúa, Lisa Lowe, and Lauren Berlant.

## Theory and Criticism of Literature: From Plato to Postmodernism

**William Shullenberger**

Literary theory is the twin of literature. Everyone who reads is practicing literary criticism. When we read, we respond — intellectually, emotionally, politically, spiritually. We try to figure out what causes our response; we make judgments about the quality of what we read; we try to understand or interpret it. The formal practice of literary criticism involves becoming more conscious, more intentional, and more systematic about our reading practices. Literary theory, in turn, makes explicit

the assumptions we have about literature, its place in the world of human action and human knowledge, its social and psychological value, and the rules and procedures that govern both the production of texts and the ways we read them. Although the course will follow a chronological program in surveying literary theory and criticism from Plato's theories of representation and inspiration and Aristotle's structural analysis of tragedy to Julia Kristeva's version of poststructuralist psychoanalysis and Homi Bhabha's postcolonialism, throughout the year we will juxtapose traditional and contemporary critical approaches in order to explore the modern relevance of older theorists and the deep continuity and persistence of traditional concerns in contemporary critics and analysts. Opportunities for both theoretical reflection and practical criticism will be provided throughout the year by the close examination of major literary texts that variously engage the concerns of the theory and criticism we study.

## The Russian Novel and Theory of the Russian Novel

**Melissa Frazier**

This course is predicated on the idea that the Russian novel and its theory are in many respects one, that is, that one of the most striking features of the Russian tradition is a preoccupation with questions of form. In the fall we will begin with Bakhtin's ideas about the novel and also with Tolstoy's essay "A Few Words About War and Peace," which claims that War and Peace is not a novel but only the latest in a line of nineteenth-century Russian non-novels including Pushkin's Eugene Onegin, Gogol's Dead Souls, and Dostoevsky's House of the Dead. We will read all these works and more in order to try to answer the double question that Tolstoy raises, not just what is the "novel," but also what we mean by "Russia."

## The Ultimate Beach of Your Being: Gay and Lesbian Latino Writers

**Ernesto Mestre**

There are places that, though they seem forbidding and foreign to us, we often retreat to, to find whatever shadow we can of our truest selves. This course will attempt to go to a few of those places. Through the study of fiction and memoirs written by gay or lesbian Latino/Latin Americans, we will explore how writers who were often working from the very fringes of the culture gave shape and form to an identity that was soon woven into the fabric of that culture, and as they opened up taboo discussions, at once gave voice to the voiceless and made the unspeakable part of the discourse. We will read classic texts in the literature such as Manuel Puig's Kiss of the Spider Woman and Reinaldo Arenas's Before Night Falls, along with novels, stories and excerpts by Nelida Piñon, Jose Lezama Lima,

John Rechy, and Achy Obejas, among others, but also other works by writers as varied as Mayra Santos Febres, Junot Díaz, and Jose Donoso, "straight" writers who daringly probe and exploit the subject of sexual identity in their work and purposefully wander into forbidden realms. More than anything, this course will seek to offer students a forum in which to discuss and explore the formation of their own sexual and cultural identity. In conference, students will be encouraged to struggle with the subject through the study of other readings, which will be selected for each student on a more individual basis, and will be given the option to explore the subject creatively, through stories or personal essays, all in an effort to get to know that crucial part of their person in the same manner that the poet yearns to know his beloved: "I shall discern that ultimate beach of your being/and see you for the first time, perhaps."

## Visions and Forms of Fiction

### *Ilja Wachs*

In this course we will intensively read and discuss a selected group of nineteenth- and twentieth-century novelists. Beginning in the nineteenth century, we will read works from Tolstoy, Dostoevski, Dickens, Eliot, Austen, Stendhal, and Balzac. We then will read some of the early modernists, including Kafka, Faulkner, and Woolf. The emphasis of the course will be on exploring the moral and social vision of the modern world created by these novelists and the basis for their choice of literary forms to realize their vision. An intensive reading and discussion course whose spirit and tone will be based upon an appreciation of the depth, wisdom, and beauty of these novelists' work.

## War and Asian America

### *Kasturi Ray*

War has had a unique and central influence on the shaping of Asian American experiences. This course examines how people of Asian descent living in the U.S. were treated and represented in times of war, and how they responded, politically and creatively, to these initiatives. We will examine the influence of WWII; the Korean, Vietnam, and Gulf Wars; as well as the ongoing war on terrorism, on Asian American community life. We will study the range of Asian American responses to these wars, including their volunteering in the armed forces to building peace movements. We will also explore the industry of war, namely in its formation of military base culture, and its debated links to changes in local economies and trafficking in sex work. We will examine if the logics of war, over the course of the twentieth century, have created enduring racial and gendered images of Asian Americans.

A full description of the course may be found under the appropriate discipline.

**Soviet Literature and Film of the 1920s and 1930s (p. 721),** Melissa Frazier *Russian, Literature,* Malcolm Turvey *Film History*

## 2003-2004

## Abbreviated Wisdom: How the Short Story Works

### *Angela Moger*

Claiming it has an intensity the novel cannot achieve, John Cheever defined the short story as "the appeasement of pain." He writes, "In a stuck ski lift, a sinking boat, a dentist's office, or a doctor's office . . . at the very point of death, one tells oneself a short story." While this statement is surely true, it gives an insufficient accounting of the disparate roles played by that elliptic, perverse, ambitious genre known as "the short story." That is, if some offer, indeed, a kind of appeasement (Cheever's own duplicitous *Goodbye, My Brother*), just as often they constitute an aggressive indictment (O'Connor's *Good Country People*) or an implicit mise en question of the reader's credentials/ motives in reading (Hawthorne's *The Minister's Black Veil*). The very brevity of the form, moreover, permits the short story to make pithy comment on matters political (Gordimer's *The Train from Rhodesia*) or pointed reflection concerning the essential nature of fiction (James's *The Turn of the Screw*). In this course we will explore the range of potential inherent in this form and probe its peculiar prosperity at certain historical moments (both Decadence and Walter Benjamin figure on the agenda). Furthermore, Jacobson's essay on metaphor and metonymy will illuminate speculation on why consummate practitioners of the novel—Lawrence, Cather, Gordimer, Balzac, and Wharton—have so often resorted to this "condensation."

## American Literature: 1830's-1929

### *Arnold Krupat*

In the 1830's, America "removed" its eastern Indians to the far side of the Mississippi, despite the objections of Ralph Waldo Emerson, author of *Nature*, among others. Henry David Thoreau spent a famous night in jail in protest against America's invasion of Mexico in the 1840's, and it was not until the 1860's that the "peculiar institution" of slavery would be undone by civil war. The year the Seventh Cavalry massacred Big Foot's Minneconjou band at Wounded Knee, 1890, was also the year the "frontier" was officially pronounced "closed." We ended the 90's with war against Spain to acquire the Philippines and then proceeded yet farther "west" to "open" China and Japan. The first semester of this course looks at some of the literature produced in this period, for the most part, the solidly "canonical"

writers (Emerson, Thoreau, Hawthorne, Whitman, Dickinson, and others) but also writers like Frederick Douglass, Margaret Fuller, Charlotte Perkins Gilman, and Stephen Crane—only newly or marginally canonical—and others (the Native Americans William Apess and Zitkala-sa, for example) whose reputation and place remain to be established. The second semester covers a shorter time period, roughly from the outbreak of war in Europe in 1914 to the Great Depression of 1929. This is the era in which the great “modernist” canon—Ezra Pound, T. S. Eliot, Ernest Hemingway, and William Faulkner—is established, but it is also the period in which the first translations of Native American oral poetry appear, and Harlem becomes the center of a “renaissance” not only in literature (Countee Cullen, Langston Hughes, Zora Neale Hurston, and Nella Larsen, among others) but of music as well. The huge wave of immigration to the United States from the 1880’s to 1924 also produces a number of writers eager to represent their “Americanization,” and we will look at a few of their texts as well (e.g., Sui Sin Far, Emma Lazarus, and Anzia Yezierska, among others).

## Austen, Gaskell, Trollope

### Julia Miele Rodas

From seemingly serene environments and out of apparently trivial circumstances, these three nineteenth-century writers—Jane Austen, Elizabeth Gaskell, and Anthony Trollope—construct wildly suspenseful and dramatic narratives. How is it that the minutia of our lives—a misplaced check, a new carpet, a minor family squabble—can be matters of such passionate interest and concern? And how is it that this minutia ultimately offers insight into the grandest possible social and philosophical issues? Through the study of six novels, this class will explore the meaning and importance of the apparently commonplace. Possible texts: Austen’s *Pride & Prejudice* and *Persuasion*, Gaskell’s *Cranford* and *Wives and Daughters*, Trollope’s *Framley Parsonage* and *Last Chronicle of Barset*.

## British Romantic Poetry and Its Legacies, from Blake to Heaney

### Neil Arditi

In this course we will be reading and discussing influential British and Irish poets of the last two centuries. One of the assumptions of the course is that a great deal of modern poetry has its roots in the Romantic era. In the wake of the French Revolution, Blake, Wordsworth, and Coleridge invented a new kind of poetry, and we will trace its influence on authors from the second generation of Romantics to the present, including Byron, Percy and Mary Shelley, Keats, Tennyson, Robert Browning, Christina Rossetti, Emily Brontë, Hardy, Yeats, and Seamus Heaney. But we will also strive to appreciate each literary artist on his or her

own terms—indeed, to appreciate each individual poem’s strangeness and originality. Our understanding of literary and historical periods will grow out of our close, imaginative reading of texts.

## Celebrating Syncretism: Italian Literature Between Science and the Circle of Arts

### Filippo Naitana

Since its very origins, Italian literature has found in the dialogue with the other liberal arts, as well as with the world of science, an extraordinary resource. From Dante, Michelangelo, and Cellini to Svevo, Pirandello, and Pasolini, Italian authors have crafted their art by building bridges among poetry, music, visual arts, as well as philosophy and psychoanalysis. The capacity of circumventing boundaries in order to reinvent the world of art is, with no doubt, the most unique ingredient of the Italian literary genius. This course deals with some of the highest achievements within this syncretistic tradition, from the Early Renaissance until the Contemporary Age. Among the works studied will be Dante, *Divine Comedy*; Michelangelo, *Poems*; Lorenzo Da Ponte, *Don Giovanni*; Italo Svevo, *Zeno’s Conscience*; Luigi Pirandello, *The Late Mattia Pascal*; and Johan Padan by the 1997 Nobel Prize-winner Dario Fo.

## Comedy and Romance in the Middle Ages

### Ann Lauinger

Knights and ladies, quests and combats, magic and love: these are the ingredients of the medieval literary romance, and they have been beguiling readers for close to a thousand years. Where do these stories come from? What accounts for their appeal? How can we understand them in relation to the medieval world in which they were first written? We begin in the twelfth century with Chrétien de Troyes and Marie de France, whose counterpointing of masculine and feminine perspectives provides a critique as well as an introduction to our topic. Other readings will include selections from Chaucer’s *Canterbury Tales*, where romance meets the facts of everyday life, to richly comic effect; *Sir Gawain and the Green Knight*, in which King Arthur’s court is put to the test of laughter; and selections from Sir Thomas Malory’s *Morte D’Arthur*, for hundreds of years the definitive Arthurian romance in English. Conference work might focus on these writers or on other (and other types) of medieval writing; it might explore some later reworkings of medieval romance; or it might center on a topic unrelated to the course, depending on the student’s interests and needs.

## Don Quixote

*Isabel de Sena*

Knight, traveler, courtly lover, wise man, and fool, Don Quixote is surely one of the most extraordinary characters ever given literary form. By turns funny, grotesque, ugly, exquisitely delicate, and tragic, Cervantes' eponymous novel casts a long shadow over notions of gender, genre, reception, reading, and writing, raising ethical questions that are as pertinent today as they were at the time it was written. We will read the entire novel, bringing in shorter texts as pertinent, and we will also watch some film versions. Along the way we will explore different approaches to its interpretation. Conference projects can cover as wide a territory as our joint imagination and students' diligence will allow. This course will be taught in English.

## Fin de Siècle Imaginations: Literature at the Turn of the Century

*Stefanie Sobelle*

During the fall semester, we will explore developments in the Anglo-American novel as the nineteenth century ended and the twentieth began, concentrating on the fifty-year span from 1875-1925. In order to gain a better understanding of the shift from the Victorian period to the Modernist one, we will investigate the thematic concerns that define that shift: technology, career/industry, crime/paranoia, urban and interior space, and most important, time. Authors may include Bram Stoker; Rebecca West; Virginia Woolf; Joseph Conrad; James Joyce; Wilkie Collins; Thomas Hardy; Henry James; Oscar Wilde; Arthur Conan Doyle; Robert Louis Stevenson; Ford Madox Ford; John Dos Passos; P. G. Wodehouse; Wyndham Lewis; Ezra Pound; William Carlos Williams; and Arthur Bennett. During the spring we will study literature from the most recent century change, again focusing on a concentrated time span: 1970-2003. Keeping in mind the issues and topics from the previous semester, we will look at the ways in which late century anxieties have changed and morphed and how they are handled in literature. Authors may include Paula Fox; Jonathan Franzen; Don DeLillo; Thomas Pynchon; Kathy Acker; Will Self; Zadie Smith; Salman Rushdie; Ronald Sukenik; Dave Eggers; David Foster Wallace; William Gibson; Jeanette Winterson; David Markson; and John Barth, as well as a variety of hypertext/online literature. The second semester will be a bit more flexible in terms of syllabus, as my hope is that as a class we can research the most contemporary authors worthy of class discussion.

## First-Year Studies: Dark Museum: From British Castles to Latin American Gothic Imagination

*Maria Negroni*

Gothic stories, usually linked in people's imagination to B-movies and best-sellers of all times (*Dracula*; *The Phantom of the Opera*; *The Golem*; *Frankenstein*; Edgar A. Poe's short stories; *Carmilla*; *Blade Runner*; *The Castle of Otranto*; *Jekyll and Hyde*; *Metropolis*; *The Turn of the Screw*; *20,000 Leagues Under the Sea*; *Psycho*; *The Picture of Dorian Gray*; *Rappaccini's Daughter*; *Aliens*; or *The Bloody Countess*) are all, despite their intense individuality, unending variations on a single subject, mainly the relation between sexuality (the body, the material) and death. Accordingly, the scenarios where these Gothic sagas take place are solitary and archaic places: castles, rundown mansions, and the like—as if a sublime geography and scenery, subdued by awe and despair, were crucial for the display of emotions—that is, for the apparition of the unconscious, the hidden otherness of “evil.” Gothic “monsters,” on the other hand, constitute a strange gallery of unwanted and/or orphaned characters, usually artists fixated on desire and sexual fears. In this course we will explore the wonderful contributions of Latin American writers to the Gothic “canon,” while drawing a possible portrait of the artist/poet as a deprived child who obsessively yearns for the impossible and in so doing, becomes an intruder into the sexual politics of the symbolic. In other words, we will use Gothic literature to discuss aesthetics, mainly the relation between beauty and mourning, loss and desire, death and forbidden drives. We will also carefully review supporting arguments, found both in literary and philosophical texts: Giorgio Agamben, Sigmund Freud, Georges Bataille, Charles Baudelaire, André Breton, and Walter Benjamin, among others.

## First-Year Studies: Myth and Drama

*Joseph Lauinger*

This course grounds the student in ancient Greek, Japanese, and Hebraic-Christian mythology and explores the ways in which myth has been used as a source of drama. Students will read, in English translation, Homer and Hesiod, poems from the *Kokinshu*, and selections from the Hebrew and Christian Bibles. Examples of drama will be taken from ancient Greek tragedy and comedy, No and Kabuki, medieval mystery and morality plays, and Shakespeare.

## First-Year Studies: Telling Tales of Slavery and Colonialism

*Chikwenye Okonjo Ogunyemi*

From Harriet Wilson to Toni Morrison, from Olaudah Equiano to Charles Johnson, former slaves and their descendants have written stories about slavery,

highlighting the psychological, economic, social, gender, and cultural ramifications of slavery. From Bessie Head to Yvonne Vera, from Chinua Achebe to Ben Okri, writers realize that African complicity in the slave trade created a space that enabled the scramble for Africa and the colonization that it reproduced. They have written about colonization in ways reminiscent of the fiction on slavery. Those advocating for reparations see the crucial links between slavery and colonization. This course will concentrate on slave narratives and contemporary fiction on slavery and colonialism, establishing the global connections. We will consider the following African American writers: Harriet Wilson, Harriet Jacobs, Octavia Butler, Toni Morrison, Olaudah Equiano, Charles Chesnutt, Ernest Gaines, Charles Johnson. The African writers include Bessie Head, Yvonne Vera, Assia Djebar, Buchi Emecheta, Chinua Achebe, Sembene Ousmane, Ngũgĩ wa Thiong'o, Nuruddin Farah. (Numerous writers not listed here can be used for conference projects.)

## Growing Up American

### Arnold Krupat

Stories about the growth or development of an individual have been important to American literature at least since Benjamin Franklin's autobiography appeared late in the eighteenth century. From the nineteenth century forward, there was a boom, as it were, in self-life-writing, as former slaves who had achieved national prominence (Frederick Douglass, Booker T. Washington), renowned Native American warriors (Geronimo), popular presidents (Theodore Roosevelt), and successful scoundrels (P. T. Barnum) published autobiographies. American novels also did a thriving business in the growing-up field, from Twain's *Adventures of Huckleberry Finn* to Salinger's *Catcher in the Rye* and Sylvia Plath's far darker *The Bell Jar*. "Other" Americans have also written about growing up American, often with emphasis on the meaning of "American," e.g., the Jewish immigrant writers Mary Antin, Anzia Yezierska, and Michael Gold and the African Americans James Weldon Johnson, James Baldwin, and Malcolm X, among many others. Chicano/a writers from Rudolfo Anaya to Gloria Anzaldua and Richard Rodriguez and Asian American writers (Maxine Hong Kingston, Frank Chin) have also provided texts well worth examining. For these writers an individual identity often could not fully be imagined without reference to some community or collectivity. We will also look at some poetry, from Whitman's indispensable "Song of Myself" to work by Allen Ginsberg, Adrienne Rich, Anne Sexton, Plath, and others that directly or indirectly bears on the modalities of "growing up American."

## Imagining Imperialism: Some Interdisciplinary Perspectives

### Fredric Smoler

Traditional imperialism is generally understood to be the policy of extending a state's authority by territorial acquisition; neo-imperialism is generally understood to be the establishment of economic and political hegemony over other states. Because nineteenth-century European imperialism was remarkably dynamic, and expanded over much of the globe—by 1914, the only truly sovereign states not controlled by Europeans or their descendents were Japan, what were then called Abyssinia and Siam, and Afghanistan—we tend to see imperialism through the prism of race, but this can be a distorting prism, because imperialism is almost as old as politics: the first Sumerian cities were part of imperial arrangements, and over the millennia, imperialism has been race-blind as often as it has been racially charged. So while we will look at some of the ways in which imperialism maps onto modern conceptions of race and racism, we will also examine older imperial ventures and arguments. The indictments of and apologies for imperialism are richly contradictory: imperialism has been understood as the cause of war and as the only possible escape from war; as the instrument of civilization and as the devastating exposure of the moral claims of the "civilized"; as the hidden economic base of wealthy societies and as an economically irrational and self-destructive course that brings down wealthy societies. The clash of rival imperialisms is often seen as the great and terrible drama of the last century, and the new century has been touted as inaugurating a burst of self-conscious imperialism by the United States, which had long understood itself as a vigorously anti-imperial power—while being seen by many as the most successful imperial power of modern history. In this course we shall look at some of the literature, history, and theories of imperialism. Readings may include, among others, Thucydides, Xenophon, Virgil, Gibbon, Marx, Conrad, Kipling, Schumpeter, Joseph Roth, Orwell, and Shaw; we shall also look at contemporary theorists and use some secondary sources.

## Imagining War: Studies in European Literature and History

### Fredric Smoler

War is one of the central themes in European literature: the greatest works of Greco-Roman antiquity are meditations on war, and as an organizing metaphor, war pervades our attempts to represent politics, economics, and sexuality. Efforts to comprehend war were the genesis of the disciplines of history and political science, and the disaster of the Peloponnesian War forms the critical, if concealed, background to the first great works of Western philosophy. We will probably begin the first semester with readings from the *Iliad* and Thucydides,

then address the *Aeneid* and selections from Augustine's *City of God*. The semester will conclude with a study of Shakespeare's second tetralogy (*Richard II*, *Henry IV pt. 2*, and *Henry V*) and some selections from Hobbes's *Leviathan*. We will also consider some secondary literature by John Keegan and Robert O'Connell synthesizing modern historical and social anthropological work on war in cross-cultural perspective. In the second semester we shall examine the origins of political economy and sociology as disciplines that had complicated relationships with military metaphor; at classical Marxism, which remilitarized political economy; at three nineteenth-century novelists—Balzac, Stendhal, and Tolstoy—who either addressed war directly or used it as an organizing metaphor for erotic and economic life; and at sections of Byron's *Don Juan*, in part an attempt to create a mock-epic in response to an imagined complicity of the epic form in militarist aesthetics. We shall conclude with a look at some twentieth-century artistic, historical, and critical attempts to represent war with an allegedly unprecedented accuracy; these works will include some of the literature of World War I, Paul Fussell's criticism of that literature, Norman Mailer's *Why Are We in Vietnam?*, and Michael Herr's *Dispatches*. We also will consider the representation of twentieth-century mass warfare in popular and mass cultural genres: some films on World War I and World War II, including Renoir's *Grand Illusion* and John Schlesinger's *Yanks*, and representations of the world wars in popular music, pictorial art, and cartoons.

## Independence: Masterworks in American Literature

### Nicolaus Mills

On July 4, 1845, Henry Thoreau began spending his days and nights at Walden Pond. His declaration of independence from the America in which he was living epitomizes a tradition that goes to the heart of American writing. This course will focus on a series of such declarations in American prose from the 1830's through the 1930's. The heart of the course will be a series of nineteenth-century classics: Henry Thoreau's *Walden*, Nathaniel Hawthorne's *The Scarlet Letter*, *Narrative of the Life of Frederick Douglass*, Herman Melville's *Moby Dick*, Mark Twain's *Huckleberry Finn*, and Henry James's *Portrait of a Lady*. Students will be expected to do assigned critical readings on the course texts and to devote part of their conference work to studying the European writing going on at this time.

## Literature and Society from the Romantic Period to the Present

### Daniel Kaiser

This course attempts to explore some of the relations between literature and social and political issues

beginning with the period of Romanticism, when crucial concepts like "literature" and "culture" took on roughly the meanings they still have for us today. We will study works that examine the connection between questions of literary form, style, and genre and the social, political, and cultural life from which these works emerge. It is hoped that the approach taken in this course will make it possible to explore relationships between literary forms of the period that are usually studied separately—for example, between lyric poetry and the novel, between nineteenth-century realistic fiction and modernistic experimental fiction, between imaginative or "creative" writing and theoretical and critical writing. Writers to be read include Blake; Dickens; Emily Brontë; Dostoevsky; Melville; Marx; Nietzsche; Wilde; Conrad; Yeats; Mann; Brecht; Benjamin; Lukacs; Adorno; Barthes; Faulkner; Mailer; Thomas Pynchon; García Márquez; and Toni Morrison.

## Literature of Exile

### Bella Brodzki

Exile refers to the condition of banishment or expulsion from one's native land, roots, home, and language and encompasses physical displacement, territorial dispossession, social marginalization, and estrangement. From expatriates sipping espresso in stylish cafes to starving refugees in squalid camps, the concept of exile conjures up striking images and generates rich metaphorical associations that it is the intent of this course to pursue. Our principal concern, however, will be the particular political, cultural, and historical contexts in which exilic literature has been produced through the ages, beginning with the Bible. In the twentieth century, the modernist canon is strongly marked by the sensibility and experience of refugee artists and intellectuals, and by those whose émigré or exile status was freely chosen, while the contemporary cultural map reflects a range of divergent responses to raging conflicts about race, ethnicity, nationalism(s), as well as struggles for new and different configurations of identity and otherness. Given the global nature of the experience of exile, our readings will draw from around the world and will be informed by various critical frameworks—mythic, theological, psychoanalytic, poststructuralist, and postcolonial.

## Literature of Hawai'i: Native and Asian/Pacific American Culture and Politics

### Kasturi Ray

Hawai'i typically is thought of as a tourist paradise. This representation obscures both its past as an important plantation economy, as well as its current critical role in Pacific Rim geopolitics. The purpose of this course is to examine the different Hawai'ian literatures that emerge from, confront, and/or seek to resolve these diverse

histories. Class readings will focus on Native and Asian/Pacific American literatures. They will include Native hula, chants, and songs; stories from and about early Asian immigrants, particularly "picture brides"; and current literary representations of the military buildup and nuclear testing in the area. Themes include warring cultural understandings of home and land; strategies of labor segregation and their possible influence on depictions of race and sexuality in Hawai'i'an literature; the position of women within and across these larger cultural battles; and definitions of race under conditions of multiraciality.

## Literature of the South Asian Diaspora

### Sastry

How do immigrants define themselves when they are no longer part of a majority culture? How do their children understand their identity with respect to the countries of their birth and the countries their parents left? This course looks at contemporary British and American literature to investigate the ways in which South Asian diasporic identities are constructed and represented to a mainstream audience. Topics will include coming of age, gender and sexuality, and the politics of race. Our reading list will include works by Zadie Smith, Salman Rushdie, Bharati Mukherjee and Jhumpa Lahiri, and we will also view films such as Mississippi Masala and Bend It Like Beckham. Theoretical and historical readings may be assigned/recommended to help contextualize the literature, but no previous theoretical knowledge is necessary.

## Masculinities and Femininities in Context: Asian/Pacific American Literatures

### Kasturi Ray

Representations of Asian/Pacific American masculinity and femininity are influenced by cultural codes from other ethnic groups in both the U.S. and abroad. In this course we will read central Asian/Pacific American novels, short stories, and poems alongside corresponding postcolonial and U.S. ethnic literatures. The goal of this course is to understand how gender conventions and transgressions in the Asian/Pacific American context reflect, disrupt, or invent themselves against this larger multicultural backdrop. Topics include depictions of early bachelor societies; the history and current representations of Asian/Pacific Americans in film and in the media; historic strategies and reasons for gender transformations; sexual practices and their perceived relationship to ethnic loyalty; and the links between gender norms and labor hierarchies.

## Metaphysical Poetry

### William Shullenberger
